286 441 175 By 1911, the number of looms in Lewis had increased to 250-300 (Hunter 1964: 42).

288 184 By the late 19th century small mills had replaced domestic spinning and weaving in the Highlands on the mainland. Weaving continued to be a home industry in the Hebrides where it was encouraged by the support of non-profit-making organizations such as the Highland Home Industries and Arts Association, the Scottish Home Industries Association, and the Crofters Agency--all established at the end of the 19th century--and also encouraged by local merchants who had begun to act as middlemen in marketing the cloth. These merchants owned small general stores throughout the island and either bought the tweed from local weavers or gave them goods from their stores in exchange. Many of the tweed firms in Lewis grew from such small general stores and from the barter system.

288 175 159 472 1. The Harris Tweed Industry in Shawbost: Coinneach Rod, a man who started a tweed business on the west side of Lewis which eventually developed into a large mill with equipment for spinning yarn and finishing tweeds, was said to have been a risk-taker, a man who lost the first L50 he borrowed, but borrowed another L50 and never looked back, a man who throughout his life gave fellow

288 175 159 472 businessmen nervous breakdowns because of the risks he continued to take. "He was planning to start some business. At one point it was going to be either distilling or the tweed, and he just happened to go for the tweed."

Some say Coinneach Rod had physical disabilities, developed or aggravated by military service, which made him unable to work like other men, and hence he was forced to find other ways of earning a living. He was a merchant, like other islands who became entrepreneurs in the tweed business.

According to one version of Coinneach Rod's life, he began to handle tweed on a large scale as the result of an accident, when an agent selling tweed for a merchant on the east side of the island arrived on Lewis for the first time, asked for a "Kenneth Macleod, merchant," and was directed to Coinneach Rod of Shawbost.

"He was also an earthy, natural, easy man to get on with. He never changed, even after the money came. He would sit the buyers down with a plateful of cuddies and say 'Dig in,' 'Eat up.' He always ate them whole, and never spat out the bones. The buyers liked that. They liked his easy manner."

175 441 452 Between the first and second world wars, the merchant was an extremely powerful figure. When men and women

175 441 452 went away to the fishing, their families bought groceries on credit. "If the merchant thought the fishing season would be good, he let them have as much as they wanted; otherwise he restricted them in their buying."

288 175 159 444 437 472 The barter system continued in Shawbost long after it stopped in Stornoway. A weaver was given credit in Coinneach Rod's store, until it closed in 1948, for the exact amount of the tweed. He never gave money. "You ha to get just the right amount of goods, even down to tuppence in matches." People were forced to buy huge jars of jam which they did not really want or need. Some "cunning" fellows would slip a two-pound pair of shoes into a shoebox marked 15 shillings. "Coinneach Rod would ask if you wanted a wireless, or would a tweed jacket fit your son. You couldn't refuse, or you wouldn't do any weaving for him for a long time."

288 175 159 472 452 Coinneach Rod bought looms for many weavers, and the would weave only for him to pay off the debt. "People living on the dole with a large family would go to him and ask him to buy them a loom. He would get the man a loom, and then get him a lot of tweeds to weave so the ma could pay him off. It was two tweeds for yourself and on for the loom."

288 175 441 2. Centralization and Specialization: Centralizatio and specialization in handling the production of the twee

*175 871 656 mainder of Scotland where, under the school boards, education became both free and compulsory.

In Lewis the school of real significance to the island was, and *175 871 • 159 still it, the Nicolson Institute, founded by Alexander Morison Nicolson and opened in February 1873, supported by bequests from him and his brothers. Nicolson's grandfather was the founder of the Lewis fish-curing trade, and was also shipowner and farmer. Alexander was the fifth of six sons and was educated in Stornoway parish school and in Glasgow High School. He served an apprenticeship as an engineer with Thomson of Clydebank. Later he entered the service of the Chinese Government and established himself with a partner of a shipbuilding and foundry business in Shanghai. In 1865, in his thirty-third year, he was killed in a boiler explosion in one of his new ships going a trial run. His ideal of establishing a school in Stornoway was subscribed to by his brothers who were a widespread family: Yorkshire, Mississippi, Western Australia, Tighnabruaich (Scotland) and South Africa.

*175 871 [875] [465] The first headmaster of the school received £82 per annum, plus the school fees, which ranged from 2s 6d per quarter in the lowest classes to 5s in the highest. The fees covered reading, writing, arithmetic, geography, English, history and English grammar and composition; when Latin, Greek, French and mathematics were taught, an additional shilling was charged for each subject. But the teacher was always bound to teach gratuitously twenty pupils selected by the Nicolson Trustees. In 1888, the school was handed over to the school board. In 1901, by a Decree of the Court of Session, its name, previously the Nicolson Public School, was changed to the Nicolson Institute. In 1898, the first boys went straight from the Institute to university, a trend that has not ceased since (see Chapter 8).

*175 874 871 As far back as the turn of this century a recommendation was made for the provision of technical education on the island. A report on the subject of Higher Education in Lewis (1900) stated: 'Regarding the practical or scientific aspect of education . . . there is a clamant need of a central Technical School in Lewis . . . the local resources are quite inadequate for the establishment of such a school, or its maintenance, on an effective basis. Such popular technical instruction as Household Economy, Wood and Iron

288 441 175* 424 sary. In the end, an application was made in 1909 to that body for a trade mark defining Harris Tweed as 'tweed, hand-spun, hand-woven and dyed and finished by hand in the Outer Hebrides', with 'made in Harris' or 'made in Lewis' added as appropriate. The Harris merchants had to join forces with their former rivals in the tweed-marketing business, the voluntary non-profit-making Associations. To inspect the cloth and stamp it with a trade mark—an orb surmounted by a cross—a Harris Tweed Association was formed, consisting of representatives of each of the Harris merchants, the Crofters Agency and the Scottish Home Industries Association. Cloth was first stamped in 1911. In 1912, some Stornoway merchants were granted representation in the Harris Tweed Association, which still exists for the benefit of the industry.

In 1934, the definition of 'Harris Tweed' was eased to include any cloth 'made from pure virgin wool, produced in Scotland, spun, dyed and finished in the Outer Hebrides and hand-woven by the Islanders at their own homes in the islands of Lewis, Harris, Uist, Barra and their several purtenances and all known as the Outer Hebrides'. It was further provided that 'Woven in Harris', 'Woven in Lewis', etc, could be added, and also 'Handspun' in the case of tweeds made entirely from hand-spun yarns.

288 286 178 Today, a few Harris families maintain the old tradition, hand-dyeing and carding, spinning on the wheel, hand-weaving and finishing, producing a high-quality article mainly for individual customers. These tweeds rightly command up to three times the price for the general run of tweed.

OTHER INDUSTRIES

441 • 159 175* It was not until the era of Sir James Matheson that anything like a truly industrial activity was attempted. Matheson, a native of Shinness in the parish of Lairg, Sutherland, was born in 1796. Aged seventeen, he decided on a commercial career and took himself to London. After two years in a mercantile house, he went to Calcutta, where he worked in the counting-house of MacKintosh

441 • 159 *175 & Co. The call of the Far East drew him away from India to Canton, where he set up business as an agent acting for firms in India. During the period 1815-20 he met William Jardine, from Dumfriesshire, who first glimpsed the mainland of China as a surgeon's mate from the deck of an East Indiaman three years before Trafalgar. Jardine left the East India Company in 1817 after sixteen years' service and, having with native prudence accumulated enough capital to set up on his own account, entered into an agreement with an East India merchant of London and a Bombay trader to operate the new ship *Sarah*. In 1832 Matheson and Jardine combined forces and interests to form Jardine, Matheson & Co, 'The Firm', as it has been known ever since those early days of commerce in the Far East. The unique experience which its founders and their successors have accumulated in providing services for manufacturers, and handling trade with more than a quarter of the world's population, is virtually unparalleled in the annals of British mercantile enterprise.

Matheson amassed a fortune. In 1842 he returned to his native Scotland, and finding that the Lewis estate was up for sale he bought it for £190,000 from the Estate Trustees. The island, at that time a truly isolated backwater, provided him with plenty of scope for ideas and work for deep pockets. He died on the last day of 1878. It has been estimated to the pound sterling that, including the purchase price of Lewis, Matheson spent over £574,363. More than £100,000 was spent in erecting Lewis Castle and in laying out the grounds, which work provided his impoverished tenants with a means to earn something with which to buy their necessities. Briefly, Matheson drained land and reclaimed it; he planted trees; he built roads, bridges and quays; he excited anew an interest in the fishing industry and built premises for fish curing; he built a patent boat-slip for the construction and repair of fishing and other craft; he established schools and paid the teachers' salaries; he also built a brick-works and a chemical works to distil paraffin from peat. He is remembered in Stornoway's Matheson Road: little else remains of his extensive efforts.

HEALTH AND HOUSING

an urgent necessity for the island of Lewis', and a committee was appointed to collect funds, the subscription list being headed by Lady Matheson; for a period of three years donations flowed in from all parts of the world. The Lewis cottage hospital was opened on 1 February 1896, starting with only fifteen beds; the number was increased to twenty in 1915. An extension was opened in 1925, and the hospital was provided with a surgeon and an ambulance. Another extension in 1929 was the result of a gift of £3,000 from Mr John Bain, of Chicago, a Lewis son who was President of no less than fourteen banks in the Mid-West. The Lewis Sanatorium was started in 1926.

Tuberculosis was at one time in the island's history a disease that caused many deaths and much sorrow. About 1930 an Assistant Medical Officer of Health was appointed, Dr R. Stevenson Doig (who died in 1965), who spent his career-life in Lewis stamping out what was called in the island the 'white scourge'; he lived long enough to see the introduction of preventive medicine and the decline of the killing and crippling diseases he found on his first years in Lewis.

In dental health, progress has, as in so many areas, been reversed. At one time the island teeth were so well known for their strength and beauty that a film was made by the Army for showing to audiences considered in need of dental-health education. In 1966 the picture had changed: a survey revealed that 95 per cent of Lewis children were in need of dental treatment. The mainland addiction to sugary foods has spread.

As distinct from the island's general medical services, centred on Stornoway, the psychiatric services are based at Inverness. What was formerly the Inverness District Asylum, now called Craig Dunain Hospital, is the only mental hospital in the Highlands area, with a few long-term beds in the Institution at Lochmaddy; the general hospital at Stornoway conducts monthly outpatient clinics. Over the area served, the rate of admission to Craig Dunain Hospital is around 3·3 persons per 1,000 of population, compared with a figure of 4·68 for Scotland as a whole, 5·5 for Lewis and 2 for Harris.

The drink problem and Lewis's relatively high rate of admissions to mental hospital both stem from the background of the

THE PEOPLE

people; Lewis can be taken as representative of the Hebrides a the Highlands in general. The incidence of involutional mela cholia, occurring mainly in middle life, is high and, to quote o expert, 'It would seem profitable to consider the states of fear a distress with which it has been associated.'

Those in Harris and Lewis aged fifty or over have their rec lections charged with little else than disaster. Not only did t island lose an abnormally high percentage of its young men

The age structure of the Lewis population in 1861 and 1901, showing t trend toward ageing as the younger elements emigrate (age scale 5-90 yea reading from base)

THE PEOPLE

771 783 157 [58] 733 157 press themselves in terms of religious values and ideas, the fear of having committed unforgivable sin. The normal adjustments, reflections and mental stocktaking of middle life are possibly more readily precipitated towards depression in an emotional people prone to serious thought. This brings of course a concomitant spectrum of problems in an area where in general a man is expected to take a dram and stand it; both nature and nurture are relevant factors. In the words of Cunningham Graham (1899), the medical adviser finds himself 'preaching teetotalism, that is for others, but himself taking his glass of whisky for the reasons which have been so cogently set forth by St Paul the Apostle to the Caledonians.' For those who comment in isolation on a community's indulgence in alcohol, one must quote a Gaelic proverb: *'Tha smuideag fhein an ceann gach foid'*—Every peat-end has its own smoke. [539]

733 *175 [539] From the earliest times the Western Isles have indeed been regarded as supporting a population with an uncanny predilection for spiritous liquors. To a certain extent the spirits were needed by ill-nourished crofters to keep out the damp and cold when on the moors or at sea; and people in a depressed economic or mental condition will anywhere seek refuge in alcohol or other available drugs—forgetting the old Gaelic proverb 'Better the little fire that will warm than the great fire that will burn.' The evil effects of drinking have certainly at times been serious: in 1869 Sir James Matheson addressed a circular letter of remonstrance to his tenants, indicating that those guilty of misconduct were liable to be deprived of their holdings. In 1920 a vote was taken in Stornoway under the Scottish Temperance Act, with the result that the town went 'dry'; three years later the poll was upheld. Then in 1926, with a majority of 84, Stornoway went 'wet' again.

275 [733] But the 'drink question' has been given undue prominence and dragged out of its island context. For instance, Stornoway contains all but three of the licensed premises on the island (at Tarbert, Rodel and Carloway) and, as the chief centre for business and pleasure, must naturally attract anyone seeking refreshment.

159

669 for crofts in Tongue, a township north of Stornoway, took
473 the law into their own hands, seized one of the fields of
the adjacent farms, and threatened to take the remainder.
It is easy to understand that when a man has come home
from the war to his sweetheart, and after being promised
a site on which to build a home (even a black house for
a start), with a plot for potatoes, and 'a cow's grass', a
year's vain delay may breed impatience! Leverhulme
motored to the township, and with his customary vigour
and persuasiveness spoke of his plans for 'work and
wages' to be concentrated at Stornoway. He again de-
clared that if the farms were divided this would cripple
his schemes, and work would stop at once. The majority
there agreed to fall in with his plans; in any case, only a
• 159 minority could find crofts on the farms. Leverhulme felt
433 that he had carried his point. He forgot not only that
661 his oratory deserved applause and had won it for its own
sake, but that the people could not lightly afford to say
'no', if this meant immediate stoppage of wages. It was
the after-thoughts on the morrow and in the following
months, rather than agreement at the moment, that signi-
[228] fied. In 1920 herring fetched a fair price, the herring
fishery prospects were encouraging, and work was resumed
for a time. Yet one raid having begun and "the die having
been cast, lawlessness spread rapidly". Leverhulme
stopped expenditure, and obtained an interdict against the
[473] 'raiders', though he did not prosecute. After further
parley, the Secretary for Scotland agreed to suspend
[654] division for ten years, and in 1921 Leverhulme resumed
159 operations. "Unfortunately very soon afterwards", wrote
433 his biographer, owing to "the general industrial depression
458 which followed the boom in trade after the war", Lever-
hulme felt impelled to close down work for the time being,

• 159 and he was unable to make plans or promises for the future.
433 Meantime, it should be said, the Island herring catch and
458 prices fell rapidly (the catch by 50 per cent and prices by
[228] 60 per cent from 1920 to 1921). As a result, crofts now
seemed more precious than ever to the applicants.

With what Leverhulme regarded as 'almost indecent
159 haste', the Secretary for Scotland proceeded to fulfil the
473 promise to divide the farms. Most of the farms remaining
654 were divided into some fifty crofts, of ten acres or so with
outrun, supplying little more than 10 per cent of the
landless men. The Manor dairy farm, near Stornoway
Castle and town, though raided by a few men, was retained
to contribute to the town's supply of milk, along with two
or three smaller farms close to Stornoway (Melbost, and
Stoneyfield with Holm). Leverhulme felt that his offer to
Lewis had been turned down, and he then concentrated
his efforts upon Harris.

159 At the extreme south of Harris (midway along the
433 south-west coast), in the 'Hope' or natural harbour of
228 Obbe, Leverhulme built new piers. He transferred the
machinery of the canning factory and the kippering sheds
he had commenced to build at Stornoway. He started to
build houses, a number being provided on generous terms;
and "at the people's wish", the settlement was renamed
Leverburgh. With the transference of his energy from
Lewis to Harris, Leverhulme's "optimism and determina-
tion were intensified", wrote his son. They were not to
last long. After a visit to the Congo in 1925, Leverhulme
died suddenly in Brussels. How far the new plans might
have succeeded had Leverhulme lived, his son has com-
mented, "remains uncertain". What is certain is that the
second Lord Leverhulme toured Harris, visiting the works
on hand and examining the accounts. No doubt he also

• 159 weighed the estimated expenditure necessary to complete
433 the unfinished projects, and their prospects of success,
228 comparing these with similar conditions on the East Coast
and at Fleetwood, and with the trend of prices. His
decision was to close the venture, and Harris was sold.
[473] The skeletons of the works were left to rust beside the
quay, while the wreck of a coal steamer was left unsalvaged,
to break up slowly upon the rocks outside, a symbol of a
lost enterprise.

2. *An All-Round Policy for Sea and Land*

185 From the 'start' in Lewis, the first Lord Leverhulme
had shown his vision and grasp as a planner. Survey pre-
ceded plan, and decisions were swiftly put into action.
185 Why then had abandonment and failure followed? Per-
114 sonal factors have been over-stressed. 'Crofters' have
been accused of stubbornness, the Scottish Office of
procrastination and Leverhulme of impatience or obstinacy.
Stornoway shopkeepers have also been apportioned their
share of blame; and while all of them welcomed the
advent of Leverhulme as sure to bring money through the
crofters' pockets to their own tills, it is possible that, later
on, some of them did prove Devil's Advocates, having
come to fear the rise of competition by co-operative or
other large-scale concerns, should the town expand at a
[181] rapid rate. Stressing other factors of character and incom-
patibility, one popular Scots author went so far as to praise
the Lewis crofter for preferring a spiritual life with poverty
on a croft, to easy work and high wages in a town. There
runs a story, well vouched for, which might seem to con-
firm this. After Leverhulme had held forth upon 'work
for wages', in a township where there had been pressing

185 applications for shares in the division of a farm, but where
114 Leverhulme now felt sure of his success, an old crofter
spoke up slowly: "My Lord, what the crofter wants iss
185 *Contemplaition*". Now, fondness for contemplation is
114 found not only among crofters as they age, but among
older fishermen all round the shores of Britain, even if it
181 mellows in the Isles especially. Yet, as Leverhulme saw
for himself, there was abundant activity among men in
their prime, as they strove to refit their boats on their
return. In 1919 hope, not contemplation, was their pre-
vailing mood: hope for an active, fisherman's life.

With all these hopeful human factors on the side of
common effort at the start, why then did differences of
view-point come to be accentuated, not harmonised, and
'incompatibilities' lead so soon to friction, deadlock and
• 159 breakdown? Surely one basic fact remains. In 1917–18,
433 when Leverhulme framed his policy and made his plans,
228 the Scottish fisheries, to judge from pre-war years, could
still expect to hold high place in providing for a brisk
market in herring and white fish. True, the value of the
[435] Island cure of white fish had fallen from £100,000 in 1900
to one-tenth, £10,000, in 1913; but Leverhulme saw that
since fresh fish were now demanded, his capitalisation of
equipment with accelerated transit of the catch should bring
quick recovery. The herring trade had been active at
Stornoway up to the eve of the war; and although the
Islanders had made leeway following the introduction of
steam and of larger motor drifters, Leverhulme thought
he saw an opportunity to capitalise the industry, providing
'work for wages'. This forecast was wrong. Consumption
declined, and the market fell. Not only so; the pro-
portion contributed by Scots fishermen to the shrinking
market declined even more.

185 In 1919, when the men came home to Lewis they could
727 still see reasons for hope. They found a strange proprietor,
known first for his outstanding—some said ruthless—
[159] business ability, and only secondly for his philanthropy.
They heard his plans and were inclined to listen.

185 Yet, remembering their pre-war losses and the notorious
fluctuations of prices and employment in the fisheries, they
wished for a policy of insurance, as it were; so, if their
home lay near a promised farm, of which they had long
• 159 meant to claim a share, they claimed this forthwith. Only
458 too soon after, in the early years of Leverhulme's adventure,
433 the fall in total sales and prices of fish brought immediate
228 loss to the keenest and hardest working of the fishermen,
and to their financial backers in Stornoway. These losses
warned others of the uncertainties of fishing. Now the
fall in the fishing industry is not so much as mentioned in
the biography of Leverhulme; nor do we remember a
[654] word of it in Leverhulme's speeches. One finds no data
to show a substantial endeavour by the Scottish Office to
co-operate with Leverhulme in framing policies either to
change the trend of European markets or to make local
adaptations to combat downward trends. The Fishery
Reports certainly record the losses, year by year. As for
the Island fishermen, they shared the feeling expressed
by other Scots fishermen, that the old markets across the
North Sea, eastward to what had been St. Petersburg,
could and should be reopened, not closed 'for party
reasons' by 'English politicians'. Although ostensibly
Leverhulme ignored it, he cannot really have been unaware
of the effect of the downward trend of the fisheries upon
his own prospects of success, and upon the hopes and
confidence of the fishermen. Having been so outspoken
upon the shortcomings of Government with regard to local

• 159 schemes, and knowing how much local fishing depended
458 upon international policy, particularly the resumption of
433 trade relations with the chief customers of the past, Lever-
228 hulme, one feels, should have dealt no less outspokenly
with these. The removal of trade barriers lay not in the
[654] hands of the Scottish Office or of Scots officials (however
internationally minded these might be as private citizens),
but in the hands of Ministers of Cabinet rank and leading
financiers, of whom Leverhulme himself was one.

In brief, the Scots fisheries suffered after the war as
458 neither Leverhulme nor others had foreseen when first
433 he laid his plans for the Island's prosperity. It seems
228 clear that had this major change been squarely faced
by Leverhulme and Government alike, in 1920, 1921 or
[473] even later, they could never have fallen apart about a
relatively minor issue, that of the farms. Both sides turned
their faces away from this disquieting factor of the Baltic
markets, though both knew it to be fundamental to the
success of Scots fisheries and the Island's future. Had they
faced it together frankly, then, even if powerless to effect
a remedy, their sincerity might have prevented a deadlock
upon a secondary matter.

159 To Leverhulme, given his large scale of expenditure
473 and return, the division of a few farms formed a minor
issue. But to a number of ex-Servicemen, 'crofters'
185 without a croft, the division meant a home and relative
433 stability. Moreover, what was merely a matter for personal
473 decision to Leverhulme, was a lifelong issue to many people
brought up in congestion on the wrong side of the boundary
[428] fence. Meantime, milk from Easter Ross was available in
Stornoway, at town if not at country prices. Lastly, further
possibilities of land-development lay open to Leverhulme,
[114] though not so readily to the unaided people. In reading

311 cottars' claims." Thus a few of the settlements reclaimed
473 out of the common peat by some scores of people, hundreds of years ago, long worked by joint tenants, then by sub-tenants, " and later turned into modern farms, came to be regarded as the only available land open to crofters in the Island ".

311 Hence, Hardy concluded, it was important to tackle some reclamation of peat or of land partially covered by
433 peat, along with the development of the main commercial industry, fishing. The specialisation of commercial fishing was " a wise, indeed an indispensable preliminary step " in a constructive policy framed to deal with the Island as a whole. One saw that the formula " All Lewismen are fishermen " was an exaggeration, and that some of those whose forebears had dwelt by the machars of Broad Bay for centuries were landsmen first and seamen
185 second. Yet the specialisation planned by Leverhulme would not only have given a chance to the seamen of Ness,
311 Eye Peninsula, Lochs and ' the Bays ' of South Harris;
[433] it would also have begun to relieve congestion, giving a croft and outrun to some of those who wished to make small-holding their principal means of livelihood and life, and providing a market for fresh produce on the Island itself.

Looking back, it seems clear that Hardy was right to report to Leverhulme (in 1919) that, while the great fishery scheme was indispensable, it should be complemented by a scheme for occupation on the land for those who wished it. The major problem of land being the amelioration of peat, continued Hardy, it should be tackled with twentieth-century knowledge and equipment. Slopes were to be found, favourable to reclamation, where peat had been thinned by cutting, where it was shallow from good drain-
[433] age, or lighter in texture from admixture with sand. Had

185 Leverhulme grasped the problem in this fresh way, comple-
311 menting his first policy of the sea for the seamen by one
433 of the land for the landsmen, he could cheerfully have allowed the Government to honour their promise to divide
• 159 the farms, and thus he would have brought peace to all. In giving up the farms he would merely have had to reconcile himself to additional imports of fresh milk from Easter Ross, at an extra cost of a penny or two per pint. To do Leverhulme justice, experiments on peat were begun (about 1920) upon a small scale, partly, it is understood, as a result of Hardy's report. Yet in failing to make this reclamation an integral part of his plans, in refusing to adapt himself to promises given and to agree to the wishes of many applicants, Leverhulme of the Lews allowed peace to be wrecked. Why he should have stopped work in Lewis in order to remove to Harris, is not clear. There is nothing to show that crofter-fishermen in the creeks of Lochs and other fishing tracts of Lewis believed less firmly in fishing than their fellows in ' the Bays ' of South Harris.[1] Nor was there extensive land for dairying in Harris. To make a second attempt to found a centre, involving fresh expense, at Obbe (on the exposed south-west coast), a much less favourable point on the Island than Stornoway, was to court disaster, not to pilot his way through the difficulties of falling markets to success.

185 Leverhulme, it is true, had seen one side of the ' all-
311 round ' policy required: the need for a plot of land for the
[114] Lewis fisherman and his family. In Hardy's words, " A man's choice of the sea should not prevent his having ' a

[1] In his father's biography, the second Viscount suggests that there was
[828] a difference of character between the (unreasonable) men of Lewis and the
[829] (reasonable) men of Harris. The assertion is unsupported by the facts. There were raids in Harris, too, comparable to any in similar tracts of Lewis, but in neither were they important.

185 corner he can call his own ', a kailyard or garden. His
311 womenfolk might wish to keep poultry, and even a cow.
[114] More than this . . . might tend to make the old amphibious life begin over again." Where Hardy went further was to see the need for a complementary policy; the development of crofting into skilled small-holding. " Similarly," he went on, " the development of small-holding, by one who chose the land for a career, should not prevent his spending a leisure hour fishing from the shore, or in a neighbour's boat, for haddock, saithe, or flounders for the morrow's dinner. Yet the wish and need for a higher standard of living involved new emphasis on one chosen vocation, and a greater division of labour than heretofore,"
311 whether on land or sea. Some division of callings already existed, be it remembered. Manifestly, in the virtual absence of arable land for them, about 1500 cottar and squatter families had perforce to depend mainly on other occupations than the land. These families included the keenest, most successful, and potentially prosperous fishermen, like those of ' congested ' Scalpay (off Tarbert, Harris). The useful " Remarks " formerly published along with the " Creek Statistics " of the Fishery Board, repeatedly contrasted the townships and creeks mainly concerned in crofting with those mainly occupied in fishing. The contrast is to be found from the Shetlands round to
• [159] Barra or Kintyre. Leverhulme, seeing a future in the
[433] fisheries, tried to give the almost landless seamen their chance at sea. Had he accepted the complementary policy of giving a number of the now boatless crofters a better croft and means to improve the outrun, his schemes would have been complete.

114 It is a misfortune that Leverhulme's one-sided policy
159 had already hardened in his mind when Hardy (and the
433

• 159 present writer) came to the Island in August 1919, and still
433 more by November 1919 when Hardy's Report had been completed. Leverhulme had begun to fight for his plan,
[114] rather than use it in a supple way. Yet there was still a chance to put things right had the concept of a balanced
[185] community been clearly visualised by Government and people, by working fishers and crofters and the educated. Had an active ' Lewis Association ' existed at that time, it might have turned the scales.[1]

Lastly, during the war and after it, Leverhulme had said, again and again, that it was his admiration of the people which had called him to the Lews. By means of this ' all-round ' plan, the very root of Island character
185 could have been renewed, namely, communal life. It was
311 with their communal life in mind that Hardy—in spite of his horror of bad husbandry and of the physical dirt of
114 the byre and black house—wrote, first, that " rural re-

114 [1] Quotations from the MS. Report having been published (apparently without permission, and with somewhat misleading criticisms), reference should be made to these to illustrate the need for survey and collaboration with Leverhulme in the first three years of his proprietorship, and the importance of survey for action today. In 1919 Mr. W. C. Mackenzie (to whose historical researches lovers of Lewis owe so much) had published his belief that " Under the new proprietorship . . . the results [of development] will be at once fruitful and far-reaching ", without his making any constructive comment. By 1932 he wrote very differently, criticising Leverhulme's policy and also Hardy's (qualified) approval. At that later time, Mr. Mackenzie would have it that ' the Lewisman ' was a crofter and fisherman in one, and that for him to become ' mainly a fisherman ' or ' mainly a crofter ' (in Hardy's words) would be false to his character and tradition. Now, historically, the element of regional specialisation is ancient in the Island; the crofter-*fishers* of Lochs, Uig or ' the Bays ' of Harris have long been rather different from the fisher-*crofters* of Barvas, or of Coll and Gress. Specialisation was strongly marked by 1914–19; it still is. Further, Hardy (and the present writer) had not pled for complete divorce of the two vocations of sea and land. We urged that crofting be given its chance as well as fishing; and that the two callings should be complementary. Allowance being made for a quarter of a century of changes, the facts and the need remain. Cf. W. C. Mackenzie, 1919 (p. 187) and 1932, for the quotations given.

185 construction of the Island must rest upon the improvement
311 of the land ": and secondly, that by this means " it was
114 imperative to revive the traditional community spirit, the essential feature of Hebridean civilisation ". Those words still hold good. Yet the land itself is too barren and the soil too poor to provide a living for many by export of
[438] fresh agricultural produce to the mainland. Only a local market could pay a fair price for most of the products of
• 159 intensive small-holding. Judging from the free, untram-
433 melled trade before 1914, Leverhulme held that fishing could be set upon a commercial basis in the Isles; and
228 there could be few better judges of commercial possibilities
438 than this keen industrial thinker and organiser. If he was right, as surely he was, to begin with, then the local market to be created, or rather enlarged by growth of population and prosperity at Stornoway, could have purchased the fresh milk and eggs, the fresh greens and fruit, raised on enlarged small-holdings and marketed co-operatively.

181 A final comment remains to be made. The community
476 spirit of Scots fishers from Berwickshire to Barra has gone far to make co-operation among the men of the crews a living thing. ' Work for Wages ' offered little outlet for this, indeed it virtually suppressed it; and ' co-partnership ' on the Port Sunlight model was a very different matter from the co-partnership of a crew. Even if at that time it had been proved impossible to organise free co-operation in fishing, co-operation in small-holding townships might have kept the communal spirit alive, for later renewal at sea.

114 It is not easy to assess the after-effects of Leverhulme's
433 activity. Leverhulme certainly helped hundreds of families by the provision of wages for the building or rebuilding of roads and other works, of which some were completed

175 Campbell wrote, " My reception by those who are called
795 'professors' ", the lay leaders who 'professed' the
793 Evangelical doctrines, " was trying to the last. Holding
that Christ died for all seemed to them so fundamental
175 an error as to poison all my teaching." Thereafter,
793 Campbell retired, in Glasgow, to read, preach to a few,
and write, keeping in touch with Norman Macleod and
814 Erskine in Scotland, and in England with J. F. D. Maurice (1805–72). After *Christ, the Bread of Life*, Campbell wrote *The Nature of the Atonement* (1856). Readers felt not only that he was one of the most lovable of men, but a profound theologian, a view reinforced today. " Of all books that have ever been written on the Atonement ", wrote Dr. Denney, " McLeod Campbell's is probably that which is most completely inspired by the spirit of the truth with which it deals. Its originality is spiritual as well as intellectual. In speculative power he cannot be compared to Schleiermacher, nor in historical learning to Ritschl; but he walks in the light all the time, and everything he touches lives."

175 Here then was a man who seemed to have been born
793 " in advance of his time ", yet who came of a community
159 of deeply traditional cast. His life's thought was attuned to that of his forebears, and expressed itself most intimately perhaps in their own tongue. Campbell was born and reared in Lorne, Argyllshire, which had first received Protestantism through Carswell, who, in translating Knox's " Liturgy " into Gaelic, incorporated the old Gaelic labour prayer of the fishermen (Chapter VII (a)). The gentler form of Protestantism brought in by Carswell may have allowed the spirit of Celtic Christianity to survive among the people of ' Mid-Argyll ' and Lorne, down to Campbell's boyhood. It may thus have contributed to the making of " a Scottish

175 saint, a character so eminently Christ-like ",[1] and to his
793 intimate beliefs, doctrine and wide influence. The same
• 159 Highland roots and deep charity characterised Dr. Norman Macleod, author of the popular classic, *The Friend of the Gael* (*Caraid nan Gaidheal*).

121 If a student of community ventures upon an interpretation of theology, it is because, to him, any attempt to understand " the relations of God to mankind " must take account of men's relations to one another. Ideas are transformed by human experience during economic and social revolutions, and in their turn they transform society. To make contact with reality, theology must regard mankind: it
175 must be integrated with sociology. Because of its close
178 bond with communal life, the religious spirit, recorded in
182 Gaelic lore, was jarred, almost overwhelmed, when community was shaken to its foundations by the commercial, agricultural and industrial revolution. Happily, the value
178 of communal Christianity has been acknowledged both by
79 Roman Catholics—notably (among Gaels) by the Rev. Allan Macdonald of Eriskay—and by Protestants.[2] In the Scottish Presbyterian Church today, the movement which seems most deeply aware of the need for a new society has acknowledged its debt to communal tradition where this has been best maintained, that is, in the Isles. Seeking to aid Christian endeavour, international and national, this movement has turned for inspiration to Iona.
(771) In Iona, of which the noble cathedral belongs to the Church of Scotland but is open for service to all denominations, Presbyterians have found a new symbol.

(113) [1] Canon Vaughan, cited by the Rev. Norman Maclean (*Scotsman*, 21st Aug. 1943).
[2] " The Church should interpret the Love of God by a flaming zeal for the redress of the social order." (The Very Rev. Prof. John Baillie, Moderator of the Church of Scotland, at St. Andrews, 1943.)

423 In May 1918 Lewis was bought by Lever of Port
565 Sunlight, then Baron Leverhulme of Bolton-le-Moors (his birthplace), the head of a great combine with 50,000 white
157 and 25,000 black employees. Meeting him in Lews Castle
124 in August 1919, Dr. Hardy and I found him troubled by a human situation he had failed to diagnose. Short and stocky but very erect, quick-eyed and rapid of manner, and with a wide expressive mouth, he spoke earnestly of his plans; but his eyes flashed and his mouth set, as he rapped out, " They keep putting off, yet they leave the people in houses *not fit for Kaffirs*! " The question, " What objective inspired—or misled—Leverhulme to buy the Island? " is answered by his son and biographer.[1]

• 159 By 1917 Leverhulme had felt it was time to devolve
423 his personal authority over his business, in the interests
433 of its future. Hence he looked about him for an estate in which he could exercise " his passion for changing the face of nature ", and his eagerness for ' planning ' with drawing board and T-square, and for philanthropy.[2] He nearly bought an estate in the Midlands in order to develop it; but work had already begun there, and he wished to find a place which would be his to remodel from the start. Thirty years before, Leverhulme had visited Lewis and now in 1917 he spent a week there, motoring all over the Island. " He was enraptured . . . he saw not merely a countryside in need of more and better roads, not only a residence and grounds capable of alteration and improvement, but a problem to be solved, a human and racial problem which had so far baffled all who had tried to solve it. . . . He had been told the Lewis man was lazy,

(113) [1] Leverhulme (2nd Viscount), *Leverhulme: By His Son*, 1927, chap. xxvi, p. 221 ff. Lord Leverhulme, who had thought of styling himself ' Of the Isles ' took the title ' Of the Lews '.
[2] Leverhulme (1927), cf. pp. 81-86.

159 stubborn and suspicious; he never believed it. He realised
423 that the backwardness of the Island arose from lack of
opportunity, and that opportunity he would do his best
433 to provide. Wherever he went he found the same story
—things half attempted, nothing done." Leverhulme, one felt in 1919, wanted to do all he could for the Islanders. A greater man would have wanted to work not only for, but with, the Islanders. Then, even if the fisheries had been ruined, as they were, by forces outside his control, he would have shared a moral victory, not shared and suffered economic loss, with moral defeat.

174 In the Isles for centuries before, a family and well-tried
183 friends were valued above all other things. What was more,
this was still true in the lifetime both of the elder men and
[178] the women he found at home, and of the absent men, at
war. The foundation for this friendly life was a plot of
159 land and work to do, a home and the leisure to enjoy it.
433 Leverhulme, too, valued these things in his own way. He
cared for human homes and gardens, and had proved it at
461 Port Sunlight and elsewhere. A pioneer of industry and efficiency, he pled for 'a six-hour day' and leisure afterwards, and he had done much to realise the ideal in his own works. Moreover, he was not without respect for spiritual values, freedom, and a congregation's right to choose their pastor.[1] All these things should have helped to put him into sympathy with Island life, and up to a point they did so.

159 It is clear that Leverhulme had considered the possi-
433 bilities of improving the local fisheries, village by village;
and an engineer had reported on possible harbour improve-
228 ments at Ness, Barvas, and elsewhere. But he came to the

[1] Leverhulme (1927), p. 211; and Leverhulme (1st Baron), *The Six-Hour Day and Other Industrial Questions*, 1919.

• 159 conclusion—undoubtedly a sound one—that the most
433 effective action for commercial fisheries (as then known)
228 must be taken at one Island centre, Stornoway. As a direct result he considered how to feed the growing town, in particular how to give its children fresh milk. He saw the farms round Broad Bay ready to be turned to high-class dairy farms, if capitalised, and for this purpose they were swiftly scheduled in his mind.

159 "His early days were happy ones"—wrote his son—
433 "but they were not to last for long. He encountered the
423 first obstacle on his path in the late summer of 1918, when the Scottish Board of Agriculture declared its intention to
[647] take over the few remaining farms in the Island for crofts." By this declaration the Board spoke for many Islesmen in the Forces. The voices of Servicemen, not those of either a Government or a philanthropic millionaire, counted over-
[927] whelmingly, on the Island and beyond. When the war was over and the men came home, many set about examining their boats and fitting them up with motors, and in a few months the evening's departure for the fishing from Stornoway had lost some of the picturesqueness of the old, stately procession of sail moving out to the Minch at sunset, but had gained in efficiency as the motorised boats went puffing out to find the shoals, sure of return without delay after the catch was hauled in. Yet fishing was still precarious: there might be no catch, and even if there were, prices were a gamble. Hence many a cottar-fisherman wished to ensure a home for himself and applied for a croft, with his eyes on the farms. Farms were few, and not enough to go round more than some 10 to 15 per cent of squatters and cottars. Still, a promise is a promise: the farms were there, why not have them and be done with it? Knowing this feeling in the Island, aware of its support

• 159 in the country, and foreseeing that the only sure way to
423 avoid irritation, friction and law-breaking was to grant
the farms and have done with it, the Secretary of State for
433 Scotland and the Board felt that they could not withdraw the Government's promise of land. The Secretary for Scotland, Mr. Munro (later Lord Alness), spoke with knowledge as a Highlander. A general promise of small-holdings had been made to all Scotsmen in the Services, and could not easily be set aside at the wish of one man, then approaching the age of seventy, however well-intentioned, wealthy and in earnest. Yet Leverhulme declared that while he would relinquish farms on the west side of Lewis, his schemes could not go on unless he retained the farms on Broad Bay to supply fresh milk for Stornoway. If the farms were divided, he said, he must close the whole scheme forthwith.

159 Of his earnestness Leverhulme left no doubt. He not
423 only planned but set up a retail agency, Mac Fisheries, and
433 he purchased drifters and trawlers, the Mac Line, to fish far afield and bring the catch to Stornoway, there to be
228 transhipped by his own carrying service. He set about building model dwellings in Stornoway itself, each with its quarter-acre allotment. 'Work and Wages' from capitalised fisheries were his offer, in further token of which, road-making and other wage-providing work was
[178] begun. Until 1920 the farms remained undivided. The farmers, for their part, could only wait for the expiry of
159 their leases, or for the transactions by which their leases
423 would be foreclosed and compensation awarded. Prices of stock were high at the time, and the valuation would
433 correspond to these. Hence tenants felt they could afford to wait. Meantime crofters' stock wandered over their
429 farms—whether because of the wilfulness of the stock or

• 159 of the owners—but farmers knew it was futile to protest,
423 and they suffered with a wry smile and a shrug of the
433 shoulders. After all, most of the farmers had stayed at home and their affairs had prospered, in war-time; whereas
427 all but the older crofters had had years of seafaring or fighting, and the nation's debt to them had not yet been forgotten. The farmers kept quiet and waited.

159 Meantime, Leverhulme made public war upon the
Government. Speaking in Edinburgh in November 1919,
668 he declared that "Reports, thick as leaves in Vallombrosa,
433 have been the dominating feature of Government policy in the Highlands and Isles . . . but the invariable rule seems to have been, whenever expenditure of public money was recommended, for the Government either to ignore such reports or to cut down expenditure so penuriously as only to result in waste . . . by not spending to the full amount . . . Lewis and Harris have too long been
[213] the Cinderella in the Government pantomime."[1] The crofters, reading this in the daily papers, and again in the weekly *Stornoway Gazette* a day or two later, chuckled with glee, rolling the phrases on their tongues. They might not all have been able to explain the strange words, like Vallombrosa or Cinderella, though they sounded fine; but all had heard of pantomimes, and some might even have seen one, without saying too much about it to the minister. About 'penurious expenditure' they could have no doubt. Yes, a fine speech, they felt! Yet in spite of the sting of truth contained in such orations, these did not make it easier for Government to co-operate with the orator, to prevent raiding or to deal with it should it begin.

000 Raiding did begin in the spring of 1920. Applicants

[1] Lecture at Edin. Phil. Instn., 1920. Quoted in Leverhulme (1927).

Lord Leverhulme's fisheries

The era of Lord Leverhulme, the soap magnate, is well documented; a complicated story and not yet told in full. The confrontation of a dynamic industrialist from England with the deep-thinking crofter of Lewis has formed the subject of much speculation, particularly with regard to the non-success—rather than failure—of Leverhulme's schemes for the island. Leverhulme bought Lewis in 1918. He had visited the island about twenty years before and had no doubt thought that with proper direction and adequate capital much could be done to bring it out into a fresh, lively economic air, profitable both to himself and the inhabitants. He was a visionary; but he was also a practical man, with great successes in the commercial world to prove it. In 1919, contracts were placed with Sir Robert MacAlpine Limited to begin operations in Stornoway: excavating, levelling and building in preparation for the new town and its factories. The Leverhulme Syndicate bought deep-sea trawlers in Aberdeen, Hull, Fleetwood and other ports, and also retail fish shops in many towns on the mainland. This side of the enterprise was known as The Mac Fisheries Limited, and the island developments were under the direction of the 'Lewis & Harris Welfare & Development Company Limited'.

Leverhulme's main idea was to establish Stornoway as the centre of a great fishing and fish-processing industry. As he put it, acre for acre the seas surrounding the Hebrides were infinitely richer than the land. He maintained that in any programme for the improvement of the islanders' economic position, fishing must become their primary if not their only activity. Such, however, was the land hunger of returning ex-servicemen that his attentions were almost wholly given over to trying to persuade those wanting crofts that they would be, materially at least, better off in his canning factories. But farms were broken up to satisfy the demand for land until the time came when Leverhulme felt he had to abandon Lewis. The Board of Agriculture and the Scottish Office were also principal actors in the play, mostly on the side of the land raiders who squatted on farm land in the island so causing the farms' eventual fragmentation into small units of economic insignificance. When he pulled out of Lewis to go south to Harris,

LORD LEVERHULME'S FISHERIES

When he pulled out of Lewis to go south to Harris, he offered—such was the character of the man—as thanks for the '98 per cent support' he got from the people of Lewis, to each Lewis crofter his own croft as a free gift, and the Lews Castle, together with all his property in Stornoway, to the people of the town.

In 1919, Leverhulme became proprietor of Harris, and concentrated his efforts in Obbe, now called Leverburgh, in South Harris. The harbour at Obbe lacked the natural advantage which Stornoway had, so he spent large sums on making it navigable. Rocky obstacles were blasted away; numerous buoys and beacons were set up to guide vessels into harbour; new quays were built; and kippering sheds, and other buildings necessary for packing and curing herring were erected. Among his other undertakings in Harris were the provision of a mill for making tweeds, and he bore half the cost of the 5½ miles of road between Leverburgh and Finsbay. In 1925, after a visit to the Congo, he died in Brussels. His Harris schemes came to an abrupt end. And the remains of industrial history are still to be seen in the quietness of the little township named after one of the most stormy of business petrels that Britain has ever seen.

Tourism

Tourism has always been a perfunctory and casual affair, until the introduction of the fast ferries which now link the mainland (via Skye) with the Outer Isles. Some 10,000 cars cross each year from Skye to the Hebrides. In 1913, the Stornoway Tourist Association had a struggle to increase the number of visitors to the town, to establish it as a tourist resort. It is much the same today with the Western Isles Tourist Association, which is having difficulty in integrating tourist facilities with crofting activities. In Lewis, the Stornoway Trust has assisted in establishing pony-trekking, a venture which has the potential to mirror the success of a similar one in the Isle of Skye.

PRESENT INDUSTRY

Almost an echo of the kelp-burning industry is the alginate industry. It provides employment for only small numbers, but is a

1

6

There are 144 crofts in the village (nine of which, in South Shawbost, were added after the turn of the century by non-crofters encamped on common grazing land who applied to the landlord for crofter status). Thirty-four (almost a quarter) of these crofts are vacant; that is, the holders of the crofts live elsewhere. One of the vacant crofts is used by its absentee tenant for holidays, and one sports a trailer (called a "caravan" in Britain) which may be rented to tourists during the summer. The rest are cultivated or used for grazing by crofters or non-crofters in the village who by inheritance or by formal or informal subletting have gained use of the land.

A little over half of the crofts are worked as individual units; 44% of the crofts are worked as combined units of two and three. Twenty-four men have the use of two crofts each, and five men the use of three crofts each.

A feature of crofting townships usually emphasized is their disproportionately large number of aged people and small number of young people, who tend to migrate to the cities. An age-sex "population pyramid" of the Highlands is not a pyramid but a top-heavy hourglass (see Table I).[1] Most persons of child-bearing age have migrated from the area and the number of children is

[1] [See p.vii--Analyst]

•16 accordingly small. In Lewis in 1970, 211 babies were born, and 264 people died. In the 1961 national census, Shawbost had a population of 598; ten years later, the population was only 515. The significant community of interaction, however, includes a much greater number of people than are indicated by these statistics, because the roles which absentee members play in their community are important. The figures in [877] Tables I_A^1 and II_A^2 do not include five males and three females in the 5-14 age category or six males and three females in the 15-24 age category who live away from home during the week to attend schools in Stornoway, but who return home during the weekend and for holidays. [464] The statistics also omit eighteen males and eighteen females in the 15-24 age category; fifteen males and seven females in the 25-34 age category; four males between 35 and 44, and two males and two females between 45 and 54 who are away from the village working but are as yet unmarried. These temporary exiles return for long or short periods of time, to weave or work in the mill, to care for aged parents, and to vary their diet of living until they become restless and set off again. [52] Their roots are in the village, and during the times when they are physically absent they are kept alive in ooo the electrical storm of the village gossip system. To

^1_A, ^2_A, [See pp. vii-viii respectively--Analyst]

Lewis and Harris

175 favour of sheep farmers, in Lewis there had been very few
236 evictions. Early in the days of the sheep-farming boom,
427 one of the Seaforths had been offered 'double rents', and refused them rather than turn the people away. Later on, when the wars were over, and when the Seaforth fortunes were failing, subtenants and their cattle had been replaced by sheep stock in three tacks around Broad Bay (at Coll and Gress and at Aignish at the base of Eye [731] Peninsula). The failure of kelp-burning and the potato famine brought acute want in rocky parts of the Isle, and led to the desertion of their homes by certain communities.
175 In 1863, out of a total of forty crofters in a township of
• 16 Barvas parish, more than half emigrated by help of Sir James Matheson. Local resettlement was aided by Sir [423] James, who provided horses and implements for Uig people who moved to Shawbost (6 miles north of Loch Roag). Abandoned places became farms; and although agricultural prices fell and Sir James made little profit from the erection of buildings and the drainage, dyking and fencing on farms, land was improved, and better stock was bred, of which some was available to improve that of crofters,
175 too. Twenty years later, however, increasing numbers
427 increased the demand for crofts, and the people sought to reoccupy their forebears' land. In this, the Lewismen [171] shared in a widespread movement, extending from the Scottish Isles to Wales and Ireland.

175 As a result of the real sufferings of the people in the
654 Highlands and Isles, and of the growing interest in the land shown in the country and in Parliament, where Irish [648] members made themselves the crofters' allies, the Government in 1883 appointed a Royal Commission of Enquiry under a fair-minded judge, Lord Napier. As a remedy, the Commissioners recommended measures based upon

4: Moisley et al. K-5 (1959) 1962 ES10 Highland Scots ES10
Uig

161 In the northern townships, stretching from Garynahine to Loch Carloway, quite the
162 reverse is seen. Here there are actually more people now than in 1841 (1,261, c.f. 1,204), although there has been a marked decline since 1891 when 2,106 were enumerated. Thus this area, which had less than one third of Uig's population in 1841, now has more than half. The main change occurred before 1891 and was associated with the prosperity of fishing, both locally and on the east mainland coast, but, in addition, this area did not lose population as rapidly as did Bernera and the southern townships in the 'twenties and 'thirties, nor since 1951, and this can undoubtedly be ascribed to the early establishment, especially in the Carloway district, of Harris Tweed weaving.

TABLE 49

Loss of Population by Districts, 1931 - 1959

	Annual rates: 1931 - 1951	1951 - 1959	Net loss: 1951 - 1959*
Carloway District	0.5%	1.6%	182
East Loch Roag District	0.8%	1.3%	185
Bernera Shore	-	2.9%	28
Bernera Island	1.6%	0.7%	182
Little Loch Roag	1.8%	1.0%	95
Valtos District	1.0%	1.8%	101

Uig Bay District	0.6%	(+0.1%)	12
Mangersta/Brenish	1.8%	2.1%	97

* Immigrant R.A.F. and Ministry of Civil Aviation staff and families are excluded.

Migration

121 One of the objects of our enquiries was to discover something of the processes of population change in recent years. To this end we tried to record some details of migrants,
• 16 from and to the parish since 1939 (see croft record questionnaire, frontispiece to Part I). We also attempted to record war and other casualties away from home. Finally, we recorded natural population changes by extracting details of births and deaths from the official registers for the period October 1939 - December 1958 (the 1959 registers were not available). The results are summarised in table 50.

166 Our record of migration depends on the memories of our informants and cannot be expected to be complete, nor can the 1939 (National Registration) population figure be

ISLAND REGIMENTS

For a number of years it had been the practice for a considerable proportion of the older schoolboys during their attendance at the Secondary School to put in their training with the local body of Territorials—the Ross Mountain Battery. At the School Prize-giving of 1914, these boys attended in their uniform to be ready to go off the same evening by steamer en route for the annual training camp. Before the School re-opened, the Territorial Force was mobilised, and for some of these lads there intervened four long years of toil, of fighting, and of sickness overseas, before they ever saw their homes again.

Later (1938), the unit became the 203rd (Ross) Battery of the 51st (West Highland) Anti-tank Regiment. It was whilst fighting as an anti-tank battery that, with other units of the 51st Division, the men were taken prisoner at St Valery in 1940. Today, after more changes, the battery is the oldest in 540 LAA Regt RA, TA (the Lovat Scouts). In 1960 the Ross Battery received the Freedom of the Burgh of Stornoway in recognition of a century of voluntary service to the community and the nation.

LAND USE AND CROFTING

The history of land use and the crofting system in the Highlands and Islands (see Chapter 5) is full of difficulties. In the older days of the clan system, before the rot set in, though the clan members belonged to the chief, they also belonged to the land and the land to them. In such a climate, the agricultural system, for it was such then, was in a reasonably healthy state; the land was worked to the full. Good land was available for the support of the clan, and as often as not in good years there was ample produce, crops, and livestock, to send south to well-paying markets. That fertile lands abounded is indicated by the reports of visitors in various centuries. But times changed. The increase in population after the breakdown of the clan system by statutory legislation, and the policy of population placement carried out with a rigorous enthusiasm, planted seeds of discontent—in particular a hunger for land. The land was in any case becoming ever more inadequate to support those already on it.

The story of the agrarian troubles in the Highlands area is well

HISTORY

The crofters were in a state of revolt against the accumulation of trends and events which now stood like a high dam against their progress to a higher level of acceptance in the social scene. They stood in open conflict with local and national authority. Unhappy scenes were enacted, many being in complete variance with the natural temperament of the Highlander. Lewis crofters were not far behind with their contribution to the agitation for land reform, though they had perhaps suffered less direct action from landowners than had crofters in the Highlands and southern Islands. But their living conditions had deteriorated. And an inhumanly-efficient factor made for deep unrest.

Land agitation began in Lewis in 1881, and large numbers of Lewis crofters gave evidence before the Napier Commission. This Commission was the result of agitation for an enquiry into crofting conditions in the Highlands. Its setting up relieved a situation of acute tension, though it neither extinguished political agitation nor mitigated the disaffection felt in the more disturbed districts. Under Lord Napier's direction a mass of information was collected. The official findings of the Commission were almost identical with political declarations in the country, but did not altogether coincide with the requirements of the crofters and their spokesmen. The resultant Crofters' Act of 1886 fixed the crofting system into that rigid trance in which agricultural innovation, opportunity for improvement, the social progress of crofting communities are largely lacking. It did give all crofters permanency of tenure, where they had none before, fair rents for the land they had and compensation for improvements. But the old demand for new smallholdings and settlements persisted with greater insistence and further pressure on high political circles.

In 1888, members of the new Crofters Commission visited Lewis and found that poverty was so general in the island that among 607 crofters for whom fair rents were fixed, there were scarcely a dozen who had not been recipients of 'destitution' meal or some other form of relief. The population was too much for the land to support it under the distribution system prevailing. The number of persons per family in 1871 was on average 5·358, as compared with 4·232 on the mainland of Ross and Cromarty, the county of which Lewis formed a part. Thirty years later, in

LAND USE AND CROFTING

1901, the average was only 5·086, the county average being 3·983. The population was still to reach its peak in Lewis, some 30,000, in 1911. Emigration was at a fairly high rate, some 2,000 every decade, but this was no relief with births between 8,000 and 9,000 during the same period. In 1894 it was estimated that the number of cottars (or squatters) as distinct from crofters was in the region of 1,000. These people, mostly relatives of crofters, constituted a serious incubus on every crofting township.

Elsewhere in the Highlands, the enlargement of crofting holdings relieved the land-hunger situation. It was not possible for the same to be done in Lewis, and Harris possessed even less useful land to share out. Many applications were made by crofters either for an increase in their own holdings or an increase in the acreage of common grazings held by each township. Though some 500 acres were in fact handed over by the estate management for crofting purposes, there was a steady refusal to diminish the acreage of farms.

The Congested Districts Board was appointed in 1897, supervising public works to relieve the people of a certain amount of their ills. It carried on until 1912, when it passed into the newly-formed Board of Agriculture. The Congested Districts Board could have achieved much more than it did. It scraped away only a little of the vast problem. The next major landmark in the history of crofting legislation was the Small Landholders (Scotland) Act of 1911. It extended certain provisions introduced for the crofter in 1886, and further increased the class of tenants who benefited by bringing in the tenants of holdings rented at not more than £50 (£30 in Lewis) or not exceeding 50 acres (30 acres in Lewis). The 1911 Act also brought into existence the Scottish Land Court in place of the Crofters Commission. In Lewis, however, the hunger for more land went on unabated and reached a not insignificant peak during the later years of Lord Leverhulme's regime.

A new Crofters Commission was set up in 1955, following on the report of a Commission of Enquiry under the chairmanship of the then Principal T. M. Taylor of Aberdeen University. Fresh provision for the reorganisation, development and regulation of the crofting system in the seven crofting counties of Scotland

ISLAND EMIGRANTS

the MacKenzie River; he was born in Stornoway in 1764, in what was known as Luskentyre House, at the corner of Kenneth Street and Francis, where Martin's Memorial Church now stands. Another MacKenzie, Lt-Col Colin MacKenzie, was born in Stornoway about 1754 and went to Madras in 1772 as a cadet in the Engineer Corps under the East India Company. In India, MacKenzie followed a career of high professional distinction,

[TEXT CONTINUED ON PAGE 157]

Population trends c 1755 to 1961 for the island as a whole; for Lewis, including Stornoway; for Harris; and for Stornoway. The population peak occurred in 1911. The dip in the Stornoway curve was due to the effects of emigration, as is the more pronounced dip in the island curve. Stornoway's curve in 1961 was on the upward trend, due to migration from the landward parts of the island into the town. Over the past 150 years, however, population mobility within the island has been virtually nil; movement has been emigration rather than migration

going concern to a trust which was set up to receive the gift and whose first object is to assist aged and infirm residents in the burgh. In effect, all profits earned by the shop are passed to the trust for distribution to those in need.

Almost half the houses in Stornoway were built by the local authority. The Town Council has never been afraid of rooting out unfit houses. By 1937, under the 1930 Slum Clearance Act, one person in four in the town lived in a council house. The housing schemes, though large, have still that element of community with personality, something often lacking in newly developed areas of other towns and cities. The Council also supports private housing by taking up sites, clearing and servicing them and then feuing them to private owners. The rents policy is to have no housing deficit beyond the statutory rate contribution (which works out at between £6,000 and £7,000 per annum). The Council's tenants co-operate with rent collection to a unique degree: collection figures are something like 99 per cent and on occasion 100 per cent. A vigorous housing policy is important to the town, as its population is now over 5,300 and still growing, mainly at the expense of the rural areas. Development plans at present envisage a 1981 population of about 9,100 persons within the parish boundary and including the burgh.

Stornoway is an island town and is an island's town: its rhythms of life are those of the island, regular and timed by nature, but with an added syncopation—the result of an urban outlook. In this context, Gaelic is the language, though English is the lingua franca. Deeper still in the methods used for communication is a kind of patois based on Gaelicised English, Anglicised Gaelic, with some other words that defy investigation into their origin. Many words find their natural forebears in Scots, American and the maritime tongues of Europe, which might be expected in view of Stornoway's importance as a sea-port of significance a century or two ago. The Stornoway language, as spoken by true-born natives, recognisable anywhere by another native, reflects the life of the cosmopolitan, sea-faring people.

Apart from its industrial opportunities, Stornoway has many of the more sophisticated urban facilities that people everywhere seem to crave, particularly with regard to education. The senior

(2,620 ft); grouped around this are the lesser peaks staring stark and treeless to the skies. At the feet of these hills are the small villages straggled along the shores of West Loch Tarbert. Much of this area is owned by the proprietors of Amhuinnsuidh Castle, a magnificent structure built by the Earl of Dunmore in the last century; the hills lying north of it are rich in red deer. The road past the castle trundles on until it peters out at the far-east village of Hushinish, beside a glorious scimitar-like curve of silver sand. Beyond Hushinish is the Island of Scarp.

The road along the shores of East Loch Tarbert ends at the village of Kyles Scalpay which overlooks Scalpay island. The Bays of Harris hold in their crevices the scattered groups of houses here and there, where an inlet of the rocky coast affords some anchorage and where a patch of ground is suitable for cultivation. Tortuous, winding footpaths have been gradually replaced by narrow roads connecting the townships. Lack of sufficient remunerative employment has led to considerable depopulation. Fifty years ago the population of the area was just over 5,400; it is now about 2,900.

The south of Harris is better known for its association with Lord Leverhulme. Obbe, later Leverburgh, became the centre of his schemes. He built a large pier, huge kippering sheds, houses for the workers, roads and lighthouses, and blasted away underwater rocks which hindered free navigation. The bulk of this work was complete in 1924, but when he died (in 1925) his successors, in the cold light of economics, decided to close down the embryo industry and realise its assets. The harbour works had cost £250,000; they were sold for £5,000 to a demolition company. Leverhulme's memorials are still to be seen. The west coast of Harris is now becoming known for the long stretches of shell sand and the green machar-land beside it, a true delight for the tourist seeking isolation.

Tarbert is the central village in Harris, with a population of about 400. It is a thriving community, nestling at the foot of Beinn an Teanga and at the head of the sheltered anchorage of East Loch Tarbert—sheltered from the prevailing south-westerly winds and from the Atlantic storms. The car ferries give direct contact with the Scottish mainland, via Skye, and Tarbert also

and to show their friends at home, that they had braved the hazardous Atlantic seas to visit St Kilda on the very edge of the world. The tourists were charitable, but this brought a psychological evil in its wake. In 1886, Robert Connel wrote: 'One cannot be long on the island without discovering the great moral injury that tourists and sentimentalists and yachtsmen, with pocketsful of money, are working upon a kindly and simple people.' It was estimated that the islanders collectively derived a profit of 5s from each of the 200 or more tourists who arrived during the short summer.

The new influx of cash into a community which required money as an exchange commodity because the original native produce was becoming less saleable, hastened the decline of effort to be self-supporting. The numbers of seabirds slaughtered steadily fell; paraffin oil replaced the traditional bird oil in St Kildan lamps. The need for daily work, to toil in fellowship with others, was dissipated; the islanders could purchase most of the food they required, provided communications with the mainland were maintained. The population was in any case dwindling, as St Kildans became more aware of 'the other life' available on the mainland of Britain.

Finally, on a misty summer's day in August 1930, at a cost to the nation of little under £1,000, St Kilda was left to the care and keeping of the changeless Atlantic. It is now preserved by the National Trust for Scotland as a crumbling monument to a small human tragedy of a kind that has been repeated, and will be repeated, in other small communities who cannot argue out the case for their survival in terms of economic viability. The island is now occupied by military personnel in connection with the Hebridean rocket range on South Uist.

St Kildans were described by Dean Monro, in 1549, as 'simple, poor folk, scarece learned in any religion'. In 1698, Martin Martin published *A Late Voyage to St Kilda*. He went there in the company of a minister who had been summoned to the island to denounce a certain false prophet who had risen among the 180 inhabitants (pretending he was an emissary of St John the Baptist). Martin found, as did later visitors, that the island economy and the quality of its life were closely dependent upon its birds,

3. *Age-Groups in Scotland and the Isles*

In Fig. 13 (*a*, *b*, *c*, and *d*) are shown four pyramids of population for comparison of an 'ideal' or theoretical

FIG. 13.—Four age-group pyramids. Each of the four, five-yearly age-groupings (in black) may be compared with the 'ideal' age-grouping (broken line).

projection in Scotland with the actual age-groups in rural or 'landward' Lewis and all Scotland in 1931 and 1951.[1]

[1] The 'ideal' pyramid (drawn from Scottish Life Tables) represents a population, unaffected by migration, of which the birth and death rates for each age-group in Scotland are as in 1931. Since 1931 health in Scotland

In the pyramid for rural Lewis (b) the differences are striking, and are mainly due to two factors: the 'natural' ratio of births to deaths, and migration. Beginning from the bottom of the pyramid, it will be seen that in 1931 there were fewer infants (from 0–5 years) than children from 5–10 years, fewer in fact than in the three older age-groups. In 1951 (c), the birth rate having risen sharply after the war and preceding depression, infants formed a much larger ratio (over 5 per cent).

In rural Lewis, emigration asserted itself earliest with girls, as they left the Island chiefly for domestic service; but soon after the age of 20 as many young men left as young women. In 1931 the discrepancy was most marked from the age of 30 to 35. This was further accentuated by the heavy death-roll among the younger men during the 1914–18 war, deaths having totalled more than 1100, perhaps the heaviest proportionate loss in the Empire. Only when they marry and return, permanently or for a period, to the croft (vacated it may be by the death of a parent), do the numbers of men tend to balance those of women. Thereafter the falling away among men is due to their shorter life expectation.

In 1951 National Service had drawn away lads of 18 to 20, so that the difference between the sexes is much less marked in the 15–19 age-group than it was in 1931. Mortality in the 1914–18 war contributes to the shortage of men between 50 and 55 in 1951, and the mortality of the 1939–45 war has also left its trace—or the birth rate would have been still higher (always excluding the factor of migration). For the men, those jobs not requiring per-

has improved, but detailed analytical statistics for 1951 were not available by 1954. Allowances being made for the effects of the wars, for the high ratio of births immediately after, and for emigration from Lewis after 1949, the age-grouping in the island changed but little from 1931.

manent absence from the Island are chiefly the Merchant Service and hydro-electric contracts, and for the women hotel and domestic service, nursing and fish-curing. The ultimate return of many men after prolonged absence contributes to the higher proportion of men of retired and pensionable age (16 per cent in rural Lewis, 11 in Stornoway and 10 in Scotland). What could not be shown on either pyramid for Lewis is the high ratio of unmarried women, owing to the losses of the war, to migration, and to the need for a daughter to devote herself to ageing parents on the croft. The ratio of widows, with or without children, is also considerable, for all three reasons, as well as a fourth, the desirability for an island home, rather than a city, as a place in which to bring up fatherless children.

Turning now to Scotland (b) (d), the same tendencies are seen as in Lewis, though in less extreme form. The difference is of quantity rather than of kind: somewhat as Lewis had lost her men to Scotland mainly, so Scotland had lost to England and beyond. On an average, mothers in Lewis have more children than mothers in Scotland, and still more so than in England. Thus the facts of population in the Island do not suggest a voluntary extinction of its community, but rather the will to live.

000 is the northernmost island in the Outer Hebrides (see
•161 Map B). The population is concentrated along the
162
361 coast, like a hat-brim around the great inner core
of the island's heather-covered bogland, a population
belt classified as "dense rural" (50-400 persons per
[226] square mile) in a map based on the 1951 census. The
pattern of land settlement reflects the importance of
fishing in the economy of the island.

131 Lewis lies between 6°10' and 7°20' west longitude,
and between 47°50' and 58°30' north latitude. Lewis
131 is as far north as Newfoundland and farther north than
132 Mongolia, but the temperature is mild because of the
North Atlantic Drift, or Gulf Stream, which passes the
132 west coast of Scotland. The temperature averages 55°F.
in summer, and 44°F. in January. A constant climatic
feature of life on the treeless island is the wind, a
relentless, insidious presence which often reaches gale
force. Winds of 60 m.p.h. and more are common.

Rain, which comes in downpours or light mist,
[133] averages 55 to 65 inches per year. The water may be
held in colloidal suspension with decomposed organic
matter in the compact, spongy material called peat, or
pour as rivers and streams off the island's shelf of
131 non-porous Archaean gneiss into the sea. Of Lewis'
133 total area of 437,200 acres, inland water comprises
24,863 acres.

000 24,863 acres. The value of this boggy property, as
423 far as the landlords are concerned, is determined by
427
226 its fishing potential. The landlords generally reside
away from their property, and brave the buffeting gales
several times a year to return to fish for trout and
[463] salmon. For the rest of the year they hire river-
[685] watchers to prevent their tenants from poaching. As
[191] in Wales (Emmett 1964), the islanders continue to poach,
in part as an expression of their identity as independ-
ent countrymen, a minority group in a nation-state.

•161 Lewis is the most populated area in the Outer
162 Hebrides, containing 21,934 of the 32,607 Outer Hebrides
634 numbered in the 1961 census. It is part of the County
of Ross and Cromarty, whose headquarters are on the
632 mainland near Inverness. Lewis has four administrative
areas called civil parishes in which births, deaths
and other vital statistics are recorded. Stornoway
[197] parish is the largest, containing the town of Stornoway
on the east side of the island in which many non-Gaelic
speakers live. Of the other three parishes, the largest
[162] is Barvas which stretches along the west side of the
[197] island and contains 4,331 persons, of whom 94.6% are
Gaelic speakers. The people of Stornoway refer to someo
[186] from the west side as a <u>siarach</u> (west-sider), a term
which connotes rusticity.

175 Around this time, various factors had encouraged
• [161] an increase in population. After Scotland's union with England in 1707, the prohibition on the import of cattle into England was lifted, and trade in cattle became economically more important (Day 1918: 26). The numerous wars of this period caused the price of cattle to double between 1736 and 1766 (Day 1918: 180). Clan warfare diminished; the potato was introduced; and vaccine for smallpox became available.

175 The increase in population led to an extreme
161 crowding of land in some areas, which made agricultural
[166] reform difficult. Many landlords tried to encourage tenants of their estates to emigrate. The appearance of a market for kelp, which lasted from the middle of the 18th century to about 1815, discouraged landlords from implementing policies of depopulation that would
175 diminish their labor force. An alkaline extract of
824 kelp was used in a variety of manufactured goods, such
323 as soap and glass. The seaweed was gathered by men,
388 women and children living along the coasts, and burned in rough open kilns. Tenants who worked at this
[465] occupation received L3-4, and the landlords L18-20, per ton (Mackinlay 1878: vii); the landlord received as high an income as L10,000 to L20,000 a year from the burning of kelp (Gray 1957: 42).

175 Factors which led to further crowding were the
423 development of industry and an increased demand for
427 wool in the south, which occurred when traditional
• [161] ties between laird and tenant had been loosened. The clans had been disbanded after the Jacobite rebellions of 1715 and 1745; those landlords who had not forfeited their estates received huge sums of money as compensation for the abolition of hereditary jurisdiction. They had experienced travel and the luxuries of other countries, and were not eager to remain on their estates. They accepted the huge rents offered to them by sheep farmers to the south, and turned vast amounts of land into sheep tracts. Tenants
[361] were crowded together along the seashore, or lived on tiny holdings dispersed among the larger farms or on moorland, earning their living by doing wage labor.

175 Despite the factors which encouraged a high level
423 of population to remain on the land, proprietors
241 attempted to destroy the joint farm with its small,
178 dispersed holdings and collective rights. Run-rig
[656] agriculture was abolished in Argyll in 1776 (Day 1918: 180; Gray 1957: 49), and over the next 80 years it disappeared from the Highlands (cf. Gray 1952: 49-50), to be replaced by townships of compact holdings surrounded by undivided hill grazing lands.

11 ISLAND LIFE

As one might expect with an island that is not obviously surrounded with water, life in Harris and Lewis is lived out by an amalgam of communities somewhat similar to those found in very large cities, with defineable districts and recognisable boundaries. The island is too large for any physical feature to demonstrate that it is unconnected with a larger land mass. One looks to the horizon, down the coasts, at the satellite islands, and concludes that if indeed it is an island, the separate elements which combine to make an islander must be found elesewhere than in the landscape. And so they are: in the people, their way of living, their economic problems, their attitudes, and their own consciousness of the fact that distance over the hills and the moors to the sea is significant, in that one eventually comes to the end of a road or track; or that a river or stream runs itself out for ever into the sea. Harris and Lewis is the biggest of all the 'small' islands off the shores of Britain, and has been fortunate in its size: large enough to support a significant number of people who, despite emigration, have managed to maintain their numbers reasonably well and who are now making efforts to reduce emigration and its effects on the island communities to a bearable level.

Because it is an island, however, external influences are felt like cold winter winds. The 1966 seamen's strike was an example; Government intervention was needed to supply essential goods. After the strike many questions were asked. All had their roots in the island's dependence on the outside for not a few of the necessities which could be produced on Harris and Lewis itself, with either its own resources or the resourcefulness of the island folk. To be short of fish, for instance—and this occurred—while the seas around the island were teeming, was unhappy history repeating itself, a harking back to former times when starvation levels could have been avoided by looking around for the means to harvest the crop lying around. The strike also threw into relief the question of the viability of crofting as a full-time occupation.

line; and there can be no doubt of the contrast found at the extremes. How strikingly different from any view over the English Plain is this, from the air or a mountain-top! It overlooks the ice-scraped rock of the fells; the drift-heaped, ill-drained hollows studded with gleaming lochs and deeply overgrown with peat; and the indented, insular coastline with its widely spaced crofting townships looking seaward, where a few fishers' sails may dot the vast expanse of ocean. In 1951 the population of Lewis-and-Harris numbered only 28,000 persons, and that of the entire Outer Hebrides some 36,000; but the small numbers need not lessen the geographical significance of the community.

Men have long recognised the homogeneity of the English 'Plain', with its recurring vale and wold, compact within a rounded coastline. In spite of the local variety of landscape, history or dialect, which enriched its heritage and compose its grandeur and charm, men have sensed the unity inherent in this land of a single tongue, centred upon a single capital. By contrast, the diversities in landscape, life and tongues of the lands far-flung to north and west have obscured the elements of a profound, underlying unity in geographic origins and in historic and social evolution. To understand the civilisation of the British Isles, it is vital first to perceive the complementary qualities found in the two great regions, and face their corresponding weaknesses or limitations. Second, within the less understood of the two regions, 'the North and West', it is vital to study the almost bewildering variety in regional types of life—distinguishing, for instance, the uprooted populations all too typical of the rural Lowlands of Scotland or Northumberland from the still deep-rooted communities of the Highlands and Isles.

2. *From Black House to White House*

342 Discontent with the old black house grew with the
177 knowledge and experience of better housing in Stornoway
178 and on the mainland. The congestion which developed
during the nineteenth century meant that often one house
175 was fouled by another above it, leading to typhoid epi-
342 demics. While the smoky atmosphere of the 'black
houses' inflamed the eyes and irritated the respiratory
161 system, the roof was high and the fire kept the air in
164 motion by day, ventilating it to the chimney hole, while
the lack of glass often made it necessary to work with the
[354] door open. The ravages of tuberculosis came towards the
end of the nineteenth century, when Islanders went to our
crowded towns and, not being immunised, were danger-
ously infected. Returning home, too often to linger and
die in a house now provided with tiny, fixed panes which
permitted a closed door and made it stuffier than before,
178 patients spread infection. Flight to a tiny, air-tight
342 wooden cabin or to a small white house of stone and lime
often followed. The availability for the first time of planks
[313] and timber, a certain practice in boat-repairing, and pos-
[177] sibly acquaintance at first- or second-hand with Canadian
wooden houses, may have influenced the choice of wood.
The early 'white' houses, with an attic lit by skylight,
were airtight, for the windows were too often fixed or only
[354] opened at the bottom. The door was left open in warm
weather, but it was not high enough to allow the escape
of the stale, upper layer of air which the women breathed
as they did their cooking and baking.

342 In the inter-war period, particularly in its last decade,
746 the 'black house' was being abandoned, not for something
178 worse, but far better. The Government-aided houses have
656

175 which heartened them for resistance in common against
829 landlord and State, both in the agitation for reform of the
Land Laws during the next ten years and in their demands
for 'the return' of sheep farms to crofting, which continued
until all these were divided soon after 1919 and the ex-
Servicemen's return.

175 Expenditure of capital in Lewis during more than a
generation, from the purchase of the estate in 1844 down
423 to the death of Sir James in 1878, helped to maintain the
646 people and provide relief in bad seasons. It left Lewis
greatly improved in roads and paths, in sea communica-
175 tions and in buildings of various sorts. Two real efforts had
been made to utilise Lewis peat, industrially for paraffin
646 oil, and agriculturally by reclamation. Given the resources
311 and knowledge of a century ago, these attempts did their
[161] initiator credit. Yet failure left the Islanders to continue
crofting without either an additional occupation or the
extension of croft land, even at the high population density
(per acre of arable) which Matheson had found on his
purchase in 1844.

175 Subdivision of crofts was the first result. A father
423 would simply divide his croft between himself and a son,
who might not even be entered on the rent-roll of the
estate, and the two would inevitably need more stock than
before upon the common. The second result was simply
'squatting': the building of a house, perhaps with a tiny
kailyard, on a piece of the 'skinned' land. As building
went on overcrowding old sites, filth accumulated and
springs were contaminated, crofting was hindered and cows
became fewer per family, in spite of overstocking. By
1886 about two-thirds the number of the cottars and
squatters found in 1914 were already in occupation. In
1914 there were over 3000 statutory crofts in Lewis, their

175 for a firmer hold upon the land and for a return to aban-
178 doned sites. The communal possession of joint farms, held
433 directly or under tacksmen, gave place to individual pos-
[731] session of crofts. Yet the legal recognition of perpetua
[166] tenure in 1886 gave not only the crofter's home but the
[167] crofting neighbourhood a security unequalled in Britain.
The use of moor and machar in common was retained
but its control for improvement or reclamation by the
175 estate or the township was weakened, rather than strength-
178 ened, by the Crofters' Acts. Confusion grew—both upon
the arable land, subdivided, unenlarged and unimproved
423 and also upon the common grazing, sorely overstocked in
427 spite of ever diminishing 'soumings' (or family shares) of
cattle. Rating difficulties and anomalies appeared. Com-
munal discipline, maintained at sea by fishing, was weak-
ened on land after the abolition of the joint farm-group,
and almost nullified in the townships by subdivision and
squatting.

175 A year before the potato famine of 1845, a new landlord
178 had brought good-will, capital and pioneering effort to
433 Lewis. These had been directed to experiments in the
reclamation and the industrial utilisation of deep peat.
[427] Helped by employment on these and other works, the
[311] population of Lewis continued to increase, when increase
in Harris was arrested for a generation. Yet while neither
[161] experiment with peat met with success, little aid had been
given to develop fisheries. In both parts of the Island a
growing population was supported from the 'seventies
onwards by help of earnings derived from the seasonal
herring fishing on the East Coast and from inshore line
fishing at home. Women added to the Island income by
seasonal 'gutting' and, in Harris, by their spinning and
[167] weaving. Money was earned by work on the mainland,

rural Islanders throughout the nineteenth century and even today.

From 1887 the State made efforts to improve the crofters' lot. Crofters' claims to stake shares upon the only available reclaimed land in the Island, that of a few farms, had been refused in the 'eighties, but came to be granted, in principle and in fact, after 1900. During the war of 1914–18 the Government reaffirmed its promise to divide sheep farms into crofts for men returning from the Services, and the Land Settlement Act became law in 1919. Yet in spite of tentative experiments and schemes, a determined effort to see the Island possibilities and face its problems, as a whole, still remained to be made in the twentieth century.

When war broke out in 1914 over 5000 men left Lewis to join the Services, and corresponding numbers left from Harris. Others, too, served in the Merchant Marine, exposed to U-boat warfare. From the first months of the war, Lewismen in the Seaforth Highlanders, and men from Harris in the Camerons, fought in the Highland Division as shock troops in the attacks which cost the Division the highest casualties of any in the British Army. The Lovat Scouts, the Mountain Battery, the Garrison Artillery and other units, also enrolled their men, and suffered loss. The last blow to the Island came after anxiety had ceased. Early in 1919 the transport *Iolaire* struck a rock and sank at the entrance to Stornoway harbour; and 200 men who had withstood dangers and hardships during four years of war went down in the dark of a winter's night, almost within call of their waiting relatives massed on the pier to welcome them.

illustrates the narrow margin of habitability on these fragmented holdings.

Now, in Lewis periodic pooling and exchange, or the practice of *movable* run-rig on the small joint-tenants' farms, was abolished early in the nineteenth century, except upon the machar, where it still continues. Apparently the strips were simply fixed where they had last been apportioned by lot. Subdivision of the little crofts among sons and grandsons followed, owing to inheritance without reclamation. Fairness gave 'the patchwork quilt' described; but it was fairness pushed to the point of folly, for differences in soil from one adjacent strip to another were slight! It is otherwise with the long, narrow plough-strips which run from the houses on the pure boulder clay down to the sandy shore: run-rig, movable or fixed, is understandable and necessary there. The case just cited shows how a sensible communal tradition, such as that of '*movable* run-rig' with periodic pooling, may degenerate into absurdity by fixation. Happily the machar still shows the sane maintenance of a tradition, the pooling of resources:[1]

In 1924–25, widespread distress in the Isles, the failure of the Leverhulme endeavour, the crofters' refusal to own their own crofts, and the emigration which followed, caused many outsiders to forecast rapid depopulation. It was all the more interesting to note the confidence in the Island's future shown by buyers of the great estate, all of whom knew what they were about, for they were men with experience of the Island, of its rates and rentals and of its people. To a wealthy man who repurchased a sporting

[1] Apportionment of lands held in run-rig in the Carloway estate is described, and the principle discussed, in *Scottish Land Court Reports*. (See *Scottish Law Rev.* vol. 28, 7; July 1940, pp. 51-54.) At the same time 'mechanisation', or the co-operative utilisation of tractors had led to pleas for 'collective farming'. (*Stornoway Gazette*, February 1944.)

CH. X BETWEEN TWO WARS, AND AFTER

182 161 470 471 124 estate, or where a single lodge was bought as a home for retirement, depopulation might not matter. Certain population-lated parishes, however, were bought as investments by men of comparatively modest means. The principal reasons for his purchase given to me by a retired man, formerly connected with the administration of the Lewis estate, were two. Asked if he had found, and expected, steady, remunerative payment of rent, he replied: "Certainly!" Next, in view of Press forecasts of general emigration, I referred to the fact that if large numbers of crofters decided to give a year's legal notice of departure and apply for compensation for improvements, including the erection of a' white house' (otherwise than by Government aid), the landowner would be faced by heavy liabilities while deprived of income. Had the purchaser no fear of such an eventuality? "Certainly not!" was the reply, "the crofters will stick to their homes for many a long year."

These examples show that, while the defeat, or non-realisation of Leverhulme's schemes, seemed to many, not 829 458 unlike the beginning of a not distant 'end' to the Island community, the Islanders themselves did not contemplate a final exodus. They were quite uncertain what was to come, it is true. Who was not, in those years of discouragement for Scotland and her people, for Wales, for Tyneside and Lancashire? The years of Leverhulme's departure from Lewis and of his death brought bad seasons. In 1924 storms destroyed crops and the great herring shoals and prices, though they had risen a little since 1921-22, had not allowed recovery from the losses sustained. The cessation of Leverhulme's wage-payments meant a gap in income which the Islanders could not fill [195] at home. To relieve poverty in 1924-25, a Highlands and

CH. X BETWEEN TWO WARS, AND AFTER

288 651 646 439 458 value' is important, is an appreciable dollar-earning asset; and because of the fluctuating export market, its manufacturing must be stabilised by sales at home.

These and other facts support the plea that if some share of taxation had to be imposed in the national interest, it should have been done by steps, by permit of readjustment in manufacturing and of adaptation to the carefully fostered market. What seems indefensible, even in the national interest, was the imposition of the full 66⅔ purchase tax. As a result of this blow, the crofter's web could not be sold, and lay, a prey to moths, in his home, while the mill-owner's stock piled up in the warehouse. 'Hand-looms', newly bought or partly paid for, lay rusting in the sheds and the machinery of the mills stood idle. The hand-weavers with their helpers and the employees in the mills, their savings spent, began to seek work beyond the Island. As the census of April 1951 has shown, the population has been falling as workers trickled away by every steamer. Some adjustment was made, it is true, late in 1951; but the case of the small independent weaver remained as hard as ever.

288 433 [651] The amount of tweed stamped with the Orb Trade Mark, which diminished slowly from 4,464,000 standard yards in 1948 to 4,101,000 in 1949 and 3,780,000 in 1950, fell when the tax was imposed to 2,800,000 in 1951. In 1952 there was a recovery, maintained in 1953. Over 5,000,000 yards will have been stamped in 1954.

APPENDIX I

434 [651] difference between the issues and the payments in rural areas 647 (£28,000 as against £13,000) is no doubt due to orders drawn 367 to pay accounts. In this connection, a comparison of conditions at an interval of nine years is suggestive for any attempt to distinguish the difference between rural incomes before and after the economic depression. In rural Lewis the total Dorator payments fell from over £33,000 in 1928-29 to barely £22,000 in 1937-38, a fall of more than a third. Although a decline in the payment of Money Orders in Stornoway was partly offset by an increase in that of Postal Orders there, it is thought that even this reflects a fall in the cash available in the townships, by indicating a fall in the average amount of accounts paid by country customers to Stornoway tradesmen. Even here, it is true, some allowances must be made, as latterly more shopping was done by customers coming into Stornoway by car and probably paying to a greater extent in cash.

[651] Comparisons may now be made, for all the data quoted, between Stornoway and the rural or 'landward' areas of Lewis, and also between landward parishes for all except the Unemployment payments. Population having changed but [161] little from 1931 to 1938, and economic conditions not being very different in the Island in the financial years 1936 and 1937-38, an approximation can be made of payments averaged per head of population. In the following table these are shown in £ sterling to one decimal place.

Average Payments (per Head per Annum)

	Stornoway Burgh	Stornoway Landward	Barvas	Lochs	Uig	Average Landward
	£	£	£	£	£	£
(a) Allowances and Pensions	10·2	3·3	4·0	3·9	5·9	3·9
(b) Unemployment Payments	2·6	..	..	..	..	5·1
(c) Money and Postal Orders	(8·4)	1·0	0·9	1·2	1·3	1·1
Total	..	..	..	..	..	10·1

192 The circular, corbelled stone "beehive" huts, some still in good repair, are of uncertain date. The best preserved are on the Morvagh Deer Forest and in Uisinish and Ardroil, which make it almost certain that they were only occupied seasonally; those on the Garyhelm common pasture are provided with asymmetrically placed entrance lintels, and, there, however, need not imply permanent occupation of the site, nor does it solve the problem of age; such huts are certainly old, possibly pre-potato (c. 1710 here) - but the hut does not decay with age and may be very much older.

Early in the eighteenth century the present area of the parish of Uig was held from the Earl of Seaforth (see chief by 26 tacksmen, whose names are recorded in the judicial-rental of 1718, [Fig.4.]). They, respectively, had sub-tenants but of these there is no record. Elsewhere in Lewis the same tacksmen and sub-tenants ruled over the great bulk of the island but in Uig, apparently, the tacksman and sub-tenant system remained intact. Although we cannot be certain of their practice under the Seaforths, we know that the tacksmen fairly well utilized the available agricultural ground [Fig.4.]. Five of them [24] cluster round Uig bay, four were in the Valtos-East area, and three in the Valtos-West of Little Bernera. All seem to have reached together they accounted for three quarters of the meal and more than half the sheep and money rents. What is more, these rents represented 27% of the total rental of Lewis, whereas by 1887 Uig yielded only 17% of the rental and by 1901 the proportion was reduced to 14%. The relative decline in Uig is largely due to the growth of Stornoway; this adds to the centre of gravity of Lewis [178] [24] [167] [161] [163] [163] [163

Congestion and Sub-division.

195 The crofting population of Uig started the second half of the nineteenth century with
317 far less land than had been occupied by their forebears fifty years before, and, although
146 famine, clearances and emigration had slightly reduced the population between 1841 and
164 1851, (from 3,828 to 3,630) thereafter it again increased, reaching about 4,600 in 1891.
427 Rising agricultural prices after 1850 favoured farmers and crofters alike but, whilst the
farmers prospered the crofters were, relatively, thus multiplied, thus in effect reducing the land
available to each family. In 14 townships recorded in the 1850 sketch book the 273 hold-
ings at that date had become 402 by about 1890, to which should be added a considerable
number of cottars and squatters, many of them keeping stock and some sharing the rent
429 of the croft on which they had built their cottages. Detailed comparison of the rentals
for the two dates shows that the increase had come about in two ways: firstly, it appears
that, from time to time, where a new rent ledger was being made up, the factor would
164 record separately cottars who actually shared the rent of the croft and, secondly, he
162 would recognise and enter some of the squatters who had obtained rent-free (and illegal)
holdings by enclosing and reclaiming the common. The latter were added to the
assuming of the township according to the rent put upon them. Table 5 (page 16),
illustrates the process. The recognition of squatters, usually at £1-£2 per annum, led
to the small increases in total rental. For the rest, the increasing numbers were
caused by subdivision. Only in a few cases does the proprietor seem to have actively
encouraged land reclamation by crofters. On April 17, 1850, four of the families which
had been cleared out of Reef were allowed to settle on the Callanish common near the
Breasclete boundary (hence the settlement became known as "Breasclete Park". Their
rent was fixed at 15/- per acre for five years, thereafter increasing 1/- per annum until
it reached 29/- per acre; they shared, according to their rent, in the Callanish common
pasture. But forty years later one of these crofts had been divided into three, another
into two, and two new ones had been carved out of the common; the total rental had risen
to £13:19/-. Again, when Breasclete was lotted in the spring of 1850, ten new lots were
marked out and the rental is annotated "there are ten young men starting ... these lots
as soon as the season commences". Not it appears to have been too optimistic; few, if
any, of the new lots were ever broken in.

The farms, by contrast, prospered and the proprietor was able to share that prosperity by increasing rents as shown in the table:

TABLE 6

195 427 Farm:	Rental in the period: 1840's	1850's	1860's	1870's
Mealasta	£90	£105	£105	£130
Ardroil	£100	£100	£187	£255
Carnish	(£75: crofters)	£95		
Timsgarry	£78	£84	£88	£108
Linshader	£250	£297	£400	£425

Thus, towards the end of the nineteenth century, the proprietors were obliged, by pressure of population within, and of public opinion without, to made some concessions to their small tenantry. It may be relevant to point out that this was a period of falling agricultural prices and declining farm rentals; indeed the time was not far off when some farms would not find tenants at any rental:

TABLE 7

Farm:	Rental at c.1875/80	c.1885/90
Mealasta	£130	£85
Margreta	£132	£95
Ardroil & Carnish	£285	£245
Timsgarry	£108	£80 (1)
Linshader	£349	£278 (2)

Notes: (1) Small reduction for enlargement to Glebe.
(2) Big reduction for Laimeshader and Grimersta Lodge.

195 317 146 164 429 234 433 435 175 653 146 164 437 317

The crofters of south Uig were in particular difficulty at this time for here fishing declined earlier than elsewhere but the townships remained greatly overcrowded. In 1910 Breanish and Islivig had 18 cottar families, (most of them sharing crofts with the official tenants), and three of squatters, i.e. on the common pasture. Here fishing had almost ceased and the people were almost entirely dependent on their crofts or on employment away from home. In Valtos and Kneep there were 21 cottar families; they had 31 cattle and sheep flocks. Here, too, fishing was on the decline. It was perhaps because of this that commercial weaving was developed in South Uig earlier than in most parts of Lewis. As early as 1900 Uig was classed with Harris, by the local committee of the Congested Districts Board, as producing a superior quality of tweed. Two 30 gallon iron pots were sent out so that enough wool could be dyed at one boiling to obviate irregular colouring in any one tweed. The C.D.B. also made grants for roads, footpaths and "marine works". Amongst the latter the pier at Valtos (1899) was an attempt to resuscitate local fishing, but it came too late.

195 653 146 164 437

The Congested Districts Board was the first government agency with funds at its disposal to aid the crofting township. One of its largest grants went in aid of the Carloway road (or Portland Road as it is now known). This scheme arose out of an abortive proposal for a railway from Loch Carloway to Stornoway. It was thought that this could enable trawlers and other large fishing boats to land their catch for quick transport to Stornoway and so to the mainland whilst the fishing vessels returned to sea with minimum delay. The road, an excellently engineered one, is still not properly surfaced. A more effective C.D.B. - aided scheme was the resettlement of crofters on Mangersta Farm, the rent of which had fallen to £70 and which the proprietors were willing to break up. Thirteen new buildings were formed here and the first harvest was taken by the new settlers in 1911. The crofters' rent was fixed at £73 and the C.D.B. paid £566 in grants to purchase the sheep stock and improvements, and towards the cost of fencing. About the same time the Board paid a grant to the township of Garenin for fencing a substantial enlargement to their pasture, obtained off Dalbeg. Here, and at Reef farm, small-holding resettlement schemes were vetoed by the Crofters Commission whose experts regarded the areas as unsuitable. Both have since been re-settled by crofters.

195 317 146 164 427 657 678

After the first World War re-settlement schemes went ahead with renewed vigour. Men serving in the Forces expected land to be available for them on their return and they were impatient to get it. By this time the Lewis estate belonged to the Lewis and Harris Development Co. - in other words to Lord Leverhulme. The farms of Mealasta, Reef, Carnish and Ardroil were all without tenants; Leverhulme agreed to break them into crofts, the Board of Agriculture surveyors were speedily put to work, and the new settlers were able to commence cultivation on March 1, 1921. Timsgarry farm, with which was the Uig shooting lodge, was in the hands of a tenant; but the Board obtained possession, reserving a small area around the lodge for amenity. Crofter farm, Bayhead, was also broken up. More than 50 new holdings received enlargements to their common pastures; details are given in Figure 10 and table 8, (pages 22 and 23). Much more remains to be done in haste, the Secretary for Scotland pushed them forward in the face of some opposition from Leverhulme. Here, as elsewhere, the ex-servicemen were restive; land raids and violence, with inevitable political repercussion, were feared.

In 1924, Linshader farm was threatened by land raiders. As a result this, too, was broken up and 10 new holdings were occupied as from Whitsuntide, 1925. This was part of the Grimersta sporting estate and the proprietors feared that all the remaining land, given to crofts, Linshader was not particularly suited to crofter-management: it consisted of 49 acres of old arable land and more than 8,000 acres of rough pasture, the furthest part of which was five miles distant and without road access. When the Land Court fixed the assuming the following remark was recorded:

"Under a club stock" (i.e. a single flock) the moor "might have been exploited to a very different extent, but in view of the fact that individual stocks are to be kept" (i.e. each crofter his own shepherd) "which is not conducive to herding, ... 70 sheep per share will be ample. If the whole outside ground were being fully made use of by the sheep stock the grazing of ten cows should do no harm.... but the grazing afforded on the holding does not justify a larger assuming" (than one cow). It had, in fact, been the practice at Linshader farm to buy in young cattle for summer grazing, and to send away the lambs to the Dingwall area for their first winter.

Finally, in the thirties, two long established cottar families at Aird Bheag, an isolated spot on the Uig shootings, applied for and obtained recognition as crofters. Their holdings have since been abandoned and now form part of the sheep farm operated by a syndicate of four Breanish and Islivig crofters. Finally, in 1935 a further 12 new holdings were formed by a partial break-up of Garynahine farm. Thus in all, 140 new crofts and 45,000 acres have been added to the crofter holdings of the area since 1878. During that period the population of the parish has declined from c.3,500 to c.700. Neither the formation of new crofts, nor the enlargement the old, has prevented depopulation. Little, if any, more land is available and depopulation continues. The only hope, now, is to make the existing land - individual holdings and commons alike - more productive.

Table 8 and the map, figure 10, illustrate the progress of resettlement.

Crofts and Crofters.

491 Parish of Uig is now mainly owned by five small limited companies: Uig Crofters,
427 Bernera Crofters, Grimersta Estate, Carloway Estate, and Lewis Island Crofters. In
437 addition, when Lord Leverhulme sold the Lewis estate a few crofters accepted their
317 holdings as free gifts; consequently they lost legal crofter status (which is confined to tenants) although they continue to share in their respective townships. More recently four crofters in the south purchased some 2,000 acres of rough sheep grazings, including the new defacto settlement of Aird Bheag. There is no official record of the extent of crofters' land, but we accounted for some 95,000 acres (table 9). The remainder con-

1871	559	1939	10,500
1881	596	1951	384
1891	555	1959	311
1901	580		

312 There is no piped water supply and after even a short period of dry weather there is
[60] water shortage. One prosperous crofter (where the crofter does weaving and one memb
of the family is periodically away with a Norwegian whaling fleet) bought a large modern
Bendix electric washer only to find that there was not sufficient water to use it except on
[35] rare occasions. The croft houses have had electricity since 1954, and even the three
remaining inhabited thatched houses now have electricity.

311 Although there are only 4 full-time crofters, most of the crofts are carefully and wo
worked. Only a few crofts are decaying, and there is a tendency for these to be sub-le
to the more agriculturally inclined crofters instead of allowing the land to revert. In
[288] addition to the full-time crofters, 31 other men do part-time crofting. Eighteen men
weave and this provides their main income, but this figure fluctuates according to the
prosperity of the Harris Tweed industry; at present the figure is probably higher than
[168] average. Although 32 people have emigrated from the township since 1939 (many of the
young people who have married on the mainland), there are still several young people a
[161] young families making their homes here. The dominant age-group of permanently resi
[162] dent adults is 15 to 44. Total population is steadily declining, but Callanish has always
been a prosperous area and seems likely to remain among the more prosperous croftin
communities.

BREASCLETE PARK by Margaret Grice and Doreen J. Phillips.

195 Breasclete Park, also known as New Park, Callanish, was settled by people cleared
427 from Reef in the mid 19th century. Two of the six original crofts have been subdivided
making nine. However, there are only five working units and on one there is no culti-
vation. There is also a feu house built in 1958.

361 The crofts, which are fenced, form broad strips perpendicular to the Breasclete-
241 Callanish road. Cultivation is mainly by tractor, oats, potatoes and some clover being
grown. One progressive crofter has successfully experimented with re-seeding one
231 acre of grazing land on his own croft. Common pasture for the 148 sheep and 6 cattle
is shared with Callanish, and for most purposes the Park can be considered a part of
that township.

162 The total population is 26 of which 4 are permanently away. There are 6 people ov
65, and 8 children under 15.

BREASCLETE by Margaret Grice and Doreen J. Phillips.

131 Breasclete is situated on the east side of East Loch Roag on land which rises gently
133 from the seashore to the moorland and is interrupted by rocky outcrops of gneiss in the
northern part. It is separated from the township of Callanish to the south, by a small
westerly flowing stream, at the mouth of which is the site of a mill.

491 The road on which most of the houses are situated, follows a curve through the
361 middle of the crofts, but newer houses and some feus have been built along the main
Callanish-Cartoway road, nearer to the shore. Stornoway is 18 miles away along this
road which is turned throughout. Breasclete could be served by the still unfinished
Pentland Road, were it to be properly surfaced and this would make the journey shorter
[144] by 4 miles. Two buses in each direction per day connect the township to Stornoway, bu
high fares make visits to the town infrequent.

312 The township hopes to receive the mains water supply within the next few years, but
at the moment, relies on wells within easy access of most of the houses. Many houses
have piped water from private wells, some of which go dry after two or three days good
weather although the wells on the lower ground never fail.

1939 - National Register.
1959 - Glasgow University and C.F.C. survey.

231 Size of croft: 6 acres arable, (3 in crop, 3 in sown grass), 18 acres outrun and
241 rights in Common Grazing to carry:-
242 6 cows, 2 young cattle, 50 ewes, 12 wedders, 12 ewe hoggs and a ram.

	Income	£	Expenses	£
231 241 242 434	Sale of 1 cow, 5 calves, 10 cast ewes and 3 wedders, and 28 lambs say	224	Rent, ram, service of bull, grass, oat, potato and turnip seed, manures and hand feeding say	98
	Sale of wool	33	Excess of income	300
	Subsidies on cows, calves and cropping	141		398
	Total income	£398		

In order to work such a croft efficiently, the tenant could not take regular ancillary employment and would require the assistance of his family at busy periods. If such holdings were formed in the particular township studied, the number of crofts would have to be reduced to almost one third of present total. Considering Park as a whole, the agricultural units would have to be reduced to half of their present number but this latter figure is only very approximate as it was based on general evidence. It is clear, however, that about 100 viable agricultural units could be maintained on the present crofting area of Park.

000 From a detailed study of the agriculture of Park one can only conclude that the present crofting situation is far from being an optimum one. Only reorganisation on a major scale could made crofting economic, and such reorganisation would have to be coupled with the development of a non-crofting sector of the community dependent on ancillary industry. The prospects for the growth of ancillary industry are discussed on page 12. Larger crofts might well evolve as a result of continued depopulation. In the meantime, a determined effort could be made in the spheres of re-seeding and pasture improvement, and in consolidating the existing non-adjacent pieces of certain crofts. A reduction of the sheep stocks, with an emphasis on quality instead of quantity, and the introduction of more cattle, narrowing the present 1:25 cattle-sheep ratio, are policies which could be followed with profit.

ANCILLARY OCCUPATIONS

464 In most crofting areas, ancillary employment is necessary to compensate for the low croft income: total dependence on the croft for a livelihood has never been characteristic of many crofting areas except in times of privation. At the time of the abolition of run-rig, most crofting areas had
[161] [162] a greater population than the land could support, even at subsistence level, and as a result, on most estates, crofts were created smaller than the optimum size in order to give as many persons as possible a share in the land. First the kelp industry and at a later period fishing, resulted in sub-
464 divisions of crofts, already too small, and the establishment of a cottar and squatter population. In
228 the case of kelp, the landlord required as many hands as he could muster and in the hay-day of the
423 fishing industry, the land was a secondary consideration as meal could be bought with the proceeds
241 of the catches.

161 In Park, it is noteworthy that the most congested areas in 1883 were the fishing townships and
162 that since 1901, when the decline in the fishing industry began, these townships have experienced
464 rapid depopulation. No other home-based ancillary industry has successfully filled the gap in the economy. In Park as a whole only 18 per cent of the total male population of insurable age (15-64) are full-time crofters today - a striking confirmation of the fact that ancillary employment in necessary.
000 However, not all such employment is available in Park: 47 per cent of the insurable male population

161
162

1901	1911	1921	1931	1939 (a)	1951	1959 (b)
4,463	4,462	3,956	3,364	3,110	2,718	2,390

(a) National Registration, not strictly comparable with decennial Census figures.

(b) Our own survey count.

return of unemployed men and families from the mainland and overseas. Thus we found, in 1959, that the population of Uig was less than in any year since 1811. Nevertheless it was still double that reported to Webster in 1755, before the potato, kelp and fishing led to inflation.

These changes have not affected all parts of the parish at the same time, nor to the same extent. The position is summarised in table 48 and figure 45. Summaries by districts conceal a good deal of the truth; each township has had its individual history and no two are alike. Township figures are given in Appendix E.

TABLE 48

Changes in the relative distribution of population 1841 - 1959
For details by townships see figure 45.

161
162
631

	Proportion of the total in each district in the years: 1841	1891	1931	1951	1959
South Uig District	52	51	31	28	27
Bernera District	16	15	19	18	18
East Loch Roag District	17	23	24	25	25
Carloway District	15	23	26	29	29
	100	100	100	100	100

South Uig, in 1841, had more than half the population of Uig, despite the early clearances. It has now little more than a quarter, and is still declining most rapidly. In Aird and Crowlista, for example, where there were 321 persons in 1891, we counted but 71; in Valtos in the same period the decline was from 480 to 113. Most striking of all, in Ungshader, where 38 persons were living as recently as 1931, we found only 9. Bernera and Bernera Shore have slightly increased their share of the population of Uig, since 1891, although the actual number has fallen from 650 to 424. Clearances never had the same depopulating effect in Bernera as they had in the south, and fishing remained prosperous longer. The re-settlement of Linshader farm by crofters in 1925 had little effect but Bernera itself, despite isolation, has retained its population quite remarkably. Many go away to find work but few leave for ever. The development of lobster fishing has helped.

[228]

102
161
162
361

Figure 45

Distribution of population in 1891 and 1959

161 In the northern townships, stretching from Garynahine in Loch Carloway, quite the
162 reverse is seen. Here there are actually more people now than in 1841 (1,261, c.f. 1,204), although there has been a marked decline since 1891 when 2,106 were enumerated. Thus this area, which had less than one third of Uig's population in 1841, now has more than half. The main change occurred before 1891 and was associated with the prosperity of fishing, both locally and on the east mainland coast, but, in addition, this area did not lose population as rapidly as did Bernera and the southern townships in the 'twenties and 'thirties, nor since 1951, and this can undoubtedly be ascribed to the early establishment, especially in the Carloway district, of Harris Tweed weaving.

TABLE 49

Loss of Population by Districts, 1931 - 1959

Migration

121/ One of the objects of our enquiries was to discover something of the processes of popu-
16 lation change in recent years. To this end we tried to record some details of migrants, from and to the parish since 1939 (see croft record questionnaire, frontispiece to Part I). We also attempted to record war and other casualties away from home. Finally, we recorded natural population changes by extracting details of births and deaths from the official registers for the period October 1939 - December 1958 (the 1959 registers were not available). The results are summarised in table 50.

166 Our record of migration depends on the memories of our informants and cannot be expected to be complete, nor can the 1939 (National Registration) population figure be

TABLE 50

The Population balance sheet, 1939 - 1959

16

District:	Population: 1939	1959	Decline, 1939 - 1959: Total	Natural:	Casualties:	Net Migration: Deduced	(Recorded)
South Uig	909	677	232	32	16	184	(95)
Bernera	638	425	213	30	11	172	(76)
East Loch Roag	764	619	145	19	7	110	(130)
Carloway	874	669	205	39	10	156	(121)
UIG	3,185	2,393	792	120	44	622	(422)
c.f. Park	1,500	908(1958)	592	(+13)	33	572	(355)

166 strictly comparable with our own. A check is possible, as shown in the table, for we can compare our records of net migration (last column in table 50) with that obtained by deducting natural change and casualties from total change. Thus, since 1939, the deduced net loss due to migration appears to be 622, c.f. our record of 462. This deduced figure is certainly too high, because it does not take account of excess of deaths over births in 1959, nor is it likely that we have recorded all "casualties", i.e. deaths outwith Uig of persons normally resident there. The Park survey showed a slightly greater discrepancy. In any event the 1939 and 1959 figures are not completely comparable; the data provide a broad picture of the changes rather than census-like statistics. But they do provide for more geographical detail than the official Census.

• 161 They show that the decline in population is due, in all parts of the parish, both to emigration and to an excess of deaths over births. Over the whole parish migration accounts for nearly 80% of the loss, natural change for 15%, casualties for 5%. By districts the proportions are:

16

	Migration:	Natural change:	Casualties:	Total change:
South Uig	79%	14%	7%	100%
Bernera	81%	14%	5%	100%
East Loch Roag	81%	14%	5%	100%
Carloway	76%	19%	5%	100%
c.f. Park	97%	(+3%)	6%	100%

This is quite a different picture from that found in Park district, where migration alone was the apparent cause of population decline and where, over two decades, births slightly exceeded deaths.* Uig lost 20% of its 1939 population by migration whereas Park lost 38% in a slightly shorter period, 1939 - 1958 c.f. 1939 - 1959 for the Uig data. Even the more remote districts of Uig have not lost population at much more than half the rate of loss from Park.

166 Net migration is made up of a large outflow, mainly of men and women under 45, and a small return flow, mainly of older people such as retired policemen and similar pensioners. Families entering the area to perform some particular service (school teachers, ministers etc.) more or less balanced the outward movements of their predecessors and may be discounted. Examination of the individual croft records shows

* Caird J.B. et al. Park: a geographical study of a Lewis crofting district (G.F.G. 1959), table XV.

162 appropriate age-group, males on the left, females on the right. The width of the bars
126 varies according to the age-range of the groups so that the length of each bar gives an indication of the relative importance of the particular age-group in the total population. In an unofficial survey it is difficult to obtain detailed information as to age; hence the diagrams are crude, nevertheless they do suggest certain trends, as well as marked regional differences, within the parish.

162 If we examine first the parish as a whole it will be seen that the proportion of children under school age, (0-4), is sufficient to maintain, and perhaps to slightly increase, the school population (5-14) provided that none are lost through emigration. The present school population is not quite sufficient to maintain the 15-44 age-group, including, of course, those working away, on the same assumption. In both these groups, as is usual, males slightly outnumber females.

The characteristics of the 15-44 age-group are clearly seen. A large number is working away from home; the proportion of women working away is far greater than of men and, in view of the "marriage risk" to women in this age group, it is reasonable to suppose that, in time, most of these women will become 'emigrants'. More men stay at home (weaving supports many of them) and, of those that go away to work, a substantial proportion is likely to return either on inheritence of a croft or when they retire; some of them may bring back wives from outwith the parish but it seems unlikely that this will by any means balance the loss of local women by marriage outwith the parish.

The 45-64 age-group is only slightly affected by the custom of working away. Men and women are evenly balanced, but when we compare them with the 15-44 group it seems that, in the next ten years or so, there will be a decline particularly in the number of women aged 45-64. Indeed, if most of the women under 45, who are at present working away, eventually marry and settle outwith the parish, the decline will be drastic. The
• 45-64 age-group should, in time, replenish the over 65's; it is clear from the diagram, 161 crude as it is, that this is not possible. At present an excessive proportion of the population is over 65 years of age and thus, in time and failing the unlikely event of substantial immigration, a further fall in total population is certain. One may hazard a guess that this decline will be of the order of 300 to 250 persons in the next ten years.

121 Turning to the districts, the most striking feature is their individuality and this emphasises again the value of this kind of survey because such local details cannot be discovered from the official census reports. In South Uig, of the total population, a very high proportion is over 65 years of age; this makes it certain that further decline is inevitable. However the 15-44 group can probably replenish and maintain the 45-64 group with little loss; the relatively high proportion of children, particularly under school age, suggests that the 15-44 group, too, will be adequately replenished, except that there is an unusually low proportion of female children. A large proportion of young women from South Uig take employment away from home, as the diagram shows, and this suggests that South Uig may have a special problem here in view of the tendency of such women to marry and settle away from home. The Bernera district shows characteristics similar to South Uig, but the preponderance of children is not quite so great.

The East Loch Roag district, and to an even greater extent the Carloway district, has
165 quite different characteristics which suggest rather different trends. There the preponderance of old people is not quite so great - but, one may remark in passing, the excess of females over males in the over 65's is quite astonishing until one recalls the heavy casualties, amongst the Naval reservists and others, from this area in the First World War. If we look at the proportion of children, however, it is clear that the school population can scarcely be maintained over the next ten years, nor can the 15-44 age-group be fully replenished. This, of course, assumes that there will be no material change in birth and death rates, nor in migration. In brief, it seems that, although population will inevitably continue to fall in South Uig and Bernera, the prospect of a more stable, though smaller, population is within sight. But in East Loch Roag and Carloway districts it seems likely that decline, though perhaps not so rapid, will continue for a long time yet.

000
• 161 1) Further depopulation is inevitable but is not necessarily bad. The special privileges
162 of crofting tenure have tended to delay the inevitable because the agricultural structure
311 has been unable to adapt itself to changing circumstances. The land is in some ways less productive than it was 80 years ago. But, as population does decline, eventually more
433 land ought to be available for each remaining family and, if properly used, should enable them to increase the proportion of their incomes derived from agriculture. This depopulation could have beneficial effects provided it were not haphazard nor complete. The rate and ultimate extent of depopulation could be controlled to some extent if a realistic assessment of the possibilities of each district were made, followed by a vigourous attempt to realise these possibilities. This must be done locally because the problems and possibilities of each district, sometimes of each township, are different. How can this be done?

288 2) It is not realistic to plan for any extensive development of industry nor for any substantial further development of forestry or fishing. Lewis is suitable for the development of industry - the phenomenal growth of the Harris Tweed industry, with an annual output worth £5 million, much of it for export, is proof enough of that. But when it is difficult to get industrialists to invest in lowland Scotland there is little point in living in perpetual hope in Lewis. To constantly cry, as some politicians do, that 'the government should send industry to Lewis', is not helpful, either, for no government has ever had sufficient power, nor is it desirable that it should have, to force a firm to invest against its will. If there is to be some industrial development it must come willingly; it would be unwise to depend on it. It follows, therefore, that agriculture must be made a more efficient basis, though not the sole basis, of most crofting communities. The present heavy dependence on casual or seasonal employment, and on permanent employment away from home, can never provide the bases for a truly viable community though it may provide a useful outlet for some younger folk. On its present scale it leads to the neglect of the only widespread natural resource, the land, as well as encouraging permanent emigration.

311 3) Crofting agriculture, as at present carried on, on most crofts, does not make the
433 best use of the local resources. The land is marginal in many respects and the development of an economic form of agriculture requires:

(a) particular skill in farm management, including initiative and technical ability to take advantage of new materials and methods, and
(b) a marketing system on which the crofter believes he can depend. At present it is the uncertainty, as much as the poverty, of the reward that deters young men from taking up agriculture seriously.

427 4) The small size of holdings need not be a serious disadvantage. Since the time of our survey subletting is no longer necessarily contrary to the conditions of crofting tenure; since it represents a voluntary evolution towards larger holdings it, rather than wholesale reorganisation, should be further encouraged.

5) It should be recognised that if a croft is not properly stocked it cannot justifiably be the subject of any of the privileges of crofting tenure. Failure to maintain a properly balanced stock is damaging to the land and to the ultimate well-being of the community as a whole. At one time the factors, through their ground officers, maintained a degree of control over the stocking of township lands and this could, in some way, be resumed - if not by the proprietors then by the Crofters Commission, - though the best way would be voluntarily, through the township committees. This would depend on establishing soumings which fairly represented the grazing capacity of the township lands and on restricting the unlimited substitution of sheep for cattle. At present many soumings depend on restatements of old ones the validity of which is very dubious; soumings are unlikely to be respected unless they are reasonable.

181 6) Few crofters possess sufficient technical knowledge and confidence to make the best
use of their land. It is particularly difficult for men with such limited resources of land and ready cash to embark on new agricultural enterprises; they are naturally reluctant to take risks and therefore tend to be excessively conservative. This cannot be put right quickly nor so long as the majority of those working the crofts are middle aged or older men who have spent the greater part of their working lives in other occupations. Such men require special help but, above all, some of the younger men must be encouraged to

THE MAKING OF THE CROFTING LANDSCAPE

17 All landscapes in these islands have roots in the distant past; Park is no exception. Yet many crofting landscapes have been significantly re-fashioned within the present century after major changes in the nineteenth century. Park does not entirely correspond to the general pattern, and the present cultural landscape has its beginnings in the late seventeenth century, although there are traces of earlier settlement.

Archaeological evidence, in the form of a stone axehead found near Habost, a dun on the brackish Loch Cromore, and a mediaeval chapel on Eilean Calum Cille, provides the earliest record of human settlement in Park. Place-name evidence[1] indicates Norse occupation: the elements 'bost', a contraction of the Norse word bolstradr - a homestead, and 'setr', a shed or bothy situated on pastureland but not regularly lived in, indicate a thin dispersion of farmers practising an extensive and transhumant economy: all the present township names contain Norse elements. 108 17

The name Park, is derived from the Gaelic 'A'Phairc' - the park or deer forest: the old name of the district was Oserval - (Norse: the east mountain). During the eighteenth century, a dyke or turf wall was built between Loch Erisort and Loch Seaforth - 'garadh an tighearna' - the lord of chiefs' dyke, to enclose the deer forest. Before this enclosure was built, Park was shieling ground used by tenants in Uig (west Lewis):- one of the groups of shielings has the name Airigh Dhomhnaill Chaim and Domhnall Cam was chief of the MacAulays in Uig at the beginning of the seventeenth century. Thus it may well be that after the Norse population left or were absorbed, Park was simply used as summer pasture. [162]

17 It is believed that settlement in what is now the Deer Forest began about 1650. Confirmation of this comes from an unpublished Gaelic song by Archibald MacDonald (An Ciaran Mabach) composed in Leith soon after 1660. In the song, the author laments the fact that he may never see the Forest again, and says of Park 538 539

"'s oil leam caradh na frithe
.....
Bhith fo bhinn aig na bodaich
D'am bu chosnadh cas-chrom."

"I deplore the state of the forest ..... that it should be in subjection to the carles whose livelihood is a cas-chrom" (foot plough - literally crooked spade). The song gives no indication of numbers, and unfortunately no rental of this period is extant.[2]

From rentals and other evidence, Park was the last area in Lewis to be colonised in permanent settlement; the fact that the population of Lochs parish increased from 912 in 1755 to 1350 in 1801, supports the view that the late eighteenth century saw the extension of modern settlement in Park. 17 [161]

The first documentary evidence of settlement in the present crofting area is the Judicial Rental of Lewis, taken by the Forfeited Estates Commissioners in 1718. This rental records tacksmen, or major tenants, living in Haboat, Seaforthhead, and Eilean Calum Cille - all situated along the southern shores of Loch Erisort: there is local tradition that Kershader and Marivig were shielings [127]

1 The editor is indebted to Miss Bridget M. Gordon, B.A., B.Litt. for an analysis and evaluation of the place-name evidence - see Appendix C.

2 For this extremely interesting information and the translation, the editor is indebted to Mr. William Matheson, M.A., of the Department of Celtic, Edinburgh University.

17 or summer pastures for the tenants of Laxay and Rarnish respectively, townships on the north 175 shores of the loch. In 1775, there were four tenants in Kershader, but their place of origin 162 is unknown. In 1805, five tenants are recorded, two of them from Uig; by 1824 there were 10 34 tenants. Thus the growth of population in Lewis during the second half of the eighteenth century 311 may well have been the major reason for the colonisation of one of the least agriculturally 161 attractive districts of the island.

From Figure 1, which shows most of the thirty-four occupied places south of Loch Shell about 1828, it is evident that colonisation had extended south into the mountainous area. The evictions, which commenced in Harris in 1816, may have increased the population already there as early as 1660, for many of these families came from Harris. The numerous shielings in South Park speak of a vigorous community: it is possible that South Park was more densely populated than the northern area up till 1800.

162 During the period 1818 to 1842, when the grazier, Donald Stewart, and his brothers had a lea 175 of South Park, most of these settlements were cleared (Fig 2): in addition, between 1838 and 361 1843, 68 tenants and sub-tenants in Shieldernish, Cleiter, Seaforthhead, Lemreway, Oronsay, 311 Stiomrabagh and Isginn were removed, in all about 436 people.[1] Some 27 families were sent to 161 Crossbost in North Lochs; others went to Tolsta and Tong in Stornoway parish, and some emigrated. The main body of those evicted settled in the townships in North Park: Marivig in 1838 had 6 tenants; by 1850, 22 are recorded. Thus the present distribution of population crystallised about 1840 and by then the townships along the shore of Loch Erisort from Habost to Garyvard were well established. The Minch coast townships from Cromore to Gravir, first settl about 1800, were greatly expanded, and Park south of Gravir became a sheep grazing devoid of small tenantry.

175 In 1844, the Seaforth family, which had held Lewis for over two centuries, sold the island to 423 Sir James Matheson. The estate management soon wrought great changes in the landscape. Until 311 1850-52, the run-rig system prevailed, a system whereby a group of joint tenants, or a tacksman 361 and subtenants, cultivated in small patches what arable land had been reclaimed, each share 241 being periodically re-allocated. The crofts, or individually held land, date from 1850-52, when the land was lotted and most of the present crofts were formed at this period. The settlement pattern associated with run-rig was one of closely nucleated groups of houses but when run-rig wa abolished, houses were built on the individual crofts.

175 In 1858, Lemreway was once again made available to crofters, most of whom came from the 162 fishing townships where population pressure was building up. After the disastrous potato famine 433 of 1846-7, and the final failure of the kelp industry from 1840 to 1844, the population of the Outer 731 Isles experienced great hardship. By the early 1850's, the letting of the crofts and the rapid 229 development of the fishing industry brought a period of prosperity and the population grew rapidly 161 especially in the fishing townships of the Minch coast. The prosperity was such that numerous cottars built houses on the lotted crofts, and their stock-keeping on the common was tolerated because of the demand for fishing crews. About 1884, the system whereby each boat was tied to individual fish merchants, who advanced meal and provisions against the catch, was discontinued. When this system was replaced by the auctioning of catches, such was the privation in Lewis that the Royal Commission investigating the poverty of the population in 1888 found conditions almost as severe as those prevailing during the potato famine forty years earlier. It was during this period that the Park Deer Raid occurred: Park became a Deer Forest in 1883 at the end of the grazier's [685] lease. In 1888, as a demonstration of their grievances, a large number of crofters from the Park townships went into the Deer Forest and killed about 200 deer, cooking the meat in the open for all to see. Some were arrested but after trial acquitted.[2] A few good fishing seasons remedied this unhappy situation and the population of the fishing townships rose to a peak in 1911.

[115] 1 Evidence given to Royal Commission of Inquiry into Crofters and Cottars 1883. (Also known the Napier Commission).

[113] 2 Report on the Conditions of the Cottar Population in the Lews, 1888.

[113] 3 Stornoway Gazette, 27.1.59.

175 While the Royal Commission of 1883-6 was investigating Crofting conditions in Scotland, the
423 farm of Seaforthhead and Shieldernish was restored to six crofters. Six years later, the Royal
311 Commission of Enquiry into the Highlands and Islands scheduled the following land as suitable for new crofting townships: Stiemreway, Eilean Calum Cille, Crobeg, and the islands of Orosaidh and Rossaidh, a total area of 153 acres arable and 3,502 acres grazing. A further 165 acres of arable and 40,135 acres of grazing in the Park Deer Forest were scheduled as land suitable for the extension of existing holdings. The Report of the Commission considered "that in the case of Lewis, it cannot be left out of view that the congestion is very great, and the demand by crofters for access to lands now scheduled is of a very urgent nature ..... The Deer Forest Commissioners do not believe that the lands now scheduled are suitable for new holdings: but were these lands occupied as common pasture by crofters, under a properly adjusted system of management, their occupation would be of much advantage to the occupants and more than outweigh the disadvantages."[4] As a result of this recommendation, the islands of Rossaidh, Orosaidh and Iubhairt, in all 90 of the 43,728 acres scheduled, were given to Marivig, Calbost, and Lemreway, respectively, as additions to the common pastures; the sheep farm comprising Crobeg, Oronsay and Stiemreway, and the Deer Forest were left undisturbed.

175 In 1924, after raiding, Oronsay was reconstituted as a crofting township, all but one of the new
423 tenants coming from the overcrowded crofts of Lemreway. An unsuccessful attempt was made by
632 squatters who had built houses at Stiemreway, to have their unofficial lots recognised, but some
311 families remained there till 1945. In 1934, fifteen small lots were cut out of the Gravir common
[162] pasture to relieve pressure on the Gravir crofts: this Department of Agriculture scheme marked the end of a century of population redistribution.

Thus the full recommendations of the Deer Forest Commission have never been implemented, but one can only conclude, after a study of the crofting economy, that greater participation by the crofters in the Deer Forest grazing would bring increased viability to the crofting community.

175 The landscape of Park has thus experienced four formative periods. Of the prehistoric era and
162 the early historical period, when the Norsemen held sway, a few archaeological sites and a large
341 number of place-names remain. From 1660 until the early nineteenth century settlement was
232 slowly established and spread over all the coastal fringe: this period saw the maximum areal distribution of the small tenantry. From 1828 to 1843, eviction stripped the entire area south of Gravir and west of Habost of population, and large scale sheep farming was extended at the expense of the small tenants. The fishing townships from Cromore to Gravir were greatly expanded at this time. From 1858-1924, three of the cleared townships were reconstituted: the population in [161] the majority of the fishing townships continued to grow till 1911. Since 1924, fifteen new lots have been formed in Park but the population has progressively declined.

The absence of large scale resettlement since 1886 differentiates Park from most other crofting districts, but the exodus of population since 1918 and the existence of a population constantly struggling for viability in an area deficient in resources are features common to the entire crofting area.

[113] 4 Report of the Royal Commission Highlands and Islands, 1892, (often known as the "Deer Forest Commission").

THE PATTERN OF CROFTING

427 Crofting, a distinctive system of land tenure, is confined to Argyllshire, Inverness-shire,
341 Ross and Cromarty, Sutherland, Caithness, Orkney and Shetland, the seven Crofting Counties of
178 Scotland. Small agricultural units sharing rights in common land, usually pasture but in some
423 districts arable land also, survive in 151 out of the 163 parishes, and these holdings form the
477 nearest equivalent to peasant communities in Britain, although only a small minority of crofters own their holdings, and the true subsistence element, implicit in any definition of peasantry, has all but disappeared.

175 Before 1886, the crofter was a tenant-at-will, with no security of tenure, and no right to
427 compensation for improvements. The Crofter's Act of 1886, defined a croft as an agricultural
341 holding in a parish where there existed, or had existed, rights of common grazing, and where the
423 annual rent paid was less than £30. Security of tenure, and compensation for improvements were the main provisions of the 1886 Act; the rent qualification was later raised to £50. In all, there are about 20,000 crofts in Scotland today[1] and Collier[2] estimated the crofting population at [161] about 100,000. The number of crofts in Park is 215, with population of 908. Thus Park forms [162] a 1 per cent sample of the crofts, and a 0.9 per cent sample of the estimated crofting population.

Crofting Organisation, Layout, and Settlement.

423 The characteristic settlement unit is the crofting township: Figure 3 illustrates the areal
127 distribution of the 12 townships in Park. Each township comprises two main elements, the
341 individually held croft land, and the common grazings. The number of crofts per township
311 ranges from 6 in Caversta to 43 in Gravir.

632 The individually held croft land (1,839 acres) is partly 'outrun' or permanent pasture and the
233 holdings are usually but not always consolidated - in Gravir (Fig. 4) and Cromore some of the crofts comprise as many as five non-adjacent pieces of land. Each croft is normally separated from neighbouring units by a drystone dyke or fence but in Park, such demarcation is the exception rather than the rule.

The croft land is separated from the common pasture by the township dyke, a stone or turf wall. The Park common pastures consist of 22,023 acres of moor grazing - generally very poor, ill-drained land with a large percentage of bare rock, areas of peat, and numerous lochs. In Park, only Oronsay common pasture is fenced, the limits of the remainder being faintly marked by crumbled turf dykes. Each croft has a defined right of grazing or 'soum' on the common pasture; the 'soum' is the number of beasts which may be pastured, a term comparable to the obsolescent 'gates' of northern England. In Gravir, the soum is 1 cow and follower or young beast up to 6 quarters old (i.e. 18 months), and 8 sheep, per £1 rent. There is also a system of stated equivalences (Gaelic 'coilpeachadh') in most townships whereby substitution of cattle for sheep and sheep for cattle is permissible: in Gravir, the exchange rate is one cow for five sheep. Soumings and equivalences vary throughout Park. In former times, when a subsistence economy prevailed, soumings were enforced but nowadays the majority of the crofters do not even know the souming of their croft.

[113] 1 Crofters' Commission, Annual Report 1958.

[113] 2 Adam Collier, "The Crofting Problem", 1953.

ll-time crofters; 19 males have other regular employment and two have periodic mployment. 8 crofters are aged over 65. It seems that the most successful combination f employment is weaving and crofting; weaving is carried on in twenty of the holdings. obster fishing in the evening is still popular but regular small-boat fishing has disappeared: ne crofter took up regular fishing when weaving was slack in the autumn of 1958.

Of a resident population of 125, 32 males and 32 females are between the ages of 15 nd 64, these representing the effective labour force. Thirteen persons are temporarily way and 16 permanently away whilst at least 46 have emigrated since 1939 and 6 have mmigrated. Thus the number that have emigrated is nearly three times the number that re merely permanently away. With a population of 125 and an effective labour force of 4 to work 35 operative units Tolsta Chaolais would seem to be far from a dying township.

If not exactly progressive the township economy seems stable and moderately pros- erous, in spite of the fact that the settlement is rather inaccesible, for the roads which oin the Carloway-Breasclete road are both very steep and have bad corners. To add to he apparent isolation there is only one Post Office-shop in the village but most commodities re bought from vans. A reallocation of the smaller crofts to younger, more ambitious enants at the deaths of the older tenants could reduce the number of operative units to bout 25. Admittedly, little can be done with the rougher terrain, and although cattle tocks could be increased there would be the added problem of sufficient winter feed. With etter drainage more land could be taken into cultivation - especially between the two ochs, an area largely wasted at the moment - whilst weaving might supply a surer source f income, especially in the winter. Tourism on a small scale might be a further ossibility for the coastal scenery is very fine and the immediate setting of the village is ery attractive. It would be more realistic however for Tolsta Chaolais to find future rosperity within its own boundaries.

361 the main area of cultivation at the head of Loch Carloway, is similarly divided into long
427 narrow crofts which traverse the broad valley which falls to the sea from the low water-shed marking the boundaries of Upper Carloway, Borroston and Garenin. The settlement is to be found on either side of the road which rises from the bay to join the two major township roads of Upper Carloway.

181 The township has a very individual character, especially at the seaward end which is
427 exposed to violent winds and spray in the winter and where the dwellings are mostly black houses. Tenanted by old ladies two of these are partly sublet and the future seems to suggest that a complete subletting will take place, which contrasts with the activity of many of the other crofters in the township. One man was prepared to carry all the fertiliser for the croft on his back because it was impossible to gain access for the tractor.

427 The twenty eight crofts, one feu and one allotment are worked in twenty five units.
311 Extensive improvements have been made on two crofts with the introduction of sown grasses in their rotations. A general increase in fencing is now taking place with the consequent closure of the crofts which were formerly open for common grazing in the winter. By far the most striking feature in the figures gathered for the township are those for the sheep stock. Although the total souming for all stock is not quite reached, the sheep soum is exceeded by 60.3%. This does not worry the crofters one of whom spoke of a 'natural souming' pointing to the fact that the total souming was not exceeded and he continued that 'if the land is overstocked animals die'; this they do all too frequently. The assertion seems to be based on the belief that the equivalence of one cow equals three or even five sheep gives an accurate assessment of the potential of the grazing. The evidence of the heavy sheep losses does not bear this out. That sheep eat a different herbage and in a different manner to cattle seems to be either unknown or is ignored.

The whole agricultural operation of the township is complicated by its situation; long journeys were necessary to go to the shielings and are still needed for bringing home the
[286] peats. Once again the emphasis is on weaving as an occupation and many of these people
161 are ageing. It is a measure of the decline in the population that now only fifteen children
162 go to school whereas one crofter could remember up to fifty in the school before the First War.

The main features which emerge from this examination of the townships to the north west of Loch Carloway may be summed up quite briefly. The croftland is a compact area of well cultivated land on the even slopes which rise to over 200 ft. O.D. It is divided into long narrow holdings which ensures that each has a fair share of the different types of land. Careful attention to much of the land shows that this is far from being a
000 dying community. In spite of the defects which can be noted in the animal husbandry, the decreased population and the reduced number of working units (a result of the sub-letting) could allow of a much more efficient working than does take place at the present time. The potential is there. Carloway has many of the basic social services which help to stabilise a community and with the advantage of its strategic position the concentration of settlement could be assured if additional employment and/or more efficient agricultural methods could be adopted.

KNOCK CARLOWAY

133 If the north west presents a picture of relative prosperity the area to the south may
[181] be described as one that is showing signs of decay and decline. Knock Carloway itself occupies part of the area with less evenly graded slopes (although a westerly outlier of the township extends to the northern flank of Loch Carloway). The eastern section
361 rises steeply to a rocky crest which marks the beginning of the common pasture. In consequence the crofts are less regular than those already described and three are
[427] worked in 'fixed runrig' with a pattern of much more fragmented cultivation. Situated on the lowest shoulder of the ridge are the churches and school close to the road junction

[TEXT CONTINUED ON PAGE 109]

Note: Figures for individual townships are given in Appendix B.

not have crofter status. Thus, despite the rigidity imposed by crofting legislation, the crofting structure is evolving; whether the larger units so formed are agriculturally more productive than the smaller, statutory, units is another question.

Cattle and sheep stocks

The production of cattle and sheep is the main function of the croft, from the agricultural point of view, and the main function of the crofting parish. In this respect a great change has occurred in the last 80 years: about 1880 some 3,300 cattle and 14,000 sheep (of all ages) were kept; in 1959 the corresponding figures were 1,281 and 35,000. This change is by no means the result of the re-settlement of crofters on former farms; in 1879, according to the Report of the Royal Commission on Agriculture, the sheep:cattle ratio was 2.3:1 on the crofting townships and 9.6:1 on the farms: now it is 27:1 over the whole parish. The change (Table 38) has been fairly uniform over the parish except that, whereas sheep stocks generally have more or less trebled, in the Carloway district they have little more than doubled.

The decline of cattle numbers has been at the same rate as that of the human population and this, together with the much lower sheep:cattle ratio on crofting townships than on farms in 1879, suggests that, 80 years ago just as to-day, the main object of cattle keeping was subsistence rather than commerce. The increase in sheep numbers on the other hand is probably no more than a reflection of increasing disregard of the soumings.

If we compare the cattle and sheep stocks with the soumings shown in Table 38 and Appendix E we find that 80 years ago, except in Bernera, there was rough agreement between stock and soum. To-day cattle stocks are around one-third of those allowed by the soum whereas sheep stocks are greatly in excess. Examination of the soumings leads one to question their validity in the light of modern conditions: the sheep soums bear no regular relation to the available areas of common pastures (Appendices A(2) and

CHAPTER THIRTEEN

POPULATION AND EMPLOYMENT

H. A. Moisley

Growth and decline.

In its demography as in so many other aspects the parish of Uig is characteristic of the Hebrides in general rather than of Lewis in particular. Throughout the Hebrides the late eighteenth century saw a rapid rise in population followed, in the early nineteenth century, by clearances, emigration and decline (Fig. 44). The growing population, sustained by the newly-introduced potato, found employment in kelp-making. Lewis made little kelp compared with the Uists and such as was made came largely from Uig, i.e. from Loch Roag; consequently, whilst the population of Barvas only increased by 15% between 1755 and 1801, that of Uig increased by 58%, (c.f. North Uist 60%, South Uist 73%). Clearances and emigration reversed this trend in population after 1821 (Mull and North Uist), after 1831 (Islay), and after 1841 (Skye, Harris, North Uist and Barra), a reversal which was not experienced in Lewis except in Uig (see Part I, Figure 8). Thereafter, in the outer, but not in the inner Hebrides, growth was resumed, to reach new maxima in 1881 (the Uists) and 1911 (Lewis, Harris and Barra); Uig, alone of Lewis parishes, reached its maximum population in 1891. Subsequent loss of population has been particularly severe, as may be seen from Table 46 and Figures 8 and 45.

TABLE 46

Loss of population, since maximum, to 1951

	Date of maximum	Loss as percentage of maximum
Uig	1891	41.2%
Lochs	1911	34.4%
Barvas	1911	26.5%
Stornoway	1911	18.6%

(Stornoway Burgh is excluded)

The early on-set of decline makes Uig somewhat comparable with the Uists, where final decline set in after 1881, rather than with Barra and Harris, where growth continued until 1911. This may be connected with the vicissitudes of fishing, particularly in south Uig where, by the 1890's, the annual Fishery Reports comment repeatedly on the decay of great line fishing and of the dried white fish trade. Re-settlement of crofters on farm land in Uig in the present century again affords a parallel with the southern Outer Hebrides rather than with the rest of Lewis; as elsewhere, it failed to arrest the decline although it did bring about a re-distribution which afforded welcome relief in the more overcrowded townships. But decline still continues; the loss appears to have been around 40 per annum in the 1950's (table 47) compared with 30 in the 1930's where there was some

1. Of the 42 male tenants aged 65 and over, 31 are still active crofters, and of this 31, 1
sole labour force on their croft.

2. Of the 23 female tenants, 3 are the sole labour force on their crofts.

/facing p. 7/

[Habost] [Kershader]

464 161 162 166 167 Of the 53 residents, 19 are over 65 and only 5 under 15 years, leaving a working population of 29: seven are in permanent employment elsewhere. The population has been steadily declining since its peak of 121 in 1901.

Since 1946, the township has changed considerably. It has been completely fenced and the 178 method of cultivation has changed from spade and horse-plough to tractor and cultivators. A 241 further fence has been erected for a lamb park and much land has been re-seeded; an increasing 231 area has been put down to hay. It would seem that fattening of stock for market is intended, and [407] better attention is being paid to stock. Yet the population is ageing and there are few young men [162] to take the place of the older crofters; when working units become larger and stock decreases to a figure nearer the real carrying capacity of the grazing, the croft could become a profitable concern: at the moment, the croft is only maintained through grants and ancillary earnings. Should that happen, however, there must be more re-seeding and an increase of cultivation to provide winter fodder.

KERSHADER

Philip W. Wheeler, M. A.

131 Kershader is a township of forty-three permanent residents on thirteen crofts, which stretch 161 for a mile along the southern shore of Loch Erisort. The crofts extend up to one-third of a 162 mile from the coast with a two-and-a-half mile deep hinterland of common grazing. The extreme 133 elevation is 270 feet and the average from 125 feet to 175 feet, but the crofts, mostly arranged 361 in rectangular strips at right-angles to the coast, are lower (maximum 125 feet) and include 241 three main zones (Fig. 8):

134 361

(a) From the low cliffs of the shore to the road, approximately, a zone mainly below 50 feet, dissected by four rejuvenated valleys. The soils of the greater part of this zone have a distinctive profile and tend to be moderately heavy, wet, and unsuited to fertilization by seaware. The smaller hillocks in this zone have thinner soils of the same sort, but the main hill (crofts 10/11) is an extension of zone (c).

(b) A zone between 50 feet and 75 feet with hills rising to over 100 feet. The lower areas have varied soils, easily fertilised, and intermediate in type between those of (a) and (b), with peaty-loam characteristics, overlying aquiferous gravels. The higher areas have thinner soils of the same kind with poor grassy pasture; in places there are signs of former skinning.

(c) A zone of hollows with deep moss soils requiring intensive drainage and reacting well to heavy fertilization with seaware and intervening heights covered with blanket bog, partly skinned, heather and grass. This zone passes into the common grazing.

Crofts 10, 11 and 12, irregular in disposition, have a steep coast line with gentler slopes over 50 feet; crofts 2 to 8, steep slopes in parts of zone (b), and crofts 1 and 9, again of irregular shape, are intermediate (Fig. 5).

241 In Kershader, there are thirteen legal crofts and twelve operative units. The crofts vary bet- 511 ween 4.4 and 18 acres, with a maximum of 3 acres reputed arable. In all, there are 23.45 acres reputed arable and 110.35 acres outrun. 24.5 acres are in fact under crop (oats 18.5, potatoes 6.0), and 9.5 acres under sown grass; and of the remaining 99.8 acres, mainly natural grass

[Kershader]

233 (b) From New Year to mid-April most sheep are kept on the common grazing. Practices, 311 however, are irregular; some flocks are usually hand fed, others only rarely. In the former 221 case they heft near the upper limit of their home croft and remain fairly close at hand. 231 Most crofters hand-feed their lambs, probably housing them at night, allowing them hay in the morning and turning them on to the common grazing in the evening. All this naturally depends on weather conditions.

(c) From mid-April to May, lambing takes place on home parks.

Most crofters let their ewes-with-lamb out at one date.

(d) At the end of June, gimmers and wedders are clipped.

(e) In mid-July the ewes are clipped.

(f) The lambs are weaned in the first and second weeks of August.

(g) The dipping takes place in October and the rams are brought on the crofts.

[432] There is no general sale time, sheep being sold or slaughtered at all seasons. There is no club stock, but all but one of the Kershader crofters, along with crofters from neighbouring townships, take full advantage of the arrangement, first established in 1941, to graze sheep at 2/- per sheep and 1/- per lamb in Park Deer Forest. Hence irregularities of rhythm are introduced or exaggerated.

231 Sheep are not particularly profitable: in general, wedder fleeces give 3½ to 4 lb, ewe fleeces [256] about 3 lb, and the wool is sold to the Stornoway mills and to the Wool Marketing Board. Average [435] sheep carcass weight is reckoned to be 41 lb. and the price rarely rises above £3 and almost never above £4. Braxy and fluke are kept under by medicaments but remain potential dangers; 'Black leg' is still a serious problem. Many sheep are drowned in the bogs in Spring and late snows (1955, 1958) are disastrous for lambing.

241 Under-employment is a serious problem in Kershader. There are nine males classified as 161 full-time crofters, but probably only four of these (two on one croft) are in fact in this category, 162 and of the total of thirty males with their homes in Kershader, only fifteen of the insurable 167 population are permanently resident. There are twenty-eight females with their homes in this 166 township, but on only six crofts do any of twenty permanently resident females help with croft 466 work. Local ancillary employment consists of weaving, fishing (for domestic consumption [463] only) and work on the roads. Boats, one with outboard motor, are owned by three crofts. The [501] only resident professional worker is a nurse. Ancillary employment must be, and is, sought away from the township. As a result, of the 73 persons recorded as having migrated since 1939 or as being resident, periodically away and permanently away in 1958, 19 have left the area for good, 4 are permanently away, 8 periodically away, and only 43 are resident. Only one person has entered the township since 1939. The age structure of the population, too, is far from the [175] optimum. The school in Kershader, which had 20 pupils in 1873, reached a peak of 110 in 1907 [178] and declined to 28 pupils in 1953, now has but 17, although it serves Caversta, Garyvard, [371] Kershader and Habost. Maximum population was attained in 1881, but the total remained fairly constant till 1911, after which decline was marked. Since 1950 this decline has markedly increased.

182 It will thus be seen that the most serious problem facing Kershader is that of stabilizing the 241 population and giving it a stronger economic basis. Apart from the potential development of tourism, fishing, weaving and other home industries, the only possible occupation is in [313] agriculture with perhaps a little forestry. Forestry, though important as shelter provision, cannot be a practical proposition in large blocks or on a large scale, as it would dislocate the

[Caversta]

241 Each croft is fenced but has a gate giving access to the common grazing, i 231 holds an equal share. The township has no specially enclosed area for fanking and no fixed date exists on which the crofters open their gates for winter grai [221] are normally brought in for tupping in mid-October and November when crops and lambing takes place in late March or April. After dipping and inoculation black leg, braxy and louping ill, the sheep are put out on the common grazing week of May.

231 The 642 acres of common pasture support a sheep stock equal to the sheep 133 stocking is only 88 per cent of the total acaming. Two crofts only exceed their while the others are well below the number required for greatest efficiency. T poor for summer pasture, owing to the lack of grass, but the heather is valuab [236] hogge. Lewis Blackface sheep are the predominant breed and the wool, clippe the Stornoway mills and the animals themselves are sent to the slaughter house at lambing was exceptionally high owing to a cold, dry spring preventing the gr ewes. More than forty lambs and thirty ewes were lost by the township last wi or five times greater than the average loss.

Six cows, two heifers and four calves are kept in the township and tethered [221] the crofts. Calves are born throughout the summer months, but whereas early sold in the Autumn at six months old, those born later must be wintered to sigh Spring sales. The cows are served by the Department of Agriculture Highland although good prices are obtained for beef cattle, it is felt that for the family m bull would produce a better strain.

241 In addition to keeping stock, oats are cultivated on five holdings and pot 244 most cases the land under each crop is less than half an acre and nowhere does 246 The land has been built up into lazybeds about six to ten feet wide, separated by 206 channels and worked by the spade. There are only two holdings where a tractor 407 is used and the acreage cultivated only amounts to three-quarters of an acre. altogether suitable for mechanisation at present, for the terrain is very uneven marsh and steep faces of bare rock.

[491] Neither Torista nor Caversta is on a main road. The former is served by road near Cromore, while the latter has a secondary road running as far as the an inferior footpath joining the main road at Garyvard. The lack of a good roa acts as a deterrent to the use of modern equipment and fertilisers. Byre manu 233 the crofts and seaweed is brought from the shore and spread on the lazybeds. 222 used on only three crofts, must be carried over rough ground from the dyke. to improve is perhaps even more marked by the fact that on one holding alone i practised - potatoes, oats undersown with clover, then hay for three or four ye this one instance, potatoes and oats are sown, perhaps alternately, on the sam Natural grass yields the bulk of the hay and is often cut from lazybeds that war On one croft there is upwards of quarter of an acre where the old ridges can be crescentic shape and are thought to date back more than one hundred years. A the township dyke is a similar stretch of land, now colonised by heather.

314 Peat still forms the principal fuel and, apart from one half acre patch withi 374 on the common grazing, as near the road as possible in May and June, and late 192 creel, bicycle or tractor. Three of the six operative units still have gardens a 193 twenty chickens; rowing boats for line fishing, solely to supplement the larder 313 326 [501] In 1841 population records show that there were twenty-two persons at Cave Torista. After 1881, when maximum figures of fifty-nine and nineteen were no 161 secondary peak in 1911 in Caversta, followed by a steady drop to twenty in 1951 162

[Caversta] [Cromore]

161 The 1914-18 war had a marked effect on the Caversta population - 16 out of 54 (29 per cent) left after
162 1911 and no re-population took place. Since 1939, seven people have migrated to Stornoway or the
166 mainland, (16 per cent of the total 1939 population), and six of these were from Torista (i.e. 50
167 per cent of the 1939 Torista population); only one family now remains there. The demographic
position is becoming more acute for there are no young married couples and no youngsters growing
[166] up. The girls have left to marry and most of the men have sought temporary or permanent employ-
ment elsewhere, for with better communications, education and the radio, the pull to the towns has
become stronger. There are now only two people in the township who could be described as full-
time crofters, earning no supplementary income by weaving tweed on commission from the Stornoway
mills.

241 Caversta is not one of the most progressive of the South Lochs townships. Although the crofts
243 are fenced, the common pasture is not visibly delimited from either the Cromore or Garyvard
632 pastures. At present, the grazing is fully stocked according to the soum, but the committee has not
as yet initiated any re-seeding schemes. As the pasture is not of the best quality, some newly sown
grass would benefit every crofter. Lack of manpower may in part account for this deficiency but even
a small acreage of re-seeding would be a great asset.

000 The future position of the township is rather doubtful: it is not the best type of land for mechanisa-
tion and is badly served by communications. The future of Torista appears to be probably one of
abandonment, unless it is more easily linked with Cromore. The possibility of a good road being
built here is remote, as there is only one family to serve. The main part of Caversta is also open
to question. Amalgamation of the crofts would not necessarily make more efficient units for the
present units are not used to their full extent. Amalgamation with Garyvard might benefit the
township a great deal, as the Caversta population is rather small to flourish in isolation. The future
of Garyvard, Kershader and Habost is one of hope, but unless some change takes place soon, it is
not difficult to see Caversta, and Torista, following the same course as Calbost and in thirty to
forty years being little more than grazing land.

CROMORE

G. Mary Swindell, B.A., and Dennis F. Fancett, B.A.

131 Cromore is situated on a peninsula between Loch Erisort and Loch Cromore. Approaching it
361 from the access road, Cromore has the appearance of a nucleated settlement, but in fact each
house is situated on the owner's croft. The crofts are so arranged that each has a portion of land
on the more level surface of drift deposits; houses 1 to 20 stand at the junction of the drift and the
Lewisian gneiss. Soils are poor and thin, and there are numerous outcrops of barren rock amongst
174 the arable land. The natural vegetation is heather moorland with extensive patches of rushes and
137 cotton grass, the pattern of most of the 'outrun' around Cromore.

The township comprises twenty-seven crofts and there are twenty-seven working units; two
241 crofts are subdivided while another four form double crofts. In addition there are five cottars and
632 the Schoolhouse feu. Outside the township dyke there are two feus and four squatters. The croft
layout differs from most other townships as each croft is in four non-adjacent pieces, one piece
around the house, another above Creag Cromore and two pieces on another area of enclosed land
on the common. Two crofts on the eastern side of Loch Cromore, have most of their arable land
around the croft-house while three crofts have only one share in the other area of enclosed land.

Until this decade all the land around the houses, and much of that above Creag Cromore, was
241 regularly cultivated. Some of the lazy-beds on the higher land are being cut for hay this year but
311 cultivation is limited to the land around the croft houses and is completely unmechanised. The only
[244] crops at present are oats and potatoes and these are usually grown in rotation. The crofters sowed
[246]

[Calbost] [Gravir] [Glengravir]

161 The present situation in Calbost is best illustrated by reference to the population statistics.
162 There are only 17 people living there at present, seven of whom are squatters and only eight houses
are occupied within the dyke. Of the male population, there are three children under fourteen years,
one man in the 15-44 age group, three between 45 and 64 years and two over 65. This clearly
shows the lack of active men from 15-44 years, necessary for the continuing economic success of
166 the community. However, even these figures are not so striking as the numbers of emigrants as
167 no less than 39 men and 40 women have left Calbost since 1939.

A community of 120 persons has shrunk to less than 20 in only twenty years as the younger
[166] people have left to find employment in Stornoway and on the mainland. The present population
[167] structure seems to indicate a continuation of the downward trend.

GRAVIR AND GLENGRAVIR

131 Gravir, the largest Park township numerically in population and crofts, lies astride the major
133 east-west inlet of Loch Ouirn, a glacially modified line of structural weakness. The site of the
township is perhaps the most picturesque in all Park, but the steep slopes, lack of cover, the small
area of good arable land, and the considerable population existing on slim resources, problems
common to Park as a whole, are all epitomised in Gravir.

361 On the south-facing-slope above the loch and the continuation of the trough in the valley to the
241 west, the majority of the crofts have been carved from moor to sea, some before 1800, and some
175 in the process of the abolition of run-rig which was accomplished in the years 1850 to 1852.
178 Originally, there appears to have been thirty crofts, but four were added during the nineteenth
century, two at each end of the line, and in 1934 a further fifteen were cut out of the common graz-
ing, a mile to the west of Gravir. On the south side of the loch, the 'clachan' of Tom an Fhuadain,
established about 1800, has since developed into a further nine crofts. Thus there are forty-three
legal crofts in Gravir and a further fifteen in Glengravir making fifty-eight in all.

The layout of Glengravir, a line of crofts from 3.6 to five acres, typifies the small post-1918
Department of Agriculture holdings. The arrangement of the Gravir crofts is illustrated in Figure
4, and it will be seen that not all the crofts are consolidated. There are three areas of former
arable commons which have been lotted in unfenced strips and they may well be reclamations which
were necessary to supplement the food producing capacity of the holdings. The method of division
and allocation speaks of a period when a subsistence economy under severe pressure from over-
population necessitated fair shares for all. The last of these commons was in cultivation until
1891. Although subsistence crofting has been obsolete since then, there is as yet no move towards
a regularisation of the layout.

178 The congestion which necessitated the reclamation of the arable commons developed mainly
175 as a result of a successful fishing industry which prospered from 1860 to 1914 and at one time there
228 were two curing stations in Gravir. With relative prosperity from an ancillary industry, cottars
[161] were tolerated and the population rose from 197 in 1830, to 368 in 1881 reaching a peak of 468
[162] in 1911. The collapse of the industry after 1914 began the downward trend which has certainly not
yet ceased. Gravir reverted from 1918 to a township of agriculturalists and a base for employment
furth of Lewis, although there have been spasms of successful fishing activity since.

Stock raising is now the function of the township and the agricultural resources and conditions
241 are hardly conducive to the development of economic holdings. The Gravir and Glengravir crofts
[231] vary between 3.5 and 26.5 acres in size; no croft has more than four acres of 'old arable'. In the
days of subsistence agriculture, and indeed until the 1930's, cultivation, all in narrow lazy-beds,
banked up with stones at the downward extremity on the steep slopes, was much more extensive.
All the cultivable land was at one time under crop, heavily manured with seaweed cut as far away as
[324] Cromore or the coast south of Kebock Head. About one-third of the maximum lazy-bed area is now
[137] cropped and the more inaccessible areas of the crofts have reverted to pasture; some of the lazy-

[Gravir] [Glengravir] [Lemreway]

The urgent need in Gravir is a reduction in the number of holdings. A pre-requisite of such reorganisation would be the creation of employment for a non-crofting population. Weaving and fishing are the more obvious occupations; the former is subject to world trade fluctuations but the latter is now in a more favourable position since the introduction of the herring fishing guaranteed subsidy, although the raising of the initial capital for buying and equipping boats is a formidable problem. It is clear that a division of the community into a crofting and non-crofting sector is essential if the present population level is to be maintained. The most serious aspect of the present trend is that the migrating section of the community comprises the younger and more enterprising people. Unless holdings of economic size can be formed, and stable employment introduced, one can expect the younger men and women to remain in Gravir.

Until a major reorganisation of the crofts is carried out, a vigorous attempt to re-seed large areas of the common pasture and the three former arable commons, and the development of a croft-tourist industry, are interim possibilities. It is not sufficiently realized in crofting districts that there is a demand from the city dweller for simple accommodation and good plain fare in a clean atmosphere, with the possibility of hill walking and fishing on fresh and salt water. Yet, until the proposed water-scheme becomes a reality, tourism on a moderate scale can hardly be contemplated.

One can only conclude that until reorganisation takes place and transforms Gravir into a township of viable agricultural holdings, any stabilisation of the present trends is out of the question. A decline in the number of holdings is inevitable in the long run but a planned reduction over a number of years would bring about a more viable community than the disintegration which will occur without such planning. Until this is achieved, the young men and women have little incentive to remain in Gravir.

LEMREWAY

Beth Blowers, Brenda G. Turner
and John E. Wearmouth

Lemreway, the southernmost township of Park, comprises 290 acres arable and outrun divided into thirty-three crofts and 3,025 acres of common pasture. The township is situated on the northern side of Loch Shell round a bay in the shelter of Eilean Iuvard.

The township consists of three distinct areas. A flat, poorly drained area at about 100 feet, part common pasture and part reclaimed as extensions to the crofts, locally known as 'the Outend', forms the first subdivision. The second area, further west, is of a hummocky nature. To the east, a steep slope rises to an altitude of 400 feet, less than half a mile from the loch shore, forming the third. Two benches are to be seen at about 100 feet on the steeper slope and similar, though wider terraces occur at the same height to the north. It is suggested that the flat area is the bed of a moraine-dammed lake, and that the hummocky sector is partly morainic and partly ice-eroded rock exposures. A channel eroded through this sector allowed the lake to drain southwards leaving a relatively deeply incised valley through which the present stream flows to the sea.

Soils may be divided into two types - a peaty loam and the better drained gravelly loam which is found to the east and along the main stream; the latter is particularly suitable for potato cultivation.

Except on rocky outcrops, the very steep slopes and the drained areas, blanket bog predominates. Sphagnum here is rarely dominant but where the land is badly drained Deer's hair grass (scirpus caespitosus) and cotton grass (Eriophorum vaginatum and Eriophorum angustifolium) are the dominants. On slightly drier land, purple moor grass (Molinia caerulea) and mat grass (nardus stricta) are abundant. Local dominants are bog asphodel (Narthecuim ossifragum) and cross-leaved heather (Erica tetralix) with other common species such as the sundews (Drosera rotundifolia and intermedia), butterwort (Pinguicula vulgaris), Juncus sp., Carex sp. and Carex panicea occurring sporadically. Where the peat has been cut and drained, 'heather moor' usually develops and Calluna

[Lemreway] [Orinsay]

The West Highland Survey Township Card[1] describes Lemreway as "predominantly a fishing township". The remains of an old curing station are visible today and until 1947 there were twelve boats operating from Lemreway. A declining market, increasing cost of gear for obsolescent boats and the lack of a landing stage led to the decline of the industry in this township. Today there is one fishing boat which lands its catch in Stornoway: working with modern equipment, drift and ring nets, it provides a regular income for a crew of six.

An examination of the population statistics proves interesting, especially when compared with those for Orinsay. Lemreway's resident population of just over 70 males and 70 females is large considering that there are six unoccupied crofts. Eleven of the crofts have more than one house and the cottar population forms over a third of the total residents. More than two-thirds of this resident population is in the two important age groups - between 15 and 64. With over forty resident males in the working age group, Lemreway provides a striking contrast to other crofting townships in Park.

Fourteen of these men are full-time croft workers, while nine others find work in ancillary occupations such as weaving and fishing. A further eight supplement their croft work with regular employment - a postmaster and a postman, a bus driver, a lorry driver and several weavers. Just over thirty people work away from the township permanently, fourteen in the Merchant Navy and nine girls in domestic service, while a further nine engage in seasonal work.

Emigration from the township has continued steadily with forty people leaving since 1939. Nevertheless, Lemreway has a larger proportionate resident population than most townships.

Only four thatched houses are occupied and housing conditions generally are good. Every house has electricity, but, with four exceptions, water has to be carried from springs and wells. Most of the present houses were constructed in the 1930s and they are usually near to the road. Ruins of the old houses remain, some being used as byres, and these were built either along the shore or up the slope in the shelter of the hills, where the house was near the sheep, the peat and the springs. Today supplies of food, peat and even seaweed are brought by road.

Mention must be made of the possibilities of the tourist trade in Lemreway with its most attractive situation and reasonable road connections. An approach has been made to the Scottish Youth Hostels Association and while hostellers could not greatly increase the income of the residents they would stimulate interest in the area. Accommodation for summer visitors, other than relatives of the crofters, is difficult to find but it seems that at least three houses could be used.

It is possible to be optimistic about the future of Lemreway, as at the moment considerable enterprise is being shown. A Ferguson tractor, bought this year by a man returning from whaling, is an example. It is to be hired out and could be put to good use in some parts, especially on the outend. The attempt to improve the common pasture and the new extensions to neatly painted houses all reflect a combined effort to improve conditions. The old economy of crofter-fisherman is being adapted to modern times and crofter-weaver, crofter-postman and crofter-bus driver are the contemporary employment combinations.

The pessimism and apathy noticed in many crofters is to be found in Lemreway but above this is the impression of enterprise. If Lemreway can continue to adapt itself to changing conditions, it may be able to combat the 'drift to Glasgow' and continue as a successful community.

ORINSAY

Beth Blowers, Brenda Turner and John Wearmouth

Orinsay is a small crofting township clustered, in the form of a horseshoe, around the head of a sheltered bay on the northern side of Loch Shell. Most of the houses are situated within fifty yards of the shore on a narrow strip of level land, while the crofts extend from the shore on to the moor

1. The Directors of the Crofting Survey are grateful to Dr. F. Fraser Darling for granting access to the individual Township Cards, which are a storehouse of information. For detailed contents of the cards, see West Highland Survey p. 247.

231 Recent trends also point to a decline in the numbers of sheep, although more are kept now than
[288] fifteen years ago. From 1942-51 the numbers were more than doubled (263-565). A great deal of this increase must have been a result of the ewe subsidy, but part at least may be connected with the war and post-war boom in Harris tweed. By 1955, when the subsidy was suspended, numbers had already begun to decline and have since fallen steadily. This year the township has only 374 breeding ewes while the rearing of only 236 lambs would suggest a further decrease in the future.

221 All the crofters keep some sheep although individual stocks vary from 15 to 150. For most of
233 the year these sheep are grazed on the common pasture on the moor or on the eighteen acre island in the bay. In August, however, the lambs are gathered in for weaning and dipping; in November the gates are opened and all the sheep allowed to graze on the cleaner pasture within the croft boundaries. If necessary they are given fodder, but from the beginning of January they are encouraged to return to the moor, although the gates are not 'officially' closed until May.

311 The total area of the common pasture exceeds 1500 acres, but most of this consists of hummocky,
233 waterlogged peat moorland supporting only poor quality coarse grasses and sedges. Over 700 sheep now graze this area and the apparently large common pasture is in reality drastically overstocked, a process which must inevitably harm the animals as well as the land.

231 No pigs or horses are to be found in the township and each crofter keeps very few hens, normally
235 just sufficient to provide eggs for home consumption. Any surplus eggs which do remain are sold
[435] to the Co-operative van, but prices are so low that the keeping of more than a dozen hens is far from profitable.

434 It can be appreciated that crofts of this size and quality can neither provide the crofter and his
464 family with sufficient income, nor fully occupy the available labour force. As a result, people
228 in the past have turned to the sea. Indeed the West Highland Survey describes Orinsay as "primarily a fishing township". Today the herring fishing has disappeared entirely and only one crofter still does a little lobster fishing, sending his catch direct to Billingsgate.

161 There are now 45 people resident in Orinsay but an examination of their ages reveals that less
162 than half of them are between 15 and 64 years. Indeed there are only six resident males between these ages, and three of these spend at least part of their time working away from the township on the Eishken estate.

366 As there is neither a school, post office, shop nor garage in Orinsay, there is no available
368 occupation in the 'service trades'. Therefore, over half of the males between the ages of 15 and 44
166 are permanently away in the Merchant Navy, returning home only for holidays, while another third
167 are seasonally away with the whalers. Similarly almost half of the females of similar age work in
464 domestic service in Glasgow. It must be realised that most of these people working away assist
505 their families at home, and that a large part of the croft incomes are made up of money sent home,
228 together with pensions and other allowances. Emigration from Orinsay to other areas has continued
462 steadily, twenty people leaving the township since the war.
352
[434]

On the whole, housing conditions are good, due to relatively recent construction. There is
392 only one traditional black-house, and even this house has electricity: only one house is without it.
377 Water supply is not so certain as wells and springs are the only source. The township lacks a
312
[206] telephone and a shop, but is served by travelling vans. A good road, constructed within the last
366 decade, connects Orinsay with Gravir; entering the township via the valley to the north-east, it
491 serves directly all but three of the crofts. A bus leaves daily for Stornoway, about thirty miles
[494] distant.

161 Like so many other crofting townships Orinsay, above all else, gives an impression of con-
162 gestion. The self-same hills that provide shelter also restrict cultivation. The crux of the situation is that land, extremely marginal in character, is being worked by too many tenants on holdings too small to be economic. With three residents to every two acres of cultivated land, Orinsay must be seen as an 'overspill' - an unfortunate result of the cottar problem in the 'twenties'.

[Orinsay]

233 The future existence of the common pasture for grazing is being seriously endangered by overstocking. The souming is not enforced in Orinsay and the actual sheep stock exceeds the soum
[314] by 300 per cent. Peat-cutting is gradually destroying valuable grazing areas; in the last three years there has even been some peat cutting on the better grazing on the island. The dangers both of overstocking and of indiscriminate peat cutting cannot be overstressed.

311 No evidence was seen of attempts to improve the quality of the common pasture. The establish-
242 ment of shelter belts would provide not only shelter but a means of stopping the peat from 'slumping' down slopes if they were carefully sited. Much of the common pasture could be improved by a hill drainage scheme and by re-seeding, after sanding and liming, a project well within the capacity of the resident labour force.

241 Good crops on a few of the crofts suggest that the land is not inherently sterile, however, and it would seem that if the holdings were reduced to a maximum of four, an economic existence might be feasible on these crofts. The stony nature of the soil limits the possibilities of tractor cultivation but with an improvement in drainage, one might be used in the two valleys.

464 It is not so easy to be optimistic about the employment of surplus population resulting from
[288] such an enlargement of holdings, although a revival in the fishing industry could absorb most of the men. At present there are no looms in Orinsay and providing the Harris tweed industry can hold its own, there are possibilities in weaving. Seaweed is in plentiful supply, indeed Lemreway people also obtain
[324] supplies and should its quality prove adequate, the establishment of a processing plant would provide valuable employment.

000 Nevertheless it is becoming increasingly obvious that unless the holdings can be enlarged, whether officially or by sub-letting, and some further employment created, Orinsay is liable to stagnate, and depopulation to continue. The township which was developed to relieve congestion is now itself congested.

SUMMARY AND CONCLUSIONS

121 The aim of the Glasgow University Department of Geography Crofting Survey is to record and analyse material relevant to the crofting districts, and in so doing provide a clear and impartial statement of the present situation. In inviting us to undertake a survey of Park, the Pairc Association hoped that a body of fact would be assembled and conclusions drawn which would assist the Association in their admirable aims of advancing the well-being of the area. Their two Progress Reports, of 1956 and 1957, indicate that they have already investigated many of the possibilities for development. This summary refers to Park alone, and, it must be emphasised that until the survey of crofting is completed, no final assessment of the Crofting Area as a whole can be made.

182 The district of Park is one of the more isolated and difficult crofting environments. The ruggedness
175 of the terrain, the high proportion of land of very low agricultural value and sheer isolation make the
511 existence of human communities precarious. In addition, many of the Park communities were first established as a result of population pressure in more favourable areas of Lewis, and the original small settlements grew rapidly as a result of a change in land use which was a national trend - the conversion of poorer areas from subsistence farming to an extensive sheep-rearing economy. The impact of this change came to Park in the form of the eviction of a large body of small farmers in favour of an extension of the grazing area. Thus the present conditions are a legacy of the relatively recent past, and of legislation, particularly in the Crofters' Act of 1886, which accepted, and tacitly agreed to the maintenance of a larger population than the land could reasonably carry[1]. Two World
[141] Wars and fluctuating economic factors have had repercussions in Park and resulted in a change in
[142] economic and social values, and depopulation has resulted: the 1951 population was 60 per cent of the 1911 total.

1. The Commissioners proposed that only holdings rented at £6 and over should have security of tenure, with a view to discouraging the perpetuation of grossly uneconomic holdings. In the Act, all holdings were given security of tenure.

POPULATION

Figure 6 and Table XII give the population of Park from 1830 to 1958 in graphical and tabular form. The 1830-51 decline was due to evictions. The rapid increase in population from 1861 until 1911 can be almost wholly ascribed to the success of the fishing industry: a comparison of the graphs of the selected agricultural and fishing townships makes this clear. The decline since 1911 has been very rapid, and is mainly a reflection of lack of ancillary employment. The 1939 figure in the graph appears to show a slight check in the rate of decline but it may be that there was an influx of evacuees from Glasgow just before the enumeration was made.[1] The 1951 Census confirmed the continuing downward trend as did the enumeration of 1958.

An investigation of the age structure of the population (Table XIII and Figure 7) reveals that not only is the population declining but also that it is ageing. In 1958, only five per cent of the population were under school age, as compared with 9.4 per cent in 1939. The largest single group in 1939 was the 15-44 age group, the most enterprising and energetic members of the community; in 1959, the 45-64 age group emerges as the largest. The 65 and over age group has increased by 5.2 per cent since 1939.

As the 1939 and 1958 enumerations were not obtained under the rigid conditions of the Census, the figures for Lewis, excluding Stornoway Burgh, have been added for comparison; unfortunately the published Census material does not give individual parish statistics in age groups for Lewis. By including those persons in seasonal employment (mainly in the summer months) and excluding those permanently away, the Census and enumeration figures are more comparable, but it is possible that in the enumeration there may be an error of five per cent. (See Table XX). From these comparisons, it would appear that the population structure of Park is unbalanced in comparison with the rest of rural Lewis, and Scotland as a whole. The reason for this is the fact that so many people are working permanently away from home. (See Table XIV). From a study of the population structure it is clear that Park has all the attributes of an ageing population, a significantly low proportion of children and a higher proportion of the 45-64 and 65 and over age group than either rural Lewis or Scotland as a whole.

An attempt was made to record migration from the townships since 1939. From Table XV it is clear that all migrants were not recorded in the enumeration but the discrepancy may be explained by two other factors. The evacuees from Scottish cities who returned after 1939 to their city homes may well account for some and more people may now be working permanently away from home than was the case in 1939.

The destination of the emigrants (Table XVI) is significant. Stornoway Burgh (32 per cent) heads the list and so many of the Park families have not left Lewis but have gone to the one place on the island where employment is available. The second largest group have migrated permanently to Glasgow; many of those in permanent employment furth of Park (unmarried and still part of the croft household) work in Glasgow, and eventually marry there. It is also significant that only 16 per cent of the emigrants settled in crofting areas. The fact that over one-third of the recorded migrants settled in the only truly urban community in the Outer Hebrides needs further investigation but one possible conclusion is that if employment were available in Park, the migration rate would be drastically cut.

1 For discussion of this point, and of the population statistics in general, the author is greatly indebted to R.S. Barclay, B.Sc., Ph.D., F.R.S.E.

1. Including those temporarily away: the permanently absent group would not be included in the 1939 enumeration.

2. Adjusted for war Casualties - Agricultural Townships 5, Fishing Townships, 28

/facing p. 14/

[Seaforthhead]

161 Table XVII reinforces the idea that there is a striking dichotomy between the agricultural
162 and fishing townships. The former are characterised by a more stable population trend,
166 significantly fewer of the population in permanent employment furth of Park, and a smaller loss by
167 migration. In the fishing townships, where growth and decline have been equally meteoric,
241 there is a larger proportion of persons in permanent employment furth of Park, and migration
222 losses have been greater. It is also significant that there is a smaller natural increase of
632 0.5 per cent in the agricultural townships. The only township which shows a natural decrease over this period is Calbost, one of the fishing townships.

SEAFORTHHEAD AND SHIELDERNISH

Rachel A. Hirst

131 Seaforthhead and Shieldernish are separated by 4,485 acres of rough grazing, the former lying on the northern shore of Loch Seaforth and the latter on the southern shore of Loch Erisort.

SEAFORTHHEAD

135 Seaforthhead, the most isolated of all the Park townships, consists of three crofts and a
361 gamekeeper's holding. The township boundary is situated between the 50 and 75 foot contours which at their furthest extent are only 150 yards from the shore. Immediately behind the road the land rises very steeply in rough uncultivable moorland covered with many boulders but generally below the road the land slopes gently at about 5-10 degrees, in places being
[241] completely flat. Here, however, the lazy-beds are very boggy and rushes have appeared in the ten years since cultivation ceased.

134 The soils are deep near the shore due to soil creep; higher up they are very thin and peat
137 accumulates to at least 3 feet both below and above the road. There is little cover; bracken is rare, but silverweed and heather, moorland sedges and grasses soon colonise disused lazy-beds.

241 Legally there are three crofts but only one is still cropped, the other two being used solely
[235] for grazing. There is, however, a gamekeeper's holding within the township boundary worked as a croft. The other two crofts are used as ancillary grazings to holdings in Airidhvruach and Balalian and have not been lived on for forty years and ten years respectively.

[244] The chief crops are oats and potatoes, though the gamekeeper had a patch of turnips and the other croft had grown them during the last few years until 'finger and toe' developed.
[407] Patches, about half an acre in extent, are drained with stone drains and ploughed by tractor, after which potatoes are grown to clean the soil, followed by oats for one year and then sown hay for three to four years. This is not strictly adhered to and several lazy-beds appeared to be
[314] in natural hay. There is no peat-cutting on the crofts as peat is secured just outside the township fence on the common pasture. Lambing has been poor for the past two years being
[231] only 50 per cent in 1958; the stock carried is twice the sheep soum. The cattle, Highland and Ayrshire or Shorthorn crosses, are below the soum, but previously nine cows and followers have been kept.

161 There has been a great decrease in population and cultivation since the resettlement in
162 1886. In Seaforthhead and Shieldernish as a whole, there were twelve crofters before the
241
178

[Seaforthhead] [Shieldernish] [Habost]

161 suppression of the original townships opposed to six today. As a result, many lazy-beds, now
167 given over to natural grass, are being gradually encroached on by heather and juncus. Out
241 of the present population of twenty-three, one is permanently away and two have migrated
178 since 1939. There is a more healthy population structure, with a large number of males between 15 and 44, due to a large family having returned home and six children, five of school age.

361 In Seaforthhead and Shieldernish all settlement is below the road and house-sites are on
[349] slight elevations. At Seaforthhead is the reputed hunting lodge of the Seaforth's, 'Seaforth Castle'
[505] now ruined, but still showing signs of abnormal size and arrangement. When first settled,
[491] communication was by ferry (1820). Now a cart-track, deeply rutted, to Eisken Lodge gives
[178] access to the Tarbert-Stornoway road two-and-a-half miles away.

SHIELDERNISH

131 Shieldernish, also consisting of three crofts, is better situated on the Park and South Lochs
361 road. The three houses are situated on a well-drained northerly slope, half-way between the
632 road and the shore, but the three crofts are on better land and greater accessibility has led to better management and new ideas.

241 Cultivation in isolated patches reaches up to nearly 100 feet and the lazy-beds have been put
311 together to permit ploughing by horse or tractor. One croft grows neither oats nor potatoes,
[246] preferring to enclose two one-acre parks, re-seed them, cut the hay in June, and wean the
[231] lambs on the aftermath. By next year, this crofter hopes to have enclosed and re-seeded a
[244] further acre and will then use the three in rotation. The other two crofts grow both oats and potatoes and one is also sowing down. The crofts average fourteen acres in size but although gentle slopes are extensive, the major part of the crofts is in permanent pasture. The total
[126] stocking of the Shieldernish crofts is below the souming. Fishing is now only for domestic use
[288] though there is a small jetty on No. 1. Part-time weaving is performed on two of the six crofts.

The future pattern would appear to progress to more grazing and less cultivation. Two out of the six crofts - both at Seaforthhead - are worked from outside the township and this isolated township, being difficult of access and having little cultivable land, is better suited to grazing. Shieldernish appears more suitable for enclosing parks for fattening lambs, as soils are deeper and slopes gentler, making the use of a tractor feasible. More could be got out of the crofts especially with fertilising and re-seeding for hay and pasture and growing
[125] fodder crops for wintering. It is hoped to fence the common securely, and then stock will be renewed - a great necessity. Daily communication with Stornoway also means that Shieldernish is better placed than Seaforthhead for a flourishing settlement. The crofts are certainly of a workable size - provided part-time work, such as weaving, is maintained, along with the grants from the Crofter's Commission.

HABOST

Rachel A Hirst

131 Habost is scattered around a small bay on the south shore of Loch Erisort. Settlement
133 stretches for over a mile encroaching on three small hills separated by wide, well-drained
241 valleys which soon rise to the dominating Craigeal (225 feet). Slopes are varied but tend to
361 flatten out at about 100 feet near the road and on this flat, most of the cultivation takes place. Nearer the shore, slopes are much steeper and on the hills there are bare rock faces and thin
[134] soils.

Lewis (excluding Stornoway)	9.0	15.7	35.1	24.3	15.9	100.0
Scotland	9.0	15.0	43.0	23.0	10.0	100.0

1. 'Total' population includes those in permanent employment furth of Lewis

/p. 12-B/

161 Table XIX summarises the population structure and trends for the four districts. It is significant
162 that the two districts without service centres, which provide a range of ancillary employment, have
166 experienced more severe depopulation since 1939. This table also underlines the fact that earnings
167 from seasonal employment are insufficient: the incidence of permanent employment furth of the
434 districts is three times as great as the incidence of seasonal employment.
464

APPENDIX B

SHIELINGS - A NOTE

John E. Wearmouth with illustrations by Beth Blowers

195 From Figure 1, compiled from the First Edition six-inch map of the Ordnance Survey (1850
233 to 1852) and from personal observations, it is clear that the shieling system was at one time an overall feature of Park for the whole peninsula has traces of this transhumant economy.

361 The rudimentary structures, some of turf, others of stones and roofed with bracken or
342 heather thatch, are all sited on well drained sites, the majority on mounds. Almost all the sites are close to lochs or streams. The majority are in loose groups of from two to nine buildings, although there are some in isolation; no site has as many as twenty-six buildings as found at Airidh na Ganithe in North Uist.

342 There appears to be two distinctive shapes of building - oval and rectangular (Fig.10). All shielings measured exhibited a remarkable similarity in dimensions, from 17½ by 9 feet to 13 by 12 feet. The oval structures are generally larger than the rectangular ones. Most of the shielings had two entrances, often, but not always, opposite each other.

195 The shieling system died out in Park about 1880 but the cattle continued to graze around the
233 shielings on the better grass, and the crofters had still to go out to milk the cattle at the shieling, although they no longer lived there. The sheep still use the mounds for shelter and grazing. These features of an obsolete economy are still easily recognisable from the luxuriant grass cover in a wilderness of peat bog and bare rock.

APPENDIX C

NORSE SETTLEMENTS NAMES IN NORTHERN PARK, LEWIS

Bridget M. Gordon, B.A., B. Litt.

103 See: Magne Oftedal, The Village Names of Lewis in the Outer Hebrides; in Norsk Tidskrift for
113 Sprogvidenskap, vol. XVII, 1954, (Oslo), pp. 363 ff.

103 Professor Oftedal points out the difficulties of these Norse-Gaelic settlement names: inaccurate spellings even in modern times, and lack of any useful evidence from older sources, make almost all the derivations a matter of conjecture. Sometimes two or more ON equivalents are possible (e.g. for Calbost), sometimes no satisfactory solution can be found (e.g. for Lemreway). Since Professor Oftedal frequently bases his explanation on pronunciations not recorded in written forms, his evidence is largely followed here.
SHIELDERNISH: the second element is N nes, 'headland'. Oftedal's explanation of the first as silda, genitive plural of N sild, 'herring', is satisfactory linguistically, but seems unlikely in meaning.

ABSTRACT

Cultural Continuity and Population Change on the Isle of Skye

Paul Richard Ducey

121 This study is concerned with the effect of population change on the culture of the essentially peasant society of the Isle of Skye, one of the Hebrides of Scotland. Standing on the very fringe of Western Europe, this particular surviving remnant of the once widespread Celtic culture has experienced a familiar consequence of the impingement of the social and economic forces 161 of urban and industrial Western Civilization. Involvement in the process of westernization brought a rapid, accelerating increase in the size of the population. Failure to make the required cultural adjustments led to persistent depopulation. 121 From the many problems created by the swing of the population pendulum, this study singles out one of particular anthropologic significance. The thesis is that population change is not necessarily a criterion of cultural discontinuity. Although one case study cannot prove this assertion, future research along similar lines in other cultures marginal to the main stream of Western Civilization may reveal a wider applicability of the [101] thesis. The material presented in the present study was collect during a year of field and library research in 1953 - 1954.

121 128 The approach to the problem is oriented toward the culture history of the Skyemen. Following a brief comparative descripti of the contemporary culture, an attempt is made to reconstruct

a wider applicability of my thesis. The evidence in support of my assertion was collected on the culture history of the Isle of Skye, a part of the area known as the Highlands and Islands of Scotland.

Since I shall frequently speak of the Highlands and Islands in the following pages, we should have a precise definition of the region (Figure 1). Geographically, the Highland boundary should be placed at the Great Highland Fault, a series of geological faults which extend across Scotland from the River Clyde to Stonehaven, south of Aberdeen. Politically and economically, however, this line has receded to the north and west. Since 1883 it has been common in Scotland to equate the Highlands and Islands with the "Seven Crofting Counties," those counties in which the predominate form of land use is the crofting system. Crofting may be defined as a system of hereditary tenure of a few acres of arable land combined with common tenure of hill grazings. These counties are: Argyll, Inverness, Ross and Cromarty, Caithness, Sutherland, Orkney, and Zetland. Out of the 163 parishes in these counties only 12 are considered non-crofting.[1] In addition to this shared socio-economic pattern, the seven counties have experienced common economic-geographical influences, a century of accelerating population growth, followed by a century of persistent depopulation.

---

[1] Adam Collier, The Crofting Problem: A Social and Economic Study (Cambridge: Cambridge University Press, 1953), p. 11n. A parish in Scotland is an ecclesiastical district which until 1929 was also a civil unit with self-government in such local affairs as education, relief for the poor and infirm, and health. If the British county is thought of as analogous to an American state, the parish can be thought of as a county, but one devoid of any function.

101 The Highlands and Islands are often divided into a Western and an Eastern subregion. The Western Highlands include all of the Hebrides and, approximately, the western half of the counties of Sutherland, Ross and Cromarty, Inverness, and Argyll. This leaves the remainder of the seven crofting counties, including the islands of Orkney and Shetland, to the Eastern [632] Highlands. The seventy-two parishes of the Western Highlands have been isolated by physical barriers from communication with Great Britain. Here, too, differences of race, language, and culture have continued to distinguish the people from the other Scots. With this rudimentary delimitation of the areas in mind, let us briefly review their population cycles.

161 When Alexander Webster, then Moderator of the Church 162 of Scotland, compiled his enumeration of the population of Scotland in 1755, the Highlands contained 257,133 people, and the Western Highlands had a population of 114,834. In terms of percentages, the total region, 47 percent of Scotland, had 20.3 percent of Scotland's population, and the subregion, 29 percent of Scotland, had 9.1 percent of the national population. By 1831, despite chronic emigration, the population of the Western Highlands rose to 200,955 (see table 1) but there had been a decline to 8.5 percent of the national total. In 1841 the total Highland population reached a peak of 396,045, but now only 15.1 percent of the Scots were Highlanders. By 1851 depopulation had begun. The Highlanders in the West had decreased in numbers to 190,728 and those in the whole area, to 395,540. From that day to this depopulation has been continuous. Although the 1951 census is still above Webster's

[TEXT CONTINUED ON PAGE 6]

Wider Applications

161 The decline of rural population is not peculiar to the Highlands of Scotland. There are areas of southeastern Scotland, including some long celebrated for cattle and grain, which have lost nearly as many people as the crofting counties. Berwickshire, for example, is one of the richest farming districts in Great Britain. The population trend, however, has been much the same as that of the Highlands.[44] In 1801 there were 30,206 in the county. After a peak in 1861, there was steady decline until now there are only 24,770, a decline of 32.3 percent. The loss of rural population is a well known phenomenon beyond Scotland's borders. It has been a persistent problem in Ireland and Wales for more than a century. Indeed, it has been a familiar phenomenon in Western Europe since the days of the Industrial Revolution. The only notable exception appears to be Italy; her rural population has increased 40 percent in the last four decades. The same tendency for decrease is found in the United States in such different areas as the Appalachians, the midwest, and, as has been observed, New England.

Population decrease has also been the fate of many primitive peoples. The Island of Yap, for example, has lost a remarkable proportion of its former population in contrast

[113]

[44] Census of Scotland: Berwickshire, 1951.

164 with many of its neighboring Caroline Islands.[45] A similar tendency has been reported for the Aleutians.[46] On the other hand, there are the Pueblo,[47] who have recently begun to increase, and the Navaho,[48] who have grown in numbers at a rate no less striking than the decline of innumerable tribes in the non-Andean areas of South America.[49]

121 Although the fate of any one community in contemporary 161 United States may be insignificant to the social scientist who is interested in culture change, social instability among folk and peasant peoples is a factor which should not be overlooked. I am certain that it is not a criterion of cultural discontinuity, unless the tribal or peasant group suffers complete obliteration. I am equally sure that it is commonly symptomatic of cultures which have been unable to make a complete adjustment to the new and higher sociocultural organization reaching down to them. Some tribes, it is true, have succeeded in making a pretense at adjustment. Noted for

121 preserving a good deal of their complex culture, the Pueblo
161 and, in particular, the Navaho have increased in numbers. The isolation of an inhospitable environment will not fully explain their conservatism without instability. One after another, even more isolated Aleutian villages have disappeared. Those which have experienced social instability and disintegration have paid the penalty for preserving too much of their traditional culture. In Aleutian villages where the traditional culture has been largely replaced by western ways social disintegration is, at present, unknown.[50] Depopulated Yap is, perhaps, the most familiar case of persistent refusal to adjust to the impinging Western World.[51] All over Europe there are peasant peoples who are facing an identical situation. Techniques for complete adjustment to their larger sociocultural groups are unavailable. Still tied to the land and their old ways instead of to 1955, they are slowly dwindling in numbers. In all of these cases of social instability the culture is growing old with the people. The deviants, the individuals who will not conform to the traditional behavior patterns and norms, leave, and they are mainly the youth. Whether or not there is always a change in the focus of the culture such as occurred on Skye I am not able to say, but, doubtlessly, there are always changes in content as a part of the process of reintegration. Nevertheless, the form, the

121 basic distinctive pattern, of the culture is preserved and
161 continuity is maintained.

The Organization of the Thesis

128 My approach to the problem of cultural continuity
129 despite marked population change is oriented toward the culture history of the Isle of Skye. To this end, in the next chapter (Chapter II) I shall describe the environmental limitations of the island and, briefly, present a comparative analysis of the economics, settlement pattern, social organization, and religion of Skye. This is intended to acquaint the reader with the local culture and provide a perspective for the following chapters. In Chapter III I shall be concerned with the culture as it was before the commercial and developing industrial society of Great Britain became a significant acculturating influence, that is, before 1745. Chapter IV is devoted to a review of four periods of social and cultural change following the introduction of the tenets of commercialism. Throughout the chapter emphasis is placed upon cultural continuity despite population increase and then decrease. The continuity will be shown to have been preserved over two hundred years, even though there were two periods of threatened cultural disintegration, chronic social instability, and several periods of social disorganization. Having established the main social and cultural trends, the contemporary culture is examined for an understanding of its continued distinctiveness. In Chapter V, the contemporary economic

of an administrative center. The government offices, however, 621
are scattered about the village. One is down at the pier; 368
another is half way out of Portree on a trunk road, and still a third is tucked away on a side road down by the shore of the harbor. The post office is behind the court house, on the opposite end of the village, and the school, the only secondary school in all the Hebrides of the County of Inverness, is out of the village all together on another trunk road. For northern 621
Skye, Portree is the shopping center. The shops are along the 344
main streets which run off the square and along the road which leads down to the pier. All of them are in remodeled houses. For the immediate area surrounding the village, Portree is a 621
religious center. The churches stand together, except one 348
which is on the opposite side of the village; the ministers' homes are dispersed on the fringes of the village. Long ago 621
Portree was known as Cuillterraglan, (burying place at the foot 149
of the glen). The old village was no more than a church, school, inn, and jail which stood overlooking the houses of a few fishermen along the bay. The surrounding area was given over to farming. The differing ages of the buildings show how the village spread along the bay, up over the terraces, out across the flats, and finally, with the assistance of the County Council which has built all of the new houses, on to the hill which overlooks the shops and the harbor. Although only the [164]
jail remains as a sentinel of the past, the differing ages of the houses also tell how the population grew from a mere handful to 1000 in over a century and a half.

175 As the tacksmen withdrew, the farms were made over to
176 tenant-tenants.[10] The former subtenants, who had been tenants
182 at will of a tacksman, became tenants at will of a landlord. Since the people no longer had to divide the produce of the land with their superiors, they were able to meet subsistence needs more adequately. Population pressure was further reduced by the introduction of the potato and kelping, the burning of seaweed to produce alkalies.[11] The acceptance of both the potato and kelping was facilitated by the fact that neither involved any great change in traditional techniques or any expenditure other than labor. The potato gave the islanders a secure yield several times that of oats and barley. One year in every four there was no grain harvest.[12] As the potato was confined to waste land, it also enabled the cultivators to reclaim land for increasing the acreage of grain. Kelping and direct participation in the cattle trade, hitherto under the control of the chief and tacksmen, freed a large number from complete dependence on their harvests. Vaccination against small pox reduced the death rate,[13] as did the cessation of
161 hostilities. Consequently, between 1755 and 1811, the population increased from 10,671 to 17,029.

175 Little is known of the religious life of this period,
177 still the beginning of a trend which continues to find expression

175 they were frequently accused of failure to conform to orthodoxy
177 and of a disinterest in their calling.[19]

175 In time a second trend appeared which was marked by
176 conservatism and an emphasis on doctrinal dogma. Toward the
182 close of the eighteenth century, it became apparent that the
161 population had pressed too hard on the means of subsistence.[20] Commercialization was continuing and sheep flocks were be-
165 ginning to replace men in one parish.[21] The people, many of then destitute, were finding a solution for their plight in migration to the New World, or in seasonal migrations to the Lowlands for work.[22] Those who remained were land hungry.
175 Gradually, they were losing respect for their ministers and
177 turning to evangelical missionaries who had begun to appear in
178 the Isles.[23] The crucial fact would seem to be that the ministers
179 were upholding values and symbols which no longer contributed
180 to group solidarity. The Island was on the verge of a period
181 of social disintegration and cultural instability. Under the changes that were to follow, the evangelical movement grew into a large scale revival.

By 1845 there was a small crescent of houses along the shore, about twenty in number, and on the raised terrace there was a new inn, a church, a post office, a bank, several shops, and a street of homes.[34] The population had grown to all of 510.[35] The existence of the village depended on the summer cattle markets and the fishing industry, which was in the hands of newcomers.

Following the establishment of Portree and accompanying the gradual decline in self-sufficiency, the Island was brought into closer contact with Great Britain by an extension of regular means of communication.[36] Regular communications, of course, are a prerequisite for commercialization. There must be access to markets for the local produce and access to consumer goods. Without such access no man can specialize; with it the Gaisharach has been disinclined to specialize. The old drove roads, the beaten paths which had served them well for many centuries, were now supplemented by roads in the Lowland sense of the term. By the end of the period most of the more accessible townships had been connected with Portree and the mainland, and a steamer had entered regular service between Portree and Glasgow. These factors paved the way for the introduction of commercial sheep farming.

While the process of commercialization proceeded against the persistent efforts of the people to maintain their traditional way of life, events in Great Britain were beginning to have a pronounced adverse effect on the local economy. The end of the Napoleonic Wars brought the cattle boom to an end. Although the droving trade remained brisk, the value of the stock declined markedly.[37] An increase in the number of cattle on the grazings, as a means to maintain an economic equilibrium, was impossible. The island was already overstocked and had been devastated by this practice. At the same time, development of large scale commercial farming in the Lowlands had encroached on the right of way of the drovers, and the Skye cattle were suffering at the markets from competition with improved, better nourished breeds from the northeast and southwest. The end of the wars also witnessed a decline in the kelp market.[38] Parliament finally completely undermined kelping by recurrently reducing the tariffs on foreign substitutes.

The crofters, who had suffered rackrenting to get their small strips of arable, found themselves without the means to pay the rents which had been set at the peak of the cattle and kelp markets and without enough land to meet subsistence needs.[39] The striking thing is that in spite of increasing economic hardship, the population continued to grow. They became hostages

to the health of the potato and their own fertility.[40] Many men turned to fishing, on a part-time basis, but once again the initial success was short-lived. Others supplemented their diminishing incomes from the croft by seasonal employment in the Lowlands. Crofting had ceased to be a subsistence economy; the people had lost their self-sufficiency. Nor were they ever again able to escape from a dependence on some form of supplementary income to provide the bare essentials of life. The difference between conditions then and now is that the pressure of the population on the means of subsistence increased until it approached a Malthusian ceiling.

In the thirties epidemic and famine began to take their toll. Destitution became widespread and there was no system of relief beyond the moral obligation of the proprietors to provide grain. The marriage rate fell. In Kilmuir the average annual number of marriages fell from twenty-one to six. Subdivision was forbidden, but it was too late. In two districts of Kilmuir there were 190 lots, crofts, and farms to support 421 families in 1840. In all of Skye, after the emigration of at least 1500 people, there were 1900 crofters and 1531 cottars. Despite the fact that oats had become as big a luxury as meat and the fact that many were living on potatoes and fish, the population continued to increase. By 1841 it reached 23,074. Finally, the economic structure collapsed.

In the autumn of 1846 there were no potatoes. A blight destroyed the entire crop. Although the famine was universal

[40] For details concerning the plight of the crofters at this time, see MSA, pp. 218-360.

in Scotland, it lacked the same effects elsewhere. There is a significant correlation in the Highlands and Islands, as in Ireland, of the disproportion of the population to the means of subsistence, due to a change from subsistence farming to a partially commercial system of land use, and the intensity of the crop failure. In both countries the persistence of innumerable traits from the traditional economy, including conservative techniques, attachment to the land, and a tendency to share the land among the kin, hampered commercialization or, at least, specialization and led to devastation.

Five years of famine ended the growth of population. The emigration of large numbers and the death of untold numbers must have seriously disturbed the patterns of interaction within the extended family and the township. Although the proprietors made a final effort to help their tenants, ruining themselves financially, they had forsaken their people. The ministers were no longer able to contribute to group solidarity,[41] because the symbols and values they upheld reflected the attitudes of the landlords and lacked significance for the people.

A religious revival reached effective proportions by 1812.[42] The appearance of the Revival suggests that the culture was far more disorganized than the scant social and economic record indicates. Normally, the attempt to seek supernatural assistance as a source of comfort and hope appears only after the culture has become thoroughly disorganized.[43]

[43] Kroeber, Anthropology, pp. 437-440.

Each man received a permanent, compact plot of arable in place of his former concurrent right to a whole farm. The change, on the surface, seems to have been superficial. The grazings remained common property and the arable land became common property after the harvest. The significant fact is that commercialization had not yet led to a disregard for the customary rights of the small tenant, except in a few isolated areas.

There were other effects of the change in tenure beyond a leveling of the social hierarchy. By giving more people a direct share in the land emigration was stopped. The practice of subdividing the crofts among the children, as they married, at once favored an increase in population and strengthened the family of orientation, if not the extended family. At the same time, it placed a greater dependence on the potato; the people became hostages to the health of the potato and their own fertility. In time progressive economic deterioration began. The old subsistence economy had been weakened by subdivision of the small plots, increasing dependence on external markets for profits from the sale of cattle, and wages from kelping or a little fishing. When the markets broke, destitution and emigration reappeared. Finally, with a failure of the potato, the economic structure collapsed. The population trends were reversed. The people had remained unspecialized in a nation of specialists.

The next stage in the process of commercialization, the growth of a village and the extension of communications, had little perceptible effect on the Gaisharach. Villages were

161 count, the number of people living in the Highlands has de-
162 clined 27.8 percent to 285,667, and those in the Western Highland, 40.7 percent to 119,071. Today the Highlanders represent only 5.6 percent, and the Westerners, only 2.3 percent of the population of Scotland.

Even though depopulation in the Western Highlands has gone at a faster rate than for the Highlands as a whole, it has not been typical of the entire subregion. William Hance, an economic geographer, has recently pointed out that "the assumption has too often been made that the Islands (the Outer Hebrides) have been depopulated at the same rate as the counties to which they belong and the Highlands as a whole."[2] He clearly demonstrates the contrasting increase of population in the Outer Isles, up to 1911, and the persistent decline elsewhere in the area. Again, within the last two decades, there has been an increase in population in the developing industrial area at the western extremity of the Great Glen, while depopulation has continued in all other parts of the subregion.

101 The Isle of Skye, the island with which I shall be con-
161 cerned in my dissertation, cannot be regarded as typical of
162 the Highlands or of the Western subregion. I rather regard it as standing in an intermediate position, geographically, demographically, and culturally. It rises from the Sea of the Hebrides between the Outer Isles to the west and the Mainland to the east. As we have just seen, depopulation is

---

[2]William A. Hance, The Outer Hebrides in Relation to Highland Depopulation (New York: By the author, 1949), p. 18.

101 more recent to the west, and in the industrial area of the
161 Great Glen the trend is reversing itself. To the north and
162 south depopulation has been more serious. To the east the general trend has been similar to that of Skye. We need not be troubled by statistics at this time, but for convenience
178 the population figures are given in Table 1. The Outer Hebrideans have preserved more of the social aspect of the old culture than the Skye people while the Mainlander has felt the effects of the processes of acculturation with more obvious results than the people of Skye. In short, the Highlands are not a homogeneous region. They represent a great diversity of conditions.

My information on the contemporary culture of the Isle
101 115 of Skye was provided by the residents of three communities, the villagers of Portree and the crofters of Glendale and
101 Kilmuir. Portree is a small nucleated village with a popu-
621 lation of a thousand. It is important to the study because
365 in many ways it represents an alien way of life. Here are found the county and national government offices, staffed mainly by newcomers to Skye, which serve the whole island.
344 Here too, are the grocery, drug, clothing, and hardware stores which depend on the people of at least, northern Skye
344 for a large part of their trade. There are a number of craftsmen who are equally dependent on the rural population. For the most part, the members of both groups are newcomers
368 from the Lowlands or elsewhere in the Highlands. As the
365 terminus for the mail steamer which links Skye with the mainland, and the hub of the daily bus service which connects the rural

In 1951 the population stood at 1,094. There has been a slight shift from the rural areas to the village, but it can hardly be regarded as significant. For one thing, the 1951 figure included an unknown number of workers on the hydro-electric scheme. Then, too, it included children from the Outer Isles who attend school in Portree, not to mention the very large number of newcomers, teachers, government employees, shopkeepers, management personnel in the stores and banks, and tradesmen, to give only a few examples.

The trend toward religious conservatism continued in the fourth period. During the closing years of the preceding period, the Free Church attempted to modify her theology and polity. The old trend toward relaxing the rigor of Presbyterianism, in accordance with the feelings of the other dissenting denominations in Scotland in order to pave the way for union, was renewed by the passing of a Declaratory Act which stated that the Free Church does not teach and does not regard the Confession of Faith as teaching the foreordination of men to death (eternal damnation) irrespective of their sin. Further, that while the Gospel is the ordinary means of salvation, it does not follow that all who die in infancy are lost. The elders, the lay kirk officers, of Skye protested violently.[88] It was popery to make the Church the judge of spiritual affairs. More important, it threatened their prestige status, which had been sanctioned by the interpretation of the religious ethic. In several parishes the elders threatened to withdraw from

[88] The Free Presbyterian Church, History of the Free Presbyterian Church of Scotland, 1893-1933 (Glasgow: H. Aldshead and Son, 1933), pp. 96-130.

means are not infrequently thwarted by the peasants, the ends are seldom achieved.

As long ago as 1859 Norway began a redistribution of the land; by 1946 42 percent of the infield and 9 percent of the outfield had been regrouped. In Ireland attempts at consolidation date back to 1870. Because the problem was especially intricate, some holdings consisted of twenty or thirty scattered patches, the attempted approach has been comprehensive, including assistance for migration, improvements, and the purchase of farms. Today, even where the consolidated holdings are substandard, they are more productive. I do not mean to imply that the program has been uniformly and sweepingly effective. The study by Arensberg and Kimball is ample evidence to the contrary,[14] but there has been reform. Germany, too, has had an all-inclusive policy since the 1870's. There, whole villages must be replanned. Wherever possible, small holdings have been abolished by moving certain families out to new farmsteads and removing others from the land. It is significant that most of the reform took place under Hitler and, even so, there was universal peasant resistance to land reformation. What effect the partition of Germany has had on these rural villages I do not know. Many of those I visited have twice the population of prewar days. In each country, from Sweden to Italy and from France to Greece, the experiments have resulted in increased agricultural production. On Skye, as in most of the Highlands, the tillage area has fallen at a faster rate than the population. Indeed,

[14] Arensberg and Kimball, Family and Community in Ireland.

where the population has suffered the greatest decline and, therefore, where enlargements, by legal or illegal means, have been the most extensive, crop production has declined the most. Nor has the decline in population, accompanied by land redistribution, altered the fundamental problem.

The cottars (subtenants) have almost disappeared thereby easing the excessive pressure on the land and removing the threat of recurring destitution. Today they are found only in a few scattered dwellings and isolated clusters. Most of them have secured some form of employment or have reached the age when a government pension is sufficient to satisfy their needs. The number of crofters, on the other hand, has increased. If the figures 2043 and 1227 can be accepted as nearly correct for the respective numbers of crofters and cottars in 1886,[15] they have increased at the expense of the latter and, also, the sheep farmer, whom they have replaced.

To briefly summarize the foregoing discussion of the township, let us look at Kilmuir. Table 3 shows the number of crofts and crofters in each of the nine townships together with the acreage and "souming" rights available to each individual. Although replanning during the past fifty years has benefited many of the local residents, crowding upon the land is still apparent.

[15] L. MacDonald, The Past and Present Position of the Skye Crofters, sheets 6, 17.

TABLE 3

CROFTS, CROFTERS, ARABLE ACREAGE, AND SOUMING RIGHTS IN THE KILMUIR TOWNSHIPS

Township	Crofts	Crofters	Arable Acres[a]	Common Grazing	Souming
Bornesketeig	47	35	4	273	2 cows, 1 calf, 12 sheep
Hungladder	14	9	5	236	2 cows, 1 calf, 10 sheep
Balgown	4	5	13, 14, 34, 46, 66	177	4 cows, 4 calves 26 sheep
Kilvaxter	12	11	27	...b	4 cows, 4 calves 26 sheep
Linicro	19	17	15	729	5 cows, 5 calves 40 sheep 1 horse
Peingown	3	4	18	187	7 cows, 7 calves 20 sheep 1 horse
Herbusta	8	8	12	308	3 cows, 3 calves 26 sheep 1 horse
Totescore	12	13	21	500	3 cows, 3 calves 20 sheep 1 horse
Monkstedt	3	3	27, 27, 5	420	9 cows, 9 calves 40 sheep 2 horses

[a] Arable acres are given in average acres per holding, unless otherwise indicated. Except in Bornesketeig and Hungladder, arable land includes outrun, improved pasture land individually held.

arduous is difficult to determine. In the winter of 1953, I helped a small crofter thrash oats, a cooperative enterprise even with a mechanical thrasher, supplied by the Department of Agriculture. The neighbors who came over to lend a hand were two men and three women. The youngest woman would never see fifty again; her seniors were seventy-seven and seventy-eight. The youngest man, who had just been married, was sixty-three; the other seventy-three. These crofters not only showed more endurance than I did, but put me to shame by carrying the sacks of grain from the field to the byre at the end of the day. Nevertheless, most of those over seventy, about 15 percent of the population, do not make use of the land for more than growing a few potatoes. An old man cannot keep a cow because, as one man said, "You can't have a cow unless you have a woman to milk it." If he is married or lives with a sister, there may be a cow and a couple of sheep. An old woman may have her cow and sheep if she is strong enough. There comes a time, however, when all the old people will only remember the work involved. Still they will say, "Och, but they were good for all that."

Absentee tenants are responsible for depopulation on the one hand and falling production on the other. A reasonable estimate would be 300. Their number could be as high as 400. Some townships have over 50 percent of the crofters absentee. The only townships which do not have this problem are the few which contain large crofts. On one small estate there are seventy-six crofts, held by seventy-two crofters. Only thirty

Beginning with a population which is believed to have been relatively stable due to recurrent crises, including epidemics, famines, and wars, the tendulum of population growth and decline for the Sgiathanach has been found to be highly responsive to cultural innovations and social adjustments. Between 1750 and 1841 the Skyemen increased in numbers from 10,671 to 23,074, an increase of more than 100 percent. From 1851 to 1951 the population has steadily decreased from 22,536 to 8,603, a decrease of 62 percent from maximum. Associated with the decline were changes in the age structure. In 1861 34 percent of the population was under fifteen and only seven percent was over sixty-five; today only 22 percent of the population is under fifteen while 19 percent is over sixty-five. How can we account for these changes, or, more correctly, how can we account for the changes in the birth, death, and emigration rates? [161] [162]

Broadly speaking, the increase was favored by the direct and indirect involvement of the Sgiathanach in the process of commercialization, with all of its associated consequences. One by one, the natural checks on population growth declined in importance. The pressure on the means of subsistence was eased. The former clan chiefs, preferring the society of Edinburgh and London, absented themselves. After converting rents from kind to money, they provoked the withdrawal of the tacksmen by resorting to rackrenting. The former clansmen, who became joint-tenants, received a larger share in the land and were freed from the obligation of feeding both their own families and those of the superiors. At the same time the [161] [175] [178] [427]

acceptance of the potato, a much more productive and dependable subsistence item than grain on Skye, made it possible for more people to live on less land. The introduction of a new industry, kelping, provided many with employment and freed them from complete dependence on a subsistence economy. Vaccination reduced the mortality rate, especially among infants whose chances of reaching maturity and procreating were thus enhanced. Another important factor was the Skyeman's share in the general prosperity of British agriculturalists during the early years of the Industrial Revolution and during the Napoleonic Wars. An especially important factor was the practice of subdividing the land which made early marriage possible, in particular after the installation of the crofting system. Finally, but by no means least significant, there was the persistence of many typical features of the culture in the days of the clan. The sentimental ties of kinship and attachment to the soil had remained. [161] [427] [671] [871] [161] [175] [178] [184]

The population decrease, partially a result of the Skyeman's involvement in the process of commercialization, was primarily a result of a failure to fully adjust to the higher, more heterogeneous socio-economic level. By the end of the second period of the modern epoch, 1845, the people had become hostages to the potato and their own fertility. When the potato failed them, they had nothing to fall back upon, except the generosity of their landlords. The cattle and kelp markets had collapsed at the end of the Wars, and the subdivided land could not produce sufficient grain. The relief of many that the population had over-run the limited local resources was confirmed. [161] [175] [178] [184]

The growth of the population ended with a prolonged famine. The proprietors, finding that the people's only justification for crowding the estates and looking to their landlords for help were some nebulous customary usages, facilitated the decline by disregarding custom and throwing as much land into sheep farming as was possible. While evictions were not new, only after the famine did they result in an absolute reduction in numbers. The Sgiathanach, fettered by a lack of capital and an inability to break with the past, could not make the final adjustment required by the process of commercialization, specialization. In addition to emigration, the Clearances and general economic hardship forced a postponement of marriage. There was neither land nor regular employment to provide a livelihood. [161] [731] [427] [182] [167] [582] [464]

Later in the nineteenth century new influences began to play a role in the continuing decline of the population. Following the passage of the Crofters' Act, the nature of emigration changed. Seasonal migration became negligible. The provisions of the Act, and ensuing legislation, made it possible for a man to remain away during his active years and return to the parental croft to spend his old age. The extention of education not only equipped the youth for life in the larger society but also created demands for objectives which could not be attained at home under the existing order. Thus, as in the period of population growth, the persistence of many features of the old traditional culture, and the renewed importance of others, were factors of no little consequence. [161] [167] [182] [871]

On the one hand, they stimulated emigration, because the only means of achieving upward mobility was through outward mobility. On the other hand they deterred a complete abandonment of a way of life which offered so few material rewards. This brings us face to face with the problem of cultural continuity. [161] [167] [182]

Cultural Continuity on the Isle of Skye
A Restatement of Theoretical Considerations

In the opening chapter, I presented a series of theoretical assumptions on which I have based my analysis of the evidence for cultural continuity on the Isle of Skye. A review of my presuppositions and my approach to the problem may expedite my final quest for proof that marked population change is not a criterion of cultural discontinuity. [121]

If society and culture are separate though complimentary concepts, cultural and social integration must be independent variables. They tend to find mutual expression, but they are not necessarily found together. Nor can they be measured by the same criteria. Cultures are considered integrated to the extent that their traits, complexes, patterns, and aspects are meaningful to the people. The content of all cultures is continually modified by the disappearance of once characteristic trait complexes and the addition of new ones. Old ways of doing things lose meaning and are disregarded; innovations find acceptance and are given meaning within the configuration of the culture. The form of the culture, its essential distinctiveness, persists. The carriers of a culture, or the

group.[6] He has maintained cultural integration and continuity. At the same time his conservative religion has not gone quite as far as the Amish Order.[7] The Sgiathanach has rejected only those patterns which would disturb the equilibrium of life in the neighborhood. The penalty for his failure to completely adjust is depopulation; others, like the people of Yap and the Aleuts, are paying a similar penalty.[8] [182] [771] [161]

Further Evidence for Cultural Continuity

[121] Various approaches to the problem of cultural continuity can be attempted in addition to the historical approach which has formed the point of departure for my study. The most obvious would be a comparative study of two basically similar people, the Welsh and the Irish. In the chapter entitled "The Setting" and throughout this study I have called attention to the similarities between the Skyeman, the Welshman,[9] and the Irishman.[10] In a host of cultural features the three are strikingly identical. Some of these common patterns may be remembered, for instance, the elien nature of nucleated villages, the strong patrilineal emphasis, the importance of the old man, and a pastoral

Whatever signs there were of social or cult organization, or threatened disintegration, in th century they have disappeared. Steward's theory societies do not entirely disappear but are ratne by way of a readaptation to the higher level of s organization of which they become a part is borne evidence from the Isle of Skye.[17] At the same tim basis of events in the culture history of the Sgia I would qualify his theory by introducing a new co Isolated, relatively simple, kinship oriented soc cultures which must achieve a reintegration if the preserve their continuity readapt, not only to the socio-cultural level, but also to the older way of

In conclusion, I regard Skye as a community maintained a continuity of culture despite marked change. The continued distinctiveness has been ma by a reintegration of the culture and a restoratio network of relationships which make for harmonious together. As in any socio-cultural group which ha through periods of threatened disintegration, the repair may be weak. Conflicts are tending to appe crofter, who has refused to fully adapt to commerc is seasonally faced with a variety and succession which no agriculturalist in the wider society woul There is the desire of the youth, who are too few to form a sodality, for a share in the manane ple

In Duirinish parish, which includes Glendale, only twenty-one families had enough land to meet even subsistence needs.[62] In one Glendale township, Holmisdale, some crofts of fourteen acres had as many as fifteen people to support.[63] Part of this extreme congestion was due to the continued practice of subdividing one's croft when a child married. Although the population in 1831 had fallen to 17,680, from 23,084 in 1841, almost every township had two or three times the number of families which had lived in them in 1841.[64]

175 178 427 233 241 The loss of the summer shielings and the common grazings meant few could keep sheep.[65] The looms were silent. Since the rent continued to be based on the value of livestock and was wholly or partially paid from the sale of cattle, all oats, which the graziers' sheep did not eat, went to feed the [439] cattle. The mills were all but idle. The people had to buy [262] flour, meal, and bread imported from Glasgow. Almost all [452] were heavily in debt to the local merchants, who seem to have been newcomers with more associations with the graziers than [272] the crofters and cottars. Milk became a precious commodity. [482] Frequently, the old cow had only enough for her calf. Unable [462] to keep horses, the women became beasts of burden. They carried

pared with 34.9 for Scotland. The death rate among Skyemen, ever, was 17.4 compared with 22.0 for Scots in general. But tland had a net emigration rate of only 3.6 while the Skyemen e leaving at a rate of 16.5. In this decade no fewer than 15 left Skye.

By the end of the third period an additional influence the process of commercialization had become apparent. The ial hierarchy was modified in the direction of greater lo-economic differentiation.[68] At the time of the "Forty- e"Skye was inhabited by the families of three clan chiefs, tacksmen, 517 joint-tenants, 1031 subtenants, and 444 vants. There were now 10 landlords. The tacksmen had been laced by 29 graziers and 12 small farmers. The joint- ants, subtenants, and servants had become 2043 crofters 1227 cottars. In the past there may have been one innkeeper, Portree, and a few millers; now there were 32 innkeepers, lers, and merchants.

The changes which we have been considering could not have the patterns of interaction undisturbed. Cooperation among members of the township would have been unnecessary. Since were affected by prolonged destitution, mutual aid must been severely curtailed. The extended family was broken migration. The nuclear family was seldom intact for more part of the year. It seems the majority of the able-bodied were travelling to the east coast each spring to find

employment as hands on fishing vessels. The young women followed these fleets seeking work as gutters and curers in the ports. Some may have made their way to Portree, where a woolen mill had been erected by the Highland Destitution Committee. The population of Portree increased during these years from 510, in 1841, to 893, in 1881, but this can hardly be regarded as a significant trend.

The really striking aspect of this period is the almost complete lack of protest by the Sgiathanach against the violation of his presumptive right to the land. The disappearance of the tacksmen, of course, had left the people without their counselors and leaders in secular affairs, and many of the ministers, especially those who were themselves sheep farmers, counseled submission to the will of God. Then, too, the ethos of the Skyemen would not allow them to ventilate their grievances. They despised the Sassanach and felt that "the landlord was bad enough, but the factor was the Devil himself." Still those who knew them well and those who rambled by their cottages wrote unanimously of a people who endured overwhelming sufferings in patience and reticence.[69] The betrayal of any weakness, especially before the cursed Sassanach, was a breach of propriety.[70]

The Skyeman had not lost his capacity to respond to leadership. Throughout the nineteenth century there had been widespread and growing discontent all over Europe with the

enlargements when the proprietor would not reasonable terms. Thus, the government beg the crofter from potential abuses and to re to the descendants of the clanna, who had, menifested a persistent disinclination to a system of land use. A complete reformation not yet possible.

The crux of the problem of maintainin population was succinctly stated in 1851 by the Highland Destitution Board. The people themselves, at a subsistence level, unless family were given ten acres of arable land only was there not enough land, but without a man could not find local employment until to produce, and, if he sought employment at could not work his land to free himself from working for a wage. In 1883 it was estimate reduction in population would not leave enou each family an adequate holding, ten acres acres of grazing land.[81] How right they were population is less than half that of 1883, a have what was considered an adequate holding ago. Let us see what measures the governmen attempt to solve this problem.

person who left in his youth to return in his old age. The new pattern of emigration not only resulted in a continuation of the persistent depopulation of the island but also, with the return flow which countered emigration of the youth with immigration of the older people, led to striking changes in the age structure of the population. If the population pyramids for the years 1861, 1901, 1931, and 1951 are compared, the significance of the new pattern becomes apparent (see figure 4). The 1861 pyramid has a strong base, despite evictions and death. By 1901 the aging of the population was already marked. There were fewer people in all age groups, but a disproportionate increase in those over sixty-five. Females had joined the exodus. Partly as a result of the emigration of young adults, and partly as a consequence of a declining marriage rate and delayed marriage, the structure was growing top-heavy.

The pyramids for 1931 and 1951 are far from ideal. The differing movements of the population has resulted in a situation in which the society can no longer reproduce itself. Natural increase became a negative factor in the decade 1921-1930. Since then births have exceeded deaths in only one year, 1949. If the population is being maintained in part by the return of exiles, one must not only ask who leaves and why but also who returns and why.

An additional change within this period was the growth of Portree as a trade center and as an administrative "capital." The cycle of population, however, was erratic. In 1891 there were 1,003 people in the village, but in 1921 there were only 793.

241 Cultivation for subsistence is minimal, and in 190
654 part stems from government-defined privileges and duties
288 regarding maintenance of a croft. The Harris Tweed
477 industry, which is restricted to the Outer Hebrides and
464 thus is protected from competition, has provided work
166 for a large number of islanders. Many of the younger
[434] members of croft families live in cities on the mainland,
and send part of their wages home; they return regularly
• [162] to the island, and many plan to retire there. Thus the
[632] township supplies urban workers who remain very much
attached to the rural townships, which are composed of
aged family members and a rural proletariat. The standard
511 of living is high, and many crofters have accumulated
654 savings, although much of this surplus is used by the men
273 for alcoholic drinks.

121 In Britain, rural communities have been interpreted as lying somewhere along a rural-urban continuum (cf. Southall 1959, Frankenberg 1966). In 1959, Southall presented "an operational theory of role" by which he suggested that heterogeneous societies may be analyzed and compared. He developed the concept "density of role texture" to describe societies which lie along a continuum from rural to urban. Frankenberg (1966) uses Southall's concept along with other concepts to present a more complete model of an urban-rural continuum. The "models" of both Southall and Frankenberg are essentially lists

HISTORY

*175 The crofters were in a state of revolt against the accumulation
423 of trends and events which now stood like a high dam against their
668 progress to a higher level of acceptance in the social scene. They
429 stood in open conflict with local and national authority. Unhappy scenes were enacted, many being in complete variance with the natural temperament of the Highlander. Lewis crofters were not far behind with their contribution to the agitation for land reform, though they had perhaps suffered less direct action from landowners than had crofters in the Highlands and southern Islands. But their living conditions had deteriorated. And an inhumanly-efficient factor made for deep unrest.

*175 Land agitation began in Lewis in 1881, and large numbers of
657 Lewis crofters gave evidence before the Napier Commission. This
423 Commission was the result of agitation for an enquiry into crofting conditions in the Highlands. Its setting up relieved a situation
429 of acute tension, though it neither extinguished political agitation
[668] nor mitigated the disaffection felt in the more disturbed districts. Under Lord Napier's direction a mass of information was collected. The official findings of the Commission were almost identical with political declarations in the country, but did not altogether coincide with the requirements of the crofters and their spokesmen. The resultant Crofters' Act of 1886 fixed the crofting system into that rigid trance in which agricultural innovation, opportunity for improvement, the social progress of crofting communities are largely lacking. It did give all crofters permanency of tenure, where they had none before, fair rents for the land they had and compensation for improvements. But the old demand for new smallholdings and settlements persisted with greater insistence and further pressure on high political circles.

In 1888, members of the new Crofters Commission visited
[935] Lewis and found that poverty was so general in the island that
[946] among 607 crofters for whom fair rents were fixed, there were scarcely a dozen who had not been recipients of 'destitution' meal or some other form of relief. The population was too much for the
161 land to support it under the distribution system prevailing. The
• 162 number of persons per family in 1871 was on average 5·358, as
*175 compared with 4·232 on the mainland of Ross and Cromarty, the county of which Lewis formed a part. Thirty years later, in

LAND USE AND CROFTING

1901, the average was only 5·086, the county average being 3·983. 161
The population was still to reach its peak in Lewis, some 30,000, 162 •
in 1911. Emigration was at a fairly high rate, some 2,000 every 175*
decade, but this was no relief with births between 8,000 and [167]
9,000 during the same period. In 1894 it was estimated that the number of cottars (or squatters) as distinct from crofters was in the region of 1,000. These people, mostly relatives of crofters, constituted a serious incubus on every crofting township.

Elsewhere in the Highlands, the enlargement of crofting hold- 175*
ings relieved the land-hunger situation. It was not possible for 423
the same to be done in Lewis, and Harris possessed even less 241
useful land to share out. Many applications were made by crofters either for an increase in their own holdings or an increase in the acreage of common grazings held by each township. Though some 500 acres were in fact handed over by the estate management for crofting purposes, there was a steady refusal to diminish the acreage of farms.

The Congested Districts Board was appointed in 1897, super- 175*
vising public works to relieve the people of a certain amount of 657
their ills. It carried on until 1912, when it passed into the newly- 656
formed Board of Agriculture. The Congested Districts Board 423
could have achieved much more than it did. It scraped away 429
only a little of the vast problem. The next major landmark in the 241
history of crofting legislation was the Small Landholders (Scot- [663]
land) Act of 1911. It extended certain provisions introduced for the crofter in 1886, and further increased the class of tenants who benefited by bringing in the tenants of holdings rented at not more than £50 (£30 in Lewis) or not exceeding 50 acres (30 acres in Lewis). The 1911 Act also brought into existence the Scottish Land Court in place of the Crofters Commission. In Lewis, however, the hunger for more land went on unabated and reached a not insignificant peak during the later years of Lord Leverhulme's regime.

A new Crofters Commission was set up in 1955, following on the report of a Commission of Enquiry under the chairmanship of the then Principal T. M. Taylor of Aberdeen University. Fresh provision for the reorganisation, development and regulation of the crofting system in the seven crofting counties of Scotland

EDUCATION

houses prior to 1854. Monthly returns of attendance were sent 175*
to my office, and parents who did not keep their children at school 871
were dealt with, but in many cases to no avail, as they often told [829]
me they did not want to give their children wings to leave them.'

In 1833 there were thirteen schools in the parish of Stornoway, [212]
according to the *New Statistical Account*, 1840-46, which records that there were 586 children between the ages of six and fifteen years, and 1,265 persons above the age of fifteen in the parish who could not read. Barvas had three schools in 1836; Uig had five in 1833. In Lochs, in 1833 a parish school had just been erected, and four schools were maintained by the Gaelic School Society; yet out of a parish population of 3,067, only 12 could write. After the Disruption of 1843, the Free Church established a large number of schools throughout the island. And soon after Sir James Matheson took over the island he built schools in those districts not catered for by other agencies.

In 1865, the Government began to prepare for the Education Act of 1872, and sent Sheriff-Substitute Nicolson to the island to investigate the state of education there. At the time of his visit there were forty-seven schools, supported by as many as nine different agencies, persons, or institutions. The number of pupils [162] •
on the rolls was 3,332, with 2,647 in actual attendance. Nicolson computed that there were some 2,500 children on the island who did not normally attend school, and who should have done. A [346]
large number of schools were little more than thatched houses. Fifteen were good; fourteen tolerable; and eighteen bad or inadequate. In the third group he classes 'those that cannot by any standard of comfort or fitness above that of troglodyte, be considered suitable for having the work of education carried on in them, or any work indeed, to which the prevalence of smoke and moisture are infavourable.' Of the children who attended these schools, 79 per cent received tuition in the Scriptures; 85 per cent were taught to read; 39 per cent were taught writing; 32 per cent were taught arithmetic; and 16 per cent taught needlework.

The Education Act of 1872 put an end to the old parochial 175*
system, and virtually to other agencies which it found at work. 871
The schools on the island were brought into line with the re- 656

RELIGION

Lewis, there were but two ministers in 1626, their parishes being 175*
Barvas (which included Uig) and Eye, which included Lochs; the 795
population of the island at the time was about 4,000. When Pres- [793]
byterianism was re-established in Scotland in 1640, the Lewis [162] •
ministers found no trouble in conforming, as did their fellow parishioners. Sectarian feeling in the island during the seventeenth and eighteenth centuries was not so much between Presbyterians and Episcopalians as between Romanists and Protestants.

In the year 1738, nine Episcopalian Lewismen signed a letter [793]
to the Bishop of the Isles, asking for an annual visit from a pastor, being unable to support a full-time minister. Almost a century 175*
later in 1839, the foundation stone of St Peter's in Stornoway was 346
laid: this is the town's Episcopal Church. The other building on the island which belongs to the Episcopalians is the ancient church at Eoropie, dating back to the tenth century and perhaps the oldest still in use in the Hebrides; services are held there occasionally, though there is no local Episcopalian congregation. One of 175*
the most significant events which echoed right through to the 795
island was the Disruption which took place in Edinburgh in 1843. The result was a 'church spectrum' in Scotland which is still mirrored on a smaller scale in the island: the Church of Scotland, the Free Presbyterian Church, the United Free Church, and the Free Church. The Roman Catholic Church is also represented.

Lewis has one of the largest Free Church congregations in the 794
country. This denomination is particularly known for its out- 795
spoken pronouncements from time to time on questions of the day. It is Calvinistic in doctrine and has a reputation for holding the 'Calvinistic outlook' in the more general and pejorative sense; though its strictness may sometimes be over-painted, it is much less liberal in its moral standpoint than is the Church of Scotland, if less austere in some respects than the Free Presbyterians. Its doctrinal position is that of unrelaxed adherence to the West- 779
minster Confession, its ministers and other office-bearers affirming their belief 'in the whole doctrine of the Confession'. It is opposed to theological liberalism and accepts the inerrancy and infallibility of the Scriptures. Only the Psalter is used in public worship, and instrumental music is dispensed with; strong

THE PEOPLE

733 people; Lewis can be taken as representative of the Hebrides and
734 the Highlands in general. The incidence of involutional melan-
158 cholia, occurring mainly in middle life, is high, and, to quote one expert, 'It would seem profitable to consider the states of fear and distress with which it has been associated.'

731 Those in Harris and Lewis aged fifty or over have their recol-
165 lections charged with little else than disaster. Not only did the island lose an abnormally high percentage of its young men in

were lost in the wreck of the *Iolaire* on New Year's morning, 1919 165
—the first morning of the first new year of peace, literally within
sight of home. Again, the effect of emigration was a loss, in many 167
small communities, of a full generation. Where religion is strong 771
and thrice-distilled, there tends also to prevail a state of mind 783
which dwells on guilt and, where people are accustomed to ex- 157

STORNOWAY

*105 The previous building was only an idea in 1897; it took
632 shape when Dr Andrew Carnegie offered to contribute £1,000
217 towards the construction of a library, provided the town adopted the Public Libraries Act. This was done, and the Council decided to incorporate the library into a larger structure, erected at a cost of £11,000 and opened in September 1905 by Lord Roseberry. Carnegie increased his contribution to £3,500, with other large donations from public-spirited industrialists of the time (eg Coats of Paisley, who also financed school libraries in the island).

*105 Being a seaport, the sea has been basic to the town's livelihood.
632 In the eighteenth century trade flourished between Stornoway
564 and the Baltic, Scandinavia, Holland, France and the north of
439 Ireland; and in the first half of the nineteenth century, fish was exported as far away as ports on the Mediterranean. The advent
*105 of steam killed the Stornoway sailing craft. At one time in its
396 history, the shipyard (at Matheson's Patent Slip, now the site of
632 the textile mill) turned out many fine vessels. The scent of tar and pitch, the crunch of a busy grindstone, the shaping of a ship's timbers, the steaming of her planks, the driving of pins and bolts, the music of mallet and caulking-iron, the buzz from the saw-pits and the riggers aloft, all gave the town a sense of at-one-ness with the waters in the bay. Then there were the schooners, brigs and barques of foreigners who put in for repairs or for merchandise. It was a time of glory that has now gone as surely as the sail has disappeared from the high seas. Ship-masters, ship-owners and
• [162 sailors all added colour and variety in the streets as they mingled with the local population—which numbered 1,000 in 1801. Stornoway captains were world-known for their skippering: MacLeods, MacIvers, MacKenzies, Ryries, MacLeans, Morisons, Allans. These were the names that were once reeled off to be paired with the famous ships of the day: *Sir Launcelot, D. L. MacKenzie*, and *Assaye*.

*105 While large numbers of its sons were sailing the high seas, many
504 in ships of Stornoway origin, the town began to take on the first
632 look of a port, with piers. On 9 August 1864, Sir James Matheson subscribed the instrument which took the Stornoway Harbour Commission into being. The following year, on 29 June 1865, the
[503] Commission was incorporated by Act of Parliament. Matheson had shown a great interest in the development of the existing

STORNOWAY

366 going concern to a trust which was set up to receive the gift and
632 whose first object is to assist aged and infirm residents in the
747 burgh. In effect, all profits earned by the shop are passed to the
429 trust for distribution to those in need.

Almost half the houses in Stornoway were built by the local
362 authority. The Town Council has never been afraid of rooting
632 out unfit houses. By 1937, under the 1930 Slum Clearance Act,
* [195 one person in four in the town lived in a council house. The housing schemes, though large, have still that element of community with personality, something often lacking in newly developed
362 areas of other towns and cities. The Council also supports private
427 housing by taking up sites, clearing and servicing them and then
632 feuing them to private owners. The rents policy is to have no housing deficit beyond the statutory rate contribution (which works out at between £6,000 and £7,000 per annum). The Council's tenants co-operate with rent collection to a unique degree: collection figures are something like 99 per cent and on occasion 100
362 per cent. A vigorous housing policy is important to the town, as
178 its population is now over 5,300 and still growing, mainly at the
• 179 expense of the rural areas. Development plans at present envisage
16 a 1981 population of about 9,100 persons within the parish
632 boundary and including the burgh.

632 Stornoway is an island town and is an island's town:
369 its rhythms of life are those of the island, regular and timed by nature, but with an added syncopation—the result of an urban
632 outlook. In this context, Gaelic is the language, though English is
147 the lingua franca. Deeper still in the methods used for communication is a kind of patois based on Gaelicised English, Anglicised Gaelic, with some other words that defy investigation into their origin. Many words find their natural forebears in Scots, American and the maritime tongues of Europe, which might be expected in view of Stornoway's importance as a sea-port of significance a century or two ago. The Stornoway language, as spoken by true-born natives, recognisable anywhere by another native, reflects the life of the cosmopolitan, sea-faring people.

632 Apart from its industrial opportunities, Stornoway has many
871 of the more sophisticated urban facilities that people everywhere
[369] seem to crave, particularly with regard to education. The senior

A HARRIS VIGNETTE

423 acreage of regulated common grazings amounts to 65,000 acres.
241 The working units (as distinct from crofts) in Harris are classified according to the arable acreage; the majority have up to 10 acres arable land. Less than 250 acres of land have been improved.

• 162 1931

The age stucture of the Harris population in 1931 and 1961, showing the decline in numbers and rise in age

631 There are four districts in Harris: North Harris, with its islands; the Bays of Harris on the east coast; the Leverburgh area, with the islands of the Sound of Harris; and the west coast.
[133] North Harris is mountainous country, dominated by the Clisham

A HARRIS VIGNETTE

(2,620 ft); grouped around this are the lesser peaks staping stark 631
and treeless to the skies. At the feet of these hills are the small 133
villages straggled along the shores of West Loch Tarbert. Much of this area is owned by the proprietors of Amhuinnsuidh Castle, a magnificent structure built by the Earth of Dunmore in the last century; the hills lying north of it are rich in red deer. The road [491]
past the castle trundles on until it peters out at the far-east village of Hushinish, beside a glorious scimitar-like curve of silver sand. Beyond Hushinish is the Island of Scarp.

The road along the shores of East Loch Tarbert ends at the 631
village of Kyles Scalpay which overlooks Scalpay island. The [491]
Bays of Harris hold in their crevices the scattered groups of houses 366
here and there, where an inlet of the rocky coast affords some 133
anchorage and where a patch of ground is suitable for cultivation. Tortuous, winding footpaths have been gradually replaced by [480]
narrow roads connecting the townships. Lack of sufficient re- [161]
munerative employment has led to considerable depopulation. [162]
Fifty years ago the population of the area was just over 3,400; it is now about 2,900.

The south of Harris is better known for its association with Lord Leverhulme. Obbe, later Leverburgh, became the centre of his schemes. He built a large pier, huge kippering sheds, houses for the workers, roads and lighthouses, and blasted away underwater rocks which hindered free navigation. The bulk of this work was complete in 1924, but when he died (in 1925) his successors, in the cold light of economics, decided to close down the embryo industry and realise its assets. The harbour works had cost £250,000; they were sold for £5,000 to a demolition company. Leverhulme's memorials are still to be seen. The west coast of Harris is now becoming known for the long stretches of shell sand and the green machar-land beside it, a true delight for the tourist seeking isolation.

Tarbert is the central village in Harris, with a population of 631
about 400. It is a thriving community, nestling at the foot of 621
Beinn an Teanga and at the head of the sheltered anchorage of East Loch Tarbert—sheltered from the prevailing south-westerly winds and from the Atlantic storms. The car ferries give direct [505]
contact with the Scottish mainland, via Skye, and Tarbert also

t, northern moorland of Lewis,
t island in the Outer Hebrides

000 is the northernmost island in the Outer Hebrides (see
161 Map B). The population is concentrated along the
162 coast, like a hat-brim around the great inner core
361 of the island's heather-covered bogland, a population
belt classified as "dense rural" (50-400 persons per
[226] square mile) in a map based on the 1951 census. The
pattern of land settlement reflects the importance of
fishing in the economy of the island.

131 Lewis lies between 6°10' and 7°20' west longitude,
and between 47°50' and 58°30' north latitude. Lewis
131 is as far north as Newfoundland and farther north than
132 Mongolia, but the temperature is mild because of the
North Atlantic Drift, or Gulf Stream, which passes the
132 west coast of Scotland. The temperature averages 55°F.
in summer, and 44°F. in January. A constant climatic
feature of life on the treeless island is the wind, a
relentless, insidious presence which often reaches gale
force. Winds of 60 m.p.h. and more are common.

Rain, which comes in downpours or light mist,
[133] averages 55 to 65 inches per year. The water may be
held in colloidal suspension with decomposed organic
matter in the compact, spongy material called peat, or
pour as rivers and streams off the island's shelf of
131 non-porous Archaean gneiss into the sea. Of Lewis'
133 total area of 437,200 acres, inland water comprises
24,863 acres.

000 24,863 acres. The value of this boggy property, as
423 far as the landlords are concerned, is determined by
427 its fishing potential. The landlords generally reside
226 away from their property, and brave the buffeting gales
several times a year to return to fish for trout and
[463] salmon. For the rest of the year they hire river-
[685] watchers to prevent their tenants from poaching. As
[71] in Wales (Emmett 1964), the islanders continue to poach,
in part as an expression of their identity as independent countrymen, a minority group in a nation-state.

161 Lewis is the most populated area in the Outer
162 Hebrides, containing 21,934 of the 32,607 Outer Hebrideans
634 numbered in the 1961 census. It is part of the County
of Ross and Cromarty, whose headquarters are on the
632 mainland near Inverness. Lewis has four administrative
areas called civil parishes in which births, deaths
and other vital statistics are recorded. Stornoway
[197] parish is the largest, containing the town of Stornoway
on the east side of the island in which many non-Gaelic
speakers live. Of the other three parishes, the largest
[162] is Barvas which stretches along the west side of the
[197] island and contains 4,331 persons, of whom 94.6% are
Gaelic speakers. The people of Stornoway refer to someone
[186] from the west side as a siarach (west-sider), a term
which connotes rusticity.

288 finished lengths of tweed. For a tweed to be classified
463 as "Harris Tweed," it must be hand-woven by Outer
[424] Hebrideans in their own homes, but the weavers are
288 essentially employees of the mill. All the large Harris
Tweed mills in Lewis, except the one in Shawbost, are
located in Stornoway. A few smaller businesses, which
design and market tweeds but have no elaborate machinery
to process the tweed further, are scattered throughout
the island.

621 The village of Shawbost is composed of 169 household
162 of which 110 are headed by "crofters," persons recognized
[427] as legal tenants of a croft. Of the remaining 59
[361] households, 16 rent houses which were built and are
maintained by the County (called "council houses"),
11 have erected houses on the crofts of relatives, and
463 32 have built homes on the common grazing lands. Non-
241 crofters participate in the agricultural activities of
the township. It would not be unusual, for example, for
a non-crofter to serve as the clerk of a grazings commi

342 In North Shawbost, one croft house and two non-
[166] croft houses are used only when the owner returns to
Shawbost from the mainland for a holiday. The school-
[875] master lives in a house adjoining the school, and the
[993] minister in a manse located between Shawbost and the
neighboring village of Bragar.

286 288 463 868 593 829 [461]

Despite these aids and incentives, parents do not encourage their children to weave. The weavers themselves describe the job as dull, offering no security and no possibilities for advancement.

Referring to her young son, a mother says, "By the time he's old enough to weave, the tweeds will have failed." Another mother says, "I want him to learn some trade, if he's intelligent enough. I don't want him to stay here. The tweed is so uncertain." "There's no future in it," says the father of another young boy, "I definitely wouldn't want him to be a weaver. It would be good if he went in for engineering."

463 464 286

The histories of the weavers reveal many examples of shifting occupations. Weaving often alternates with work in the local mill, which is also relatively unspecialized. The Shawbost mill must tolerate this unstable labor force, as labor is difficult to find.

[166] [593]

Eldest sons tend to leave the island for more stable, permanent jobs, leaving the croft and the loom to their younger siblings. Table V[1] shows the number of male weavers in each age group.

288 464 162 166

The fact that Shawbost has the same age structure as the rest of rural Lewis (see Table II)[2] and less unemployment signifies that weaving has not served as an adequate incentive to keep young people on the island.

1. [See p. xi--Analyst]
2. [See p.xiii--Analyst]

288 464 162 166

Rather, the industry has provided jobs for those who, for one reason or another, would have stayed anyway.

Of the weavers between the ages of 15 and 24, eight are only sons or sons who had to begin work becaus their fathers became ill or died; two others live at home only temporarily and plan to work elsewhere. Of those of ages 25 to 34, two men live at home because they are disabled; one has returned from the Merchant Service for awhile; two are only sons who are encourage to remain at home, and several are youngest sons or sons whose parents have strongly discouraged them from leaving home. Of the 35-44 age group, four have remaine on the island because of various ailments such as tuberculosis and mental health problems; one had to leave the Merchant Service because of an injury; at least five have stayed or returned because of family ties, the demands of aging parents and sick siblings. In the 45-54 age category, a number of men served in the navy or other branches of the armed forces during World War II, and returned from shipwrecks and other disastrous events to the relative security of the loom.

288 464 167 162

Many of the older weavers (at least nine in the 55-64 age category) started weaving after they had returned from the United States or Canada because of the depression. Some recall the horror of wandering

288 through alleys to rummage through the trash cans of
464 hospitals or other large institutions for food. The
167 occupational histories of the weavers support the
162 generalization made by an official of the Harris Tweed Association that the younger weavers leave because they do not like the weaving and they are replaced mainly by older men who want to settle down after a life at sea. (See Appendix A for several life histories of weavers.)

E. Crofting as Strategy

241 Because of the relatively high income provided by
288 the Harris Tweed industry, those who remain within the
434 township have tended to emphasize weaving and neglect the croft.

592 ### 1. Croft as Place of Residence vs. Agricultural Unit

Most of the 169 households consist of married couples wit
[582] their unmarried children. A tendency to marry rather late in life and for children not to marry while their parents are still living is evident in Table VI[1] (Partial List of Households According to Type of Household and Age of Household Head).

Fourteen households of married couples and their children (not included in Table VI) include at least one

1, [This source as received did not contain this table--Analyst]

The
105 fact that crofting townships are located on marginal
241 land is one reason that the larger society is not moti
654 to exploit the land. The Crofters Holding Act of 1886
[311] and subsequent legislation ensured protection of and
[671] incentives for continued maintenance of crofting and the crofting township.

Protective government legislation, grants and lo for housing, subsidies for rearing livestock, relativ low taxes, and the economic protection provided by a socialistic government in times of crisis have helped maintain a core of crofting families for many generat
105 The predominance of older persons in the township is
162 striking, but many of the younger people who have lef
632 the island to work on the mainland return frequently,
166 contribute part of their salary to the remaining fami
434 members, and plan eventually to marry and settle down
584 the village or to retire there. Long-term residence
[621] kin-linked families in a small area has in itself con to the boundedness of the township network.

105 The policy of the government, through developmen
241 agencies such as the Highlands and Islands Developmen
654 Board, has been to support economic strategies that
632 complement, rather than interfere with the functioning the crofting township with its small holdings and com
000 practices. The Harris Tweed industry is lauded as an

A HARRIS VIGNETTE

HARRIS'S OFFSHORE ISLANDS

Scarp

Until 1972 Scarp was the most westerly inhabited island in Scotland, separated from the Harris mainland by a strait which is about half a mile across at its narrowest, coursed by strong tidal currents. The island is about three miles in diameter, rugged, especially in the north and west, with cliffs on all sides; the maximum altitude is nearly 1,000 ft. On the east side lies a tiny marginal belt of good land, machar and soil; on this green shelf, about one-third of a mile long, were all the crofts of the Scarp settlement. Many stand deserted, and abandoned lazy-beds in sites beyond the present settlement indicate a denser population at one time. The island's population-carrying capacity was severely limited by the minute amount of land available for tillage: of a total of about seven square miles only half a square mile can be used. Climatic conditions and soil type also restrict the range and quality of crops grown.

Scarp was originally settled about 1810 and was occupied by eight farming families who were reasonably comfortable. Not only did they have the island to themselves, but they had access to good pasturage on the Harris mainland opposite. About 1823 thirteen small townships between the head of Loch Resort, Harris, and Bunabhainneader were cleared, some of the displaced families coming to Scarp. Some emigration back to Harris took place in the 1840s, but when about 1868 the proprietor divided Scarp into sixteen crofts instead of the previous eight holdings, these were further divided by the people themselves, trying to accommodate their families and friends from elsewhere. In 1861 the population was 151; the peak was reached in 1881 with 213 persons. In 1951 it was 74. Communication with the Harris mainland is by boat, plying between two stone-built jetties.

The local economy was essentially a subsistence one, with self-sufficiency in such products as potatoes, turnips, cabbages, oats, milk and fish. After a break of some years lobster-fishing has recently been reinstated as an occupation. Oil lamps are the only lighting, though a few houses have piped water. The small shop

the community generally—in particular for a landing stage in the North Harbour. The lighthouse at Eilean Glas, Scalpay, was in fact erected as long ago as 1788; for a long time it was the only lighthouse in the Western Isles. In 1792 it was described as 'one of great utility to the numerous shipping that frequent this channel [between Skye and the Long Island] on their voyages to and from the Baltic'. 505 [441] [502]

The independence of the islanders again appears in their attitude to the education facilities provided for their children. In 1949 Scalpay parents staged a school strike in protest against the delay in the construction of a road to the school. At present the island has a junior secondary school but in 1966 the Inverness-shire County Council Education Committee proposed the transfer of the island pupils to the school at Tarbert; this would mean each child rising early in the morning to face a trip across Scalpay Sound and then a road journey to Tarbert. The inevitable protests against this proposal were rooted in its deeper implications. The school roll on Scalpay (70 pupils) has maintained a remarkable level of continuity over the years, reflecting the general prosperity of the island. Forced attendance at a central educational facility, the islanders maintain, will introduce an unsettling urban element into their children's adult views. 181 871

The smaller islands

To the west of Scalpay, in East Loch Tarbert, is the one-square-mile island of Scotosay. Its population was 14 in 1861, none in 1881, 18 in 1891, 15 in 1901, and 20 in 1911. In 1921 7 males and 12 females lived there, but none permanently since. 361 162• 175* [131]

On the west of the Harris mainland is a high rocky island, four miles by one, called Taransay. In 1549 Dean Monro described it as being 'well inhabit and manurit', a place where people delved with spades, and with good barley and corn, and fishing. There are two old chapels and a burying ground on the island. The population of Taransay has declined to a handful through the years; its peak was 76 in 1911.

The Sound of Harris is 'a chaos of rocks and islands', so numerous that they cannot easily be counted. Some are mere pinpoints of rock; others once supported small populations. Nearest to the

SULASGEIR

Dean Monro, in his 1549 account, refers to the vast numbers 175* of wild fowl and mentions that the men of Ness sail there and 223 stay for seven or eight days with a boat full of dried wild fowl and feathers. The *Old Statistical Account* (1796) says: 'There is in Ness a most adventurous set of people who, for a few years back, at the hazard of their lives, went there in an open six-oared boat without even the aid of a compass.' The boat, says the *Account*, could not be pulled up out of the sea, and therefore, while some of the men worked on the birds, the others had to stay in the boat on the most sheltered side of the sheer-cliffed island. This custom of hunting young gannets for 'guga' on Sula- [185] geir still continues. Under the Protection of Wild Birds Act, 1954, [261] the gannet is protected by law, but so that the Ness men could continue their old custom, a Statutory Order was passed making a special exemption (from 31 August each year at the end of the close season) of the gannets on Sulasgeir. With North Rona, [136] Sulasgeir is one of the great breeding grounds for British oceanic seabirds.

The Loch Roag islands

The one large inhabited island off the Lewis coast is Great 361 Bernera, though technically it is not now an island, having been 162* connected to the mainland of Lewis in 1953 by a bridge. It is part 175 of the parish of Uig, as are the other islands in Loch Roag. Its [131] population reached a peak of 730 in 1911, but has now fallen [231] to about half that figure. Off the west of Great Bernera is Little Bernera, which in Dean Monro's time was 'inhabit and manurit', but which has had no population recorded since the 1861 Census. Monro describes it as full of rough little craigs, but with fertile earth between.

Also in Loch Roag are three islands which, now deserted, once supported families: Pabbay had 17 people in 1861, 9 in 1881, and none since; Vacsay had nine men in 1861, and none since; Orasay in 1891 had one man and one woman, but none since.

The Flannans

Belonging again to the parish of Uig is the group of islands 131 known as the Flannans, or Seven Hunters, some twenty miles

THE SHIANT ISLES

361 Island) and Eilean Mhuire (Mary's Island). The Shiants are the 131 eroded relic of the same age of volcanic activity that formed the 162* strange-looking columns of Staffa and of the Giant's Causeway 175* in Antrim. The mass of cooling molten rock flowy crystallized [133] and changed in composition: the early-formed crystals sank to the bottom, the later ones being found nearer the top. In 1865 one 361 family lived on Garbh Eilean, the largest, which is joined to 162* Eilean an Tigh by a low storm beach; but the family was lost, 175* falling over one of the great precipices which are a feature of the group. In 1821, 2 males and 4 females lived there; in 1891, 3 males and 5 females; and in 1901, 4 males and 4 females. But in this year the last family upped sticks and left for Tarbert, Harris; for one of its members, a girl of 21, it was the first visit to the outside world. Since then there has been no permanent population. Back [511] between 1811 and 1821 a visitor to the Shiants had some hard things to say about the filth and darkness of the shepherd's dwelling in comparison with civilized manners, and as the demand for the island's products declined, communications became more important: to support the family a man had to leave to find work on the Scottish mainland. Large-scale emigration began in 1852 when thirty-six islanders (with State aid) left for Australia. Island life was punctuated by loss of life; boating disasters and cliff-falls in particular deprived the community of the vital male elements needed for survival. Tetanus infantus, known on St Kilda as the 'eight-days' sickness' strangled every third or fourth babies born; this disease ravaged the island for almost a century and again struck harder at the male sex. About 1810 the population was about 200, a definite overcrowding. By 1861 it had fallen to 78; in 1911 it was 80, and in 1921, 73. A decade later it was nil.

[178] [468] [167]

Records show that at one time in the islands' history some sixteen people lived there, working small crofts. The ruins of their chapel can still be seen. The author Sir Compton MacKenzie had the house on Eilean an Tigh renovated for a stay there, and later the islands were bought by Nigel Nicholson, author and publisher. Today they are used for grazing sheep.

St Kilda

The St Kilda group of islands, some 45 miles off the west coast 131 of Lewis, belong to the parish of Harris. These islands have an 231 extensive literature and can only be touched on here. When the population was evacuated from St Kilda in 1930, the move broke for all time almost 2,000 years of continuous island living; they were taken off at their own request, after much careful and serious deliberation by the St Kilda 'parliament'. Life in Hirta, the only island in the group with a permanent human settlement, depended on the seabirds that breed in their tens of thousands on the cliffs of Hirta and Boreray, and the great stacks of Stac an Armin and Stac Lee. The flesh of puffins, gannets and fulmars

THE OTHER ISLANDS

The flesh of puffins, gannets and fulmars

361 was the staple diet of the St Kildans; the oil and feathers were 162 the vital exports that paid the island rent to MacLeod of Harris, 175 the owner of the group. These exports also helped to pay for the [133] purchase of such foodstuffs as salt, sugar and tea, and other items [421] which the island could not itself supply. The St Kildans owned 361 some hundreds of sheep, the wool being spun and woven into 162 tweed, and a few cattle were also kept. But the seabirds were the 175* foundation of the island economy.

The factor which led ultimately to the desertion of the island group was isolation. The community there was throughout its history undoubtedly the most isolated in the British Isles, though until the present century this material fact left to the St Kildans [236] All that was deemed necessary for the continuation of the community was that, once a year, MacLeod of Harris should send his factor over from Skye to collect the island goods that were to be sold, and to bring with him those provisions which would see them through another twelvemonth. Later, as the demand for the island's products declined, communications became more important: to support the family a man had to leave to find work on the Scottish mainland. Large-scale emigration began in 1852 when thirty-six islanders (with State aid) left for Australia. Island life was punctuated by loss of life; boating disasters and cliff-falls in particular deprived the community of the vital male elements needed for survival. Tetanus infantus, known on St Kilda as the 'eight-days' sickness' strangled every third or fourth babies born; this disease ravaged the island for almost a century and again struck harder at the male sex. About 1810 the population was about 200, a definite overcrowding. By 1861 it had fallen to 78; in 1911 it was 80, and in 1921, 73. A decade later it was nil.

[438]

484 Desolation tended to make the St Kildans a human menagerie. 361 With the improvement in boat services, St Kilda became a 'must' 175* on tourist itineraries. The tourist trade took on an economic importance for the population after July 1877, when the *Dunera Castle* steamed north and went for a voyage to the 'romantic Western Isles and lone St Kilda'. The steamers continued to call throughout the three summer months annually for sixty years, their passengers eager to buy souvenirs: tweed, quern stones, spinning wheels, stuffed birds and eggs; indeed, anything to remind them,

THE OTHER ISLANDS

195 even to the extent that the St Kildans used their observations of 18 the flights of birds both as compass and as omen for good or evil. [826] Martin speaks of the islands with amusement and admiration. He indicates that the community was backward in some ways: they were illiterate, and wondered naively at the newcomers and their manners. 'The inhabitants of St Kilda are much happier than the generality of mankind, as being the almost only people in the world who feel the sweetness of true liberty.'

In May 1877, when the local tourist trade had hardly started, [276] HMS *Flirt* sailed from Greenock with food to relieve hardship [138] among the St Kildans, and an official report of England & Island Agricultural Society on board reported that 'Tobacco was what they invariably asked for'. The ordinary diet of the island con- [262] sisted of, for breakfast, porridge and milk; for dinner, potatoes and the flesh of fulmar, or mutton and, occasionally, fish; for supper, porridge when meal was plentiful. Seabirds' eggs, from [272] March onwards, also formed a staple food. Tea was taken once or twice a week and the islanders were reported to be 'rather fond [349] of it'. There were eighteen inhabited houses, sixteen of which had fine roofs, two being thatched huts. The sixteen new cottages had been erected about 1863, 'and are certainly much superior to the inhabitations of the same class of tenants anywhere in the [372] Western Isles'. All were well furnished, peat was used for fuel and [405] there were two watches and one clock on the island. There were 162 some seventy-five islanders; most of the men were old, and only 162 two of them were unmarried, with twelve spinsters still to choose [210] from. All read the Gaelic Bible. The men were mostly tailors, shoe- [463] makers and weavers; every house had a loom. They made all [244] their own clothing, the men also making the women's dresses, [286] and a good deal of blanketing and tweed cloth was made and sold. Nearly every house had a spinning wheel and a large pot in [460] which the yarn was dyed. The women were expert knitters. Each [421] croft and house was rented at £2 annually, sheep being charged for at the rate of 9d per head; these charges were usually paid in kind.

[137] Feathers of the sea fowl formed the principal export of the [136] island. The factor paid 6s per stone of 24 lb for black feathers; [237] and 5s per stone for grey. For these he received, in Edinburgh or

133 line; and there can be no doubt of the contrast found at 131 the extremes. How strikingly different from any view over the English Plain is this, from the air or a mountain-top! It overlooks the ice-scraped rock of the fells; the drift-heaped, ill-drained hollows studded with gleaming lochs and deeply overgrown with peat; and the indented, insular coastline with its widely spaced crofting townships looking seaward, where a few fishers' sails may dot the vast expanse of water. The population of Lewis 161 and-Harris numbered only 28,000 persons, and that of the 162 entire Outer Hebrides some 36,000; but the small num- 182 bers need not lessen the geographical significance of the community.

18 Men have long recognised the homogeneity of the English 'plain', with its recurring vale and wold, compact within a rounded coastline in spite of the local variety of landscape, history or dialect, which enriched its heritage and compose its grandeur and charm, men have sensed the unity inherent in this land of a single tongue, centred upon a single capital. By contrast, the diversities in landscape, life and tongues in the lands far-flung to north and west have obscured the elements of a profound, underlying unity in geographic origins and in historic and social 121 evolution. To understand the civilisation of the British Isles, it is vital first to perceive the complementary qualities found in the two great regions, and face their corresponding 198 weaknesses or limitations. Second, within the less understood of the two regions, 'the North and West', it is vital to study the almost bewildering variety in regional types of life—distinguishing, for instance, the uprooted populations all too typical of the rural Lowlands of Scotland or Northumberland from the still deep-rooted communities of the Highlands and Isles.

121 And region by region, a fairer balance must be struck 185 between country and town. In Lewis, the part of Storno- 241 way, with its population nearing 5000 (in 1951), is 162 important. Its port, its fisheries, its spinning mills for the 184 crofters' hand-loom weaving, its merchants' shops, and its 621 local, administrative and professional services, are essential 632 to the Island. Its economic and social evolution, too, are 178 interesting. Stornoway's plans for the future are active and ambitious, and these, it is realised, depend upon the 182 prosperity of the population of Lewis proper.

121 But the subject of this book is geographical rural. It is 128 see with fresh eyes that, from our Harris mountain-top, we viewed as a unit at the core of 'the North and West'. After the island has been described in terms of its physical and human geography (Part One), the endeavour (in Part Two) will be to give a complete account than may yet have been given of the natural environment of the rural workers as their temporal duties and its spiritual sanctions. The three concentric circles of community are described: the family, the farm team and boat's crew, and the larger township groups. The relations of this threefold grouping of livelihood and society to Chiefs and Church are studied, and followed out in later evolution, until today. Elsewhere I have endeavoured to show that rural life can worthily maintain itself, and thereby find a new freedom. The final chapter returns to the broader aspects of society and region touched on here.

If this intensive study of a single isle and community can throw fresh light upon certain essential characters of the less-understood region of the British Isles—that lying outside the south-eastern 'Plain'—it may help to contribute to more economic reorientation. The significance of the Island life—not so much for the past, which

174 the township; and to each were allotted the rights of the 776 common grazing and the fishing grounds. For more than 241 a century the croft has been held individually, though in 162 473 the townships the common grazing is still held in common. 621 Beyond these 'homely' limits lie wider horizons, in the 632 past those of seafaring and of droving or the chase, and 178 today of fishing and gilleing at home, or of ocean journeys, urban occupations or colonisation.

In the Lowland regions each symbol represents 100 182 acres of arable farmland, or 200 acres of farming; the particular type of symbol shows the average number of workers 184 employed on a farm-holding in each county. On each 241 farm the employed workers form what may be called the 'Labour-Team'. A team may be 'small', 'medium' or 'large'. The Scottish averages of these three types (indicated in the inset key to the map) are roughly three, five and seven workers; the average number of 'permanent' workers are counted as equivalent to one 'permanent' worker, but farmers' wives are excluded. Under (B), for the same Lowland counties and areas, full-time small-holdings are 543 shown separately. The Scottish average of less than one full-time worker employed, most often a son or daughter of the small-holder, is typical of all the counties.

241 As to the relative importance of the different classes of 241 farms and small-holdings in Scotland, true agricultural 162 land-holders number 68,000, of which fully one-third hold part-time holdings (like the Island crofters), one-third 'full-time farms', and rather fewer (one-fifth) hold 'full-time small-holdings'. The remainder accounts for other types of less importance. The farms predominate in terms of improved land, full-time employment, and of course of 311 production. As to area, farms cover 80 per cent of agri- 464 cultural land. The farmers employ nearly 90,000 workers, 162 [refer to map p. 16 ... analysis]

24 and with the addition of 10,000 workers on full-time small-
162 holdings, these constitute a labour force of nearly 100,000.
481 Nevertheless, there are more crofts than farms in Scotland,
and more small (part-time) crofters than farmers, besides
241 'full-time small-holders', of whom so many are crofters,
north of the Highland line. Thus the number of crofter
427 families forms an important item of Scotland's rural popu-
162 lation. Of these, the families of Lewis-and-Harris form
fully one-fifth, owing to the remarkable growth of popula-
tion until 1925. Even in the little burgh of Stornoway
many families hold a plot of land, and at heart they may
be almost as much 'crofters' as townsmen.

Socially, what is meant in the Island by the term
24 'crofters'? Although each Island crofter cultivates his
427 own arable holding (his croft), he shares the common
62 pastures with fellow-crofters, each having a right to a
'sum' of so much stock, 'his souming'. Open, sandy
land by the shore, if any, may also be shared. These
common grazings, shared together by the crofters of one
community—a hamlet, a village or township—form a social
link of great significance. They distinguish what we shall
call 'township crofting' from individual holding, whether
of part-time or full-time small-holdings, or of true farms.
The common grazings, enclosed by line C (Fig. 2), thus
[361] form an important social index. About 75 per cent of the
area included forms Common (or other Crofters') Grazings.
The close dots of the dotted line divide the 'Commons'
from Deer Forests, as in the Island and inland from the
north-western coasts. Widely spaced dots divide the
Commons from the Sheep Farms and other mixed holdings
further south.

24 Outside the tract of 'township crofting' in the north
361 and west, the chief unit of Scots rural life is the farm,

[see p. 16 -- analyst]

361 The chief advantage of moving uphill to the road has been
198 ease of communication and access to grocers' vans and mill-
311 spinners' lorries; but the disadvantage proves to be the
491 laying on of running water. A much-needed scheme for
water supply is now being applied by the Department of
[654] Health for Scotland. Scrutiny of a 'quarter-inch' map
will indicate the chief facts and tendencies and the condi-
tions they involve.

4. Distribution of Population

• 162 The distribution of rural population can be closely
311 estimated by inspection of a 'quarter-inch' map, where
both the area of cultivation and the house dots are noted.
Comparison with parish populations shows that on an
average one dot represents seven or eight houses or families
and thirty to thirty-five persons. Since there are now no
large farms, cultivation indicates crofting, and, therefore,
a typical density of one person to a little over half an acre,
or 1000–1200 per square mile. Rural numbers over the
whole Island show a density of about twenty-five persons
per square mile. If the fishing grounds, with a sail here
and there on the wide sea, were added, the density would
be lower still! A single dot found with cultivation indi-
cates crofts, which are hardly ever found singly. Where
no cultivation is shown around a single dot, this generally
indicates an isolated stalker's house, a shooting lodge by a
road, or a shieling (*áirigh*) out on the moor.

(B) STORNOWAY

1. Site, Plan and Development

361 The plan of Stornoway and its harbour shows three
stages in the growth of the town, the first two picked out

[TEXT CONTINUED ON PAGE 89]

175 the eighteenth century these 'black houses' would be
342 replaced by houses of stone and lime, and a few of those
361 survive.

Of the fort built by Cromwell on the Point, no signs
192 remain. For tactical reasons, the best site would seem
194 to be the neck of the Point, from which the guns of the
712 fort could defend the houses, stores and quays. The
irregular building line near the point marked T, a
Town House at a later period, may correspond to the
175 northern angle of the fort. The fort appears to have been
712 standing when the original drawing was made for the
engraving in the Old (or First) Statistical Account of
Stornoway, *c.* 1793.

175 By the time Wood drew his plan in 1820, houses on
361 the Point no longer looked exclusively on to the axial
street. The main alinement of interest came to be the
shore, marked by a properly built quay. Today, the Point
Street houses have fallen into decay but many older houses
still stand in fair repair along the 'Beach' or Quay.

175 Thirdly, from the nineteenth century, until 1914, two-
361 storey, flatted tenements, hotels and houses of middle-class
34 people were built upon a grid that followed upon the old
field plans. In an alternative plan, proposed about 1820
but not adopted, a diagonal vista opened out to the Estab-
lished Church, built in 1794 on rising ground. The
modest Seaforth Lodge which had stood across the harbour
was replaced in 1850 by Stornoway (or Lews) Castle, its
pseudo-Tudor style designed to please the new improving
landlord, Sir James Matheson, who had purchased Lewis
in 1844. Presented to the people on the break-up of the
Leverhulme Estates in 1925, a new technical school has
175 taken it over. A few villas also grew up on outlying roads.
361 Thus, a mere village in 1801, and among the smaller burghs
• 162
228

175 of Ross and Cromarty, with populations of from 1000 to
361 2300 in 1841, Stornoway leapt ahead by 1851, growing
• 162 with the rise of the fishing trade. Including the literally
228 floating population of fishers, its numbers exceeded 4000
in the summer of 1921, though falling below this in 1931
when the census was held in the spring.

175 Still another stage, a fourth, seemed in sight when, in
228 1918, the first Lord Leverhulme made his bid to centralise
the scattered, failing fishing industry of the Island at
361 Stornoway. A canning factory was started (south of the
area shown on the plan), only to be dismantled before its
completion, then recommenced and again dismantled at
"Leverburgh", South Harris. New housing commenced.
When this great venture closed and population stagnated,
the grandiose proposal to reopen the diagonal vista on
Wood's plan and centre it on some great new building,
remained a dream. The failure of Leverhulme's great
enterprise and its hopes led to discouragement for some
years. Yet it is possible that the vision of change given
to the Island may have contributed to a renewed capacity
for enterprise, individual and communal.

175 Later extension had to await the growth of the Harris
361 tweed industry, and the erection of spinning-mills to
provide yarn for the rural hand-weavers. The town has
[288] extended beyond the plan in two main directions: to
north-east with villas and housing schemes and to ESE.
with the great new mills where kippering sheds were
numerous from the mid-nineteenth century until after
1919.

361 Although Tarbert is a shopping centre for Harris and
361 has its spinning-mill, Stornoway has no rival on the
Island. The adequate depth of its harbour, combined
[162] with its position and access from sea and land, have given

361 it command and make it the leading settlement of the
366 Hebrides, with a population fluctuating around 5000.[1]
• 162

2. Aspects and Problems of the Burgh

361 The little town pleases by its views over the harbours,
632 outer or inner—sheltering perhaps a steamer or two and
the clustered fishing vessels—across to the wooded sky-
line and the beautiful grounds of the Castle, a-flower
in spring with rhododendrons. Or framed in trees from
the Castle policies, the harbour and even the roofs and
smoke of the houses are not unpleasing (Plate II). But
[342] the town's chief charm is its setting, not itself, though its
plain dwellings with 'harled' or rough-cast walls and slate
roofs are simple and inoffensive. In rehousing, the Local
[916] Authority had respected Scottish domestic features. But
[656] the greater use of local materials, labour and skill is surely
desirable in the Island with its many half-employed men,
who need such work to maintain income, health and morale.
[342] As is to be expected in view of low incomes, and the ex-
tremely primitive housing in the country, urban housing
[162] is inadequate. In Stornoway burgh in 1931, 44 per cent,
or nearly half the population, still dwelt in houses of one
to three rooms, 17 per cent in four (including attics often
with no dormer windows), 20 per cent in five or six, and
18 per cent in seven rooms and over. There has been
improvement up to 1939, and after 1945, but much remains
to be done.

369 Turning to cultural life, profound differences divide
632 the town from the country about it. Whereas in the town-
ships of rural Lewis the people are almost purely natives

[1] The burghal area was extended in 1935. At the census of 1951 its population stood at 4930. This showed an increase of 15·9 per cent above the population enumerated in the same area in 1931.

361 by co-operation of three authorities: the Town Council,
364 the Piers and Harbour Commission, and the Stornoway
632 Trust as owner of property, including Lews Castle with
its grounds. The social situation is of quite exceptional
[656] interest, and an attempt to describe some of its features is
[654] made in Appendix II, on the Stornoway Trust and the
Lewis Association.

(C) CHANGES IN ISLAND POPULATION, AND THE FUTURE

1. From 1801 to 1939

175 Until the middle of the eighteenth century, the growth
• 162 of population was periodically checked or even set back by
famines and epidemics, such as smallpox, or by warfare.
[731] In 1801 the total population of the Outer Hebrides (in
round numbers) was 21,700, and in 1831 it was 32,000.
Of this total, Lewis carried 9200 and Harris 3000 in 1801
and, a generation later, in 1831, respectively 14,500 and
3900. In the graph (Fig. 12) the curve showing the
average for the five landward or rural parishes of the
Island (excluding Stornoway Burgh) indicates the fairly
steady numerical increase there, almost to the close of the
[731] century. Following the evictions after 1831 and the potato
famine of 1846–48, emigration caused a fall in the southern
islands (*e.g.* in South Uist, Fig. 12). Forty years later, in
1871, the Outer Hebridean total reached nearly 40,000,
of which Lewis alone, with 21,000, now gave more than
half the total, and Harris—in spite of an intervening drop
owing to evictions—4800. By 1901, in spite of losses in
the southern isles, the total for the Outer Hebrides reached
a peak of 46,200. Of this, Lewis already contributed almost

A HARRIS VIGNETTE

Nearest to the
361 southern shore of Harris is the verdant arable island of Ensay,
162 two miles in circumference. The peak population was 15 in 1861,
175 but in 1951 and 1961 there were two men (seasonal shepherds).
131 Just south of Ensay is Killegray, two miles long. The south end was uncultivated, though a good source of peat; five people lived on Killegray in 1861, 3 in 1911 and 1921, 5 in 1931 and none in 1951. An 1865 report mentions that there was only one house on the island, so the population must have been one family only.

[131] Four to five miles west of Killegray is a low-lying, fertile island of about four miles by 1½. This is Bernera Harris which, though lying nearer to North Uist, is included in the civil parish of Harris. It still carries a fairly large population. Until the early eighteenth century it was occupied by a tacksman at one end and a community of crofters at the other. Later there was an influx of people evicted from Pabbay and the mainland of Harris. Some clearing of families from Bernera itself took place. In 1861 the population of Bernera was 315; it rose to 524 in 1901. Three schools were open
[871] on the island in 1865: an SSPCK school, a Gaelic School Society school, and a 'female industrial school' supported by the SSPCK and 'taught by a venerable Highland lady in receipt of a salary of £8 per annum'. The school was housed in, to quote an 1865 report, 'the oldest dwelling in the Long Island, and was at one time inhabited by persons of distinction. In the outer wall is a marble slab bearing this inscription: "Hic Natus est/Illustris Ille/Normannus MacLeod/De Bernera/Eques Auratus." (Here was born that famous man, Norman MacLeod of Berneray, a distinguished knight.) This illustrious personage and his brother, Sir Roderick of Talisker, were both knighted by Charles II for distinguished services . . . A grandson of Sir Norman became known in the annals of the Bench as Lord Bannatyne.'

Three miles north-west of Bernera is Pabbay, also in the parish of Harris. At one time Pabbay was a rich green island, the 'granary of Harris', and supported a considerable population. Early last century it was inhabited by 26 families (about 100 people), who lived in comparative comfort, and by 1841 the population was 338. But Pabbay was cleared of its people. Some emigrated to Australia, some went to other places nearby, such as Scalpay, Bernera and the Bays area of Harris. In 1858 only a

1. [See pp. 59-60--Analyst]

herd's family was left. Pabbay is conical in shape, and about
niles in diameter. In recent times drift and sea spray have
aged its fertility.

st north of Pabbay is Shillay, one mile in circumference,
e Martin Martin (1695) says he found sheep with the biggest
s he had ever seen. Whether Shillay was ever inhabited is
nown.

10 THE OTHER ISLANDS

THE continued evacuation of islands is a problem peculiar to Scotland. In the eighteenth century some 8 per cent of Scots lived on islands; today the figure is less than 2 per cent. Island populations today account for about 30 per cent of the total Highland (crofting counties) population. The difficulty for most islands is the relationship between population density and potential for economic development.

As though reflecting the relationship of man to man on Lewis-with-Harris—keeping together in community for survival—the other islands round the larger island mass have played some role at one time or another in recorded history. Most of the socially-significant islands of Harris have been described in Chapter 9. Lewis has very few, and these are mostly far-flung oceanic outliers.

North Rona

To begin at the northern point of the Lewis parish, about 45 miles NNE of the Butt of Lewis is North Rona, a block of hornblende schist with pegmatite intrusions. Though the island has never figured in any Census reports, since the Census began, it has been inhabited from time to time. Of about 300 acres in extent, it is cliff-bound and reaches 355 ft at its highest point. It lies in a part of the Atlantic where a deep swell seems perpetual, and landings can be difficult.

Dean Monro comments: 'Towards the north northeist from Lewis, three score myles of sea, lyes and little ile callit Roney, laiche maine land, inhabit and manurit be simple people, scant of ony religione.' The Dean's 'simple people' were no recent settlers. They were in fact the continuation of a community which had inhabited North Rona for at least 700 years previously. Tradition has it that the first inhabitant was St Ronan, who built a small monastic cell or hermitage there some time during the eighth century, but there may have been earlier inhabitants.

Though the island is but a great lump of rock, Dean Monro says that in his time an abundance of corn was grown, by delving only, and an abundance of clover-grass for sheep. The island also produced a fine bere-meal which the islanders stuffed into the skins of sheep and sent, as their rent or tribute, to MacLeod of Lewis, along with mutton and fowls.

Of St Ronan's Chapel, still to be seen and reckoned the oldest Christian building in Britain remaining in its original state, Monro says: 'As the ancients of the country allege, they leave a spade and a shuil [shovel] when any man dies, and upon the morrow find the place of the grave marked with a spade, as they allege.' In 1695 Martin wrote of Rona in 1680:

> The people repeat the Lord's Prayer, Creed, and the Ten Commandments in the Chapel every Sunday morning. They have cows, sheep, barley, oats, and live a harmless life, being perfectly ignorant of most of those vices that abound in the world. They know nothing of money or gold, having no occasion for either; they neither sell nor buy, but only barter for such little things as they want; they covet no wealth, being fully content and satisfied with food and raiment; though at the same time they are very precise in the matter of property among themselves; for none of them will by any means allow his neighbour to fish within his property . . . They concern not themselves about the rest of mankind except the inhabitants in the north part of Lewis. They take their surname from the colour of the sky, rainbow, and clouds. There are only five families in this small island, and every tenant has his dwelling-house, a barn, a house where their best effects are preserved, a house for their cattle, and a porch on each side to keep off the rain or snow. Their houses are built with stone and thatched with straw . . . When any one of them comes to Lewis, which is seldom, they are astonished to see so many people.

Then came tragedy. Somehow, probably off a wreck, a swarm of rats landed on the island and consumed virtually all the food. A few months later, some seamen landed and robbed the islanders of their only bull. 'These misfortunes and the want of supply from Lewis for the space of a year occasioned the death of all that ancient race of people.' Some years afterwards a new colony was sent to the island. In 1796, at the time of the *Old Statistical*

Account, there was one family there, that of the person employed by the owner to look after the livestock. The owner was a Ness tacksman who paid £4 sterling rent per annum. The island produce was corn, butter, cheese, a few sheep and sometimes a cow, and some wild fowl and feathers.

In 1844 Rona was evacuated, its last inhabitant being, in the seventh year of Queen Victoria's reign, the 'King of Rona', Donald MacLeod, who lived in almost prehistoric conditions. Rona was without inhabitants until 1884, when a last attempt at resettlement was made by two men from Ness. This was a self-imposed exile, after a difference of opinion with the minister of their parish; in penance, they hied themselves off to Rona. In 1885 a relief boat called and found both men dead, one from natural causes, the other from starvation and exhaustion after nursing his friend. By the fireside of their hut was a pot ready for the preparation of a meal they never ate.

Today, man's connection with the island is maintained by the small party of Lewis shepherds who each year make the journey to shear the sheep which still graze on the green slopes around the now-ruined village. Otherwise, only the occasional traveller now lands there. In June 1956, North Rona with its associated rock, Sulasgeir, was declared a National Nature Reserve on account of its importance as a breeding ground for colonies of oceanic birds—guillemots, puffins, kittiwakes, and fulmars—and for its seal colony.

Sulasgeir

Sulasgeir is twelve miles west of North Rona, a lonely rock in the Atlantic, bleak and grassless, and tunnelled by caves and gullies. The only life it has ever supported is seabirds—officially. Yet one of the old buildings is said to be a chapel and is called 'Tigh Beannaicht' (House of Blessing). According to Ness tradition, Sulasgeir was once used as a prison for sheep-stealers, and it is also said that Brenhilda, sister to St Ronan, was left on the island to perish. Yet another tradition claims that it was at this rock that Prince Charles Edward made his first contact with his Scots clansmen, when the ship that carried him to Scotland was spoken to by a Ness boat making for North Rona.

Lewis and Harris

29,000 and Harris 5270. From 1901 to 1911 rural growth slowed down and ceased thereafter; but even by 1921 there had been little change (rural Lewis, 28,380; Harris, 5280).

FIG. 12.—Graph showing changes of population in Lewis-and-Harris from *c.* 1701 to 1951. (Because of boundary changes the curves for the parishes of Barvas, Lochs and Uig have been averaged and are shown as B.-L.-U.)

The great exodus from the Island came three years after, in 1924–25, when Leverhulme's expenditure on labouring wages was over, the war bounties had been spent —partly upon the refitting of boats—and when fishing was hard hit by the destruction of the Russian market. Simultaneously, a wet summer spoiled the crops and prevented even the drying of the peats.

Lewis and Harris

167 Emigration set in, both individually and by help of schemes for group settlement in Canada, and in 1931 rural [162] Lewis returned only 21,200 and Harris 4500. The curve of average parish increase illustrates the fairly steady numerical increase to the close of the last century, then the lessening increase, and after 1921 a fall, recorded in 1931.

162 The census of April 1951, which recorded the population of Stornoway burgh as nearly 5000 (a net increase of 16 per cent since April 1931), recorded little or no change in the population of rural Stornoway parish but losses of 11 to 19 per cent in the Island's four outlying parishes. The average net rural loss approached 9 per cent. But—as indicated in the curves drawn for Fig. 12 which are based upon statistical estimates that corroborate observation—the loss did not take place smoothly over the twenty-year period to 1951. Much of the loss occurred in the two preceding years, 1949 to 1951. Although partly due to a long term trend, this loss was greatly caused by crisis.

2. *Present Population Trends and the Outlook*

167 After 1931, as a result of the trade depression in the Empire and the United States, many emigrants returned, frequently putting what was left of their savings into the purchase of a loom, giving some months to the building of a new house with the help of Government loans, and setting about the improvement of their parents' holding [162] or the reclamation of a new allotment. Soon after 1931—at a time when the Press read the census results as a por- [168] tent of steady and drastic Island depopulation—Islanders remarked that unless unexpected attraction came from outside the Island, accompanied by lessened prosperity in

ISLAND, WORK AND PEOPLE PT. I

3. *Age-Groups in Scotland and the Isles*

162 In Fig. 13 (*a*, *b*, *c*, and *d*) are shown four pyramids of population for comparison of an 'ideal' or theoretical

FIG. 13—*Four* age-group pyramids. Each of the four, five-yearly age-groupings (in black) may be compared with the 'ideal' age-grouping (broken line).

projection in Scotland with the actual age-groups in rural or 'landward' Lewis and Scotland in 1931 and 1951.[1]

[1] 'The ideal' pyramid (drawn from Scottish Life Tables) represents a population, unaffected by migration, of which the birth and death rates for each age-group in Scotland are as in 1931. Since 1931 health in Scotland

CH. III THE ISLAND HOME

16 In the pyramid for rural Lewis (b) the differences are striking, and are mainly due to two factors: the 'natural' 162 ratio of births to deaths, and migration. Beginning from the bottom of the pyramid, it will be seen that in 1931 there were fewer infants (from 0–5 years) than children from 5–10 years, fewer in fact than in the three older age-groups. In 1951 (c), the birth rate having risen sharply after the war and preceding depression, infants formed a much larger ratio (over 5 per cent).

162 In rural Lewis, emigration asserted itself earliest with 167 girls, as they left the Island chiefly for domestic service; but soon after the age of 20 as many young men left as young women. In 1951 the discrepancy was most marked 165 from the age of 30 to 35. This was further accentuated 172 by the heavy death-roll among the younger men during the 1914–18 war, deaths having totalled more than 1100, perhaps the heaviest proportionate loss in the Empire. Only when they marry and return, permanently or for a period, to the croft (vacated it may be by the death of a parent), do the numbers of men tend to balance those of women. Thereafter the falling away among men is due to their shorter life expectation.

16 In 1951 National Service had drawn away lads of 18 to 20, so that the difference between the sexes is much less marked in the 15–19 age-group than it was in 1931. Mortality in the 1914–18 war contributes to the shortage of men between 50 and 55 in 1951, and the mortality of the 1939–45 war has also left its trace—or the birth rate would have been still higher (always excluding the factor of migration). For men, those jobs not requiring per-

has improved, but detailed sociological statistics for 1951 were not available by 1954. Allowances being made for the effects of the wars, for the high ratio of births immediately after, and for emigration from Lewis after 1945, the age-grouping in the island changed but little from 1931.

CH. V FAMILY, FARM GROUP AND TOWNSHIP

175 natural zone, could not be extended. In any case, the re-
243 clamation of clay land tended to slacken as efforts turned
162 to fishing and kelp-making. The introduction or increased
191 growing of potatoes added to the human, but hardly to the
182 animal, food supply. Finally, while the beginnings of
201 medical knowledge and vaccination had aided the growth
232 of population after 1750, veterinary science had made no
472 progress, nor did it advance in the Island for many years
to come. We may conclude that an average stock per Island
family about 1750 was rather more than that of 1790, and
the acreage relatively larger, while both were greater than
the average of today, particularly in the Lews.

What, then, could a family have to eat, from such crops
246 and stock? While in winter even now there is almost no
244 milk to be had on a croft, and there would be little then,
there was salt meat, dried or salted cod (or herring) and
fish oil; oat and barley meal and some rye meal; cabbages;
and, increasingly in the eighteenth century, potatoes.
Martin included potatoes among the crops grown even on
far St. Kildа in 1697. A century later it was written that
the people of Uig, for instance, had, though 'unwilling',
been induced to grow and eat them 'forty years before';
and the years tend to be under-estimated where changes
are slow and memories long! But it was written of Harris
that by June the meal and potatoes had mostly been con-
sumed, "and such as cannot afford to purchase imported
meal subsist chiefly on the milk of their cows and sheep,
with what fish they may chance to catch, till their wants
are relieved by the first fruits of their potato crops early
in Harvest".

175 We conclude that with even less money but a little
51 more grain the population in the Island had fluctuated
162 about a mean for some centuries before, as it had in so

COMMUNITY FROM PAST TO PRESENT PT. II

175 much of Britain and Europe until about 1900. A modern
51 parallel may be found in Asiatic lands with the frequency
70 of famines alternating with periods of recovery or, in others,
162 the long-drawn misery of chronic under-nutrition and
191 endemic disease. In modern Europe, only international
(193) or civil war can now bring such extreme widespread misery.
And as peace brings partial healing, so in the Island past,
when good seasons returned after famines, the life of the
family renewed itself.

175 The narrow margin of survival even in good seasons,
550 the risks of the bread-winner's death and of his family's
destitution, and the need of co-operation in so many tasks made the family too small, weak and precarious a unit to stand alone. Even with relatively little division (or specialisation) of labour, and in spite of its apparent self-sufficiency, the family had perforce to link itself with wider circles of community life.

(*a*) JOINT LABOUR BY SMALL TEAMS: THE EVIDENCE OF TENURE IN 1715–26

175 Romance is hidden among the rent-rolls of the Seaforth
241 estates, all of which were forfeited when the Earl rose for
427 'King James VIII' in 1715. For of the rents withheld
647 from the government until 1720, on the mainland at least
(613) the loyal clansmen paid a considerable portion to their exiled chief, styled 'Marquis' by 'King James'. But the

[1] 'The' ups and downs' of a peasantry living on the margin of subsistence and subject to severe disease can be studied in Inada, 1871–1941, where the 'net' or more change has to be correlated with the 'vulnerability'. This wide problem was reviewed in a series of papers to 1948: "The Social and Psychological Significance of Variability in Human Biological Adaptation and Population", with examples taken from Indian villages. (A. Geddes, *Human Relations*, Vol. 1, 1947–48; cf. *Geog. Rev.* 1942 and 1948; and *Geog. Journal*, 3, vol. 98, 1942).

COMMUNITY FROM PAST TO PRESENT PT. II

175 Roman Catholicism was far less complete than that ulti-
241 mately brought about by Protestantism—Episcopalian or
Calvinist.

At least twenty-five churches, chapels and tiny oratories
162 are named by Martin in Lewis and his list is incomplete
(1934, p. 106). Harris and its islets also had their comple-
344 ment of 'temples', in addition to the priory church of
162 Rodel. We may perhaps assume that before the Reforma-
tion Lewis had a population of some 4000 persons,
or 1000 families, and contained some thirty chapels or
(194) oratories in inhabited areas. If so, then one church or
'temple', on an average served thirty to thirty-five families,
or six or seven farm-groups. Yet only the larger congre-
gations at Eye, Stornoway, Ness or Uig and Rodel would
normally be served by clergy; the people of smaller conge-
gations would be without, for weeks and months or even
years.

175 When the people were too distant from priests (and
79 later ministers) to hear the Lessons, they handed down
the Word orally. Their power of retaining memorable
(163) thought, even in prose, is still remarkable; and verse
strengthened memory. For example, 'the Ten Com-
175 mandments' paraphrased in rhyme are recorded in Fr.
188 Allan Macdonald's little collection, "as given by the God
777 of grace to Moses in the wilderness" (*Na Faisnean*,
p. 62). Moses, had he understood Gaelic, would have
protested at the omission of the Second Commandment,
but no sculptor of Iona, Rodel or Eye would have felt a
need for it, being unafraid that a Christian could bow
down to a golden calf. Believing, with Solomon, that a
craftsman's work is his prayer, the artist-monks held that
an 'image' should represent, though never replace, God's
creation, and may even quicken our concept of the Creator

CH. IX ECONOMIC CHANGES: 1750–1919

000 landlords to improve passenger regulations at that time.
Wars brought enlistment in the Highland regiments,
175 the Navy and Merchant Marine. Owing to migrations of
all kinds, males came to be outnumbered by females, then
(902) as later (100 males to 114 females, 1931).[1] In Lewis in
(147) 1795 the proportion was 100 to 111, and in Harris 100 to
144. From this period onwards the 'export of men' con-
175 tinued, modified by the reserve for war. Men were trained
for the Naval Reserve and Militia; and in 1900 for instance
762 800 men were training at Fort George and 2500 sailors
swept in the Minch annually. The maintenance of a reserve for the
Navy was one of the strongest pleas for the framing of the
Crofters Act.

175 A new resource, important to the Islanders after 1750,
824 was helps rendered in the cutting and burning of seaweed upon
the shore, for use in the manufacture of alkali in the glass
323 and soap industries. From 1770 onwards the price rose,
388 heightened first by an import duty, then by the Napoleonic
Wars. Estimating from the high prices, averaging over
175 £10 per ton from 1800 to 1823, Sir John Sinclair put the
824 value of the annual produce (20,000 tons) at £200,000. "It
435 may appear surprising", he remarks, "how that sum could
be of such importance to 80,000 people"; but he goes
on to point out that this gave the additional cash needed
to supplement their subsistence. But even when Sinclair
wrote in 1825, the industry was in peril. Failure and loss
occurred almost immediately after, with disastrous effect.

It is complained in the *New Statistical Account* that
175 owing to the summer-time work of kelp-making up to
433 1830, the people could give little attention to the crofts, so
(811) that their extension must almost have ceased. Nor could

[1] In 1921 the ratio in Lewis was 100 males to 114 females, and in Harris, 100 to 116.

CH. IX ECONOMIC CHANGES: 1750–1919

000 to one another, to the landlord and to the State would have been profoundly different.

(*c*) STATE AID, THE LAND, AND THE CROFTERS' RESPONSE

175 Until 1914 the congestion in each Island township
162 dotted between the wide, lonely moors, had increased, and
342 it was still increasing. To every two legal crofters, either
a cottar or a landless squatter was to be found, on the
175 'skinned land' outside the crofts. Parliament, in 1886,
640 had discarded the Napier Commission's recommendations
646 to give powers to extend the crofts from portions of the
(342) common, or to supply a house site and garden space for
Department crofters, after obtaining the consent of the Common Grazings Committee of the township and permission from the Land Court for 'resumption', *i.e.* for enclosure of a portion of the common.
427 The legal and administrative procedure involved may seem
636 formidable to make a living, say, as a fisherman, and about to
marry but having no croft—was penalised by high rates,
should he take up his proper status of a legal cottar at a
small rent. Throughout the crofting counties, the legal
crofter, as an agricultural landholder, was (and is) de-rated,
and had only to pay one-eighth the rates for a non-agri-
cultural holding of the same rental. Only since 1938 has
the value of the house been assessed. A recognised cottar
occupied almost as estate was rated as owner and occupier,
being treated in fact as a feuar; [1] and as such he had to
bear a heavy burden of rates, possibly of over 30s. in the £.
Whereas if 'he' lay low' and shared his father's or brother's

[1] *Feuar*, in Scotland one who holds real estate in consideration of a stipulated annual payment; lit. *on feudal* tenure. Cf. J. P. Day (1938), pp. 383–384, 392.

CH. X BETWEEN TWO WARS, AND AFTER

623 The Trustees of the Stornoway Trust have not found
423 it easy to meet the cost of keeping up the valuable property
of the Castle and Policies, and, in consequence, there is
476 no adequate income being available for the purpose.
178 Today, however, Leverhulme's gift is being put to good
311 use as a Technical College, opened in September 1952.
201 Division of the available farms, after providing about
311 200 small crofts (of ten acres or so), still left the problem
of finding legal homes on legal tenure for the remaining
472 cottars and squatters. The Department of Agriculture
324 arranged to feu plots of 'skinned land' on the outrun of
656 certain townships, including one in the extreme north and
others in Lochs. About 200 of these little holdings with
potato ground were provided. On the holders' behalf the
Department forbade the conversion, after obtaining
the consent of the Common Grazings Committee of the
township and permission from the Land Court for 'resumption', *i.e.* for enclosure of a portion of the common.
The legal and administrative procedure involved may seem
disproportionate to the economic value of the holdings.
Yet difficulties of law and custom had been allowed to go
from bad to worse during the past eighty years; and these
difficulties were overcome.

To encourage better housing in the crofting counties,
342 loans are made to 'crofters and fishermen feuars' person-
655 ally. Local stone, or latterly concrete, is used, and much
(312) of the building is done by the 'man of the house' himself,
and his friends. From 1920 to 1940, nearly 1200 loans
were made in Lewis and Harris for the erection (or im-
provements of houses), and in a few cases for the erection

[1] Estimated 41,200 to 1300 shortly before, the open question was whether subdivision during the preceding eighty years was to be recognised and accepted.

COMMUNITY FROM PAST TO PRESENT *PT. II*

458 which the Isles form the outermost fringe. Particular
747 aspects of the Island's problem were its own.

The application of 'the Means Test' was therefore to the good in the Isles to begin with, whatever was to be said for or against it in towns. Many honest crofters thought the test should have been much more rigidly applied in the
[142] Islands. In 1932, after the worst of the depression had passed, there were in Lewis (proper) some 750 registered unemployed men (with only 5 boys), of whom 250 were seamen from the Merchant Service; and the other 500 included dockers and casual labourers of various sorts, many of whom had returned from the cities. The seamen, to take the largest class, constituted not the least loyal Territorials to the Royal Navy. The Highland Division experienced a few months of relative inactivity in France, then of a brief but bitter campaign, followed by long years in prison camps, while other soldiers underwent prolonged training in Britain, followed by severe fighting for long periods, then for afield. Lastly, a limited number of men served in engineering or other works of war-time industry, though labouring work, [142] at high wages, kept many of the older men employed at home. Of the women called up for service, some were posted to the Forces, some to the Land Army and some were sent to factories. The greater opportunities for women to earn a living wage away from the Island tend to equalise the ratio of the sexes.

There were years when work at sea was not to be had. As one left the Firth of Clyde, by the railroad to the Isles, one could count sometimes a dozen, sometimes a score of good 'tramp' steamers dossed in the Gareloch; and one thought of their owners, good men, but hard cutting men. At such a time reduced payment to Island seamen with a croft, in place of total payment to town-dwelling seamen without one, effected a saving to the public purse. The

COMMUNITY FROM PAST TO PRESENT *PT. II*

[85] so creating a small link in the purse and in the mind,
[142] having both a little empire, week by week. Surveys made
[525] by teacher-members of the Educational Institute of Scotland describe the effects on listeners in Highland parishes
[142] so pernicious, in the main, from a Christian point of view, the other hand, emphasise their cultural endeavours, and
[142] the lightening of house-work and of rural monotony or solitude. Every effort is needed to aid a happy selection
[142] in home and neighbourhood.

Experiences undergone in war were of very differing types. Many men spent the war years in the Navy, without
[721] contact with decent town life, or others in the Merchant Service, on the land (both of which, the Territorials of the original 51st Highland Division experienced a few months of relative inactivity in France, then of a brief but bitter campaign, followed by long years in prison camps, while other soldiers underwent prolonged training in Britain, followed by severe fighting for long periods, then for afield. Lastly, a limited number of men served in engineering or other works of war-time industry, though labouring work, [142] at high wages, kept many of the older men employed at home. Of the women called up for service, some were posted to the Forces, some to the Land Army and some were sent to factories. The greater opportunities for women to
[142] earn a living wage away from the Island tend to equalise the ratio of the sexes.

An experience new to the Western Isles came with the establishment of Air Bases. Not only did their construction provide high wages for labouring for the older resident crofters, brought daily to the Bases by bus from their townships, but for the first time a heterogeneous mass of men from every part of urban Britain was put down at the doors of these quiet communities—at a time when

APPENDIX I

[128] An effort has been made to separate crofting from other in-
[435] come, and also to average the income from the sources given of
[142] the 3,600 occupied crofts plus an estimated 10,000 others, namely,
[525] crofters, fishermen, seamen, farmers, and building land in fee.
[431] Finally, to the productive income earned on the Island there
[142] should be added that received by earning sent or brought
home to dependants, together with pensions, unemployment
relief and the like. I am greatly indebted to the appropriate
officials for the figures cited for 1937-38 or the year immediately
preceding. These sources average £45 per rural household.
[128] The figures tabled all appear in Table I. Some, but many figures
having been obtained for Harris also, conclusions are similar
there. The concluding Table (Table IV) gives a little more on
other sources of income, with a similar table for 1953.

(i) *Tweed Industry*

[178] After deducting the cost of wool imported from the main-
[142] land and certain other items, the net productive income was
[142] taken to be £307,000. The estimate may still be on the high side but it indicates the prime importance of the industry in the Lews. For 1938 the quantity of wool spun, woven, and certified as hand-woven by the Harris Tweed Association Ltd., was 2,830,000 square yards, rising in 1939 to just over 4,000,000 yards, though falling thereafter. The value of the tweed produced in 1938 was approximately £700,000. The total wages paid in 1938 amounted to £246,000 (£339,000), rather more than half of which was paid to the weavers working at home. In 1940 this had risen to nearly £400,000, a slightly higher proportion falling to the weavers.

In addition to the wages paid and the price paid for local wool, the industry is a valuable customer of the Electricity Company and directly or indirectly provides much other employment in the Island. The industry also provided a market for a large quantity of Scottish wool and contributed to taxation.

The productivity and earnings of the industry continued to

APPENDIX II

[178] 8110. The acreage under potatoes declined steadily: 1901,
[434] 2736, 1691. Barley dwindled from 2350 acres to 1340, and
[142] 1951. Turnips reached a maximum of 210 acres in 1939, but were not worth noting by 1955. These crop acreages reflect the change in stock-rearing, with the decline in the number of cattle but the great increase in sheep. Table VIII. Taking the three successive totals for 1918, 1939 and 1953, cattle numbered 13,800, 9960 and 6740 head; but this diminution by more than half was chiefly due to the small number of bullocks reared. Sheep numbered 54,600, 76,500 in 1918, still stood at about 43,000 in 1953, and they are now of far better quality in weight and milk production. The totals of sheep are sufficient, 78,150, 114,330, 185,800; by use of mainland rams more average weight has increased, while the wool is rather more abundant but finer. Cattle are now, whereas in 1901 they yielded only 1% of the total, and in 1901 and 1918 only 2%, the chief source of farm income. Sheep in 1951 yielded 3% of the total, and in 1953 they yielded 5%. Cattle in 1953 yielded 12%, and in 1955 they yielded 15%. The shift in the centre of gravity of Lewis farming has not yet been recognised by the statisticians and historians of the Island.

By the end of the eighteenth century the inclosure seem to have disappeared, at any rate in the Lewis, and the crofters were left with the hill pasture, the shore and the arable land. Inclosure of the hill pasture began in the Lewis in the 1820s, and was completed in Harris by the 1860s. Inclosure in 1733 for the Island of Berneray, 1 1/2 percent, in 1751 the Island of Pabbay, 1 percent, in 1771 the Island of Mingulay, 1 percent, in 1773 the Island of Bernera, 1 percent, in 1775 the Island of Scalpay, 1 percent, in 1776 the Island of Ensay, 1 percent, in 1777 the Island of Killegray, 1 percent, in 1778 the Island of Gigha, 1 percent, in 1779 the Island of Eriskay, 1 percent, in 1780 the Island of Raasay, 1 percent, in 1781 the Island of Rhum, 1 percent, in 1782 the Island of Eigg, 1 percent, in 1783 the Island of Canna, 1 percent, in 1784 the Island of Soay, 1 percent, in 1785 the Island of Muck, 1 percent, in 1786 the Island of Oronsay, 1 percent, in 1787 the Island of Colonsay, 1 percent, in 1788 the Island of Islay, 1 percent, in 1789 the Island of Jura, 1 percent, in 1790 the Island of Tiree, 1 percent, in 1791 the Island of Coll, 1 percent, in 1792 the Island of Lismore, 1 percent, in 1793 the Island of Mull, 1 percent, in 1794 the Island of Gometra, 1 percent, in 1795 the Island of Ulva, 1 percent, in 1796 the Island of Islay, 1 percent, in 1797 the Island of Tiree, 1 percent, in 1798 the Island of Coll, 1 percent, in 1799 the Island of Lismore, 1 percent, in 1800 the Island of Mull, 1 percent, in 1801 the Island of Gometra, 1 percent, in 1802 the Island of Ulva, 1 percent, in 1803 the Island of Islay, 1 percent, in 1804 the Island of Tiree, 1 percent, in 1805 the Island of Coll, 1 percent, in 1806 the Island of Lismore, 1 percent, in 1807 the Island of Mull, 1 percent, in 1808 the Island of Gometra, 1 percent, in 1809 the Island of Ulva, 1 percent, in 1810 the Island of Islay, 1 percent, in 1811 the Island of Tiree, 1 percent, in 1812 the Island of Coll, 1 percent, in 1813 the Island of Lismore, 1 percent, in 1814 the Island of Mull, 1 weaving and fishing, the fall in population would probably be small, if any, in 1941. This fall in the total figure was not so much a decrease in the number of families as in the number per family. The Island was only then following the restriction of population begun half a century before in the rest of Protestant Britain, though the causes, social and economic, are very dissimilar. Actually, little did occur to change either the rural situation or that of Stornoway, until the outbreak of war in 1939.

Since 1931 there had been no real decrease: Lewis is a land of house-building, not of ruin and abandonment; of increase of holdings, not diminution, and even of agricultural improvement. No doubt 'artificial' causes were at work: first, loans, grants and unemployment insurance and assistance—once known as 'the dole'—and, secondly, the money sent to elderly parents and dependants at home by young folk in Glasgow or abroad, or savings brought back by the young people themselves. Yet there is some fishing and agriculture still. Above all, 'hand-weaving' has grown, even if this be partly 'artificial'. Recently it was not only the elders who had returned to the Island, but men and women in the prime of life, so that the question of resources, livelihood and population in Lewis needs to be re-examined afresh.

The emigration which took place from 1949 to 1951 followed directly upon the losses and the unemployment in the Island's Harris tweed industry. This crisis resulted from the imposition in 1949 of a Purchase Tax on hand-woven Harris tweed of 666 per cent. If the tax had been maintained and no adequate adjustment made, the effects on population would have been far-reaching.

Figure 9.

/p. 20/

175 427 Thus, towards the end of the nineteenth century, the proprietors were obliged, by pressure of population within, and of public opinion without, to made some concessions to their small tenantry. It may be relevant to point out that this was a period of falling agricultural prices and declining farm rentals; indeed the time was not far off when some farms would not find tenants at any rental:

TABLE 7

Farm:	Rental at c. 1875/80	Rental at c. 1885/90
Mealasta	£130	£85
Mangersta	£132	£95
Ardroil & Carnish	£285	£245
Timegarry	£108	£80 (1)
Linshader	£349	£278 (2)

Notes: (1) Small reduction for enlargement to Glebe.
(2) £22 reduction for Laimeshader and Grimersta Lodge.

175 326 [161] [162] The crofters of south Uig were in particular difficulty at this time for here fishing declined earlier than elsewhere but the townships remained greatly overcrowded. In 1910 Breanish and Islivig had 14 cottar families, (most of them sharing crofts with the official tenants), and three of squatters, i.e. on the common pasture. Here fishing had almost ceased and the people were almost entirely dependent on their crofts or on employment away from home. [231] In Valtos and Kneep there were 21 cottar families; they had 31 cattle and sheep flocks. Here, too, fishing was on the decline. It was perhaps because of this that 288 commercial weaving was developed in South Uig earlier than in most parts of Lewis. As 175 early as 1900 Uig was classed with Harris, by the local committee of the Congested Districts Board, as producing a superior quality of tweed. Two 30 gallon iron pots were sent out so that enough wool could be dyed at one boiling to obviate irregular colouring in any one tweed. [653] The C.D.B. also made grants for roads, footpaths and "marine works". Amongst the latter the pier at Valtos (1899) was an attempt to resuscitate local fishing, but it came too late.

175 653 The Congested Districts Board was the first government agency with funds at its disposal to aid the crofting townships. One of its largest grants went in aid of the Carlow Road (or Pentland Road as it is now known). This scheme arose out of an abortive proposal for a railway from Loch Carloway to Stornoway. It was thought that this could enable trawlers and other large fishing boats to land their catch for quick transport to Stornoway and so to the mainland whilst the fishing vessels returned to sea with minimum 175 delay. The road, an excellently engineered one, is still not properly surfaced. A more effective C.D.B. - aided scheme was the resettlement of crofters on Mangersta Farm, 657 the rent of which had fallen to £70 and which the proprietors were willing to break up. 427 Thirteen new buildings were formed here and the first harvest was taken by the new settlers in 1911. The crofters' rent was fixed at £73 and the C.D.B. paid £566 in grants [241] to purchase the sheep stock and improvements, and towards the cost of fencing. About the same time the Board paid a grant to the township of Garenin for fencing a substantial enlargement to their pasture, obtained off Dalbeg. Here, and at Reef farm, small-holding resettlement schemes were vetoed by the Crofters Commission whose experts regarded the areas as unsuitable. Both have since been re-settled by crofters.

231 summer, were last used for cattle six to eight years ago by people in Brenish, but none are in use today. These shielings were at the western foot of Mealisval, only about a mile from the township. The Brenish 'distant' sheilings, about six miles to the south-east of the township across the mountains, were not used after about 1920, while the adjoining Islivig sheilings were last used in 1922. Mangersta may have had its original shielings to the east of Loch Melavat about a mile south of the township, but after obtaining the enlargement from Mealasta farm, until about 1939, sheilings were used in that area.

314 No peats are cut on the crofts; the peat-cutting areas for all three townships are near the road and in no case far from the township. The common pasture near the crofts bears
241 evidence of former cultivation, but it is at least fifty years ago since crops were grown on it. At this time the townships of Islivig and Brenish were over-populated with many cottars living on the crofts and all possible land on the crofts was already under cultivation. Today, less than half this 'old arable' is being cultivated, and in several cases the land is used solely for hay and grazing.

342 There are now no thatched houses inhabited in the townships and most houses have kitchen and other extensions added. Some crofters have built concrete two-storey byres
312 of modern design. In Brenish, where the hills to the east provide a good catchment area and the Brenish river a good source of supply, all the crofts have their own private piped water supplies, while in Islivig and Mangersta most crofts now have, or are getting, a
377 water supply. All croft houses are supplied with electricity from the grid.

226 Commercial fishing has long ceased and as there are only three boats there is now very
301 little fishing for domestic use, the principal use of the boats being to ferry sheep to the off-shore islands. Weaving is an important occupation. There are seventeen weavers -
286 nine in Brenish, two in Islivig and six in Mangersta, and during 1959 they were kept busy;
461 in 1958, however, few orders were received. Weaving cannot be said to bring in a steady income here, and some of the weavers, and others, find additional employment outside
[434] the township - this includes four men at the hydro-electric scheme at Gisla, three at Mangersta Ministry of Civil Aviation station, three at Aird R. A. F. station and at least
[407] one in the Glen Valtos quarries. In addition, one man owns at tractor which he hires
[449] out, and one, owning a lorry and van, does haulage work. Altogether, out of a total of twenty-seven men under sixty-five who do work, all but three (one just out of school and one a semi-invalid) have other employment in addition to their crofts.

162 The total population for the three townships is one hundred and twenty-one residents, and fourteen permanently away from home. Of the residents, twenty-eight (or 23%) are children of, or below, school age, forty-seven (39%) are in the 15 - 45 age group, 15 (12%) are in the 45 - 65 age group, and 31 (26%) are over 65. Of the resident tenants, thirteen are over 65, twelve under 45, and five between 45 and 65.

181 The relatively young population may help to account, together with the better soils, for this area giving an impression of a fairly prosperous crofting district compared with some of the others in Uig. Amalgamation of crofts into larger units has also gone further. The use of a tractor or horse for ploughing, extensive use of artificial fertilisers, the sowing of grass seeds and the sale of sheep for meat, all seem evidence of a group of people who are determined to make the most of their limite resources.

233 One enterprise, that of the Aird Bheag sheep farm, deserves special mention. Four crofters (three from Brenish and one from Islivig) have purchased from the Uig shooting estate about 2,000 acres of land on the Aird Bheag and Aird Moire peninsulas, five miles south of Mealasta. Here they are running a flock of about five hundred sheep. There is

TABLE 11

Land Available by Numbers of Tenants

INBYE LAND Acres:	No. of tenants: (a) in whole parish:	(b) in 'new' townships:	COMMON PASTURES Acres:	No. of tenants: (a) in whole parish:	(b) in 'new' townships:
	(a)	(b)		(a)	(b)
0-1.0	1		Less than 50	88	
1.0-2.5	73	2	51-100	332	14
2.6-5.0	241	19	101-200	139	12
5.1-7.5	137	22	201-300	52	-
7.6-10	66	23	301-400	32	32
10.1-15	56	23	401-500	8	8
15.1-20	30	17			
20.1-50	29	24	940	10	10

Note: 'New' townships, for this purpose, are those settled since 1900.

In detail the arrangement of the townships varies. Certain features are common: all inbye land and, consequently, all settlements, are coastal (except Lochganvich). Each has common pasture adjacent to the inbye and many have further areas of common - former shieling grazings - some distance inland (figure 1). This division of the hill grazings is to some extent nominal because fences are often absent or ineffective. Uninhabited islands, on the other hand, require no fences, and are particularly valuable for winter grazing; the smaller of them provide convenient natural paddocks for bulls and tups when out of season. The management of all these common pastures is controlled by the township committees. Unfortunately the most important aspect of stock management - control of numbers and maintenance of a proper balance of sheep and cattle - is almost universally neglected.

The total stock which each croft may put on the common pastures - the 'soum' - is defined in the Regulations. In the case of townships re-settled in the present century a specific soum is placed on each croft but, in most other cases, the old practice persists of stating the soum in terms of rent. Thus the soum of each croft may be defined as 1 cow, 1 two-year-old and 8 sheep per pound sterling rent (this is a very common souming). Such soumings have been in existence since time immemorial; they are mentioned in 1836*. Many of the Uig townships had their soumings stated by the Land Court in 1912; in most cases the soum was given "per pound sterling of rent" (presumably 1912 rent), but in a few "per pound sterling of rent payable in 1886". The rents had been substantially reduced in 1891, thus 1912 and 1886 rents were very different. Any township has a certain limited, stock-carrying capacity; therefore, if the total rental is thus changed without

233 427 656 175 change in area, then the amount of stock allowed, per pound sterling of rent, ought to be changed, too.

This does not appear to have been done in Uig although in Stornoway parish the soum per pound was increased after rents were reduced in the late nineteenth century. More recently, the Crofters Commission, in re-stating soumings for some townships, has generally (but not invariably) applied the soum to the 1886 rent, regardless of the wording of the 1912 regulations. This may appear to have the merit of consistency and, insofar as crofters pay any attention to the Regulations, it satisfies them because the greater (1886) rent gives them a larger soum and less likelihood of being criticised or penalised for overstocking. However, it perpetuates inconsistencies which originated during the nineteenth century when the stock allowed per pound sterling rent was not reduced although total rentals were increasing as squatters' and cottars' holdings were added (see page above). Moreover, the old souming referred to the old type of highland cattle which were much smaller beasts than those kept today, and it assumed that the shieling pastures would be in full use. A further complication arises because about 1920 some townships acquired substantial enlargements but the soumings do not appear to have been adjusted. Altogether it is little wonder that the Grazing Regulations are seldom observed, for they seldom bear any close relationship to the grazing capacity of township lands. Proper observance of carefully revised Regulations, in which unlimited substitution of sheep in place of cattle was specifically forbidden, would be of considerable benefit to the crofters.

241 233 417 178 The inbye, or croft, land is invariably separated from the common pasture by a ring fence, the gates of which are generally closed for protection of crops from May to November. Progressive townships are installing grids to obviate the twin nuisances of traffic interference and straying stock. The fencing of individual crofts was rare until the 1930's and is still by no means general. The inbye land is, in many townships, the best winter grazing and its division into innumerable tiny fenced patches, whilst advantageous for cultivation, would restrict the movement of stock in search of water and shelter; in a predominantly pastoral economy complete enclosure of individual holdings is not necessarily an advantage. This problem will be discussed in Part III but, in the present context, it is relevant to point out that the small crofts of Lewis contrast strongly with the larger ones of, for example, the Uists and Tiree. Therefore, what may be advantageous in the latter may be retrograde in much of Lewis. 184

The lay-out of the crofts aggravates this problem. The long narrow strips of the 1850 lotting, well-suited to spade cultivation and common winter grazing, may require four or five times the length of fencing required by an equi-dimensional croft of similar area. If fenced the stock may be deprived of both water and shelter; since arable cultivation has become relatively unimportant a suitable solution to this problem might be to fence a small potato plot near the house and to put the rest of the inbye down to sown grass in three or four communal parks in which grazing could be properly controlled. A particular problem is posed by crofts which have been sub-divided. These may take the form of strips as much as half a mile long by 10 yards wide or, more commonly (and much worse), of piece-meal sharing of innumerable plots, a system known locally, but incorrectly, as 'run-rig'. This is seen at its height in Kneep (fig 22), where every croft in the township is affected. The problem does not arise in townships with large crofts, which are usually more nearly equi-dimensional. These are mostly the result of re-settlement schemes and have long been fenced, (see, for example, figure 15).

Crofter-tenants.

162 427 463 An analysis of crofter-tenants according to age, sex and occupation (table 12) provides several important clues as to the present unsatisfactory state of crofting. More than one-third of the tenants are over 65 years of age; a further 16% are absent, some of these may also be over 65, others are younger people working away from home, a few are tenants

162 427 463 of crofts in other districts, despite the legal requirement that a tenant shall reside within two miles of his croft. Thus half the crofts in the parish are tenated by persons who cannot be expected to make the best use of them. This implies no criticism of the people concerned, it is a criticism of the system. Of 314 resident tenants under 65 years of age, 43 are women; of the men, 170 have regular employment including fishing or weaving, 55 take casual or seasonal work as and when they can get it. Only 46, or 7% of all tenants, are "full-time crofters" and, in fact, most of these are either invalids, disabled, or over 60 years of age. Thus in Uig, unlike the southern Outer Hebrides, most crofts are at best a spare time occupation, at worst merely a house site carying special privileges. The table also demonstrates that the size of crofts has little bearing on occupational status; this is inevitable in a rigid system under which a man has no control of varying the size of his holding according to his needs. Some young tenants inherit crofts far too small for their family needs, whilst many elderly tenants, and women, have crofts which are too large for them to maintain.

241 427 It is not surprising, then, that many tenants do not wish, or are not able, properly to cultivate or stock their crofts. A few, however, are particularly interested in agricultural production as a means of livelihood. Some of these have acquired extra crofts, and so built up much larger units. This may be done by acquiring tenancies either in the crofter's own name or that of his wife or a close relative, or by sub-letting. About 30 crofters in Uig are tenants of more than one holding, at least 20 work holdings held in the name of close relatives, and at least 120 have sub-let holdings. These figures are certainly too low: sub-letting without the consent of the proprietor or Crofters Commission is illegal. Nevertheless it is common, and it is generally unsatisfactory because the sub-tenant has no security of tenure and no right to compensation for improvements; consequently sub-let crofts are often neglected and sometimes over-grazed as well. Controlled sub-letting, for a stated minimum period and with the right to compensation, would regularise a well established practice and encourage the formation of larger units, better able to support a family.

A converse of sub-letting is unofficial sub-division. There are a few cases of cottars - usually relatives living in a second dwelling house on the croft - sharing the croft with the tenant; but this formerly widespread practice has all but disappeared. Such de facto "crofters" share the common grazings, as do "squatters" - persons with houses on the common land - who keep stock. Thus neither the number of crofter-holdings on the rental (699), nor that of crofter-tenants (663), is any guide to the effective number of potential agricultural units. Of the crofter-tenants, 100 are absent and some of those who are resident sub-let their crofts. After making these allowances the number of de facto holdings becomes 518; to these must be added 39 cottars, squatters and others (including a few tenants of council houses) who keep at least a cow or five sheep, and 23 agricultural holdings without crofter status. Thus there are 580 potential agricultural units in Uig. 162 241 427

233 That is not all. Of these 66 have no cattle, and 162 carry less than half their soum, of which 22 have no stock at all. Little more than 400 holdings can reasonably be said to be agriculturally effective. This is an indictment, not of the crofters, but of the agricultural structure of the system. This neither provides viable holdings nor does it enable those who wish to acquire enough land to be agriculturalists to get it, even though much land lies unused or ill-used. In short, the system is too rigid. In consequence, de-population goes on apace whilst potential resources are neglected. Three-quarters of a century of legislation and financial aid have, in the main, encouraged the development of crofts as homes for the elderly and as hobbies for those in other employment. Very reasonably, many crofters complain. But very few realise-or are willing to admit - that the security of tenure and other privileges won in 1886, if too rigidly maintained, may ultimately bring about the decay of the very communities which they were intended to protect. 241 427

APPENDIX B (1) Population totals. 162 166 241 427 463 464

| | MALES | | |

Congestion and Sub-division.

The crofting population of Uig started the second half of the nineteenth century with ar less land than had been occupied by their forebears fifty years before, and, although amine, clearance and emigration had slightly reduced the population between 1841 and 861, (from 3,828 to 3,630) thereafter it again increased, reaching about 4,600 in 1891. lising agricultural prices after 1850 favoured farmers and crofters alike but, whilst the armers prospered the crofters merely multiplied, thus in effect reducing the land vailable to each family. In 14 townships recorded in the 1850 sketch book the 273 hold-ngs at that date had become 402 by about 1890, to which should be added a considerable umber of cottars and squattars, many of them keeping stock and some sharing the rent f the crofts on which they had built their cottages. Detailed comparison of the rentals or the two dates shows that the increase had come about in two ways: firstly, it appears hat, from time to time, where a new rent ledger was being made up, the factor would ecord separately cottars who actually shared the rent of the croft and, secondly, he ould recognise and enter some of the squatters who had obtained rent-free (and illegal) oldings by enclosing and reclaiming from the common. The latter were added to the ourning of the townships according to the rent put upon them. Table 5 (page 16), lustrates the process. The recognition of squatters, usually at £1-£2 per annum, led o the small increases in total rental. For the rest, the increasing numbers were aused by subdivision. Only in a few cases does the proprietor seem to have actively ncouraged land reclamation by crofters. On April 17, 1850, four of the families which ad been cleared out of Reef were allowed to settle on the Callanish common near the reasclete boundary (hence the settlement became known as 'Breasclete Park'. Their ent was fixed at 15/- per acre for five years, thereafter increasing 1/- per annum until reached 29/- per acre; they shared, according to their rent, in the Callanish common asture. But forty years later one of these crofts had been divided into three, another nto two, and two new ones had been carved out of the common; the total rental had risen £13:19/-. Again, when Breanish was lotted in the spring of 1850, ten new lots were arked out and the rental is annotated "there are ten young men starting ... these lots soon as the season commences". This appears to have been too optimistic; few, if ny, of the new lots were ever broken in.

The farms, by contrast, prospered and the proprietor was able to share that rosperity by increasing rents as shown in the table:

Figure 8.

After the first World War re-settlement schemes went ahead with renewed vigour. Men serving in the Forces expected land to be available for them on their return and they were impatient to get it. By this time the Lewis estate belonged to the Lewis and Harris Development Co. - in other words to Lord Leverhulme. The farms of Mealasta, Reef, Carnish and Ardroil were all without tenants; Leverhulme agreed to break them into crofts, the Board of Agriculture surveyors were speedily put to work, and the new settlers were able to commence cultivation on March 1, 1921. Timagarry farm, with which was the Uig shooting lodge, was in the hands of a tenant; but the Board obtained possission, reserving a small area around the lodge for amenity. Croir farm, Bernera, was also broken up. More than 50 new holdings received enlargements to their common pastures; details are given in Figure 10 and table 8, (pages 22 and 23). The schemes were done in haste, the Secretary for Scotland pushed them forward in the face of some opposition from Leverhulme. Here, as elsewhere, the ex-servicemen were restive; land raids and violence, with inevitable political repercussion, were feared.

In 1924, Linshader farm was threatened by land raiders. As a result this, too, was broken up and 10 new holdings were occupied as from Whitsuntide, 1925. This was part of the Grimersta sporting estate and the proprietors required that all the ghillies be given crofts. Linshader was not particularly suited to crofter-management: it consisted of 49 acres of old arable land and more than 8,000 acres of rough pasture, the furthest part of which was five miles distant and without road access. When the Land Court fixed the souming the following remark was recorded:

"Under a club stock" (i.e. a single flock) the moor "might have been exploited to a very different extent, but in view of the fact that individual stocks are to be kept" (i.e. each crofter his own shepherd) "which is not conducive to hefting, ... 30 sheep per share will be ample. If the whole outside ground were being fully made use of by the sheep stock the grazing of ten cows should do no harm .... but the wintering afforded on the holdings does not justify a larger souming" (than one cow). It had, in fact, been the practise at Linshader farm to buy in young cattle for summer grazing, and to send away the lambs to the Dingwall area for their first winter.

Finally, in the thirties, two long established cottar families at Aird Bheag an isolated spot on the Uig shootings, applied for and obtained recognition as crofters. Their holdings have since been abandoned and now form part of the sheep farm operated by a syndicate of four Breanish and Ialivig crofters. Finally, in 1935 a further 12 new holdings were formed by a partial break-up of Garynahine farm. Thus in all, 140 new crofts and 45,000 acres have been added to the crofter holdings of Uig since 1878. During that period the population of the parish has declined from 4,500 to 2,700. Neither the formation of new crofts, nor the enlargement the old, has prevented depopulation. Little, if any, more land is available and depopulation continues. The only hope, now, is to make the existing land - individual holdings and commons alike - more productive.

Table 8 and the map, figure 10, illustrate the progress of resettlement.

Crofts and Crofters.

The parish of Uig is now mainly owned by five small limited companies: Uig Crofters, Bernera Crofters, Grimersta Estate, Carloway Estate, and Lewis Island Crofters. In addition, when Lord Leverhulme sold the Lewis estate a few crofters accepted their holdings as free gifts; consequently they lost legal crofter status (which is confined to tenants) although they continue to share in their respective townships. More recently four crofters in the south purchased some 2,000 acres of rough sheep grazings, including the now defunct settlement of Ard Bheag. There is no official record of the extent of crofters' land, but we accounted for some 95,000 acres (table 9). The remainder con-

491 311 427 sists of the sporting estates of Grimersta, Scaliscro, Morsgail and Uig Lodge, on some of which a few cattle and sheep may be grazed, and a few small farms.

632 311 427 162 There are 37 crofting townships. In area they extend from 9,000 acres (Linshader) to about 500 acres (Croir, excluding de facto shares in Bernera Shielings). The number of crofter tenants ranged from 4 in Ungshadir and Earshadir to 61 in Breasclete, and the average amount of land available to each crofter is 7.2 acres of inbye and 126 acres of common pasture (table 10). Averages are misleading. As the table shows, between districts the amount of land available per crofter varies from about 50 to 500 acres; as between townships the range is even wider (table 11). To some extent this contrast is the result of resettlement schemes which, in general, attempted to provide new holdings sufficient to yield a family living. The extent to which they were successful in this respect was limited by political pressure, especially in the 1920's, to provide the maximum number of holdings. Nevertheless the re-settled holdings have twice the average areas of both inbye and common pasture (13.3 against 7.2 acres, and 225 against 126 acres, respectively).

TABLE 10

Average acreage of land available for each holding and working unit.

241 233 311 427

	7.2	9.0	126	157	699	580

NOTE: The distinction between "holdings" and "working units" is explained in the text.

427 632 311 Even amongst the old-established townships there is a tremendous range in amount of land available per tenant, the southern districts being best placed and those in the north worst, a situation which still remains. Indeed, the contrast in land available as between tenants (table 11) is a fundamental one; surprisingly, it is not on the whole reflected by a corresponding contrast in stock carried. Together with the rarity of effective fences between or within township pastures, the impossibility of properly hefting sheep to the hills when each crofter keeps his own little pack, and the excessive sheep/cattle ratio, this gives rise to serious problems which will be examined in Part III.

484 485 [494] As yet the tourist trade is almost entirely restricted to visiting relations but many houses offer suitable accommodation for people who would appreciate quiet holidays in these very beautiful surroundings. The distance from Stornoway, the difficulty of obtaining varied food supplies - and the weather - were cited as disadvantages! Passengers on a weekly coach tour from Stornoway are supplied with meals at an Ardroil house which has good access to the beach but otherwise the crofters show little interest in the possibilities of tourism.

● 162 166 464 In common with other crofting townships, the greatest problem here is that of an ageing population because the younger people seek employment outside their township. The diagrams illustrate the age-heavy structure of the permanent resident group and also the numbers of the insurable population periodically or permanently away. The lack of suitable work, for young women particularly, is also shown. The ages of the tenants also illustrate this problem. Of the thirty-seven tenants here, twenty or 34% are over sixty-five. Serious, too, is the loss by emigration of people between fifteen and sixty-five. Of the total 'working population', 35% have left this region since 1939. The corresponding figure for Crowlista alone, the older settlement with smaller crofts, is as high as 42%.

241 231 427 [511] [887] We found in this part of Uig some crofts efficiently and energetically worked by young tenants, and if reasonable stock prices are obtained the larger crofts can be worked profitably. However no croft will fully support a family; ancillary employment is always sought by crofters with growing families yet many crofts are carrying less stock than they might because some tenants are not interested in, or able for, agriculture. The croft is increasingly thought of as a home, as part-time employment - often for older members of the family - and as a place for retirement.

000 It is easy to list schemes for improvement and change:- dairying to supply Stornoway with milk, poultry and pig keeping on a commercial scale, cultivation under glass, the tourist industry, forestry on a small scale, lobster and crab fishing, etc. Such schemes would require capital not available in the townships, careful planning, and tactful administration by people with real knowledge of this area and its people. Meanwhile even the potential production of the crofts is by no means realised.

CHAPTER SIX

AIRD

by

Madge Phillips.

131 133 427 133 The little township of Aird is an isolated and old-established crofting settlement along the western side of the steep and narrow valley of the Amhuinn Gil na h-Airde three miles north of Crowlista. After leaving Loch Meacheit, the river flows northward through a gorge (at the mouth of which are the ruins of the old corn-mill), then across a narrow flood-plain into the rocky bay of Camus na h-Airde. The crofts, roughly fan-shaped in arrangement and varying in size from 3¼ to 7 acres, each originally included a narrow strip of the flood-plain, stretching across from just beyond the right bank of the river, up the steep, rocky slopes above the left bank and widening out over the more gently slopes between the 100 ft. and 200 ft. contours. A number of the crofts were subsequently enlarged, gaining extra land on the right bank of the stream, whilst others received additional ground to the north or south.

700 acres of common pasture stretch to the east and west of the crofts, across
ula which terminates in Gallan Head, extending to those of Crowlista and Valtos
h. The whole coast is broken and rocky, the land inland is peaty, and Aird
advantages of the machair land found further west. To the north of the village
ow an R. A. F. radar station on Rudha Caol, built on what was part of the common
It dominates the landscape and makes a considerable difference to the life of the
.

wnship, though isolated, is reached by a good road which leaves the main road
tern end of Glen Valtos. Grocery vans call on Wednesday and Friday, a
van on Saturday, and the local people are also allowed to shop at the N. A. A. F. I.
Camp. The road through the village approximately follows the line of the 100
r and all the houses are built directly on to the road, with byres, weaving sheds
buildings behind, whilst in most cases hens are kept on the steeper slopes below
Thus the settlement has far more of the appearance of an English village than
crofting townships, but there is no shop or post office. The majority of the
e stone with slate roofs and fairly large, though some of them have been built for
fifty years. All have electric light and their own water supply and several have
yres.

are ten crofts, as the enlargement of one of the original nine was subsequently
o make a separate croft. Of these, one tenant is an absentee and another an
oman who does no cultivation. In both these cases, grazing is let to others so
are actually eight operative units. The crofts are fenced in their upper portions,
st cases the fencing does not extend down to the river and there is free access to
concrete footbridge which spans the stream.

nly crops now grown are oats and potatoes and a few vegetables, with some sown
atural grass provides most of the hay crop. Lime and shell sand and artificial
are used; the two former particularly on the ground near the river where the
n is in narrow strips separated by drainage ditches and ploughing is done by horse.
he cultivated land is on the gentler slopes behind the houses, where the use of a
possible. Before 1914 most of the land within the original turf dyke was culti-
re was grown and ground at the mill for meal for barley bread. Seaweed was
ly used as a fertiliser and most of the families kept eight or nine cows, so that
a more plentiful supply of manure. Now, six of the families each keep one cow
stic milk supply (two of the others each keep a goat). The township possesses
ut make use of those at Valtos or Ardroil.

e other hand, the sheep scum is generally exceeded; instead of the entitlement
200, the total flocks grazed on the township pastures are approximately 500. The
e weaned early in August and put on Rudha Caol (Air Force use has not prevented
wedders are usually sold at the age of two or three years in Stornoway - many
r to reduce the numbers that must be pastured during the winter.

otal resident population of Aird consists of fifteen males and sixteen females.
twelve are over 65, six are aged 45 - 64, 11 are in the 15 - 44 age-group (there
three married couples) and there are two children under 15. Nevertheless, most
are complete families; only one person lives alone; no members are reported as
lly working away, no men and only two women are permanently away. Neither
been much emigration since 1939 - five women only have married out of the

roup is a new-comer to the district and does little croft work.

the crofts at Kneep are still highly fragmented: the fifteen crofts comprise over one hundr
and eighty separate arable plots. The lotted crofts at Reef were cleared in 1842 to provid
land for a sheep farm. Plans to clear the remainder of the Valtos peninsula were thwarte
by the Fisheries Board because Valtos and Kneep were then good centres for the white fish
industry. As late as 1892 Valtos and Kneep had forty boats, providing employment for on
hundred and forty-five men. Valtos with thirty-two boats and one hundred and twenty
fisher-men was second only to Carloway as a fishing centre in Uig. With the prosperity
of the fishing industry, the population of Valtos and Kneep had risen rapidly - from 467 in
1841 to 659 in 1891. Some, at least, of the subdivisions of Kneep date from this period.
Reef was scheduled by the Deer Forest Commission (1896) for resettlement by crofters
and in 1908 an attempt was made to do this, but agricultural experts advised against it, on
the grounds of poor water supply, scarcity of arable land (only ninety-three acres old aral
and the risk that, if cultivated, the machair would suffer wind erosion. Nevertheless, in
1921, Reef was resettled by ex-servicemen from Valtos and Kneep. At the time the shee
farm was only carrying a stock of one hundred and seventy sheep - less than half the croft
sheep stock in 1959.

Tables 15 - 18 summarize the more significant points of the economy of the Valtos
peninsula. Table 16 illustrates the fact that the economy is in decline. Only two-thirds
the total possible units are being worked. Many of the crofters have abandoned their cro
and the younger generations are unwilling to take over. Of those remaining to work the
crofts 18% are over sixty-five, and a further 47% are between forty-five and sixty-four.

TABLE 16

15.1-20	30	17			
20.1-50	29	24	940	10	10

Note: 'New' townships, for this purpose, are those settled since 1900.

In detail the arrangement of the townships varies. Certain features are common: all inbye land and, consequently, all settlements, are coastal (except Lochganvich). Ea has common pasture adjacent to the inbye and many have further areas of common - former shieling grazings - some distance inland (figure 1). This division of the hill grazings is to some extent nominal because fences are often absent or ineffective. Uninhabited islands, on the other hand, require no fences, and are particularly valuable for winter grazing; the smaller of them provide convenient natural paddocks for bulls and tups when out of season. The management of all these common pastures is control by the township committees. Unfortunately the most important aspect of stock manage ment - control of numbers and maintenance of a proper balance of sheep and cattle - is almost universally neglected.

The total stock which each croft may put on the common pastures - the 'soum' - is defined in the Regulations. In the case of townships re-settled in the present century a specific soum is placed on each croft but, in most other cases, the old practice persist of stating the soum in terms of rent. Thus the soum of each croft may be defined as 1 cow, 1 two-year-old and 8 sheep per pound sterling rent (this is a very common soum Such soumings have been in existence since time immemorial; they are mentioned in 1836*. Many of the Uig townships had their soumings stated by the Land Court in 1912; in most cases the soum was given "per pound sterling of rent" (presumably 1912 rent), but in a few "per pound sterling of rent payable in 1886". The rents had been substanti reduced in 1891, thus 1912 and 1886 rents were very different. Any township has a certa limited, stock-carrying capacity; therefore, if the total rental is thus changed without

Crofts and Commons

423 427 311 632

A crofting area normally consists of the croft land proper - the inbye (arable and unimproved land, and various common grazings. Table 20 summarises the situation in Bernera. Kirkibost has by far the largest inbye and the Bernera Island townships generally are larger than those of Bernera Shore. That the positions are reversed with regard to common grazings is due to the limited hill of Croir and the very extensive hill of Linshader. The Bernera Island townships would, however, be much worse off for hill land had they not various special common grazings (except Croir) and did they not share in the 4,341 acres of the Bernera shielings on the mainland. It is possible to calculate the appropriate shieling share for each township on the basis that, though the theoretical soums for each township and common grazing are exact, in fact all working units may send animals to the

to less regular routines than was the case when the shielings formed an essential part of the grazing regime. The old "Black Cattle" strain is completely bred out, nor is there much trace of Highland blood. The cattle are almost exclusively of Shorthorn or of Aberdeen Angus or of cross blood in order to qualify for the hill cattle subsidy. The exceptions, like the Jersey cow in Cruliveg, are very few. The cows are dual purpose beasts, kept for milk and for production of calves for sale. The latter are sold either within a week or so of birth, or at the age of up to six months (i.e. in autumn) or at about eighteen months age, after which the regulations usually specify that followers must be counted as full-grown beasts in the soum. They may be sold either in Stornoway or at the biannual sale at Breaclete. Cows unless they are being passed on to another crofter, are usually sold to the Stornoway slaughter house. Again, owing to the restricted market available, prices are lower than on the mainland, though undoubtedly greatly improved since 1939.

The problem of winter feed is still a governing factor in cattle management: cattle kept through the winter need a good deal of fodder, and happy the crofter and fortunate the year when it is not necessary to buy in a certain amount of cake, bruised oats, other feed or even hay. However, it is generally reckoned that the croft will supply the most if not all of the hay and oats. In any case, the amount generally bought in is a great deal less than that necessary in the mainland Highlands. This is largely due to the fact that, on many days, the cattle can be let out for foraging and will, in fact, manage to gain some natural feed.

Here, in contrast with Sutherland (where frequently a bull upon a neighbouring farm is used for service), and even with Park (where each township has its own bull) there is but one bull. In order to get round the problems of maintenance which have occasionally bedevilled Lewis townships, there is a recognised practice: the bull spends July to October upon the Tobson township common grazing, and the rest of the year on Little Bernera.*

Horses have never occupied a very important place in the economy of the area. It is said that the first horse on Bernera Island was taken to Hacklete bout 1923: previous to that and for some time after, most of the cultivation was by hand. This is understandable: in an area where most of the arable land is in lazy beds, and where, owing to dependence upon and nearness to the sea, problems of long distance land transport did not arise, there was little place for the horse, a fact which was recognised by the omission of horses from all the soums save that of Linshader itself. There is no recollection in the area of the keeping of goats. Nor is there a tradition of pig-keeping, though there were undoubtedly a few kept in the past. Poultry are kept almost entirely for domestic use.

Population - ages and occupations.**

162

Questions of land use cannot be separated from questions of population. The permanently resident population of the Bernera region is but three hundred and sixty and it is not balanced as to age-distribution (see Fig. 30). Appendix C(3) shows that out of 85 croft-holders on Bernera there are 34 full-time crofters: 21 are men, only seven of whom are less than 65; 13 are women, only six of whom are less than 65. The situation is even worse on Bernera Shore: out of 25 croft holders, only 11 are full-time, all men but all are over 65. The term 'full-time crofter' really implies crofter with no other occupation, and cannot be taken as necessarily involving a full-time unit of effective agricultural labour. Of the croft holders with full-time employment, 33 on the Island and six on the Shore, all but one, as would be expected, are less than 65. Therefore a large part of the active labour force is siphoned off into other occupations, for, increasingly, a man with a regular job has neither the energy nor the inclination to work a croft in

464

*The introduction of Artificial Insemination may soon change this.

**Appendix D(1) contains details of population by townships, appendices D(2) and (3) give further details of occupations and emigration.

TEXT CONTINUED ON PAGE 81

Figure 31

464 his little spare time. In addition there are a few croft holders with periodic employment. It is noteworthy that the incidence of employment bears no direct relationship to the size of croft holding - there is not, for example, a preponderance of holders of small crofts taking permanent employment.*

162 464 However, the croft holders are not the only source of labour: Appendix C(4) shows that there is a total force of fairly regular labour for the crofts amounting to 147, or rather less than half the total resident population. Of these, 78 undertake regular employment, 24 have employment on occasion, and thus only 45 are full-time, of whom 25 are over 65. The forms of employment are indicated on Appendix D(2); weaving, with 49 persons regularly involved, is by far the most important single source of full-time employment, the only other being fishing (24 persons). Estate work (mostly gamekeepers, ghillies, etc. at Grimersta Lodge) gives regular employment to ten persons in the townships of the Shore. No other form of employment accounts for more than three residents between 15 and 65 years of age; the category 'casual' covers a variety of unskilled labour and there are five non-employable invalids. 288 226

288 283 About 50 households, out of 130, have looms. Yarn is distributed by the Stornoway producers for weaving on commission; they collect, finish, and market the cloth. Hand spinning has all but died out and such yarn is more likely to be used for handknitting than for weaving; at least one lady supplements her income in this way. There is some evidence that Bernera weavers receive less work than those more accessible to Stornoway; the reason for this may lie partly in individual contacts between weavers and producers, and partly in the particular skills of particular weavers but transport is an important factor. Such a small isolated group of weavers does not justify frequent journeys by the Stornoway vans; in fact most yarn is put out, and tweeds collected, by a weekly carrier.

Table 31

Fishing in Bernera District 1892-1956

178 226 435

	Numbers engaged: Boats:	Men:	Value of Catch:
1892	39	133	?
1900	36	164	?
1913	39	163	£1,300
1920	36	151	£1,400
1930	27	145	£670
1938	33	114	£699
1948	40	84	£2,850
1956	25	26	£4,949

Source: Scottish Sea Fisheries Statistical Tables.

Note: Not all the boats returned were necessarily engaged in regular fishing. Nor is the value of the catch shown necessarily attributable entirely to Bernera.

* Editorial Note: this is an inevitable result of the rigid structure of crofter land holdings. See Part I, page 30 and table 12. The age of the crofter, and his family circumstances are decisive.

Uig

Figure 20

/facing p. 43/

[See p. 45 for discussion of chart--Analyst.]

An attempt has been made in Figs 19 and 20 to relate the size of the stock carried on the individual croft to the size of holding and to the availability and age of the labour force. In both diagrams there is a significant division between the subsistence holding (0 - 7 units) and the commercial holding (11+ units), but there is no definite relationship between stock and size of holding or labour availability. The inclusion of the points of equilibrium for certain lines in Figure 20 reveals a somewhat unexpected state of affairs: in the case of crofters with regular work and full time crofters, those over the age of forty-five carry a larger stock from those under forty-five. It is frequently argued that the solution to the economic problem of crofting lies in the amalgamation of holdings in order to create a more viable economic unit, but the indication from these diagrams is that an increase in the size of holding will not, of itself, lead to an increase in stock. It is the absence of accessible markets that deter the crofter from increasing his agricultural production.

In their present state the crofts in the Valtos area are unable to provide a livelihood for the crofter and his family. Of the crofters under sixty-five almost 90% supplement the croft income by other employment. Of these casual labour (at present mainly at the Gisla hydro-electric scheme) accounts for 57% regular work - particularly weaving - 43%. The combination of crofting and weaving provides probably the best return for the labour: one crofter with a croft of 3.3 acres, carrying two cows, two followers and ninety sheep (sixty ewes) made the following estimates for 1958:

FROM THE CROFT:	
Sale of two year-old calves	£80
Cow and calf subsidies	£40
Sale of wool at 4s. 3d. per lb.	£75
	£ 195 (1)
FROM WEAVING -	
at two tweeds per week (32 hrs. p.w.)	£550
GROSS INCOME	£745

Weaving abour 30 hours a week apparently leaves him sufficient time to run the croft efficiently; at present a crofter supplementing his income by a labourer's wage at Gisla hydro electric scheme would have to put in nearly sixty hours per week to achieve the same financial reward.

The economy of the Valtos peninsula has been changing, and contracting, for several years. The number of unoccupied crofts is increasing; commercial fishing ended at the time of the first World War; the shielings have been abandoned as summer cattle pastures. The Valtos shielings near Loch Scanadale were abandoned during the 1939 - 45 war, due mainly to the lack of manpower in the township, though some was used intermittently until 1953. The shielings of Kneep and Reef were abandoned in the late 1930's, at which time Kneep had some fifty milk cows as compared with fourteen in 1959.

[1] Against this figure, must be set the costs of production (i.e. fertilisers, new seed, winter fodder supplements, sheep dips etc.)

312 There is no piped water supply and after even a short period of dry weather there
[Bed] water shortage. One prosperous crofter (where the crofter does weaving and one me
of the family is periodically away with a Norwegian whaling fleet) bought a large mode
Bendix electric washer only to find that there was not sufficient water to use it except
[359] rare occasions. The croft houses have had electricity since 1954, and even the three
remaining inhabited thatched houses now have electricity.

311 Although there are only 4 full-time crofters, most of the crofts are carefully and
worked. Only a few crofts are decaying, and there is a tendency for these to be sub-
to the more agriculturally inclined crofters instead of allowing the land to revert. In
[288] addition to the full-time crofters, 31 other men do part-time crofting. Eighteen men
weave and this provides their main income, but this figure fluctuates according to the
prosperity of the Harris Tweed industry; at present the figure is probably higher than
[166] average. Although 32 people have emigrated from the township since 1939 (many of
young people who have married on the mainland), there are still several young people
[161] young families making their homes here. The dominant age-group of permanently re
[163] dent adults is 15 to 44. Total population is steadily declining, but Callanish has alw
been a prosperous area and seems likely to remain among the more prosperous croft
communities.

BREASCLETE PARK by Margaret Grice and Doreen J. Phillips.

115 Breasclete Park, also known as New Park, Callanish, was settled by people clea
427 from Reef in the mid 19th century. Two of the six original crofts have been subdivi
making nine. However, there are only five working units and on one there is no cul
vation. There is also a feu house built in 1958.

361 The crofts, which are fenced, form broad strips perpendicular to the Breasclete
241 Callanish road. Cultivation is mainly by tractor, oats, potatoes and some clover bei
231 grown. One progressive crofter has successfully experimented with re-seeding one
acre of grazing land on his own croft. Common pasture for the 148 sheep and 6 catt
is shared with Callanish, and for most purposes the Park can be considered a part o
that township.

162 The total population is 26 of which 4 are permanently away. There are 6 people
65, and 8 children under 15.

BREASCLETE by Margaret Grice and Doreen J. Phillips.

131 Breasclete is situated on the east side of East Loch Roag on land which rises ge
133 from the seashore to the moorland and is interrupted by rocky outcrops of gneiss in
northern part. It is separated from the township of Callanish to the south, by a sm
westerly flowing stream, at the mouth of which is the site of a mill.

491 The road on which most of the houses are situated, follows a curve through the
361 middle of the crofts, but newer houses and some feus have been built along the main
Callanish-Cartoway road, nearer to the shore. Stornoway is 18 miles away along t
road which is turned throughout. Breasclete could be served by the still unfinished
Pentland Road, were it to be properly surfaced and this would make the journey sho
[441] by 4 miles. Two buses in each direction per day connect the township to Stornoway
high fares make visits to the town infrequent.

312 The township hopes to receive the mains water supply within the next few years,
at the moment, relies on wells within easy access of most of the houses. Many hou
have piped water from private wells, some of which go dry after two or three days
weather although the wells on the lower ground never fail.

7 joint tenants of one have moved to Geshader while continuing to work the Ungshader land. 8 Another is preparing to move to Enaclete and yet another lives on a feu at Loch Chroistean Cottage. At present, three working units remain. Enaclete consists of nine crofts with ten units, one being rented by joint tenants.

21 The rhythm of work is similar to that in other parts of western Uig. Potatoes and oats are planted in April followed by lambing and peat cutting in May. In June and July the sheep are shorn and subsequently sent to the common grazings. In August the peats are carted, once they are dry, by lorry direct to the crofts. Hay-making follows. The lambs are weaned in September, harvest is then carried in and tupping and statutory dipping take place in November. The sheep are then returned to the township grazing though the lambs may be fed with hay on the croft. There is little regular crop rotation and only a small number of crofters seem to undersow oats, thus improving the quality of future hay crops. Gardens are not important and only provide for family needs but Caryshader particularly has a number, some growing flowers as well as vegetables. Fertilisers vary widely from croft to croft as well township to township. Enaclete potatoes are still grown near the shor and thrive on seaweed; those of Caryshader are usually fed on artificials.

31 Most crofters keep one milk cow with a calf; a few rear a young beast for the autumn sales in Caryshader. However, some now rely on their neighbours for milk in return for grazing and one croft has turned to goats, as giving less trouble. The bull for the whole district is a beef shorthorn and is kept on Geshader -Ungshader common grazing as it is completely fenced; and Geshader is responsible for its upkeep.

33 Lambing seems to have been generally good in 1959 but it was not easy to get exact figures. The Morsgail Estate and Gisla farm also run considerable flocks. The common pastures total 3,119 acres with an enlargement, formerly used as shielings, of 1,215 acres for Enaclete, Geshader and Ungshader near Loch Suainaval, and for Caryshader 88 acres 34 on Floday island. The shielings have been disused since the war. Peat is normally cut to the west of the road but at least one elderly tenant in Geshader has kept a section of his croft for this purpose to save the effort of working further afield.

41 Generally speaking the land now cropped only represents one third to one half of that 78 worked by spade 20 - 50 years ago when the crofting population was larger and when much greater numbers of cattle were kept through the winter, thus requiring more potatoes and more oats. The cattle numbers are much less than the total souming but sheep are in 31 excess. In Enaclete, at least, overgrazing by sheep has caused a decline in grazing quality

4 Clearly in these townships, apart from the very few crofts still fully cultivated, the means of livelihood is sought elsewhere. At present there are altogether fifty-three men in the working age group (15 - 64) in all four townships. Of these fourteen are away, nine permanently and five periodically. Thirty have regular or periodic employment besides crofting and of these seven work at Gisla on the hydro-electric scheme, seven weave, some of them part-time, four hire out vans, two do post-office work and others have varied occupations while only three are full-time crofters. At present there are few men in the Merch Navy and fishing does not provide an occupation although many share rowing-boats in their spare time, and fish for domestic use.

62 The population as a whole is ageing and of the group between 15 and 64, forty-four 47 (roughly 30%) work away permanently or have emigrated. It is noticeable that there are 29 few crofts worked by people with young families

00 In conclusion it may be re-emphasised that the fate of the crofting townships depends mo

632 361 strips running across the slope, which are interchanged each year, whilst a large part of 427 the common grazing lands are divided into interchangeable sections ("quarters") to 311 accommodate each of the groups of crofts. See Figures 22 and 23. [233]

[132] The cultivable croftland at Kneep is relatively flat and the natural drainage is poorly developed; the quality of this land, depends to a very great extent on the upkeep of a dyke [312] running across the croftland from a small marshy loch to the sea. This dyke has not been cleaned for several years, and as a result a large area has been invaded by reeds. Other parts of the croftland have been similarly overrun by 'wild rhubarb'. Such deterioration is almost inevitable when land is so fragmented.

The crofts at Reef are grouped in three separate localities. Crofts 1, 2 and 3, on the edge of the machair have probably never been occupied since the crofts were allotted in 1921 and are now used only for grazing. The main body of the crofts (nos. 3 - 13) face south - they are more compact than those in Valtos and Reef, but they vary in size from 2.9 to 13.25 acres and their boundaries are irregular in shape. Two crofts (14 and 15) are separated from the main parts of Reef: they are both small (2.5 acres) but the size is compensated by their situation on the level terrain of the machair. The old farm house [241] is used as the dwelling for both 14 and 15. Much of the cultivation at Reef, except on the machair crofts, is on lazy beds - but many of these have decayed with the advent of horse [407] and tractor ploughing; 35% of the land is cultivated by spade, and the remainder by horse plough.

433 The crofting economy is probably at its lowest ebb in Reef. Only eight of the fifteen crofts are occupied and of these five are worked by disabled crofters or crofters over [729] sixty-five. The Reef crofts were settled in 1921 by returning ex-servicemen and today seven are being worked by the original settlers; there is little evidence of a desire among the younger generation to succeed to the crofts.

[233] Until 1956, crofters on Reef used to graze both sheep and young cattle on the Flannan Islands, fifteen miles west of Uig.

● 162 Fig. 24 shows the age/sex structure of the population in the three townships. It tells a story familiar to crofting townships: 55% of the resident population are over forty-five years of age; 9% of the total population are permanently away; and since 1939 the population has declined by at least 15% as the result of emigration alone. But perhaps the 163 most significant fact is the very small proportion of women of a child-bearing age and the consequence that only three children are being born each year to replace the older generations.

131 By their very position, the townships of the Valtos peninsula are isolated. Fifty years 20 ago communication with the rest of Lewis was by boat. The road to Valtos and Kneep was built originally to bring the mails from the pier at Meavaig; the motor road to Reef was completed in 1956. Shopping facilities are provided at Valtos, for the people at [443] Valtos and Kneep, and at Meavaig which serves Reef, Uigean and Cliff. These are supplemented by travelling shops which call once per week, by Indian dealers and by the local 'bus-driver who makes purchases in Stornoway on behalf of customers on the [346] peninsula. The school for the whole area is situated mid-way between Cliff and Valtos and two kirks and the doctor's house lie at the junction of the Valtos and Reef roads.

| Townships | FEMALES | | |

233 Little close attention is paid to shepherding though several crofters profess to liking it. The great losses on the moor (often amounting to one third of the lambs each year) does not seem to cause much worry. The chief income from the sheep is the fleece which [435] sells at up to 4/- per pound, an average fleece weighing from three to four pounds. This [288] wool is not used for the tweed industry since it is too coarse being more suited to carpet manufacture. Appendix C (6) shows that the majority of flocks are small averaging from 10-20. The overgrazing is the result of a smaller number of owners keeping larger flocks. Thirteen of the working units have between 50 and 100 sheep. As to those without sheep, several crofters declared themselves to be too old to bother with them, a fact which serves as an illustration and introduction to the population problems.

162 Appendices D (1) shows the twofold nature of the difficulties which confront the community. Twenty-two per cent of the residents are over 65 years of age and no less than 56% are 464 over 45 years old. With the sole exception of one man who works on the power development project at Gisla in South Uig, the main focus of employment is local. A small number [434] of people are engaged in services to the community including shopkeeping, but the main source of income is weaving since crofting itself (by definition in this area at least) does not yield sufficient to maintain a family. Yet there are 31 full time crofters who are being supported in some other way, either by relations temporarily or permanently absent or by interest on capital accumulated during periods of employment away from the island.

162 There is an insufficiency of women of child-bearing age to offer hope of an increase in 464 the population or even a sufficient number to guarantee a level of replacement. This fact toegther with the emphasis on one form of employment gives rise to anxiety among the crofters, who recollect what happened when the fishing finally collapsed during the First World War after a period of steady decline. In 1913 twenty boats sailed from Carloway [435] and gave employment to 295 men. If the weaving fails (at present a weaver making three tweeds per week can earn up to £16 for them) there will be similar hardship and the net emigration from an area already none too attractive to young people will certainly become more marked than it is at present.

| | | |

361 and across the croft boundaries and it is along these that the majority of the houses are
441 to be found so that as the roads followed the easiest course open to them so the settlement
378 has moved to the roads.

A particularly interesting example of this kind can be drawn from Upper Carloway where a twofold movement of settlements has taken place; first, from about 150 feet above sea level, where the original black houses were built, there was an uphill movement to the upper of the two roads which cross the township at from 150 to 170 feet above sea level, and, secondly (and more recently), there has been a move to build at from 25 to 30 feet above sea level along the lower road which has become the main axis for the public
342 services. Three main types of building exist then in this township. The first is the blackhouse of which only one or two now remain. Even these are not the primitive type of blackhouse, for they all have proper chimneys. The second is an ill-defined group which includes buildings erected during the later years of the fishing boom and in the period up to the Second World War. These houses are either one or two storied often with the traditional dormer windows; they form the majority. Finally there is the development of the modern bungalows which are built by the crofters but based on plans supplied by the Department of Agriculture. Few have ventured to build away from the level of the lower road.

42 How then does this pattern of settlement illustrate the changes referred to at the
78 beginning of this section? The original houses were abandoned gradually as the temporary prosperity of the fishing enabled the crofters to build the better houses. These have seen great changes, but in most cases they are still occupied. Some have been extended and improved by their owners whilst others remain without additions almost as they were when first built. That the crofter owns his own house has certainly encouraged replacement
[54] in recent times. The generous grants and loans provided by the Department of Agriculture have been utilised to construct the modern bungalows on crofts where the original croft house stands as a byre and where the second house is sometimes inhabited by some relative or person who sublets part of the croft. It is rare to see such successive phases so close together in a landscape reflecting the varying fortunes of economic enterprise and the influence of government subsidies now so much a part of the life of the crofting township.

Roads and public services.

441 Carloway's importance as a centre for West Lewis is accounted for by the fact that at the break in the coastline caused by East Loch Roag the main road southwards from Barvas turns inland to Breasclete. Near the point where it crosses the Carloway river at Carloway bridge it is joined by a number of local township roads creating a focus for community services (figure 38).[1] Here also the line of the still unfinished 'Pentland' road, projected as a direct link with Stornoway during the fishing boom, reaches Loch Carloway and passes along its north shore to the pier at Borrowston. This substantial pier was the scene of great activity during the period of commercial fishing before the First World War.

68 The six hundred residents of the immediate Carloway area are served by eight travel-
94 ling shops as well as by the local stores. Bread, fish, meat, green-groceries, library
2 and bank all come to the end of the croft if not to the crofter's door. Of the vans one is based on Carloway, one on Breasclete and the rest on Stornoway. A mobile film unit visits once each fortnight. The churches and school rightly reflect their importance in the community by the commanding position which they occupy just above the bridge. Here too is the showground; the annual show attracts people from all over the island, being as much a social as an agricultural gathering. Other services are more dispersed but not far away. They include doctor and district nurse, policeman, post office, and football

[TEXT CONTINUED ON PAGE 103]

1. [Presumably the author means figure 39--Analyst]

361 is attached to the Free Church Manse, is sublet to two feuars and is used entirely for
427 hay. One remarkably well stocked croft has one horse, two cows in milk, one calf and a heifer together with a sheep stock of twenty breeding ewes, twenty lambs and twenty other sheep (this was the first 100% lambing for many years). Labour is provided by one full time crofter with assistance from two others one of whom is a weaver. On another croft an elderly lady was preparing to make an application for a cultivation grant.

241 The intensity of cultivation may be attributed to two factors; first the sheltered position of the land, the moderate slope and good drainage and second to the energy and enterprise of the crofters.

BORROWSTON

361 Borrowston exhibits many of the characteristics that have been noted in Upper Carloway
427 and which are common on the north west of Loch Carloway. It consists of sixteen registered crofts and there are no feus. The crofts were lotted in narrow strips which rise steeply from the western shore of Loch Carloway to a head dyke at about 200 feet O.D. The drift cover thins as the ground rises until an upper zone with exposures of bare rock is reached. The result is that most of the cultivation takes place below the road which passes through the croft land and along which the settlement is located. All the crofts are fenced below the road, but are only partly fenced above it, presenting a pattern similar to that at Upper Carloway. Because of the steepness of the crofts the only way that the tractor can gain access to the land is by way of the lower road which passes from the bridge to the pier.

241 Fifty four acres of croftland are worked in fourteen operative units on which the oats are cultivated by tractor and the potatoes by spade. Though all the crofts have immediate access to the shore none are fertilised with seaweed at the present time; following the common practice in the area artificial fertilisers are used to supplement lime and manure
233 from the byres. None of the crofts are open for common grazing in the winter; this is because of the use of the old farm of Laimshader, granted to the township as an enlargement. The former arable land is now used as additional common pasture. The normal practice is to use the former farm land in conjunction with the croft land in the summer, the cattle being maintained on Laimshader as late in the season as is possible.

241 Borrowston is intensively cultivated, presenting a prosperous picture when viewed from the opposite shore of the loch, but in spite of its apparent prosperity the majority
[162] of the population is over 45 years of age. Herein lies one of the main causes of concern in this part of Uig parish, for though Carloway is in many ways more prosperous than is
181 south Uig and has a larger and more active population working in much more favourable conditions, the population is an aging one that has not the potential for maintaining a
[163] level of replacement. In Borrowston eight of the crofters depend on weaving, four are full-time crofters and seven of the twelve are over sixty five. Yet these men are active and maintain large sheep stocks, ten of the twelve exceeding their soaming though only one of them has an excess of cattle.

Figure 40[1] has been drawn to illustrate the land use on particular crofts in this
233 northwestern area; one is in Borrowston and one is in Upper Carloway. The stock data
427 have also been added to give the complete picture of the agricultural unit. Each croft though prosperous, has an elderly tenant.

GARENIN

361
427 The township of Garenin, whose main area of croftland is situated a little apart from

[TEXT CONTINUED ON PAGE 107]

1. [Presumably the author means figure 41--Analyst]

361 the main area of cultivation at the head of Loch Carloway, is similarly div
427 narrow crofts which traverse the broad valley which falls to the sea from t shed marking the boundaries of Upper Carloway, Borroston and Garenin. is to be found on either side of the road which rises from the bay to join th township roads of Upper Carloway.

181 The township has a very individual character, especially at the seawar
427 exposed to violent winds and spray in the winter and where the dwellings a black houses. Tenanted by old ladies two of these are partly sublet and th to suggest that a complete subletting will take place, which contrasts with many of the other crofters in the township. One man was prepared to car fertiliser for the croft on his back because it was impossible to gain acces

427 The twenty eight crofts, one feu and one allotment are worked in twent
311 Extensive improvements have been made on two crofts with the introductio grasses in their rotations. A general increase in fencing is now taking pl consequent closure of the crofts which were formerly open for common gr winter. By far the most striking feature in the figures gathered for the t those for the sheep stock. Although the total souming for all stock is not the sheep soum is exceeded by 60.3%. This does not worry the crofters spoke of a 'natural souming' pointing to the fact that the total souming was and he continued that 'if the land is overstocked animals die'; this they do frequently. The assertion seems to be based on the belief that the equiva cow equals three or even five sheep gives an accurate assessment of the p grazing. The evidence of the heavy sheep losses does not bear this out. eat a different herbage and in a different manner to cattle seems to be eith is ignored.

The whole agricultural operation of the township is complicated by its journeys were necessary to go to the shielings and are still needed for bri
[286] peats. Once again the emphasis is on weaving as an occupation and many
161 are ageing. It is a measure of the decline in the population that now only
162 go to school whereas one crofter could remember up to fifty in the school First War.

The main features which emerge from this examination of the township west of Loch Carloway may be summed up quite briefly. The croftland is area of well cultivated land on the even slopes which rise to over 200 ft. O divided into long narrow holdings which ensures that each has a fair share types of land. Careful attention to much of the land shows that this is far dying community. In spite of the defects which can be noted in the animal the decreased population and the reduced number of working units (a resul letting) could allow of a much more efficient working than does take place times. The potential is there. Carloway has many of the basic social ser help to stabilise a community and with the advantage of its strategic positi centration of settlement could be assured if additional employment and/or agricultural methods could be adopted.

KNOCK CARLOWAY

133 If the north west presents a picture of relative prosperity the area to t
[181] be described as one that is showing signs of decay and decline. Knock Ca occupies part of the area with less evenly graded slopes (although a weste of the township extends to the northern flank of Loch Carloway). The east
361 rises steeply to a rocky crest which marks the beginning of the common pa consequence the crofts are less regular than those already described and t
[427] worked in 'fixed runrig' with a pattern of much more fragmented cultivatio on the lowest shoulder of the ridge are the churches and school close to th

[TEXT CONTINUED ON PAGE 109]

361 at Carloway Bridge. In addition to the main settlement which is irregularly disposed on either side of the two roads, a group of Swedish timber Council houses has been built in a somewhat forbidding situation on the common pasture adjoining the 'Pentland' road.

427 311 The thirty three registered crofts and thirteen feus or allotments (of which only five are non-agricultural) are worked in thirty four units. Three of the tenants of the Swedish houses have crofts, two in Knock Carloway and one in Upper Carloway.

311 The land use figures show that Knock Carloway has a much greater percentage of permanent grass than has Borroweston on the opposite shore of the loch. These figures reflect not only the less rewarding physical environment on the south shore, but also the lower intensity of cultivation which bears a direct relationship to the type, number and quality of the stock. The township has less than the total number of animals permitted by the souming though the higher figure for sheep than cattle reflects the general trend for the area. No horses are kept but the township has the bull which serves the area - a privately owned beef-shorthorn.

464 286 632 Weaving remains the major occupation but the emphasis is less heavy than in the other townships for the community services centred here employ a number of the inhabitants. It may be that here lies part of the answer to the problems of the community as a whole: but even if employment in services were to be increased it could never be very significant in a district with a total population of only 600.

KIRIVICK

361 162 133 Adjoining Knock Carloway is the small township of Kirivick which has forty one permanent residents. It occupies the least rewarding agricultural environment of the area. Crofts 1 to 13 rise from the shore of Loch Carloway on the broken hill face to the Carloway-Breasclete road, whilst number 14 occupies the head of a small valley which was once part of the common pasture beyond the road.

361 133 The houses are set back from the road occasionally sheltering in the lee of the frequent knolls of bare rock which are exposed on the croft land. These rock surfaces together with the irregular deposition of the drift account for the fragmentation of the cultivated strips in small hand-dug lazy beds on the upper parts of the crofts inaccessible to the tractor.

361 427 311 There are fourteen crofts, three feus and one squatter settlement and all but two of these are fenced. Two of the crofts are held in 'fixed runrig' and the small sections in which the land is cultivated are shown in figure 41[1] which also illustrates the regular distribution of sections between the two. Though it used to be the normal practice the crofts are not now open to common grazing in the winter.

311 The restricted amount of land available for common grazing ensured the continued use of the shielings until 1939; small patches were cultivated on the common grazing about forty years ago and this fact too is the only recorded instance of a practice that was a community by the size of the working unit and the land available. At the moment there is no proposal for reseeding of any part of the common pasture* because of the difficulty of getting access for tractors. As in the case of Knock Carloway the total souming is not exceeded, but the sheep stock is 25% above the sheep soum.

162 The population figures emphasise the problem of the whole of this southern area and here is the most extreme case of incipient decline. There are two fulltime crofters, six crofters who weave and five crofters over sixty five. Seventy per cent of the population is over 45 and only two children attend the school neither of whom is likely to take up crofting.

427 not have crofter status. Thus, despite the rigidity imposed by crofting legislation, the
311 crofting structure is evolving; whether the larger units so formed are agriculturally more
[178] productive than the smaller, statutory, units is another question.

Cattle and sheep stocks

231 The production of cattle and sheep is the main function of the croft, from the
178 agricultural point of view, and the main function of the crofting parish. In this respect a great change has occurred in the last 80 years: about 1880 some 3,300 cattle and 14,000 sheep (of all ages) were kept; in 1959 the corresponding figures were 1,281 and 35,000. This change is by no means the result of the re-settlement of crofters on former farms; in 1879, according to the Report of the Royal Commission on Agriculture, the sheep:cattle ratio was 2.3:1 on the crofting townships and 9.6:1 on the farms: now it is 27:1 over the whole parish. The change (Table 38) has been fairly uniform over the parish except that, whereas sheep stocks generally have more or less trebled, in the Carloway district they have little more than doubled.

The decline of cattle numbers has been at the same rate as that of the human
[161] population and this, together with the much lower sheep:cattle ratio on crofting townships
[162] than on farms in 1879, suggests that, 80 years ago just as to-day, the main object of cattle keeping was subsistence rather than commerce. The increase in sheep numbers on the other hand is probably no more than a reflection of increasing disregard of the soumings.

233 If we compare the cattle and sheep stocks with the soumings shown in Table 38 and
Appendix E we find that 80 years ago, except in Bernera, there was rough agreement
311 between stock and soum. To-day cattle stocks are around one-third of those allowed by
178 the soum whereas sheep stocks are greatly in excess. Examination of the soumings leads one to question their validity in the light of modern conditions: the sheep soums bear no regular relation to the available areas of common pastures (Appendices A(2) and

weather although the wells on the lower ground never fail. Mains electricity was installed years ago, but on the whole cooking is still done by Calor Gas and peat. The chief ource of fuel for heating purposes is peat, alghough a little coal may be used.

There are 63 registered crofts, including many subdivisions, a small-holding of 15 cres formerly the Mill, and 10 feus, all of which are worked as 54 units. The crofts ie as long narrow strips in a NE - SW direction from the moorland to the sea. All are t least partly fenced, the fencing being of recent date. Some crofters are, at the moment, making use of fencing grants to enclose their land completely.

The only crops grown are oats and potatoes, and although a little clover mixture is own for hay, many crofters find that the natural grass is sufficient for their needs. Vegetables are produced in a few gardens, but most people do not have enough time or nterest to bother with them. Flowers rarely flourish owing to the lack of shelter.

Far less of the croft is cultivated now than in the past, and the land nearest the shore, part of which was once cultivated on a run-rig system is now unfenced and used entirely for grazing together with some peat cutting. A piece of the common grazing has been improved by application of shell sand and chemical fertilizers and reseeded. This experiment in which almost the whole township took part has proved very successful and there are plans for further reseeding. Details of crops are given in Appendix C.

Although the tractors of which there are two in the township are used wherever possible the spade is still used on many small patches, particularly for potatoes. Much hay is cut by mower but scythes are used to a large extent. There is still one horse in the township but it is scarcely ever used for ploughing except by its owner.

The total number of sheep kept in the township is 1,500 i.e. 2½ times the souming which here is 2 cows and 5 sheep per £1 sterling rent. 40 crofters keep sheep but none have sufficient to make a livelihood from sheep alone. Many lambs are lost on the moors during the summer and more fail to survive the winter. The number of cattle kept is 84, i.e. only 1/3 of that permitted. It is usual for each household to keep 1 cow and 1 calf which is generally sold after 6 months when a subsidy can be claimed. Breasclete has no bull, but shares the one from Callanish. Most households keep sufficient poultry for their needs but no eggs are marketed.

Shielings were still used to some extent up to 1938. Now it is not necessary as fewer cows are kept than formerly. With the reduction in numbers of stock the common pastures close to the village are being colonised by heather.

The crofters' year begins at the end of March when the ditches are cleaned and the land is prepared. In April the ground is ploughed, fertilised and sown with oats and potatoes. The sheep are dipped and by the 10th of May must be out on the moors as the crofts are then closed to common grazings. Soon after this peats are cut on the moors two or three miles from the village. After about 20 days the peats are lifted and carried to the Pentland Road by tractor where they are stacked to await the lorry which takes them to the village.

In June, the sheep are gathered into the fank for shearing and the cows are usually brought to graze on the crofts from the nearby moors. If the croft is not fenced they must be tethered. At the end of June the clover is cut, while the potatoes must be cleaned and hoed. In August the lambs are weaned and dipped. Natural grass is cut for hay and if there is any first year sown grass this may yield a second crop in September, together with the corn harvest. When the potatoes have been lifted in October the crofts are opened and the sheep are brought in for the winter. Final dipping takes place in November.

Out of a total resident population of 226, 56 are under 15 years and 57 are over 65 years of age. Of the resident tenants 9 are between 15 and 44 years, 19 are between 44 and 65 years and 26 are over 65 years of age. Twenty on persons are periodically away e.g. students and seasonal workers and 29 are permanently away. Since 1939,

full-time crofters; 19 males have other regular employment and two have periodic employment. 8 crofters are aged over 65. It seems that the most successful combination of employment is we ng and crofting; weaving is carried on in twenty of the holdings. Lobster fishing in the ening is still popular but regular small-boat fishing has disappeare one crofter took up regular fishing when weaving was slack in the autumn of 1958.

Of a resident population of 125, 32 males and 32 females are between the ages of 15 and 64, these representing the effective labour force. Thirteen persons are temporarily away and 16 permanently away whilst at least 46 have emigrated since 1939 and 6 have immigrated. Thus the number that have emigrated is nearly three times the number that are merely permanently away. With a population of 125 and an effective labour force of 64 to work 35 operative units Tolsta Chaolais would seem to be far from a dying township.

If not exactly progressive the township economy seems stable and moderately prosperous, in spite of the fact that the settlement is rather inaccesible, for the roads which join the Carloway-Breasclete road are both very steep and have bad corners. To add to the apparent isolation there is only one Post Office-shop in the village but most commoditie are bought from vans. A reallocation of the smaller crofts to younger, more ambitious tenants at the deaths of the older tenants could reduce the number of operative units to about 25. Admittedly, little can be done with the rougher terrain, and although cattle stocks could be increased there would be the added problem of sufficient winter feed. With better drainage more land could be taken into cultivation - especially between the two lochs, an area largely wasted at the moment - whilst weaving might supply a surer source of income, especially in the winter. Tourism on a small scale might be a further possibility for the coastal scenery is very fine and the immediate setting of the village is very attractive. It would be more realistic however for Tolsta Chaolais to find future prosperity within its own boundaries.

Labour - who are the agriculturalists ?

461 When we recall (Table 12, page 28) that 16% of the crofter tenants are absentees,
162 that 34% are over 65 years of age (of whom 8% are women), and that a further 7% are women under the age of 65, it becomes clear that many of the tenants cannot reasonably be expected themselves to provide active labour for agricultural operations. An attempt has been made to analyse the agricultural labour force; this must be treated
464 with some reserve because it was necessary to decide for every effective agricultural
162 unit, who was the principal croft worker. In some cases croft work is shared by a younger and an older man, the former having a regular job (often weaving) but being available for the heavier work, whilst the older man keeps things going from day to day.
128 Women, even the elderly, often provide an important subsidiary source of labour, too.
887 Where two persons were shown on the croft record as sharing the work of the croft, the older, if over 65, was ignored. Thus the analysis probably under-estimates the part played by elderly persons. Nevertheless the results are useful (Table 43): two-thirds of all effective agricultural units are worked by crofters having other

of unit; the result (Table 45) does not suggest that the possession of a large agricult unit encourages a man to become a full-time rather than a spare-time agricultural Indeed, the possession of a large unit, built up by amalgamation, is often a fortuit
[462] result of marriage, death, or inheritance, rather than a matter of individual choic only significant correlation in the table seems to be the understandable tendency fo female croft workers to work the smaller, rather than the larger, crofts.

CHAPTER THIRTEEN

POPULATION AND EMPLOYMENT

H. A. Moisley

Growth and decline.

In its demography as in so many other aspects the parish of Uig is characteristic of the Hebrides in general rather than of Lewis in particular. Throughout the Hebrides the late eighteenth century saw a rapid rise in population followed, in the early nineteenth century, by clearances, emigration and decline (Fig. 44). The growing population, however, was not the result of a high birth-rate but of a long-lived one. Lewis made little headway compared with the Uists and much no doubt could be said for Uig, but, like from Loch Roag, consequently, whilst the population of Barvas only increased by 17% between 1755 and 1801, that of Uig increased by 58%, i.e. North Uist 60%, South Uist 71%). Clearances and emigration reversed this trend in population after 1821 (Mull and North Uist), after 1831 (Skye), and after 1841 (Skye, Harris, North Uist and Barra). A reversal which was not experienced in Lewis except in Uig (see Part I, Figure 8). Thereafter, in the outer, but not in the inner Hebrides, growth was resumed, to reach new maxima in 1881 (the Uists) and 1911 (Lewis, Harris and Barra). Uig, alone of Lewis parishes, reached its maximum population in 1891. Subsequent loss of population has been particularly severe, as may be seen from Table 46 and Figures 8 and 45.

TABLE 46

Loss of population, since maximum, to 1951

	Date of maximum	Loss as percentage of maximum
Uig	1891	41.2%
Lochs	1911	34.4%
Barvas	1911	25.3%
Stornoway	1931	18.6%
(Stornoway Burgh is excluded)		

The early on-set of decline makes Uig somewhat comparable with the Uists, where final decline set in after 1921, rather than with Barra and Harris, where growth continued until 1911. This may be connected with the vicissitudes of fishing, particularly in north Uig where, by the 1880's, the annual Fishery Reports comment repeatedly on the decay of great late fishing, & of the dried white fish trade. Re-settlement of crofters on farm land in Uig in the 1920's, however, again affords a parallel with the southern Outer Hebrides rather than with the rest of Lewis; as elsewhere, it failed to arrest the decline although it did bring about a redistribution which afforded welcome relief in the more overcrowded townships. But decline still continues; the loss appears to have been around 30 per annum in the 1950's (Table 47) compared with 50 in the 1930's when there was some

(a) National Registration, not strictly comparable with decennial Census figures.

(b) Our own survey count.

return of unemployed men and families from the mainland and overseas. Thus we found, in 1959, that the population of Uig was less than in any year since 1811. Nevertheless it was still about that reported between 1755, before the potato, kelp and fishing led to isolation.

These changes have not affected all parts of the parish at the same time, nor to the same extent. The position is summarised in Table 48 and Figure 45. Summaries by districts conceal a good deal of the truth; each township has had its individual history and no two are alike. Township figures are given in Appendix I.

TABLE 48

Changes in the relative distribution of population 1841 - 1959
For details by township see figure 45.

	Proportion of the total in each district in the years 1841	1891	1931	1951	1959
South Uig District	32	31	31	26	27
Barvas District	16	15	19	18	18
East Loch Roag District	17	23	24	25	25
Carloway District	35	33	26	29	29
	100	100	100	100	100

South Uig, in 1841, had more than half the population of Uig, despite the early clearances. It has now little more than a quarter, and is still declining most rapidly. In Aird and Crowlista, for example, where there were 321 persons in 1891, we counted but 71, in 1959. In Uigshader, where period the decline was from 480 to 113. Most striking of all, in Uigshader, where the population is now as low as it was in 1811, we found only 5. Barvas and Barvas's Shore have slightly increasing populations, numbering 1,050 in 1959, although the actual number has fallen from 650 to 424. Clearances over half a century ago, depopulating effect in Barvas as they had in the south, and fishing remained prosperous longer. The re-settlement of Linshader farm by crofters in 1925 had little effect but Barvas itself, despite isolation, has retained its population quite remarkably. Many go away to find work but few leave for ever. The development of lobster fishing has helped.

Figure 45

Distribution of population in 1891 and 1959

In the northern township, stretching from Garenahine to Loch Carloway, quite the reverse is seen. Here the 1959 count actually rose: people now than in 1841 (1,182, i.e. 1,2041, although there has been a marked decline since 1891 when 2,156 were enumerated. This this area, which had less than one third of Uig's population in 1841, now has more than half. The main change occurred before 1891 and was associated with the prosperity of fishing, both locally and on the east mainland coast, but, in addition, this area did not lose population as rapidly as Barvas and the southern townships in the twenties and thirties, as the table shows. Much of this prosperity is attributed to the early establishment, especially in the Carloway district, of Harris Tweed weaving.

TABLE 49

Loss of Population by Districts, 1931 - 1959

	Annual rates 1931 - 1951	1951 - 1959	Net loss 1931 - 1959*

Uig Bay District	0.4%	(+0.1%)	12
Mangersta/Breanish	1.8%	2.1%	97

* Immigrant R.A.F. and Ministry of Civil Aviation staff and families are excluded.

Migration

One of the objects of our enquiries was to discover something of the processes of population change in recent years. To this end we tried to record some details of migrants, from and to the parish since 1939 (see craft record questionnaire, frontispiece to Part I). We also attempted to record war and other casualties away from home. Finally, we recorded natural population change by extracting details of births and deaths from the official registers for the period October 1939 - December 1958 (the 1939 registers were not available). The results are summarised in table 50.

One record of migration depends on the memories of our informants and cannot be expected to be complete, nor can the 1939 (National Registration) population figure be

island girls bringing mainland men to settle in the island are rare indeed. This migration remains, as it has long been, a one-way traffic and this is almost certainly related to the problem of establishing technical innovation*.

Age structure

The age structure of the population reflects the changes that have taken place in recent years. The population of Uig, as in small areas of declining population, is ageing. It is one disadvantage of a survey such as ours that the data may be analysed in greater geographical detail than is possible from the published figures in the official Census reports. This is particularly important in the crofting region where neighbouring communities may show quite different demographic and economic trends. Table 51 compares the 1951 Census figures for Uig with those for the other Outer Hebrides, the other districts, one (Park) remote like Uig, the other (Point) easy of access and with the same employment and employment offered by Stornoway. Uig has an even greater proportion of old folk than has Park, but it also has more children. This is probably related to the smaller proportion of Uig's population finding it necessary to leave the parish in search of work (14%, compare 28% from Park).

The proportion of the population over 65 years of age has increased from 17% in 1939 to 21% in 1959; it is that much more than twice the national average and well above the figure for rural Lewis. The proportion between 15 and 44 years has fallen from 47% to 41% and 44 has markedly declined. The actual number of persons aged between 15 and 44 had declined from 1,263 in 1939 to 786 in 1959. It is to this age group in particular that one should look when seeking economic development but it is by no means certain that this decline is an unmitigated evil.

TABLE 52

Age distribution

	Percentage in each age groups 0-4	5-14	15-44	45-64	65+

Employment - the search for work

When an island community undergoes the local intrinsic resources permanent emigration is not the only solution. It is one of the outstanding demographic characteristics of the Hebrides that there has been a long tradition of seasonal employment away from the island while maintaining an island domicile. We therefore classified the population, in the first place, according to whether it was:

(a) permanently resident in the parish

(b) leaving the parish seasonally or otherwise irregularly in search of work, and

(c) working permanently away yet without a permanent home except in the parish.

TABLE 53

Location of employment

	Proportion of total populations Resident	Periodically away	Permanently away	
Uig Parish	63.7%	6.5%	9.8%	100% (2,912)
Districts				
South Uig	67.2%[1]	3.1%	9.7%	100% (749)
Barvas	65.2%	7.2%	7.6%	100% (460)
East Loch Roag	61.5%	7.0%	11.7%	100% (731)
Carloway	61.2%	6.8%	10.2%	100% (972)
Ref.				
Park	72.7%	11.0%	16.3%	100% (1,200) (1958)
Point (Stornoway)	66.6%	5.5%	10.9%	100% (3,960) (Compiler 1960)
Harris (mainland)	80.6%	6.9%	12.5%	100% (5,760) (1961)
North Uist	67.1%	5.3%	10.0%	100% (430) (Compiler 1960)
South Uist	66.8%	5.5%	9.5%	100% (5,600) (1956)
Barra	70.6%	4.0%	25.5%	100% (1,956) (1961)

Note: (1) Including at least 27 temporarily employed on construction work at the Gisla hydro-electric scheme, and 20 permanently employed at government sites (equivalent to 7.6% of the total population). Map of these men would otherwise seek employment outside Uig.

On the basis some 14% of the population of Uig is periodically or permanently away. This may seem low compared with 28% in Park and 30% in Barra Isle, on the other hand on the Point district, near Stornoway, the proportion is only 19%, and on North and South Uist it is around 12 - 14%. In Harris (Scalpay and Berneray islands excepted) the proportion is 19%. Various factors influence this state of affairs; they may be summarised as the age-structure of the population, the relative stability of the crofts and the opportunities for local employment. Within Uig the situation differs from district to district; the particularly low proportion classified as "periodically away" in South Uig was probably

Figure 16
The search for employment

a temporary feature in 1959 due to the cutoal employment provided by a hydro-electric scheme at Gorin (Figure 16).

In the respect the young age group in 15 - 44 years (table 54), the older people have work away from home. Of this age group, 158 (and of 231) persons were in work away from home, or almost 70%. In contrast only 11% of the children in a strong majority of the children in the parish are in work away from home.

The contrasting experiences of the different districts are quite remarkable. In Bernera and Lochs District, more people go away from the two northern districts than from Bernera and the Barvas District, despite the greater importance of weaving in the north. The explanation for this lies in the fact that the northern districts are in the Lewis Travel to Work area, which provides most available locally any parts in the Outer Hebrides, partly in the type of employment available, and partly in the distance from the Lewis Travel to Work area, which differs from district to district. Social contacts, which may vary from one to another area the west, has a strong bearing on whether and where young men and women choose to work.

Proportion of resident males, aged 15-64, in Major categories of employment

See Appendices B(ii) and D(ii) for details.

	Croft-work only	Croft-work and weaving	Croft and other regular work	Croft and part-time work	No croft work	Total (100%)
Uig Parish	11	43	16	15	14	(615)
Districts						
South Uig	13	27	22	24	13	(186)
Bernera	9	56	25	10	0	(136)
East Loch Roag	9	55	11	11	13	(148)
Carloway	16	63	6	6	13	(171)

Table 55 and figure 47 summarise the main sources of employment. The small group with "croft work only" may be briefly discussed. A large proportion of these men have disability or otherwise infirm; a few are pensioners (e.g. retired police or service men); and a few are young men who have left school and are still at home. Some may be counted as a reservoir of labour in this area.

The most important category, by all statistics, is "croft work and weaving", but it is particularly for this category that the north where there is correspondingly greater reliance on other forms of regular employment or on periodic work, i.e. casual work, is very difficult to overestimate the significance of weaving in all districts. Weaving is almost a custom in the parish and it should be clear from the previous chapter that it is a very important occupation in the Barvas District, and in the Lochs District. The weavers and "croft-weavers" are in a "near-monopoly". A contrast remains between Carloway and the rest of the parish in that, whereas generally weaving is the main source of income for the majority of men with 43, in the Carloway area two-thirds of men are working at weaving. Carloway is the only area in the parish where the tradition of weaving into Carloway than elsewhere for, although some weaving has always been done throughout the area, it only became a major source of income in Carloway in the 19th century, and, in fact, in the 1960s. Thus few of the older men in the south learned weaving when they were young, and, in fact, the tradition of weaving in the south is not a source of employment for young men from Carloway than for those from the south.

Other sources of regular local employment are inshore fishing (Bernera only), gamekeeping and other estate work (Bernera where and South Uig), and government establishments (South Uig). In addition there are the usual services - postmen, haulage contractors,

For a detailed discussion of the significance of weaving see Moisley, H.A., Harris Tweed - a growing Highland industry. Economic Geography, 37, 1961, pages 333 - 350.

[BLANK CONTENTS OF PAGE 151]

Figure 18
Population by age group and place of employment

appropriate age-group, choice on the left, females on the right. The width of the bars varies according to the age-range of the groups so that the length of each bar gives an indication of the relative importance of the particular age-group in the total population. In an unofficial survey it is difficult to obtain accurate information on age, but the diagrams are right, and they do indicate the suggest certain trends, as well as marked regional differences, within the parish.

If we examine first the parish as a whole it will be noted that the proportion of children aged 0 - 14 years is very high, and the proportion of people aged 15 - 44 years is relatively low. Only a quarter (25.1%) provided that some of their through emigration. The present school population is not quite sufficient to maintain the 15-44 age-group, including, of course, those working away, on the same assumption. In both these groups, as in usual, males slightly outnumber females.

The characteristics of the 15-44 age-group are clearly seen. A large number is working away from home, the proportion of women working away is far greater than of men, and, in the case of men, the majority are permanently away, and, in the case of women, temporarily away, i.e., most of the women will become "emigrants". More men stay at home (working supports many of them) and, of those that go away to work, a substantial proportion is likely to return to the parish after a period of years. Lots of men who left Uig to "seek" a job, in the 1950s, and, in particular, in the number of men who may bring wives from work in other areas, to form a family to travel against the will, but they are remote because of the lack of work in the parish.

The 45-64 age-group is only slightly affected by the custom of working away. Men and women in this age-group are mainly "residents" and, in the case of the men, the proportion dependent on casual or seasonal work is far greater than in the 15-44 age-group. In the south, in the male sex ratio, 54.4. Indeed, it most of the women under 65, who are at present working away, eventually return and settle in this parish, the future will be clouded. The 65-74 age-group is very small, and, in the case of the women, it is very small. The 75 and over age-group is too small to be meaningful. At present an excessive proportion of the population is over 65 years of age and thus, in time and taking the unlikely event of substantial immigration, a further fall in total population is certain. One may hazard a guess that this decline will be of the order of 200 or 250 persons in the next ten years.

Turning to the district, the most striking feature is their individuality and this underlines again the value of the local area approach which has of necessity been used in a marketing system on which the crofter believes he can rely. At present it is the uncertainty, as much as the poverty, of the crofting that deters young men from taking up agriculture seriously.

The usual view of holdings need not be a serious disadvantage. Since the time of the Crofters Commission, the Government has encouraged the amalgamation of crofting units and, since it represents a voluntary evolution towards larger units, it is consistent with other Government measures.

It should be recognised that if a croft is not properly stocked it cannot justifiably be considered a full-time occupation. Thus, the Government's policy of encouraging crofters to become full-time farmers is not quite so easy as it appears when looking at the crofting as a whole. At one time the hulks, through their ground officers, dominated a degree of control over the stocking of township lands and the croft, in some way, be remembered - not by the proprietors then by the Crofters Commission. Though the best way would be to encourage the formation of crofting partnerships, the Government has encouraged crofters which lacks represented the grazing capacity of the township, and, as a result, the stocking of the unlimited colonisation of sheep for cattle. At present many sassenachs depend on crofters of not even the stocking of which is very dubious. Sassenachs are unlikely to be very interested in crofting unless they are retired.

The crofter possess sufficient technical knowledge and confidence to make the best use of their lands. It is particularly doubtful whether the Government's policy of encouraging the amalgamation of crofts will be of much value to the majority of the crofters who are relatively elderly and who are unlikely to take risks and therefore tend to be very conservative. This cannot be put right quickly nor so long as the majority of those working the crofts are middle aged or older men who have spent the greater part of their working lives in other occupations. Crofting may require special help but, above all, some of the younger men must be encouraged to

Further diversification is necessary but is not particularly hot. The special problems of the Outer Hebrides are well known and, in the Barvas District, the problem is made more difficult by the fact that it is difficult to obtain sites for industry, because of the shortage of flat ground. The problem is made more difficult by the fact that, in population this district, essentially more than the other districts, is a "near-monopoly" of weaving and, in the past, weaving has been a very important source of employment in the Barvas District. Thus weaving has been a very important source of employment in the Barvas District. Thus weaving has been an important source of employment in the Barvas District. Thus weaving has been an important source of employment in the Barvas District. Thus weaving has been an

THE ENVIRONMENT

13 The district of Park lies in the parish of Lochs in south-east Lewis, almost cut off from the
101 rest of Lewis and Harris by Loch Erisort to the north and Loch Seaforth to the west. The district may be divided into two regions by Loch Shell and the valley to the west: this subdivision is meaningful physically, historically and from the socio-economic point of view.

13 The northern part of Park is a low, mamillated, ice-scraped plateau at an average altitude of 250 feet and a maximum altitude of about 450 feet, developed on Lewisian gneiss, a resistant acid rock of Pre-Cambrian age. Glacial erosion has scoured the area and expanses of bare rock are everywhere apparent. Coarse drift deposits are scattered throughout the area, but are more continuous along the southern shores of Loch Erisort between Shieldernish and Caversta, and at the head of Loch Ouirn. The cool, humid oceanic climate has led to the widespread accumulation of peat, and in the interior there are extensive areas of blanket bog. The Minch coast is rugged wi cliffs attaining a height of 350 feet at Kebock Head, but there are several sheltered bays and inlets around which the crofting townships cling to the steep slopes. Along the more sheltered shores of Loch Erisort cliff features are almost absent and the physical landscape is less harsh and uninvitin

The mountainous area south of Loch Shell, an eastward continuation of the North Harris hills, attains a height of 1,885 feet. Glacial erosion has had more spectacular effects than in northern
14 Park and corries and glacially modified valleys are numerous. Southern Park is now uninhabited but during the early nineteenth century a small population was scattered round the shores of the peninsula on areas of drift deposits.

There are no climatic statistics for Park, but the Stornoway figures can reasonably be applied to northern Park. The mean annual temperature for Stornoway is 47°F. ranging from 41°F in January and February to 56°F. in July. The mean annual rainfall in Stornoway is 50 inches, with May and June the driest months, but on average there are 260 rainy days. Wind, however, is the most notable element in the climate: an average of 155 days have gusts exceeding 38 m. p. h.

Soils are thin and immature, except on isolated patches of deeper drift: vegetation is dominated by heather (calluna vulgaris) purple moor grass (molinia) and sphagnum, and there are few trees, stunted rowans being almost the only species; trees are confined to islands in lochs and cliffs inaccessible to stock.

861 The aspect of Park is thus one of desolate moorland, and the human communities are without exception distributed round the coasts; the Minch coast townships are situated on sheltered bays or inlets and it is clear that the harvest of the sea was the original attraction rather than the agricultural possibilities on steeply sloping, rocky terrain.

18 Park is the most isolated area of Lewis apart from South-west Uig. A sea-journey of only nine miles separates Lemreway in the south from Stornoway but the overland distance is 36 miles, which takes more than two hours by the daily bus service. Until 1924, there was no through-road beyond Habost although the Congested Districts Board provided a grant for the making of a road between Gravir and Cromore in 1901; in 1913 this road was extended to Garyvard. With the coming of the road, and the decline in the numbers of fishing boats, the people of Park have ceased to travel to Stornoway by sea. In terms of distance, Park is now more isolated than ever before.

101 Isolated, poor agriculturally, and without any industry, Park is a "Region of Difficulty" with
13 a rapidly declining population; basically the environment has little to offer in the twentieth
14 century.

POPULATION

161 162 228 Figure 6 and Table XII give the population of Park from 1830 to 1958 in graphical and tabular form. The 1830-51 decline was due to evictions. The rapid increase in population from 1861 until 1911 can be almost wholly ascribed to the success of the fishing industry: a comparison of the graphs of the selected agricultural and fishing townships makes this clear. The decline since 1911 has been very rapid, and is mainly a reflection of lack of ancillary employment. The 1939 figure in the graph appears to show a slight check in the rate of decline but it may be that there was an influx of evacuees from Glasgow just before the enumeration was made.[1] The 1951 Census confirmed the continuing downward trend as did the enumeration of 1958.

An investigation of the age structure of the population (Table XIII and Figure 7) reveals that not only is the population declining but also that it is ageing. In 1958, only five per cent of the population were under school age, as compared with 9.4 per cent in 1939. The largest single group in 1939 was the 15-44 age group, the most enterprising and energetic members of the community; in 1959, the 45-64 age group emerges as the largest. The 65 and over age group has increased by 5.2 per cent since 1939.

As the 1939 and 1958 enumerations were not obtained under the rigid conditions of the Census, the figures for Lewis, excluding Stornoway Burgh, have been added for comparison; unfortunately the published Census material does not give individual parish statistics in age groups for Lewis. By including those persons in seasonal employment (mainly in the summer months) and excluding those permanently away, the Census and enumeration figures are more comparable, but it is possible that in the enumeration there may be an error of five per cent. (See Table XX). From these comparisons, it would appear that the population structure of Park is unbalanced in comparison with the rest of rural Lewis, and Scotland as a whole. The reason for this is the fact that so many people are working permanently away from home. (See Table XIV). From a study of the population structure it is clear that Park has all the attributes of an ageing population, a significantly low proportion of children and a higher proportion of the 45-64 and 65 and over age group than either rural Lewis or Scotland as a whole.

166 167 An attempt was made to record migration from the townships since 1939. From Table XV it is clear that all migrants were not recorded in the enumeration but the discrepancy may be explained by two other factors. The evacuees from Scottish cities who returned after 1939 to their city homes may well account for some and more people may now be working permanently away from home than was the case in 1939.

The destination of the emigrants (Table XVI) is significant. Stornoway Burgh (32 per cent) heads the list and so many of the Park families have not left Lewis but have gone to the one place on the island where employment is available. The second largest group have migrated permanently to Glasgow; many of those in permanent employment furth of Park (unmarried and still part of the croft household) work in Glasgow, and eventually marry there. It is also significant that only 16 per cent of the emigrants settled in crofting areas. The fact that over one-third of the recorded migrants settled in the only truly urban community in the Outer Hebrides needs further investigation but one possible conclusion is that if employment were available in Park, the migration rate would be drastically cut.

1 For discussion of this point, and of the population statistics in general, the author is greatly indebted to R. S. Barclay, B.Sc., Ph.D., F.R.S.E.

or summer pastures for the tenants of Laxay and Harnish respectively, townships on the north shores of the loch. In 1775, there were four tenants in Kershader, but their place of origin is unknown. In 1805, five tenants are recorded, two of them from Uig; by 1824 there were 10 tenants. Thus the growth of population in Lewis during the second half of the eighteenth century may well have been the major reason for the colonisation of one of the least agriculturally attractive districts of the island.

From Figure 1, which shows most of the thirty-four occupied places south of Loch Shell about 1828, it is evident that colonisation had extended south into the mountainous area. The evictions, which commenced in Harris in 1816, may have increased the population already there as early as 1660, for many of these families came from Harris. The numerous shielings in South Park speak of a vigorous community: it is possible that South Park was more densely populated than the northern area up till 1800.

During the period 1818 to 1842, when the grazier, Donald Stewart, and his brothers had a lease of South Park, most of these settlements were cleared (Fig 2): in addition, between 1838 and 1843, 68 tenants and sub-tenants in Shieldernish, Cleiter, Seaforthhead, Lemreway, Oronsay, Stiomrabagh and Isginn were removed, in all about 436 people.[1] Some 27 families were sent to Crossbost in North Locha; others went to Tolsta and Tong in Stornoway parish, and some emigrated. The main body of those evicted settled in the townships in North Park: Marivig in 1838 had 6 tenants; by 1850, 22 are recorded. Thus the present distribution of population crystallised about 1840 and by then the townships along the shore of Loch Erisort from Habost to Garyvard were well established. The Minch coast townships from Cromore to Gravir, first settled about 1800, were greatly expanded, and Park south of Gravir became a sheep grazing devoid of small tenantry.

In 1844, the Seaforth family, which had held Lewis for over two centuries, sold the island to Sir James Matheson. The estate management soon wrought great changes in the landscape. Until 1850-52, the run-rig system prevailed, a system whereby a group of joint tenants, or a tacksman and subtenants, cultivated in small patches what arable land had been reclaimed, each share being periodically re-allocated. The crofts, or individually held land, date from 1850-52, when the land was lotted and most of the present crofts were formed at this period. The settlement pattern associated with run-rig was one of closely nucleated groups of houses but when run-rig was abolished, houses were built on the individual crofts.

In 1858, Lemreway was once again made available to crofters, most of whom came from the fishing townships where population pressure was building up. After the disastrous potato famine of 1846-7, and the final failure of the kelp industry from 1840 to 1844, the population of the Outer Isles experienced great hardship. By the early 1850's, the lotting of the crofts and the rapid development of the fishing industry brought a period of prosperity and the population grew rapidly especially in the fishing townships of the Minch coast. The prosperity was such that numerous cottars built houses on the lotted crofts, and their stock-keeping on the common was tolerated because of the demand for fishing crews. About 1884, the system whereby each boat was tied to individual fish merchants, who advanced meal and provisions against the catch, was discontinued. When this system was replaced by the auctioning of catches, such was the privation in Lewis that the Royal Commission investigating the poverty of the population in 1888 found conditions almost as severe as those prevailing during the potato famine forty years earlier. It was during this period that the Park Deer Raid occurred: Park became a Deer Forest in 1883 at the end of the grazier's lease. In 1888, as a demonstration of their grievances, a large number of crofters from the Park townships went into the Deer Forest and killed about 200 deer, cooking the meat in the open for all to see. Some were arrested but after trial acquitted.[3] A few good fishing seasons remedied this unhappy situation and the population of the fishing townships rose to a peak in 1911.

1 Evidence given to Royal Commission of Inquiry into Crofters and Cottars 1883. (Also known as the Napier Commission).

2 Report on the Conditions of the Cottar Population in the Lewe, 1888.

3 Stornoway Gazette, 27.1.59.

While the Royal Commission of 1883-6 was investigating Crofting conditions in Scotland, the farm of Seaforthhead and Shieldernish was restored to six crofters. Six years later, the Royal Commission of Enquiry into the Highlands and Islands scheduled the following land as suitable for new crofting townships: Stiemreway, Eilean Calum Cille, Crobeg, and the islands of Orosaidh and Rossaidh, a total area of 153 acres arable and 3,502 acres grazing. A further 165 acres of arable and 40,135 acres of grazing in the Park Deer Forest were scheduled as land suitable for the extension of existing holdings. The Report of the Commission considered "that in the case of Lewis, it cannot be left out of view that the congestion is very great, and the demand by crofters for access to lands now scheduled is of a very urgent nature ..... The Deer Forest Commissioners do not believe that the lands now scheduled are suitable for new holdings: but were these lands occupied as common pasture by crofters, under a properly adjusted system of management, their occupation would be of much advantage to the occupants and more than outweigh the disadvantages."[4] As a result of this recommendation, the islands of Rossaidh, Orosaidh and Iubhairt, in all 90 of the 43,728 acres scheduled, were given to Marivig, Calbost, and Lemreway, respectively, as additions to the common pastures; the sheep farm comprising Crobeg, Oronsay and Stiemreway, and the Deer Forest were left undisturbed.

In 1924, after raiding, Oronsay was reconstituted as a crofting township, all but one of the new tenants coming from the overcrowded crofts of Lemreway. An unsuccessful attempt was made by squatters who had built houses at Stiemreway, to have their unofficial lots recognised, but some families remained there till 1945. In 1934, fifteen small lots were cut out of the Gravir common pasture to relieve pressure on the Gravir crofts: this Department of Agriculture scheme marked the end of a century of population redistribution.

Thus the full recommendations of the Deer Forest Commission have never been implemented, but one can only conclude, after a study of the crofting economy, that greater participation by the crofters in the Deer Forest grazing would bring increased viability to the crofting community.

The landscape of Park has thus experienced four formative periods. Of the prehistoric era and the early historical period, when the Norsemen held sway, a few archaeological sites and a large number of place-names remain. From 1660 until the early nineteenth century settlement was slowly established and spread over all the coastal fringe: this period saw the maximum areal distribution of the small tenantry. From 1828 to 1843, eviction stripped the entire area south of Gravir and west of Habost of population, and large scale sheep farming was extended at the expense of the small tenants. The fishing townships from Cromore to Gravir were greatly expanded at this time. From 1858-1924, three of the cleared townships were reconstituted: the population in the majority of the fishing townships continued to grow till 1911. Since 1924, fifteen new lots have been formed in Park but the population has progressively declined.

The absence of large scale resettlement since 1886 differentiates Park from most other crofting districts, but the exodus of population since 1918 and the existence of a population constantly struggling for viability in an area deficient in resources are features common to the entire crofting area.

4 **Report of the Royal Commission Highlands and Islands, 1892, (often known as the "Deer Forest Commission").**

THE PATTERN OF CROFTING

Crofting, a distinctive system of land tenure, is confined to Argyllshire, Inverness-shire, Ross and Cromarty, Sutherland, Caithness, Orkney and Shetland, the seven Crofting Counties of Scotland. Small agricultural units sharing rights in common land, usually pasture but in some districts arable land also, survive in 151 out of the 163 parishes, and these holdings form the nearest equivalent to peasant communities in Britain, although only a small minority of crofters own their holdings, and the true subsistence element, implicit in any definition of peasantry, has all but disappeared.

Before 1886, the crofter was a tenant-at-will, with no security of tenure, and no right to compensation for improvements. The Crofter's Act of 1886, defined a croft as an agricultural holding in a parish where there existed, or had existed, rights of common grazing, and where the annual rent paid was less than £30. Security of tenure, and compensation for improvements were the main provisions of the 1886 Act; the rent qualification was later raised to £50. In all, there are about 20,000 crofts in Scotland today[1] and Collier[2] estimated the crofting population at about 100,000. The number of crofts in Park is 215, with population of 908. Thus Park forms a 1 per cent sample of the crofts, and a 0.9 per cent sample of the estimated crofting population.

Crofting Organisation, Layout, and Settlement.

The characteristic settlement unit is the crofting township: Figure 3 illustrates the areal distribution of the 12 townships in Park. Each township comprises two main elements, the individually held croft land, and the common grazings. The number of crofts per township ranges from 6 in Caversta to 43 in Gravir.

The individually held croft land (1,839 acres) is partly 'outrun' or permanent pasture and the holdings are usually but not always consolidated - in Gravir (Fig. 4) and Cromore some of the crofts comprise as many as five non-adjacent pieces of land. Each croft is normally separated from neighbouring units by a drystone dyke or fence but in Park, such demarcation is the exception rather than the rule.

The croft land is separated from the common pasture by the township dyke, a stone or turf w The Park common pasturse consist of 22,023 acres of moor grazing - generally very poor, ill-drained land with a large percentage of bare rock, areas of peat, and numerous lochs. In Park, only Oronsay common pasture is fenced, the limits of the remainder being faintly marked by crumbled turf dykes. Each croft has a defined right of grazing or 'soum' on the common pastur the 'soum' is the number of beasts which may be pastured, a term comparable to the obsolescent 'gates' of northern England. In Gravir, the soum is 1 cow and follower or young be up to 6 quarters old (i.e. 18 months), and 8 sheep, per £1 rent. There is also a system of stat equivalences (Gaelic 'coilpeachadh') in most townships whereby substitution of cattle for sheep a sheep for cattle is permissible: in Gravir, the exchange rate is one cow for five sheep. Soumin and equivalences vary throughout Park. In former times, when a subsistence economy prevaile soumings were enforced but nowadays the majority of the crofters do not even know the souming their croft.

1 Crofters' Commission, Annual Report 1958.

2 Adam Collier, "The Crofting Problem", 1953.

427 Although the croftland is individually held, individual control of the crofts only applies for six
241 months of the year. After the harvest, the croft land reverts to common grazing and the whole
township stock graze indiscriminately over the crofts. Thus basically the whole area of the
[227] township, the individually held crofts and the common pasture, is common land, and it is clear
[423] that the agricultural revolution with its system of enclosure has not yet fully refashioned the Crofting
[176] Area.
[233]

175 Before 1900, there was a third element in the crofting landscape, the shieling (Gaelic - 'airigh').
233 The sites of the shielings are usually on slopes commanding a view of the surrounding area near a spring or stream and usually two to nine huts belonging to the same township are grouped together on a site; isolated shielings are rather rare. In order to conserve the pasture within the township dyke for wintering and to protect the unfenced crops, the cattle were removed to the hill early in June, and the younger members of the households went out to live in small stone or turf-walled huts to tend the cattle. The milk was either carried back to the township daily or made into butter or cheese at the shieling. The distance of shielings from the crofts varied from one to five miles in Park.

632 The affairs of the townships are managed by the Grazing Committee, elected triennially by the township and presided over by the Clerk of the Committee. The duties of the Committee in the past related mainly to the enforcement of soumings, but are now reduced to the disbursement of subsidies, although responsibility for the maintenance of the township dyke and the care of the township bull (usually lent by the Department of Agriculture but sometimes communally owned) are also the province of the Committee.

[341] The layout of the townships varies with the topography but the majority of the crofts are aligned
[342] in strips from the moor to the sea (figures 4 and 5). Most croft houses are built on the crofts; in
[78] former times, the majority of the houses were sited on the poorest part of the croft as all the cultivable land was required for crops, but nowadays the houses tend to be sited near the road.

162 The official pattern of crofting is thus one of tenants, each living on his or her croft and sharing
561 in the rights and duties of the township. Table I gives an analysis of the tenants of the 215 Park
427 crofts. It will be noted that only one-fifth of the crofts are tenanted by those in the 15-44 age
241 group: a similar proportion are tenanted by those over 65 years of age. Absentee tenants account for 14 per cent of the total. Women form under 10 per cent of the total, but only one in seven of
[466] the women tenants is the sole labour force on the croft. The intrinsic worth of the holdings can be inferred from the fact that two-thirds of the male tenants in the insurable age group take supplementary work, two-fifths of them furth of Lewis. With such a large proportion of the tenants either fully employed in ancillary occupations in Park or elsewhere it is hardly surprising that the theoretical township organization exists mainly in name alone.

427 Each croft, however, is not necessarily an agricultural unit; some are sublet by absentee
241 tenants or by tenants who are too old or too infirm to work their crofts. Of the 215 crofts, one-fifth are wholly or partly sublet. In addition to the legal crofts, there are unofficial holdings which fall into three categories, cottars, squatters and feuars, all legally without grazing rights. A cottar[1] is a person, usually a close relative of the tenant, who builds another house on

1 These are the de facto definitions. Section 34 of the Crofters' Act of 1886 defines a cottar as follows:- "Cottar" means the occupier of a dwelling-house situate in a crofting parish with or without land who pays no rent to the landlord, as also the tenant from year to year of a dwelling house situated in a crofting parish who resides therein, and who pays to the landlord therefor an annual rent not exceeding six pounds in money, whether with or without garden ground, but without
[113] arable or pasture land". For fuller treatment, see Scott, J., "The Law of Smallholdings in Scotland," 1933, pages 152-155.

There is no legal definition of a squatter, and the above definition does not include any distinction between houses built on a croft and houses built on the Common Grazings.

THE MAKING OF THE CROFTING LANDSCAPE

All landscapes in these islands have roots in the distant past; Park is no exception. Yet many crofting landscapes have been significantly re-fashioned within the present century after major changes in the nineteenth century. Park does not entirely correspond to the general pattern, and the present cultural landscape has its beginnings in the late seventeenth century, although there are traces of earlier settlement.

Archaeological evidence, in the form of a stone axehead found near Habost, a dun on the brackish Loch Cromore, and a mediaeval chapel on Eilean Calum Cille, provides the earliest record of human settlement in Park. Place-name evidence[1] indicates Norse occupation: the elements 'bost', a contraction of the Norse word bolstradr - a homestead, and 'setr', a shed or bothy situated on pastureland but not regularly lived in, indicate a thin dispersion of farmers practising an extensive and transhumant economy: all the present township names contain Norse elements.

The name Park, is derived from the Gaelic 'A'Phairc' - the park or deer forest: the old name of the district was Oservaul (Norse: the east mountain). During the eighteenth century, a dyke or turf wall was built between Loch Erisort and Loch Seaforth - 'garadh an tighearna' - the lord of chiefs' dyke, to enclose the deer forest. Before this enclosure was built, Park was shieling ground used by tenants in Uig (west Lewis):- one of the groups of shielings has the name Airigh Dhomhnaill Chaim and Domhnall Cam was chief of the MacAulays in Uig at the beginning of the seventeenth century. Thus it may well be that after the Norse population left or were absorbed, Park was simply used as summer pasture.

It is believed that settlement in what is now the Deer Forest began about 1650. Confirmation of this comes from an unpublished Gaelic song by Archibald MacDonald (An Ciaran Mabach) composed in Leith soon after 1660. In the song, the author laments the fact that he may never see the Forest again, and says of Park

"'s oil leam caradh na frithe
.....
Bhith fo bhinn aig na bodaich
D'am bu chosnadh cas-chrom."

"I deplore the state of the forest ..... that it should be in subjection to the carles whose livelihood is a cas-chrom" (foot plough - literally crooked spade). The song gives no indication of numbers, and unfortunately no rental of this period is extant.[2]

From rentals and other evidence, Park was the last area in Lewis to be colonised in permanent settlement; the fact that the population of Lochs parish increased from 912 in 1755 to 1350 in 1801, supports the view that the late eighteenth century saw the extension of modern settlement in Park.

The first documentary evidence of settlement in the present crofting area is the Judicial Rental of Lewis, taken by the Forfeited Estates Commissioners in 1718. This rental records tacksmen, or major tenants, living in Habost, Seaforthhead, and Eilean Calum Cille - all situated along the southern shores of Loch Erisort: there is local tradition that Kershader and Marivig were shielings

1 The editor is indebted to Miss Bridget M. Gordon, B.A., B.Litt. for an analysis and evaluation of the place-name evidence - see Appendix C.

2 For this extremely interesting information and the translation, the editor is indebted to Mr. William Matheson, M.A., of the Department of Celtic, Edinburgh University.

/p. 12-A/

161 Table XVII reinforces the idea that there is a striking dichotomy between the agricultural
162 and fishing townships. The former are characterised by a more stable population trend,
166 significantly fewer of the population in permanent employment furth of Park, and a smaller loss by
167 migration. In the fishing townships, where growth and decline have been equally meteoric,
241 there is a larger proportion of persons in permanent employment furth of Park, and migration
228 losses have been greater. It is also significant that there is a smaller natural increase of
632 0.5 per cent in the agricultural townships. The only township which shows a natural decrease over this period is Calbost, one of the fishing townships.

SEAFORTHHEAD AND SHIELDERNISH

Rachel A. Hirst

131 Seaforthhead and Shieldernish are separated by 4,485 acres of rough grazing, the former lying on the northern shore of Loch Seaforth and the latter on the southern shore of Loch Erisort.

SEAFORTHHEAD

133 Seaforthhead, the most isolated of all the Park townships, consists of three crofts and a
361 gamekeeper's holding. The township boundary is situated between the 50 and 75 foot contours which at their furthest extent are only 150 yards from the shore. Immediately behind the road the land rises very steeply in rough uncultivable moorland covered with many boulders but generally below the road the land slopes gently at about 5-10 degrees, in places being
[241] completely flat. Here, however, the lazy-beds are very boggy and rushes have appeared in the ten years since cultivation ceased.

134 The soils are deep near the shore due to soil creep; higher up they are very thin and peat
137 accumulates to at least 3 feet both below and above the road. There is little cover; bracken is rare, but silverweed and heather, moorland sedges and grasses soon colonise disused lazy-beds.

241 Legally there are three crofts but only one is still cropped, the other two being used solely
[233] for grazing. There is, however, a gamekeeper's holding within the township boundary worked as a croft. The other two crofts are used as ancillary grazings to holdings in Airidhvruach and Balalian and have not been lived on for forty years and ten years respectively.

[244] The chief crops are oats and potatoes, though the gamekeeper had a patch of turnips and the other croft had grown them during the last few years until 'finger and toe' developed.
[407] Patches, about half an acre in extent, are drained with stone drains and ploughed by tractor, after which potatoes are grown to clean the soil, followed by oats for one year and then sown hay for three to four years. This is not strictly adhered to and several lazy-beds appeared to be
[314] in natural hay. There is no peat-cutting on the crofts as peat is secured just outside the township fence on the common pasture. Lambing has been poor for the past two years being
[231] only 50 per cent in 1958; the stock carried is twice the sheep soum. The cattle, Highland and Ayrshire or Shorthorn crosses, are below the soum, but previously nine cows and followers have been kept.

161 There has been a great decrease in population and cultivation since the resettlement in
162 1886. In Seaforthhead and Shieldernish as a whole, there were twelve crofters before the
241
178

161 suppression of the original townships opposed to six tod
162 given over to natural grass, are being gradually encroa
of the present population of twenty-three, one is perma
241 since 1939. There is a more healthy population structu
178 between 15 and 44, due to a large family having returne
age.

361 In Seaforthhead and Shieldernish all settlement is be
[349] slight elevations. At Seaforthhead is the reputed huntin
[505] new ruined, but still showing signs of abnormal size an
[491] communication was by ferry (1820). Now a cart-track,
[178] access to the Tarbert-Stornoway road two-and-a-half m

SHIELDERNISH

131 Shieldernish, also consisting of three crofts, is bett
361 road. The three houses are situated on a well-drained
632 road and the shore, but the three crofts are on better la
better management and new ideas.

241 Cultivation in isolated patches reaches up to nearly
311 together to permit ploughing by horse or tractor. One c
[246] preferring to enclose two one-acre parks, re-seed them
[231] lambs on the aftermath. By next year, this crofter hop
[244] further acre and will then use the three in rotation. Th
potatoes and one is also sowing down. The crofts avera
gentle slopes are extensive, the major part of the crofts
[226] stocking of the Shieldernish crofts is below the souming,
[288] though there is a small jetty on No. 1. Part-time weav
crofts.

The future pattern would appear to progress to more
of the six crofts - both at Seaforthhead - are worked fro
isolated township, being difficult of access and having lit
grazing. Shieldernish appears more suitable for enclosi
soils are deeper and slopes gentler, making the use of a
out of the crofts especially with fertilising and re-seedin
[185] fodder crops for wintering. It is hoped to fence the com
renewed - a great necessity. Daily communication with
is better placed than Seaforthhead for a flourishing settl
workable size - provided part-time work, such as weavi
grants from the Crofter's Commission.

HABOST

[162]

Of the 53 residents, 19 are over 65 and only 5 under 15 years, leaving a working population of 29: seven are in permanent employment elsewhere. The population has been steadily declining since its peak of 121 in 1901.

Since 1946, the township has changed considerably. It has been completely fenced and the method of cultivation has changed from spade and horse-plough to tractor and cultivators. A further fence has been erected for a lamb park and much land has been re-seeded; an increasing area has been put down to hay. It would seem that fattening of stock for market is intended, and better attention is being paid to stock. Yet the population is ageing and there are few young men to take the place of the older crofters; when working units become larger and stock decreases to a figure nearer the real carrying capacity of the grazing, the croft could become a profitable concern: at the moment, the croft is only maintained through grants and ancillary earnings. Should that happen, however, there must be more re-seeding and an increase of cultivation to provide winter fodder.

KERSHADER

Philip W. Wheeler, M.A.

361

Kershader is a township of forty-three permanent residents on thirteen crofts, which stretch for a mile along the southern shore of Loch Erisort. The crofts extend up to one-third of a mile from the coast with a two-and-a-half mile deep hinterland of common grazing. The extreme elevation is 270 feet and the average from 125 feet to 175 feet, but the crofts, mostly arranged in rectangular strips at right angles to the coast, are lower (maximum 125 feet) and include three main zones (Fig. 8):

(a) From the low cliffs of the shore to the road, approximately, a zone mainly below 50 feet, dissected by four rejuvenated valleys. The soils of the greater part of this zone have a distinctive profile and tend to be moderately heavy, wet, and unsuited to fertilisation by seaware. The smaller hillocks in this zone have thinner soils of the same sort, but the main hill (crofts 10/11) is an extension of zone (c).

(b) A zone between 50 feet and 75 feet with hills rising to over 100 feet. The lower areas have varied soils, easily fertilised, and intermediate in type between those of (a) and (b), with peaty-loam characteristics, overlying aquiferous gravels. The higher areas have thinner soils of the same kind with poor grassy pasture; in places there are signs of former skinning.

(c) A zone of hollows with deep moss soils requiring intensive drainage and reacting well to heavy fertilisation with seaware and intervening heights covered with blanket bog, partly skinned, heather and grass. This zone passes into the common grazing.

Crofts 10, 11 and 12, irregular in disposition, have a steep coast line with gentler slopes over 50 feet; crofts 2 to 8, steep slopes in parts of zone (b), and crofts 1 and 9, again of irregular shape, are intermediate (Fig. 5).

241
511

In Kershader, there are thirteen legal crofts and twelve operative units. The crofts vary between 4.4 and 18 acres, with a maximum of 3 acres reputed arable. In all, there are 23.45 acres reputed arable and 110.35 acres outrun. 24.5 acres are in fact under crop (oats 18.5, potatoes 6.0), and 9.5 acres under sown grass; and of the remaining 99.8 acres, mainly natural grass

161 Table XIX summarises the population structure and trends for the four districts. It is significant
162 that the two districts without service centres, which provide a range of ancillary employment, have
166 experienced more severe depopulation since 1939. This table also underlines the fact that earnings
167 from seasonal employment are insufficient: the incidence of permanent employment furth of the
434 districts is three times as great as the incidence of seasonal employment.
464

APPENDIX B

SHIELINGS - A NOTE

John E. Wearmouth with illustrations by Beth Blowers

175 From Figure 1, compiled from the First Edition six-inch map of the Ordnance Survey (1850
233 to 1852) and from personal observations, it is clear that the shieling system was at one time an overall feature of Park for the whole peninsula has traces of this transhumant economy.

361 The rudimentary structures, some of turf, others of stones and roofed with bracken or
342 heather thatch, are all sited on well drained sites, the majority on mounds. Almost all the sites are close to lochs or streams. The majority are in loose groups of from two to nine buildings, although there are some in isolation; no site has as many as twenty-six buildings as found at Airidh na Gaoithe in North Uist.

342 There appears to be two distinctive shapes of building - oval and rectangular (Fig.10). All shielings measured exhibited a remarkable similarity in dimensions, from 17½ by 9 feet to 13 by 12 feet. The oval structures are generally larger than the rectangular ones. Most of the shielings had two entrances, often, but not always, opposite each other.

195 The shieling system died out in Park about 1880 but the cattle continued to graze around the
283 shielings on the better grass, and the crofters had still to go out to milk the cattle at the shieling, although they no longer lived there. The sheep still use the mounds for shelter and grazing. These features of an obsolete economy are still easily recognisable from the luxuriant grass cover in a wilderness of peat bog and bare rock.

APPENDIX C

NORSE SETTLEMENTS NAMES IN NORTHERN PARK, LEWIS

Bridget M. Gordon, B.A., B. Litt.

103 See: Magne Oftedal, The Village Names of Lewis in the Outer Hebrides; in Norsk Tidskrift for
113 Sprogvidenskap, vol. XVII, 1954, (Oslo), pp. 363 ff.

103 Professor Oftedal points out the difficulties of these Norse-Gaelic settlement names: inaccurate spellings even in modern times, and lack of any useful evidence from older sources, make almost all the derivations a matter of conjecture. Sometimes two or more ON equivalents are possible (e.g. for Calbost), sometimes no satisfactory solution can be found (e.g. for Lemreway). Since Professor Oftedal frequently bases his explanation on pronunciations not recorded in written forms, his evidence is largely followed here.
SHIELDERNISH: the second element is N nes, 'headland'. Oftedal's explanation of the first as silda, genitive plural of N sild, 'herring', is satisfactory linguistically, but seems unlikely in meaning.

[877] [505] [897] [759] [357]

/facing p. 40/

[Kershader]

(b) From New Year to mid-April most sheep are kept on the common grazing. Practices, however, are irregular; some flocks are usually hand fed, others only rarely. In the former case they hold near the upper limit of their home croft and remain fairly tidy at hand. Most crofters hand-feed their lambs, probably housing them at night, allowing them hay in the morning and turning them on to the common grazing in the evening. All this naturally depends on weather conditions.

(c) From mid-April to May, lambing takes place on home parks.

Most crofters let their ewes-with-lamb out at one date.

(d) At the end of June, gimmaers are weaned and clipped.

(e) In mid-July the ewes are clipped.

(f) The lambs are weaned in the first and second weeks of August.

(g) The dipping takes place in October and the rams are brought on the croft.

There is no general sale time, sheep being sold or slaughtered at all seasons. There is no club here, but all but one of the Kershader crofters, along with crofters from neighbouring townships, take full advantage of the arrangement, first established in 1941, to graze sheep at 2/- per sheep and 1/- per lamb in Park Deer Forest. Hence irregularities of rhythm are introduced or exaggerated.

Sheep are not particularly profitable: in general, wedder fleeces give 3 to 4 lb. ewe fleeces about 3 lb., and the wool is sold to the Stornoway mills and Scottish Marketing Board. Average sheep carcass weight is reckoned to be 41 lb. and the price rarely rises above £3 and almost never above £4. Bracy and flake are kept under by medicaments but remain potential dangers: 'Black leg' is still a serious problem. Many sheep are drowned in the hogs in Spring and late mows (1955, 1958) are disastrous for lambing.

Under-employment is a serious problem in Kershader. There are nine males classified as full-time crofters, but probably only four of them (two on one croft) are in fact in this category, and of the total of thirty males with their homes in Kershader, only fifteen of the insurable population are permanently resident. There are twenty-eight females with their homes in this township, but only six crofts do any of twenty permanently resident females help with croft work. Local auxiliary employment consists of weaving, fishing (for domestic consumption) and work on the roads. Boats, one with outboard motor, are owned by three crofts. The only resident professional worker is a nurse. Ancillary employment must be, and is, sought away from the township, as a result, of the 73 permanently migrated since 1939 or as being resident, periodically away and permanently away in 1958, 19 have left the area for good, 4 are permanently away, 8 periodically away, and only 43 are resident. Only one person has entered the township since 1939. The age structure of the population, for last year, is fairly optimum. The school in Kershader, which had 28 pupils in 1951, reached a peak of 110 in 1907 and declined to 28 pupils in 1953, now has 101 17, although it serves Caverata, Garryard, Kershader and Habost. Maximum population was attained in 1881, but the total remained fairly constant till 1911; after which decline was marked. Since 1950 this decline has markedly increased.

It will thus be seen that the most serious problem facing Kershader is that of stabilizing the population and giving it a stronger economic basis. Apart from the potential development of tourism, fishing, weaving and other home industries, the only possible occupation is in agriculture with perhaps a little forestry. Forestry, though important as shelter protection, cannot be a practical proposition in large blocks or on a large scale, as it would dislocate the

[Garryard] [Caverata]

At the moment Garryard appears to be a go-ahead village, carrying out communal scheme which will benefit the township as a whole. However, the age structure of the population is abnormal since 60 per cent of the population is over 45 years. The future in Garryard offers young people hard work, little money and no entertainment, unless the amenities of the cities and Inverness are maintained quite irresistible. Unless some industry can be started the future bodes ill for the area, since most crofters are of the opinion that a weekly wage packet would more compensate the loss of their independence. Perhaps it is symptomatic of the age of National Assistance and subsidies that man cares more for monetary rewards and the luxuries of life. This is well understood by parents who encourage their children to leave the islands to seek employment either in Britain or within the Commonwealth. The Lewisman is no sentimentalist clinging to dying traditions and a way of life. His present decisions have been re-cast as a result of his increasing contact with the world beyond the Hebrides and he is prepared to abandon his home where it defeats his aims and purpose. Unless prosperity can be brought to his door by new industry, tourism or increased croft and crofting activity, co-operation in working and marketing, it is possible that we are witnessing the end of a community.

CAVERSTA

Helen Mackenzie

Caverata lies along a southern inlet of Loch Eriscort, five miles from the Minch and is partially sheltered from east winds by the Cromore peninsula and Eilean Chalum Chille.

The physical nature of the terrain is irregular, rising steeply from the water's edge to a level of approximately 225 feet. To the west and to the east, the land slopes to the river estuary and it is about 1½ miles in length and varies in depth from 1 to 2 miles. Physiography is simple and drainage is good. Average sheep carcass weight is reckoned to be 41 lb. and the price rarely rises above £3 and almost never above £4. Bracy and flake are kept under by medicaments but remain potential dangers: 'Black leg' is still a serious problem. Many sheep are drowned in the hogs in Spring and late mows (1955, 1958) are disastrous for lambing.

The soil is peaty and has a good giving access to the common grazing, in which each crofter holds an equal share. The township has no specially enclosed area for lambing or other purposes and no fixed date exists on which the crofters open their gates for winter grazing. Breeding ewes are normally brought in for tupping in mid-October and November when crops have been gathered, and lambing takes place in late March or April. After dipping and inoculation with vaccines for black leg, bracy and tupping ill, the sheep are put out on the common grazing in the second or third week of May.

The 642 acres of common pasture support a sheep stock equal to the sheep soum, but the overall stocking is only 84 per cent of the total souming. Two crofts only a used their individual soums, while the others are well below the number required for greatest efficiency. The grazing is, however, poor for summer pasture, owing to the lack of grass, but the heather is valuable for wintering the world beyond the Hebrides and he is prepared to abandon his home where it defeats his aims and purpose. Unless prosperity can be brought to his door by new industry, tourism or increased croft and crofting activity, co-operation in working and marketing, it is possible that we are witnessing the end of a community.

CAVERSTA

Helen Mackenzie

Caverata lies along a southern inlet of Loch Eriscort, five miles from the Minch and is partially sheltered from east winds by the Cromore peninsula and Eilean Chalum Chille.

The physical nature of the terrain is irregular, rising steeply from the water's edge to a level of approximately 225 feet. To the west and to the east, the land slopes to the river estuary and it is about 1½ miles in length and varies in depth from 1 to 2 miles. Physiography is simple and drainage is good. Average sheep carcass weight is reckoned to be 41 lb. and the price rarely rises above £3 and almost never above £4. Bracy and flake are kept under by medicaments but remain potential dangers: 'Black leg' is still a serious problem. Many sheep are drowned in the hogs in Spring and late mows (1955, 1958) are disastrous for lambing.

The soil is peaty and has a good giving access to the common grazing, in which each crofter holds an equal share. The township has no specially enclosed area for lambing or other purposes and no fixed date exists on which the crofters open their gates for winter grazing. Breeding ewes are normally brought in for tupping in mid-October and November when crops have been gathered, and lambing takes place in late March or April. After dipping and inoculation with vaccines for black leg, bracy and tupping ill, the sheep are put out on the common grazing in the second or third week of May.

The 642 acres of common pasture support a sheep stock equal to the sheep soum, but the overall stocking is only 84 per cent of the total souming. Two crofts only a used their individual soums, while the others are well below the number required for greatest efficiency. The grazing is, however, poor for summer pasture, owing to the lack of grass, but the heather is valuable for wintering the

Two crofts only a used their individual soums, while the others are well below the number required for greatest efficiency. The grazing is, however, poor for summer pasture, owing to the lack of grass, but the heather is valuable for wintering the world beyond the Hebrides and he is prepared to abandon his home where it defeats his aims and purpose. Unless prosperity can be brought to his door by new industry, tourism or increased croft and crofting activity, co-operation in working and marketing, it is possible that we are witnessing the end of a community.

[Caverata] [Cromore]

The 1914-18 war had a marked effect on the Caverata population - 16 out of 54 (29 per cent) left after 1911 and no re-population took place. Since 1939, seven people have migrated to Stornoway or the mainland, (16 per cent of the total 1939 population), and six of these were from Tornata (i.e., 50 per cent of the 1939 Tornata population); only one family now remains there. The demographic position is not good, there are four males for every two females, and the majority are young married couples and young men and women seeking employment elsewhere, for with better communications, education and the radio, the pull to the towns has become stronger. There are now only two people in the township who could be described as full-time crofters, earning no supplementary incomes by weaving tweed on commission from the Stornoway mills.

Caverata is not one of the most progressive of the South Lochs townships. Although the crofts are fenced, the common pasture is not visibly delimited from either the Cromore or Garryard pastures. At present, the grazing is fully shared according to the soum, but the committee has not as yet initiated any rotational grazing schemes. As the pasture is not of the best quality, seldom any grass would benefit every crofter. Lack of manpower may in part account for this deficiency but even a small acreage of improved grazing would be a great asset.

The future position of the township is rather doubtful: it is not the best type of land for mechanization and is badly served by communications. The future of Caverta appears to be probably one of abandonment, since it is more easily linked with Cromore. The possibility of a good road being built here is remote, as there is only one family to serve. The main part of Caverata is also open to question. Amalgamation of the crofts would not necessarily make more efficient units for the present units are not used to their full extent. Amalgamation with Garryard might benefit the township a great deal, as the Caverata population is rather small to flourish in isolation. The future of Cromore, Kershader and Habost is one of hope, but unless some change takes place, it is not difficult to see Caverata, and Tortata, following the same courses as Garryard, about five miles to the north of Gravir.

CROMORE

G. Mary Swindell, B.A., and Dennis F. Fancett, B.A.

Cromore is situated on a peninsula between Loch Eriscort and Loch Cromore. Approaching it from the Arnish road, Cromore has the appearance of a nucleated settlement, but the main house is situated on the owner's croft. The crofts are so arranged that each has a portion of land on the more level surface of drift deposits; houses 1 to 20 stand at the junction of the drift and the Kershader gates. Soils are poor and thin, and there are numerous outcrops of barren rock amongst the arable land. The natural vegetation is heather moorland with extensive patches of rushes and cotton grass. The pattern of land use is of the 'outcrop' around Cromore.

The township comprises twenty-seven crofts and there are twenty-seven working units; two crofts are subdivided while another four form double crofts. In addition there are five cottars and the Schoolhouse too. Outside the township dyke there are two free and four squatters. The croft layout differs from most other townships as each croft is in four non-adjacent parts, one piece around the house, another above Creag Cromore and two pieces on another area of enclosed land on the common grazing. Two crofts on the eastern side of Loch Cromore, have most of their arable land around the croft-house while three crofts have only one share in the other area of enclosed land.

Until this decade all the land around the houses, and much of that above Creag Cromore, was regularly cultivated. Some of the lazy-beds on the higher land are being cut for hay this year but cultivation is limited to the land around the croft houses and is completely unmechanised. The only crops at present are oats and potatoes and these are usually grown in rotation. The crofters sowed

[Cromore]

The crofters sowed clover with their oats in 1957; the quality of most of the natural grass could be improved considerably by extending this practice. Several of the crofters have taken advantage of the facilities for obtaining lime and fertilisers, but seaweed and byre manure are widely used. Only seven crofters put in potatoes last year but that of No. 23, (partially enclosed by a dry-stone wall) has produced crops of lettuce, cabbage, turnips and carrots.

The scutching for Cromore is one cow, one heifer and eight sheep per £1 rental, but is not enforced. The crofters keep the stock which they can manage to maintain through the winter and no one appeared to be dissatisfied with this arrangement. In fact the scutching is exceeded by only seven crofters and the total stock for the township is only 75 per cent of the soum. Lambing takes place in April and May and after a high proportion of ewes and lambs is lost. The sheep are clipped in July and each crofter usually clips his own sheep. No other wells the fleece or has it spun in Stornoway before weaving it himself. The lambs are taken from the ewes during the second week of August and tupped. Breeding ewes are kept for the tupping period and almost every crofter has his own ram. Most crofts have a cow and a calf and the crofters like the calves to be born in March so that they can be sold in October for the Garryard sales. The cows are fed on hay and oats, Aberdeen-Angus bull from Crobeg Farm. The township gates are opened in October and the cattle remain on the township until May, the grazing regulation enforced by the Grazings Committee without special permission, or on fank days.

The buildings, situated on the common grazing between Calbost and Cromore, were used until the 1890's. Although the crofts have been carried from moor to arable, even in the 1920's, some of the moor was under cultivation and from an air photograph, it is evident that hay was being taken from the moor. Originally, there appeared to be a continuous trend in a continuing decrease in the amount of arable land but this year ten crofters formed a group to enclose and improve a ten-acre plot on the moor, the south side of the loch, the township's first attempt at a group enterprise. Peats are now being cut near the north of Gravir.

Cromore was once a prosperous fishing village but now it has no fishing boats. Two Cromore fishermen have left the area for Mallaig and one from Stornoway and there are only a few men who would welcome the opportunity to start fishing again. There seem little prospect of this, however. The landing-stage, completed in 1957, is regarded by many as a 'white elephant' and, in fact, at low tide it is useless. So much for the hopes that it might have been used by large vessels bringing goods to Park.

In Cromore there are fourteen looms for the weaving of Harris Tweed. Tweeds are obtained by road from two mills in Stornoway and one in Shawbost. At present the weavers are working only one tweed per loom per week but the weavers could quite easily double their production. During the Korean crisis, looms were put into production and they, and there are numerous outcrops of barren rock amongst the arable land. The natural vegetation is heather moorland with extensive patches of rushes and cotton grass. The pattern of land use is of the 'outcrop' around Cromore.

The township comprises twenty-seven crofts and there are twenty-seven working units; two crofts are subdivided while another four form double crofts. The only crops at present are oats and potatoes and these are usually grown in rotation. The crofters sowed

[Gravir] [Glengravir]

The present situation in Calbost is best illustrated by reference to the population statistics. There are only 17 people living there at present, seven of whom are adults and only eight boys are occupied within the dyke. Of the male population, there are three children under fourteen, one man in the 15-44 age group, three between 45 and 64 years and two over 65. This clearly shows the lack of active men from 15-44 years, necessary for the continuing economic success of the community. However, even these figures are not as striking as the numbers of emigrants as no less than 39 men and 40 women have left Calbost since 1939.

A community of 120 persons has shrunk to less than 20 in only twenty years as the younger people have left to find employment in Stornoway and on the mainland. The present population structure seems to indicate a continuation of the downward trend.

GRAVIR AND GLENGRAVIR

Gravir, the largest Park township numerically in population and crofts, lies astride the main east-west inlet of Loch Cairn, a glacially modified line of structural weakness. The site of the township is perhaps the most physiographic in all Park, but the steep slopes, lack of cover, the small area of good arable land, and the considerable population existing on slim resources, problems common to Park as a whole, are all epitomised in Gravir.

On the south-facing slope above the loch and the continuation of the trough in the valley to the west, the majority of the croft houses have been carried from moor to arable, even in the 1920's, in the process of the abolition of run-rig that was accomplished in the years 1850 to 1852. Originally, there appeared to be a continuous trend in a continuing decrease in the amount of arable land but this year ten crofters formed a group to enclose and improve a ten-acre plot on the moor, the south side of the loch, the township's first attempt at a group enterprise. Peats are now being cut near the north of Gravir.

The layout of Glengravir, a line of crofts from 3 to 5 to five acres, typifies the small post-1918 Department of Agriculture for Scotland (now Department of Agriculture) and one from Tigharry and 4, and it will be seen that not all the crofts are consolidated. There are three areas of former arable common grazing which have been lost in unfenced strips and they may well be reclamation work were necessary to supplement the food producing capacity of the holdings. The method of division and allocation speaks of a period when a subsistence economy under severe pressure from over-population necessitated fair shares for all. The last of these commons was in cultivation until 1951. Although subsistence crofting has been obsolete since then, there is kept in reserve a sufficiency of the arable land.

The congestion which necessitated the reclamation of the arable common developed mainly as a result of a successful fishing industry which prospered from 1860 to 1914 and at one time there were two curing stations in the township. The population of the township increased and were tolerated and the population rose from 197 in 1830, to 368 in 1881 reaching a peak of 468 in 1911. The collapse of the industry after 1914 began the downward trend which has continued yet ceased. Gravir reverted from 1918 to a township of agriculturalists and a base for employment forth of Lewis, although there have been spasms of successful fishing activity since.

Rock raising is now the function of the township and the agricultural resources and conditions are hardly conducive to the development of economic holdings. The Gravir and Glengravir crofts vary between 3.5 and 24.5 acres in size: no croft has more than four acres of 'old arable', in the days of subsistence agriculture, and indeed until the 1930's, cultivation, all in manure-laden, hand-worked up with stones at the downward extremity on the steep slopes, was much more extensive. All the cultivable land was at one time under crop, heavily manured with seaweed (cut at low water) Cromore or the coast south of Kebock Head. About one-third of the maximum lazy-bed area is cropped and the more inaccessible areas of the crofts have reverted to pasture; some of the lazy-

[Gravir] [Glengravit] [Lemreway]

The urgent need in Gravir is a reduction in the number of holdings. A pre-requisite of such reorganisation would be the creation of employment for a non-crofting population. Weaving and fishing are the more obvious occupations; the former is subject to world trade fluctuations but the latter is now in a more favourable position since the introduction of the herring fishing guaranteed subsidy, although the raising of the initial capital for buying and equipping boats is a formidable obstacle. It is clear that a division of the community into a crofting and non-crofting sector is essential if the present population level is to be maintained. The most serious aspect of the present trend is that the migrating section of the community comprises the younger and more enterprising people. Unless holdings of economic size can be formed, and stable employment introduced, one can expect the younger men and women to remain in Gravir.

Until a major reorganisation of the crofts is carried out, a vigorous attempt to re-seed large areas of the common pasture and the three former arable commons and the development of a crofter-tourist industry, are interim possibilities. It is not sufficiently realised in crofting districts that there is a demand from the city dweller for simple accommodation and good plain fare in a clean atmosphere, with the possibility of hill walking and fishing on fresh and salt water. Yet, until the proposed water-scheme becomes a reality, tourism on a moderate scale can hardly be contemplated.

One can only conclude that until reorganisation takes place and transforms Gravir into a township of viable economic holdings, any stabilisation of the present trends is out of the question. A decline in the number of holdings is inevitable in the long run but a planned reduction over a number of years would bring about a more viable community than the disintegration which will occur without such planning. Until this is achieved, the young men and women have little incentive to remain in Gravir.

LEMREWAY

Beth Blowers, Brenda C. Turner
and John E. Wearmouth

Lemreway, the southernmost township of Park, comprises 290 acres arable and outrun divided into thirty-three crofts and 3,025 acres of common pasture. The township is situated on the northern side of Loch Shell round a bay in the shelter of Eilean Iosward.

The township consists of three distinct areas. A flat, poorly drained area at about 100 feet, part common pasture and part reclaimed as extensions to the crofts, locally known as 'the Outend', forms the first subdivision. The second area, further west, is of a hummocky nature. To the east, a steep slope rises to an altitude of 400 feet, less than half a mile from the loch shore, forming the third. Two benches are to be seen at about 100 feet on the steeper slope and similar, though wider terraces occur at the same height to the north. It is suggested that the former is the bed of a glacial dammed lake, and that the hummocky sector is partly morainic and partly ice-eroded rock exposure. A channel eroded through this sector allowed the lake to drain southwards leaving a relatively deeply incised valley through which the present stream flows to the sea.

Soils may be divided into two types - a peaty loam and the better drained gravelly loam which is found to the east and along the main stream; the latter is particularly suitable for potato cultivation.

Except on rocky outcrops, the very steep slopes and the drained areas, blanket bog predominates. Sphaghnum here is rarely dominant but where the land is badly drained Deer's hair grass (Scirpus caespitosus) and cotton grass (Eriophorum vaginatum and Eriophorum angustifolium) are the dominants. On slightly drier land, purple moor grass (Molinia caerulea) and mat grass (Nardus stricta) are abundant. Local dominants are bog asphodel (Narthecium ossifragum) and cross-leaved heather (Erica tetralix) with other common species such as the sundews (Drosera rotundifolia and intermedia), butterwort (Pinguicula vulgaris), Juncus sp., Carex sp. and Carex panicea occurring sporadically. Where the peat has been cut and drained, 'heather moor' usually develops and Calluna

The West Highland Survey Township Card describes Lemreway as "predominantly a fishing township". The remains of an old curing station are visible today and until 1947 there were twelve boats operating from Lemreway. A declining market, increasing cost of gear for obsolescent boats and the lack of a landing stage led to the decline of the industry in this township. Today there is one fishing boat which lands its catch in Stornoway, working with modern equipment, drift and ring nets, it provides a regular income for a crew of six.

An examination of the population statistics proves interesting, especially when compared with those for Orinsay. Lemreway's resident population of just over 70 males and 70 females is large considering that there are six unoccupied crofts. Eleven of the crofts have more than one house and the entire population farms over a third of the total residents. More than two-thirds of this resident population is in the two important age groups - between 15 and 64. With over forty resident males in the working age group, Lemreway provides a striking contrast to other crofting townships in Park.

Fourteen of these men are full-time croft workers, while nine others find work in ancillary occupations such as weaving and fishing. A further eight supplement their craft work with regular employment - a postmaster and postman, a bus driver, a lorry driver as well as a crofter-fisherman. Just over thirty people work away from the township permanently, fourteen in the Merchant Navy and nine girls in domestic service, while a further nine engage in seasonal work.

Emigration from the township has continued steadily with forty people leaving since 1939. Nevertheless, Lemreway has a larger proportionate resident population than most townships.

Only four thatched houses are occupied and housing conditions generally are good. Every house has electricity, but, with four exceptions, water has to be carried from springs and wells. Most of the present houses were constructed in the 1930s and they are usually near to the road. Ruins of the old houses remain, some being used as byres, and there were built either along the shore or up the slope in the shelter of the hills, where the house was near the sheep, the peat and the springs. Today supplies of food, peat and coal are assured are brought by road.

Mention must be made of the possibilities of the tourist trade in Lemreway with its most attractive situation and reasonable road connections. An approach has been made to the Scottish Youth Hostels Association and while hostelliers could not greatly increase the income of the residents, they would stimulate interest in the area. Accommodation for summer visitors, other than relatives of the crofters, is difficult to find but it seems that at least three houses could be used.

It is possible to be optimistic about the future of Lemreway, as at the moment considerable enterprise is being shown. A Ferguson tractor, bought this year by a man returning from whaling, is an example. It is to be hired out and could be put to good use in some parts, especially on the hummocky ground. The attempt to improve the common pasture and the new extensions to small painted houses all reflect a combined effort to improve conditions. The old economy of crofter-fisherman is being adapted to the modern times and crofter-weaver, crofter-postman and crofter-bus driver are the contemporary employment combinations.

The pessimism and apathy noticed in many crofters is to be found in Lemreway but above this is the impression of enterprise. If Lemreway can continue to adapt itself to changing conditions, it may be able to combat the 'drift to Glasgow' and continue as a successful community.

ORINSAY

Beth Blowers, Brenda Turner and John Wearmouth

Orinsay is a small crofting township clustered, in the form of a horseshoe, around the head of a sheltered bay on the northern side of Loch Shell. Most of the houses are situated within fifty yards of the shore on a narrow strip of level land, while the crofts extend from the shore on to the moor

1. The Directors of the Crofting Survey are grateful to Dr. F. Fraser Darling for granting access to the individual Township Cards, which are a storehouse of information. For detailed contents of the cards, see West Highland Survey p. 247.

Recent trends also point to a decline in the numbers of sheep, although more are kept now than fifteen years ago. From 1942-51 the numbers were more than doubled (263-565). A great deal of this increase must have been a result of the ewe subsidy, but part at least may be connected with the war and post-war boom in Harris tweed. By 1955, when the subsidy was suspended, numbers had already begun to decline and have since fallen steadily. This year the township has only 376 breeding ewes while the rearing of only 236 lambs would suggest a further decrease in the future.

All the crofters keep some sheep although individual stocks vary from 1 to 40 for most of the year these sheep are grazed on the common pasture on the moor or on the sighteen acre island in the bay. In August, however, the lambs are gathered in for weaning and dipping; in November the gates are opened and all the sheep allowed to graze on the clearer pasture within the croft boundaries. If necessary they are given fodder, but from the beginning of January they are encouraged to return to the moor, although the gates are now permitted a striking contrast to other crofting townships in Park.

The total area of the common pasture exceeds 400 acres and it consists of hummocky, rocky terrain, some improved supporting only poor quality coarse grasses and sedges. Over 700 sheep now graze this area and the apparently large common pasture is in reality drastically overstocked, a process which must inevitably harm the grazing. A lorry will be used to round up the sheep.

No pigs or horses are to be found in the township and each crofter keeps very few hens, normally just sufficient to provide eggs for home consumption. Any surplus eggs which do remain are sold to the Co-operative van, but prices are so low that the keeping of more than a dozen hens is far from profitable.

It can be appreciated that crofts of this size and quality can neither provide the crofter and his family with sufficient income, nor fully occupy the available labour force. As a result, people in the old houses remain, some being used as byres, and there were built either along the shore or up the slope in the shelter of the hills, where the house was near the sheep, the peat and the springs. Today supplies of food, peat and ewes assured are brought by road.

There are now 45 people resident in Orinsay but an examination of their ages reveals that less than half of them are aged between 15 and 64 years. Indeed there are only six resident males between these ages, and three of these spend at least part of their time working away from the township on the Eishken estate.

As there is neither a school, post office, shop nor garage in Orinsay, there is no available occupation in the 'service trades'. Therefore, over half of the males between the ages of 15 and 44 are permanently away in the Merchant Navy, returning home only for holidays, while another third are reasonably away with the whalers. Similarly almost half of the females of similar age work in domestic service in Glasgow. It must be realised that most of these people working away assist their families at home, and that a large part of the croft incomes are made up of money sent home, together with pensions and other allowances. Emigration from Orinsay to other areas has continued steadily, twenty people leaving the township since the war.

On the whole, housing conditions are good, due to relatively recent construction. There is only one traditional black-house, and even this house has electricity: only one house is without it. Water supply is not so certain as wells and springs are the only source. The township lacks a telephone and a shop, but is served by travelling vans. A good road, constructed within the last decade, connects Orinsay with Gravir; entering the township via the valley to the north-east, it serves directly all but three of the crofts. A bus leaves daily for Stornoway, about thirty miles distant.

Like so many other crofting townships Orinsay, above all else, gives an impression of congestion. The self-same hills that provide shelter also restrict cultivation. The crux of the situation is that land, extremely marginalin character, is being worked by too many tenants on holdings too small to be economic. With three residents to every two acres of cultivated land, Orinsay must be seen as an 'overpsill' - an unfortunate result of the cotter problem in the 'twenties'.

The future existence of the common pasture as a viable grazing is being seriously endangered by overstocking. The scouring is not enforced in Orinsay and the actual sheep stock exceeds the sum by 300 per cent. Peat-cutting is gradually destroying valuable grazing areas; in the last three years there has even been some peat-cutting on the better grazing on the island. The dangers both of overstocking and of indiscriminate peat cutting cannot be overstressed.

No evidence was seen of attempts to improve the quality of the common pasture. The establishment of shelter belts would provide not only shelter but a means of stopping the peat from 'slumping' down slopes if they were carefully sited. Much of the common pasture could be improved by a hill drainage scheme and by re-seeding, after sanding and liming. A project well within the capacity of the resident labour force.

Good crops on a few of the crofts suggest that the land is not inherently sterile, however, and it would seem that if the holdings were reduced to a maximum of four, an economic existence might be possible on these crofts. The easy nature of the soil limits the possibilities of tractor cultivation, but with an improvement in drainage, one might be used in the two valleys.

It is not so easy to be optimistic about the employment of surplus population resulting from such an enlargement of holdings. Although a revival in the fishing industry could absorb most of the men. At present there are no looms in Orinsay and providing the Harris tweed industry can hold its own, there are possibilities in weaving. Seaweed is in plentiful supply, indeed Lemreway people also obtain surplus and should its quality prove adequate, the establishment of a processing plant would provide valuable employment.

Nevertheless it is becoming increasingly obvious that unless the holdings can be enlarged, whether officially or by sub-letting, and some further employment created, Orinsay is liable to stagnate, and depopulation to continue. The township which was developed to relieve congestion is now itself congested.

SUMMARY AND CONCLUSIONS

The aim of the Glasgow University Department of Geography Crofting Survey is to record and analyse material relevant to the crofting districts, and in so doing provide a clear and impartial statement of the present situation. In inviting us to undertake a survey of Park, the Pairc Association hoped that a body of fact would be assembled and conclusions drawn which would assist the Association in their admirable aims of advancing the well-being of the area. Their two Progress Reports, of 1947 and 1957, indicate that they have already instituted many of the possibilities for crofting in completed, no final assessment of the Crofting Area as a whole can be made.

The district of Park is one of the more isolated and difficult crofting environments. The ruggedness of the terrain, the high proportion of land of very low agricultural value and sheer isolation make the existence of human communities precarious. In addition, many of the Park communities were first established as a result of population pressure in more favourable areas of Lewis, and the original small settlements grew rapidly as a result of a change in land use which was a national trend - the conversion of poorer areas from subsistence farming to an extensive sheep-rearing economy. The impact of this change came to Park in the form of the eviction of a large body of small farmers in favour of an extension of the grazing area. Thus the present conditions are a legacy of the relatively recent past, and of legislation, particularly in the Crofters' Act of 1886, which accepted, and tacitly agreed to the maintenance of a larger population than the land could reasonable carry[1]. Two World Wars and fluctuating economic factors have had repercussions in Park and resulted in a change in economic and social values, and depopulation has resulted: the 1951 population was 60 per cent of the 1911 total.

1. The Commissioners proposed that only holdings rested at £6 and over should have security of tenure, with a view to discouraging the perpetuation of grossly uneconomic holdings; in the Act, all holdings were given security of tenure.

TABLE XIX

POPULATION IN FOUR CROFTING DISTRICTS 1939-1956/8

(Figures in brackets are percentages)

101 The Highlands and Islands are often divided into a Western and an Eastern subregion. The Western Highlands include all of the Hebrides and, approximately, the western half of the counties of Sutherland, Ross and Cromarty, Inverness, and Argyll. This leaves the remainder of the seven crofting counties, including the islands of Orkney and Shetland, to the Eastern [102] Highlands. The seventy-two parishes of the Western Highlands have been isolated by physical barriers from communication with Great Britain. Here, too, differences of race, language, and culture have continued to distinguish the people from the other Scots. With this rudimentary delimitation of the areas in mind, let us briefly review their population cycles.

161 When Alexander Webster, then Moderator of the Church 162 of Scotland, compiled his enumeration of the population of Scotland in 1755, the Highlands contained 257,183 people, and the Western Highlands had a population of 114,884. In terms of percentages, the total region, 47 percent of Scotland, had 20.3 percent of Scotland's population, and the subregion, 29 percent of Scotland, had 9.1 percent of the national population. By 1831, despite chronic emigration, the population of the Western Highlands rose to 200,955 (see table 1) but there had been a decline to 8.5 percent of the national total. In 1841 the total Highland population reached a peak of 396,045, but now only 15.1 percent of the Scots were Highlanders. By 1851 depopulation had begun. The Highlanders in the West had decreased in numbers to 190,728 and those in the whole area, to 395,540. From that day to this depopulation has been continuous. Although the 1951 census is still above Webster's

[TEXT CONTINUED ON PAGE 6]

count, the number of people living in the Highlands has declined 27.8 percent to 285,667, and those in the Western Highland, 40.7 percent to 119,071. Today the Highlanders represent only 5.6 percent, and the Westerners, only 2.3 percent of the population of Scotland.

Even though depopulation in the Western Highlands has gone at a faster rate than for the Highlands as a whole, it has not been typical of the entire subregion. William Hance, an economic geographer, has recently pointed out that "the assumption has too often been made that the Islands (the Outer Hebrides) have been depopulated at the same rate as the counties to which they belong and the Highlands as a whole."[2] He clearly demonstrates the contrasting increase of population in the Outer Isles, up to 1911, and the persistent decline elsewhere in the area. Again, within the last two decades, there has been an increase in population in the developing industrial area at the western extremity of the Great Glen, while depopulation has continued in all other parts of the subregion.

The Isle of Skye, the island with which I shall be concerned in my dissertation, cannot be regarded as typical of the Highlands or of the Western subregion. I rather regard it as standing in an intermediate position, geographically, demographically, and culturally. It rises from the Sea of the Hebrides between the Outer Isles to the west and the Mainland to the east. As we have just seen, depopulation is

361 basalt plateau where the light and potentially rich soil and the relatively luxuriant pasture land are valuable assets. The remainder of the island has been generally avoided, except for a few isolated areas of raised beaches, moraine, and similar 361 deposits of local importance. The contrasting population 162 densities in modern times support my assertion. With an overall density for the Island of thirteen per square mile, northern Skye has a density of nineteen per square mile in contrast to six per square mile in southern Skye. This three one ratio has persisted for at least two centuries.

361 Until the nineteenth century all the inhabitants of Skye lived in isolated hamlet-like clusters. The majority continue to dwell in dispersed crofting communities. Indeed, the domi characteristic of the settlement pattern is, with a single exception, the lack of nucleated villages. Skye is not unique this respect. The Irish and the Welsh have never made the vi a part of their cultural heritage.[13] The pattern I am about describe will, no doubt, be unfamiliar to many who are only acquainted with rural communities of the Western Hemisphere. The units of settlement on Skye are on a very diminutive scal compared to those to which we are accustomed.

361 As we have seen, the efficient socio-economic unit is t 621 township, the collection of individual crofts and the communa grazing lands. Skye contains 182 townships. All of them are found in an inhabited area of roughly thirty square miles.

compared with 34.9 for Scotland. The death rate among Skyemen, however, was 17.4 compared with 22.0 for Scots in general. But Scotland had a net emigration rate of only 3.6 while the Skyemen were leaving at a rate of 16.5. In this decade no fewer than 3,115 left Skye.

By the end of the third period an additional influence of the process of commercialization had become apparent. The social hierarchy was modified in the direction of greater socio-economic differentiation.[68] At the time of the "Forty-five" Skye was inhabited by the families of three clan chiefs, 139 tacksmen, 517 joint-tenants, 1031 subtenants, and 444 servants. There were now 10 landlords. The tacksmen had been replaced by 29 graziers and 12 small farmers. The joint-tenants, subtenants, and servants had become 2043 crofters and 1227 cottars. In the past there may have been one innkeeper, at Portree, and a few millers; now there were 32 innkeepers, millers, and merchants.

The changes which we have been considering could not have left the patterns of interaction undisturbed. Cooperation among the members of the township would have been unnecessary. Since all were affected by prolonged destitution, mutual aid must have been severely curtailed. The extended family was broken by emigration. The nuclear family was seldom intact for more than part of the year. It seems the majority of the able-bodied men were travelling to the east coast each spring to find

employment as hands on fishing vessels. The young women followed these fleets seeking work as gutters and curers in the ports. Some may have made their way to Portree, where a woolen mill had been erected by the Highland Destitution Committee. The population of Portree increased during these years from 510, in 1841, to 893, in 1881, but this can hardly be regarded as a significant trend.

The really striking aspect of this period is the almost complete lack of protest by the Sgriathanach against the violation of this presumptive right to the land. The disappearance of the tacksman, of course, had left the people without their counselors and leaders in secular affairs, and many of the ministers, especially those who were themselves sheep farmers, counseled submission to the will of God. Then, too, the ethos of the Skyemen would not allow them to ventilate their grievances. They despised the Gassanach and felt that "the landlord was bad enough, but the factor was the Devil himself." Still those who knew them well and those who rambled by their cottages wrote unanimously of a people who endured overwhelming sufferings in patience and reticence.[69] The betrayal of any weakness, especially before the cursed Gassanach, was a breach of propriety.[70]

The Skyeman had not lost his capacity to respond to leadership. Throughout the nineteenth century there had been widespread and growing discontent all over Europe with the

culture which can hardly be distinguished from that of the Lowland rural areas, but it has by no means disappeared.

Socially, these changes, particularly the introduction of national laws of land tenure, involved a leveling of the social hierarchy. The old polarity of the land lord and tenant, with an intermediate group of doctors, ministers, and tradesmen, was restored. The place of the tacksman, of course, has been filled by the government. The bulk of the population was once again undifferentiated socially or economically. Land lost much of its commercial value for the proprietors. It once again had more of an intrinsic value, almost as in the days of the clan. The status of the proprietors, locally and as a horizontal segment of the total British population, depended on land ownership. The graziers and the proprietors who had appeared during the "Clearances" withdrew, selling out to the national government.

These changes did not work to halt the continuous outward flow of the Sgriathanach. To the contrary, increasing integration with the national culture created new needs, such as a demand for a higher standard of living and an opportunity to achieve status, and provided the training necessary for the youth to find roles more suitable to their talents elsewhere in the world. The young men and women of Skye journeyed to the Lowlands to join the national labor force, to enter the professions, or to seek other permanent employment. Thus, emigration changed from a movement by families to a movement by individuals. At the same time, the benefits of the crofters' legislation and the program of government assistance made it possible for the

person who left in his youth to return in his old age. The new pattern of emigration not only resulted in a continuation of the persistent depopulation of the inland but also, with the return flow which counteracted emigration of the youth with immigration of the older people, led to striking changes in the age structure of the population. If the population pyramids for the years 1861, 1901, 1931, and 1951 are compared, the significance of the new pattern becomes apparent (see figure 4). The 1861 pyramid has a strong base, despite evictions and death. By 1901 the aging of the population was already marked. There were fewer people in all age groups, but a disproportionate increase in those over sixty-five. Females had joined the exodus. Partly as a result of the emigration of young adults, and partly as a consequence of a declining marriage rate and delayed marriage, the structure was growing top-heavy.

The pyramids for 1931 and 1951 are far from ideal. The differing movements of the population has resulted in a situation in which the society can no longer reproduce itself. Natural increase became a negative factor in the decade 1921-1930. Since then births have exceeded deaths in only one year, 1949. If the population is being maintained in part by the return of exiles, one must not only ask who leaves and why but also who returns and why.

An additional change within this period was the growth of Portree as a trade center and as an administrative "capital." The cycle of population, however, was erratic. In 1891 there were 1,003 people in the village, but in 1921 there were only 793.

Fig. 4. Population Pyramids for Skye: 1861, 1901, 1931, and 1951.
Source: Census of Scotland, 1861, 1901, 1931, and 1951.

In 1951 the population stood at 1,094. There has been a slight shift from the rural areas to the village, but it can hardly be regarded as significant. For one thing, the 1951 figure included an unknown number of workers on the hydro-electric scheme. Then, too, it included children from the Outer Isles who attend school in Portree, not to mention the very large number of newcomers, teachers, government employees, shop-keepers, management personnel in the stores and banks, and tradesmen, to give only a few examples.

The trend toward religious conservatism continued in the fourth period. During the closing years of the preceding period, the Free Church attempted to modify her theology and polity. The old trend toward relaxing the rigor of Presbyterianism, in accordance with the feelings of the other dissenting denominations in Scotland in order to pave the way for union, was reversed by the passing of a Declaratory Act which stated that the Free Church does not teach and does not regard the Confession of Faith as teaching the foreordination of men to death (eternal damnation) irrespective of their sin. Further, that while the Gospel is the ordinary means of salvation, it does not follow that all who die in infancy are lost. The elders, the lay kirk officers, of Skye protested violently.[88] It was psyey to make the Church the judge of spiritual affairs. More important, it threatened their prestige status, which had been sanctioned by the interpretation of the religious ethic. In several parishes the elders threatened to withdraw from

[88] The Free Presbyterian Church, History of the Free Presbyterian Church of Scotland, 1893-1933 (Glasgow: A. Adshead and Son, 1933), pp. 98-130.

The number of holdings which can be carved from the land in any one place and the proximity of these clusters of crofts to each other are determined to a large degree by the limiting influences of the environment. Landforms, climate, and soil have always restricted settlement to the coastal fringe and a few internal glens. Although the Sgriathanach has abandoned his former dependence on a subsistence economy, the original cultural adjustment, these natural features continue to exert a negative influence. Each man must have some arable land to provide winter feed for his cattle and to winter his sheep.

If the low-lying area is small and isolated, only a few holdings can be laid out. If the fertile area is large, the influence of the environment is less direct. In either case social and economic factors are important. The small isolated townships are invariably unsuccessful. A few, like Point of Sleat, are completely empty. Others are all but derelict. There is Kylerhea in Sleat where no children have been born in over fifteen years. Suisinish in Strath, a township well remembered from the days of the "Clearances," when a minister's sheep replaced the inhabitants, is now inhabited by an old man and his two elderly bachelor sons. All of these failing townships are at the end of a road. Whereas the minimum size was once four able-bodied men, the number in a plough team or a boat crew,[12] it is now three. This functional trio is indispensible for the care of a sheep stock large enough to be worth keeping. Even three families do seem to satisfy the social minimum.

[12] Ibid., pp. 1-2.

The maximum is harder to determine, economically. There is some limit to the number who can stock a common grazing with individually owned stock without becoming involved in complicated entanglements over right, obligations, and questions of ownership. The few townships containing more than thirty crofts in the Western Highlands (91 out of 957),[13] and the negligible number on Skye (only ten), suggests that less than thirty holdings per township, no matter how much fertile land surrounds the cluster, has been found to be the optimum. Most of the townships contain between five and twenty crofts. The fact that many large, adjacent townships, such as Bornesketaig in Kilmuir and all those in the Braes, are losing their population is a reflection of a many faceted condition we have been exploring throughout this chapter--the vast majority of the crofts are too small to provide an adequate livelihood. One of the primary causes for this state of affairs would seem to be overcrowding on the land.

Congestion. In almost all but the recently established or replanned townships, congestion is a legacy of the increase in population during the first century of the modern period, often aggravated by coerced subdivision during the period of the "Clearances." Because of this, over-all statistics have little meaning. It is quite correct to say there are some 2300 crofts on Skye and approximately 2200 crofters, but this does not mean each family has a croft to itself. To take

[13]Ibid., table 1.

extreme examples, Bornesketeig in Kilmuir consists of 47 crofts held by 35 crofters, but Aird in Sleat has 39 crofters who rent 20 crofts. In one badly subdivided township, Calligary in Sleat, one holding is held in the following shares: four men each have five-twenty-fourths, one has one-sixth, and one has ¼ part." The whole, indeed, is more than the sum of its parts. Moreover, townships with a balance of crofts and crofters, and even those with fewer crofters than crofts, often show the effects of subdivision. Another Kilmuir township, Herbusta, is laid out in eight holdings. Although there are an equal number of landholders, several of the crofts are divided into half shares. Then, there is Kilvaxter, also a Kilmuir township, with 11 tenants and 12 crofts; one man has three full shares while two others have only half a croft each. Multiple crofts are not necessarily adjacent. Some crofters hold land in two different townships. One of my informants rents two crofts separated by over twenty miles. On foot, it takes him two days to make the trip between his two holdings.

Subdivision, frequently carried to its ludicrous extreme, is not a problem confined to the Highlands of Scotland. All over Europe the traditional laws of succession have had a similar result. In consequence, the governments of all European countries have been striving to initiate reform. Generally, the aim has been to consolidate scattered patches, but almost always the schemes have become more comprehensive, attempting to create economic farms and increase productivity. Since the

where the population has suffered the greatest decline and, therefore, where enlargements, by legal or illegal means, have been the most extensive, crop production has declined the most. Nor has the decline in population, accompanied by land redistribution, altered the fundamental problem.

The cotters (subtenants) have almost disappeared thereby easing the excessive pressure on the land and removing the threat of recurring destitution. Today they are found only in a few scattered dwellings and isolated clusters. Most of them have secured some form of employment or have reached the age when a government pension is sufficient to satisfy their needs. The number of crofters, on the other hand, has increased. If the figures 2043 and 1227 can be accepted as nearly correct for the respective numbers of crofters and cotters in 1886,[15] they have increased at the expense of the latter and, also, the sheep farmer, whom they have replaced.

To briefly summarize the foregoing discussion of the township, let us look at Kilmuir. Table 3 shows the number of crofts and crofters in each of the nine townships together with the acreage and "souming" rights available to each individual. Although replanning during the past fifty years has benefited many of the local residents, crowding upon the land is still apparent.

[15]L. MacDonald, The Past and Present Position of the Skye Crofters, sheets 6, 17.

TABLE 3

CROFTS, CROFTERS, ARABLE ACREAGE, AND SOUMING RIGHTS IN THE KILMUIR TOWNSHIPS

Township	Crofts	Crofters	Arable Acres[a]	Common Grazing	Souming
Bornesketeig	47	35	4	273	2 cows, 1 calf, 12 sheep
Hunglladder	14	9	5	236	2 cows, 1 calf, 10 sheep
Balgown	4	5	13, 14, 32, 46, [illegible]	177	4 cows, 4 calves 26 sheep
Kilvaxter	12	11	27	...b	4 cows, 4 calves 26 sheep
Linicro	19	17	15	729	5 cows, 5 calves 40 sheep 1 horse
Peingown	3	4	18	187	7 cows, 7 calves 20 sheep 1 horse
Herbusta	8	8	12	308	3 cows, 3 calves 26 sheep 1 horse
Totescore	12	13	21	500	3 cows, 3 calves 20 sheep 1 horse
Monkstadt	3	3	27, 27, 5	420	9 cows, 9 calves 40 sheep 2 horses

[a]Arable acres are given in average acres per holding, unless otherwise indicated. Except in Bornesketeig and Hunglladder, arable land includes outrun, improved pasture land individually held.

[b]Shared with Kilvaxter.

arduous is difficult to determine. In the winter of 1953, I helped a small crofter thrash oats, a cooperative enterprise even with a mechanical thresher, supplied by the Department of Agriculture. The neighbors who came over to lend a hand were two men and three women. The youngest woman would never see fifty again; her seniors were seventy-seven and seventy-eight. The youngest man, who had just been married, was sixty-three; the other seventy-three. These crofters not only showed more endurance than I did, but put me to shame by carrying the sacks of grain from the field to the byre at the end of the day. Nevertheless, most of those over seventy, about 15 percent of the population, do not make use of the land for more than growing a few potatoes. An old man cannot keep a cow because, as one man said, "You can't have a cow unless you have a woman to milk it." If he is married or lives with a sister, there may be a cow and a couple of sheep. An old woman may have her cow and sheep if she is strong enough. There comes a time, however, when all the old people will only remember the work involved. Still, they will say, "Och, but they were good for all that."

Absentee tenants are responsible for depopulation on the one hand and felling production on the other. A reasonable estimate would be 300. Their number could be as high as 400. Some townships have over 50 percent of the crofters absentee. The only townships which do not have this problem are the few which contain large crofts. On one small estate there are seventy-six crofts, held by seventy-two crofters. Only thirty

of the holders reside on their land for more than half the year. The lowest rate of absenteeism is found among the tenants of the Department of Agriculture. There are 76 absentees out of a total of 667 tenants. Most of the non-resident crofters are permanently absent. On the small estate mentioned above, thirty-seven of the forty-two absentees have not been seen in years. Five of them usually return to Skye to spend their summer vacation.

Thus, we have a situation in which, perhaps, a third of the crofts are held by people who either cannot work them because of old age or infirmity, or do not choose to work them because of greater opportunities elsewhere. What, then, happens to this land? Some of the old people allow a neighbor to use the land. Almost invariably this means the few fertile acres will be used for grass and hay. Absentees "entrust" the croft, house and land, to a landless family. While Parliament inadvertently gave the crofter a right to keep his holding whether he resided on it or not, it is illegal to sublet. So far, this has not concerned the crofters. Other absentees "entrust" the land to someone in the township who uses it for grass.

Turning to the influence of old age and absenteeism on stocking, we find a series of entanglements. If the township is inhabited solely by old people, like Aird in Sleat, the township becomes derelict. More commonly, the absentee and the old person allows someone else to take over his "souming" so that some crofters have far more than their share. Not infrequently, this gives the crofter a chance to outwit that

ship size is variable. There is a complete range from 361
township with a single inhabited croft and a population of 621
e, an old man and his two sons, to one with fifty crofts, 162
by thirty-two families, and a population of almost eighty.
townships contain between six and twenty crofts.

The crofts are set out in long, parallel strips, typi-
y, at right angles to the coast, or, if the township is in
en, across the glen. In the older townships, the houses
to be built at one end of the strip on the least pro-
ive land. The byre, if there is one, stands at the rear
ither side of the house. Exposure or road access have not
ys been determining factors. Most frequently, it would seem,
nment along a road is present only because the county govern-
has built a road into the township. Only in the more modern
ships, those planned or re-organized within the last fifty
s, have the crofters tended to build near the road. Several
he townships lack any apparent orientation. The houses are
tered up and down the lower slopes of the hills which rise
e the cultivated land.

Wherever the configuration of the land and the environ-
al factors of soil and rainfall permit large settlements,
e is a grouping of townships into the pattern of the British
country neighborhood or the French line village.[14]
tered among the crofts, without any nucleus of community 366
dings, there are, usually, a school, one or two churches, 368

is and Beegle, op. cit., pp. 229-231, 234-237.

361 one or more country stores, a few workshops, and a post office.
621 Kilmuir will serve as an example of these larger settlements.
366
368 Along the shore of Loch Snizort, on the peninsula of
361 Trotternish, there is a broad, fertile plain. Including old
621 Loch Chaluim Chille, there are approximately ten square miles
311 of good land. Although the soil is not cultivated as intensive-
ly as in the days when Kilmuir was "the granary of Skye,"
this is regarded as the best agricultural region on the island.
162 In all there are 122 crofts, held by 105 crofters, in 9 town-
ships. There are also two small farms. The population is
slightly over 300.

361 The crofters' cottages are loosely strung around the
621 old loch and across the plain in an irregular "Y" shaped
pattern (Figure 3). Basically the pattern resembles the
French line village, but there are several features remi-
361 niscent of the British open country neighborhood. Most of
621 the cottages, it would seem, were originally built on the
491 landward fringe of the plain and along the shore of a small
bay, known as Camus Mor, without any regard for road access.
179 In recent years, increasing dependence on motor transport
has led to demands for roads. Now almost all the crofters,
except those in Bornesketaig, have a paved road running
by their door. About a third of the houses are on the county
road which encircles the peninsula and links Kilmuir with
the outside world via Portree.

621 In the center of Kilmuir, in the township of Balgown,
368 stand two spireless churches, a church hall, a two room school,

tradesmen are respected, but since most are crofters, they are 554
treated like all other men.

The Village. The village contains a heterogeneous population. 621
At least a third of the families have arrived in the recent 162
past. They have come to fill positions in the county and 187
national government offices; in Lowland directed banks or
business houses which have extended their field of operations
to Skye; and in the professions as doctors, lawyers, ministers,
and schoolteachers. A few have come to Skye to open a shop or
offer their services as tradesmen. The remainder are either
Skye folk who have recently moved into the village to see
employment or families that have been in Portree for one or
more generations. Very few families seem to have lived in
the village for more than three generations.

While there are many opportunities for an individual to 554
achieve status in Portree, the cultural heritage and the 189
economic limitations under which the Sgiathanach labors has
not allowed him to compete with the newcomers. His ability
to compete is further restricted by the prevailing policy of
the government and the national corporations to bring in
managerial and, often, clerical personnel from the outside.
All share one socio-economic trait; they are non-crofting. As 565
yet there is no class structure beyond the polarity of the
landed gentry and the crofters who participate in village life.
There is verticality. Highest prestige status is accorded to
those who have been accepted among the local aristocracy. Be-
low them rank the ministers, doctors, and school teachers.

to the health of the potato and their own fertility.[40] Many men turned to fishing, on a part-time basis, but once again the initial success was short-lived. Others supplemented their diminishing incomes from the croft by seasonal employment in the Lowlands. Crofting had ceased to be a subsistence economy; the people had lost their self-sufficiency. Nor were they ever again able to escape from a dependence on some form of supplementary income to provide the bare essentials of life. The difference between conditions then and now is that the pressure of the population on the means of subsistence increased until it approached a Malthusian ceiling.

In the thirties epidemic and famine began to take their toll. Destitution became widespread and there was no system of relief beyond the moral obligation of the proprietors to provide grain. The marriage rate fell. In Kilmuir the average annual number of marriages fell from twenty-one to six. Subdivision was forbidden, but it was too late. In two districts of Kilmuir there were 190 lots, crofts, and farms to support 421 families in 1840. In all of Skye, after the emigration of at least 1500 people, there were 1900 crofters and 1531 cottars. Despite the fact that oats had become as big a luxury as meat and the fact that many were living on potatoes and fish, the population continued to increase. By 1841 it reached 23,074. Finally, the economic structure collapsed.

In the autumn of 1846 there were no potatoes. A blight destroyed the entire crop. Although the famine was universal

[40] For details concerning the plight of the crofters at this time, see NSA, pp. 218-360.

eighty cottars in four townships were replaced by two shepherds brought in from the mainland.[57]

As the interests of the proprietors and their tacksmen had clashed at an earlier time, those of the landlords and their tenantry were now irreconcilably opposed. The appearance of the latifundia in England has been described as being characterized by absentee landlords, pastoralism, and a decline in the rural population through death and migration.[58] A process which had begun three centuries earlier in England and which had reached the Scottish Borders two centuries earlier had at last become operative on Skye. Let us examine the effects of full scale commercialization on the Skyemen.

The effects are evident. Commercialization and the evictions, which were a necessary counterpart, prompted emigration and confined the people within narrow limits, often, on inferior land.[59] By 1865 it was possible to describe Sleat as a quiet pastoral land, desolate and deserted.[60] The people had been pushed into a few isolated, badly subdivided townships. In Bracadale, the first parish to be fully commercialized, there were once thirty-six runrig farms; in 1882 there were six large grazing farms.[61] The bulk of the population, 922, were

squatters without any legal hold on the land. In Duirinish parish, which includes Glendale, only twenty-one families had enough land to meet even subsistence needs.[62] In one Glendale township, Holmisdale, some crofts of ftut en acres had as many as fifteen people to support.[63] Part of this extreme congestion was due to the continued practice of subdividing one's croft when a child married. Although the population in 1881 had fallen to 17,680, from 23,084 in 1841, almost every township had two or three times the number of families which had lived in them in 1841.[64]

The loss of the summer shielings and the common grazings meant few could keep sheep.[65] The looms were silent. Since the rent continued to be based on the value of livestock and was wholly or partially paid from the sale of cattle, all oats, which the graziers' sheep did not eat, went to feed the cattle. The mills were all but idle. The people had to buy flour, meal, and bread imported from Glasgow. Almost all were heavily in debt to the local merchants, who seem to have been newcomers with more associations with the graziers than the crofters and cottars. Milk became a precious commodity. Frequently, the old cow had only enough for her calf. Unable to keep horses, the women became beasts of burden. They carried

[65] The following is drawn from the evidence presented to the Napier Commission by the crofters and cottars of Skye; see Napier Report, Appendix 1, pp. 1-82.

228 162 Throughout the present century, the commercial importance of fishing, judged on the basis of income, numbers of crofter-fishermen, and boats, has steadily declined. The number of crofter-fishermen has decreased at a faster rate than the decline in population. In recent years its significance as a part-time chore has also been reduced. Wage labor has replaced fishing in the economic pattern. In 1900 there were 1,015 crofter-fishermen with 485 boats.[22] While the number of fishermen rose to 1,039 in 1905, from then until now their number has fallen steadily. In 1953 there were 237 crofter-fishermen with 120 boats. Despite higher prices, the value of fish 228 [133] landed on the island is one-third that of 1900. In 1952 the total contribution of fishing to the local economy was £10,091. This is in marked contrast to the Outer Hebrides where fishing [242] brings in more money than crofting.[23] Fish have, of course, remained essential in the diet. All the crofters have their barrel of salt herring, purchased from mainland curers. Their own fish is usually sold for fish meal.

All who have considered the "Highland Problem" have stressed the need for some form of secondary employment to support the economy. Fishing has enjoyed great popularity as a recommended industry. This is due to the long tradition and the importance of fishing in the Outer Isles.[24] There are several pitfalls in the program as far as Skye is concerned.

313 point cultural considerations enter. The land is often esse
to the continued existence of the farm or the crofting towns
In Sleat, for example, the land which the Forestry Commissio
has listed as commercially valuable is the lower, sheltered
313 824 grazings of several farms and crofting townships. Finally,
is the people's dislike of trees. Many a Sgiathanach in Por
is distressed by the plans to cover Glen Sligihan with a fore
They share the attitude of a man from Soay, a small island a
short distance off the west coast of Skye, near Glen Brittle,
who was being moved to the Isle of Mull by the Department of
Agriculture when Soay was evacuated at the crofters' request.
"Och, its all right down there, but you can't see the sky un-
less you bend over like this," he said bending over double a
looking over his shoulder.

464 [162] We have now accounted for, at the most, 120 men and 20
women who work for wages and 238 crofter-fishermen. Excludi
the latter, there are over 1000 men and almost 500 women who
are employed locally at sometime during the year.[32] With only
a few remaining isolated industries, such as the small silic
sand quarry at Ord in Sleat and the infrequently used limest
and marble deposits at Broadford in Strath, most of the oppo
for employment have to be in services for women and laboring
for men.

462 401 Let us consider the occupations of women. Over half a
employed as resident domestic servants or as help in hotels
restaurants. Ten percent find work in the local shops as cl

Labor in Scotland, Portree and Edinburgh.

eginning with a population which is believed to have been 161
elatively stable due to recurrent crises, including epidemics,
amines, and wars, the pendulum of population growth and decline
or the Sgiathanach has been found to be highly responsive
o cultural innovations and social adjustments. Between 1750
nd 1841 the Skyemen increased in numbers from 10,671 to 23,074,
n increase of more than 100 percent. From 1851 to 1951 the
opulation has steadily decreased from 22,536 to 8,603, a
ecrease of 62 percent from maximum. Associated with the 161
ecline were changes in the age structure. In 1861 34 percent 162
f the population was under fifteen and only seven percent
as over sixty-five; today only 22 percent of the population
s under fifteen while 19 percent is over sixty-five. How
an we account for these changes, or, more correctly, how
an we account for the changes in the birth, death, and emi-
ration rates?

Broadly speaking, the increase was favored by the direct 161
nd indirect involvement of the Sgiathanach in the process 175
f commercialization, with all of its associated consequences. 178
ne by one, the natural checks on population growth declined
n importance. The pressure on the means of subsistence was
ased. The former clan chiefs, preferring the society of
dinburgh and London, absented themselves. After converting 161
ents from kind to money, they provoked the withdrawal of the 175
acksmen by resorting to rackrenting. The former clansmen, 178
hc became joint-tenants, received a larger share in the land 427
nd were freed from the obligation of feeding both their own
amilies and those of the superiors. At the same time the

ts, and newcomers who carry with them ideas of reform. 621
r, as well as being mutually dependent commercially, the
rs and the villagers interact formally and informally
ial, political, and, especially, religious activities.
nsciousness of common interest of the villagers, however, 621 186
more from a knowledge that they are different from the
rs than from any common symbol. The 1000 villagers [162] ●
om diverse backgrounds. They find solidarity in being
ent rather than in "neighboring" or all attending the
hurch. The village also lacks the time depth of the
settlements, being a creation of an individual in the
entury.

For community I prefer an inclusive definition on the 631
of Redfield's.[8] A community is characterized by con-
nal understandings, the occupation of a territory, and
ssession of a culture. Thus, we shall refer to the
f Skye as the community.

It will be noted that I have not used the term parish. 632 799
gh the parish was once important politically and religiously, 178
older baronies were replaced, it lost these functions
9.[9] People reside within parishes and they, along with
crops and stock, are enumerated by parishes, but the
is now little more than a statistical convenience. Church
zation and political administrative units cross-cut
erride parish boundaries. Indeed, I doubt if the people [186]
hought of themselves as members of a parish.

[8]Redfield, The Folk Culture of Yucatan, pp. 15-16.

offer help without an expectation of payment. Nevertheless, 794
anonymous donations of food and casual visits make sure that 573
none of their number becomes absolutely destitute. In Glendale
this religious clique merges with the person's "people and
friends." Kilmuir has two religious cliques.

We have had ample opportunity to examine the age-grades 561
of Skye's society and in the next chapter we shall have a
closer look at the functions of the age-grades, especially
that of the old men. One of the most important weaknesses 857
of the social structure, in my mind, is the lack of age mates 883
for children and adolescents. They find it difficult, almost 561
impossible, to come together as a sodality. In Kilmuir, for
example, there are only fifteen boys under twenty in an area
of ten square miles. A youth is anyone under forty. Of the [162] ●
total population 60 percent are over fifty. For this reason 561
the important age grade clique tends to merge with the re- 794
ligious social circle. The situation is much the same in
Glendale. There the age-grade and kinship groups are inter-
twined with the kirk congregation.

Status Equality within the Neighborhood. The fundamental 621
status equality which we found for the crofters within the 534
township carries over to the neighborhood, but, as would be 571
expected, there is often a need for leadership in this larger
group. Let us look at the two neighborhoods which I know best
to cast light on the methods employed in the self-selection of
a leader and the means of expressing leadership as a role.
Kilmuir has a Crofters' Club, which was originally formed by 573

121 share similar social attitudes and a distinctive way of
life.[27] The investigator can understand the society with
greater ease once he can equate the differing cultural e
pressions with the sense of status.

554 Ascribed status continues to be important in Portre
621 at least in stratifying the old Skye families. On the fr
of the village there are a few part-time crofters or trad
who keep some stock and grow a little grain and few potat
[573] these men and their families as well as the crofters from
hinterland find their place in the village society throug
clique groups, in particular those based upon kinship and
"friendship." Several of the county families reside in t
village and, with the landed gentry who continue to live
their estates, take an active part in village life.

463 Between the two poles there is a large intermediate
621 group. Their occupations range from the professions, in-
564 cluding doctors, ministers, teachers, and lawyers; throug
● 162 employees of the national and county gouvernments, includ
estate factors, policemen, office managers, and clerks; t
shopkeepers, tradesmen, truck drivers, and laborers. Els
where in Great Britain these people would fall into the m
and working classes.[28] On Skye such stratification is un-
121 important. If we cannot use the British scheme, we certa
cannot employ the American system developed by Warner.[29]

[27]Cf. MacIver, op. cit., pp. 166-167.

[28]Cf. Lewis and Maude, The English Middle Classes.

[29]W. Lloyd Warner and Paul S.Lunt, The Social Life Modern Community (New Haven: Yale University Press, 1941) The Status System of Modern Community (New Haven: Yale Un Press, 1941).

565 many newcomers and the high rates of inward, outward, and upward mobility seems to have worked against any clear cut pattern. Certainly, it requires more than non-membership in the highest and lowest classes or socially recognized strata to form a middle class. I look upon this indefinable strata as a neo-class. This is not meant to imply the absence of ranking or prestige status. Ranking is no less important than it is in the rural neighborhood.

162 559 463 183 As in the neighborhood, a few professions automatically carry high prestige; these are the ministry, medicine, and teaching. Otherwise, a man's prestige depends more on his outside activities than his occupation. Bankers are often thought of as having prestige. In Portree one banker is highly regarded because "he does an awful lot for the church." Another, although respected, as evidenced by the use of his surname when referring to him, is socially inferior because "he never mixes with people" and "no one ever gets invited to his house." The same holds for other occupations. One man may be looked up to because he has taken an active part in organizing an old people's welfare committee and was instrumental in founding the Skye Council of Social Service, the only rural social service council in Scotland. Another of the same occupation is looked down upon because he keeps to himself. To cast a shadow on whatever prestige he may have, the people talk about a shady deal in which he supposedly got involved and claim that his wife sells eggs. No one but a crofter's wife sells eggs. If a man is a native Sgiathanach

162 559 463 183 his occupation matters very little. Unlike the Welsh,[35] the Sgiathanach does not particularly look up to the man who prospers. Indeed, the people are more than likely to [564] attribute his success to dishonesty or find fault with his character. I shall have more to say about this when we consider the topic of gossip.

463 573 At the same time, occupation is a factor in the formation of cliques. The school teachers form one clique which has tended to become more and more exclusive in recent years. The shop keepers also have their small clique. Once a year they have a dance at the Royal Hotel. Within both social circles there are, of course, special groups [561] of friends who associate regularly. Age grades provide another basis for clique formation. Clerks, shop assistants, and employees of the government are divided on this basis. Since it is government and, apparently, business and banking house policy to use theremote rural areas for a training ground and to make promotions, most of the newcomers and local residents who work for these agencies are young men.

[621] Neither occupation nor age-grades are exclusive factors in determining the social structure of Portree as they are for the crofters. If they were, I could not support the assertion that there is fluidity among the village population.

575 There are several clubs and fraternal organizations, such as a drama society, the Women's Rural Institute, An Comun

[35] Rees, op. cit., p. 127.

Iain the Basher

Hard-drinking and with a bitterness that seems ready to erupt in hostility at any moment, Iain "the Basher" at the age of 70 has enough painful memories locked inside his rawhide-covered heart to interfere with any normal bloodstream. He left the island for the United States on the ship Metagama, but returned during the depression. "I remember a night in New York. It was so hot your feet fried in your shoes. I was walking barefoot, carrying my shoes in my hands. A cat screamed in an alley. I heaved a shoe into the shadows and hit a man who was standing there. He started chasing me, throwing bottles so that they broke in front of me. I had to run through the broken glass in my bare feet. He finally stopped chasing me, but I had to go back--the bloody shoe was still in the alley. He was standing there with some of his chums talking to a policeman. I told them what happened, that I had thrown the shoe at a cat and accidentally hit the man. 'You didn't hit him hard enough,' said the policeman, 'You didn't hit him bloody hard enough.'"

Iain married twice and had several children, all of whom after his wives' deaths were raised by his sister, who never married. He was drunk the night his first wife died in childbirth. His second wife died of cancer, and soon afterwards he set fire to his house. The insurance company

175* 181

in the exercises of swimming, archery, vaulting, or leaping'. He also says that they were great lovers of music, and that when he was in the island he heard of eighteen men who could play the violin well without having been taught. [533] [534]

The Rev William MacRae, minister of Barvas, writing in the *New Statistical Account*, gives a description of his parishioners (in 1836) which can be applied to all the country districts in the island at that time. After stating that in their habits much cleanliness can scarcely be expected, considering their poverty and the wretchedness of their habitations, he says: [515]

> Their mode of living most closely approaches the pastoral: without arts, trade, manufacture, navigation, or literature, their whole round of duty consists in securing fuel, in sowing and reaping their scanty crops, and in rearing their flocks, and tending them at pasture. Yet in these limited circumstances, while supplied with food and clothing of the plainest description, and able to pay their rents, their simple cottages are abodes of happiness and contentment. Blue kelt [a thick cloth] is almost the only dress worn by the men, and stuffs, variously striped, by the women, with under dresses of plaiding, all home-made. In many instances, however, cotton shirts and print gowns are beginning to supersede the use of some of these articles . . . Their ordinary food consists of oat and barley meal, potatoes and milk variously prepared. Their domestic economy is frugal and moderate beyond conception. The produce of a foreign soil such as tea, coffee, and sugar, and the common conveniences of art, such as knives, forks, and etc., are to them altogether alien. [291] [262]

It is of interest that the change in dress-types (from woollen homespuns to cotton fabrics) was followed by an increase in the incidence of rheumatism. [164] •

Today, the island folk are reputed to be gloomy with a black, depressive attitude towards life. The editor of the *Stornoway Gazette* has pointed out: 'We cannot understand a people and why they act as they do unless we know the content of their memories. We cannot understand the paradox of the naturally gay in heart seeking religious consolation in a grim and gritty Calvinism. We cannot understand why Lewis, which clothes the world in colourful tweeds, clothes most of the women in noth- 181

ing, 73 per cent have the language, which has been introduced by immigrant country folk and their descendants. 197

HEALTH AND HOUSING

Despite the harsh conditions of centuries, the physical health of the island was good in early times. Epidemics were rare due to isolation, though on occasion smallpox carried away many children. The commonest diseases were fevers, jaundice, dysentery and diarrhoea. Bloodletting (as in many another more advanced community) was the usual cure for fevers and dysentery. For coughs the people took a 'brochan' or soup of roots of nettles and reeds boiled in water with yeast; the meal of a black bean, mixed with boiled milk, was a useful cure for dysentery. Reports describe the folk as being well-proportioned, free from bodily imperfections and of good stature; healthful and strong-bodied. 175* 164 175* 157 175* 142

But privations, particularly the frequent recurrences of near-famine, coupled with the primitive housing conditions, began to take their toll. The increasing sickness rate aroused the concern of authority. The most primitive dwellings had but one room, with the cattle at one end and the family at the other: In 1830 Seaforth sought at least to put an end to this, ordering that a partition must be erected between beast and man, 'and that more light should be admitted into the dark recesses of their habitation'. This type of one-room dwelling was not confined to the island, being found with many variants throughout the Highlands and Islands area. The old Lewis house was, as a rule, an oblong structure, varying in length according to the means and requirements of the occupier. It had but one door, and frequently had no windows. Chimneys did not find favour, mainly because any opening for the escape of smoke from the centrally-sited hearth tended to reduce the quality of soot produced; and soot was regarded as a valuable manurial product. If there was a hole in the roof to admit some light, a small pane of glass was fixed into it: this soon had a coating of soot, and the sole source of light was the doorway—when the door was open. The family and the cattle used the same entrance; and the cows' dung was removed once a year in the springtime. 175* 164 175* 342 [231] [184] [354] [241] [231]

*175 342 In 1899, the Medical Officer of Health for the Parish of Barvas described the typical Lewis crofter's house of the time. It had three apartments, two for the family, and a third for the cattle; this new arrangement was the result of the Regulations issued by Sir James Matheson for the betterment of the estate. The low thick walls were built of stone, or stone and turf, with a packing of loose earth, and were perennially damp. The roof, composed of a framework of wooden rafters and couples resting on the inner edge of these walls, was covered over with turf divots and straw, bound with ropes of straw, heather or coarse thatching rope, and weighted down with stones. It was never air- or water-tight, and roof water usually soaked into the packing of the walls and thus oozed into the house. Further, only the slightest attention was given to situation and drainage. The floor of the dwelling apartment was composed of a pavement of rough stones covered over with clay—and a cold damp floor it was. The cattle apartment had no pavement, so that the manure liquids and slop water percolated into the ground and at times found their way into neighbouring dwelling houses and even into the drinking wells. Many of the houses were built back-to-back and sometimes in rows three deep. Lighting was deficient and the windows, fixed either in walls or roof, were not made to open. [333] [231]

*175 342 354 Some houses had round portholes in the roof at the top of the wall which might be opened or closed at pleasure; these served for lighting and ventilation at the byre end of the house, though occasionally they were present also at the living end. Draughts coming in through the roof and walls, and the blazing peat fire in the centre of the middle apartment, helped to keep the air in motion, but the smoke from the fire frequently filled the upper portions of the room and, there still being no chimney or other outlet as a rule, it pervaded the whole atmosphere of the house.

*175 342 From a sanitary point of view such houses had the gravest of defects: it amazed visiting doctors that infectious diseases were ever absent. Yet generally the inmates compared well in physique, general well-being and immunity from serious disease with those more favourably situated. Tuberculosis was the most prevalent enemy. • [164]

[427] [144] In 1879, improving leases were offered to those who were will-

[TEXT CONTINUED ON PAGE 145]

ing to put their houses into better condition. The leases required, *inter alia*, that the thatch was not to be stripped off or removed for manurial purposes; that the byre was to be a separate building; and that the dung was to be removed regularly to a distant dung-heap. A Sanitary Inspector's Report for 1896 noted that the new houses being erected were following the old traditional patterns. And though the introduction of statutory requirements did bring real improvements, as late as 1902 it was reported: 'The insanitary houses and the impure water to which the people have long been accustomed, would lead an enquirer to expect a high death-rate. That is not so, however. The island is occasionally visited by epidemics of measles, or whooping-cough, like other parts of the country; and there are sometimes outbreaks of dung-fever—a preventable malady—but altogether the general health is good."

The Sanitary Inspector's Report for 1898 described certain water supplies in the island as 'little better than cesspools for surface soakings'. And five years earlier the water supply of Cromore was 'merely a few holes dug out amongst the arable land next to the houses; and polluted with the manure dissoved off their arable ground; and in some cases contaminated with liquid sewage percolating through the soil from their houses.' In 1893 an outbreak of typhoid fever in some townships in Uig was traced to the contaminated stream whose water was used as a drinking-water supply. Improvements in the water supplies were eventually put into effect, with a marked decrease in the ailments which the people had come to expect as normal to their way of life.

The rate of infant mortality was high. The weaklings died young. Only the strong survived to withstand the insanitary surroundings. A peculiar form of disease was associated with the island: it seized a child about the fifth night after its birth and was consequently called the 'fifth night's sickness'. According to medical opinion this was infant lockjaw *(tetanus neonatorum)*. The doctor of Lochs in 1892 reported that it was common among the infants of his parish, being 'most frequently met with in those dwelling houses where sanitation in its most rudimentary form is entirely ignored; where we have to walk to the fireplace in the

centre of the mud floor through tons and tons of decomposing organic matter or manure.'

The island, for all its ills and chills, had a high birth-rate and a low death-rate. Martin Martin (1695) declared: 'It is a general observation of such as live on the sea coast that they are more prolific than any other people whatsoever.' In some areas of the island the birth-rate was as high as 35 per cent with a death-rate of about 12 per cent. The longevity of the islanders is well known, a fact confirmed by a glance any week at the Deaths columns of the *Stornoway Gazette*, regularly recording the decease of octogenarians, nonagenarians and some reaching their century.

In 1795 the island had only one surgeon. In Stornoway, 'Inoculation is performed here with success by the skill and attention of Mr Robert Millar, Surgeon.' Later, another doctor came to Stornoway, who attended to the sick in all parts of the island. By the turn of the century there were resident medical officers in each parish, with five doctors in practice in Stornoway.

Just after the turn of the century, there was a medical club in the north of Harris. This had been formed by the proprietor, Sir Samuel Scott, whose crofters were supposed to pay 5s per annum and cottars 2s 6d; this subscription covered dependents. In return, Scott guaranteed the salary of a medical officer, thus securing the services of a resident doctor in the district. But there was apparently considerable reluctance to call a doctor, whether the patient belonged to the club or not. The salary of the district Medical Officer of Health was £35 per annum, and from the North Harris Club he received some £200. Scott also provided him with a home. Dr Fletcher reported in 1906 that a complete change had taken place in the diet of the people within the memory of the older inhabitants, whose accounts of what they called new diseases and lowered virility he found very interesting. Good, plain wholesome diet 'has been replaced by cheap stuff, of questionable quality and purity. To this change there is another nondescript article which goes by the name of tea, in the use, or rather abuse, of which they are quite intemperate and from which they extract the last dregs by boiling. The result is disastrous to the strongest digestive system.'

In 1892 'a well-equipped medical and surgical hospital was

an urgent necessity for the island of Lewis', and a committee was appointed to collect funds, the subscription list being headed by Lady Matheson; for a period of three years donations flowed in from all parts of the world. The Lewis cottage hospital was opened on 1 February 1896, starting with only fifteen beds; the number was increased to twenty in 1915. An extension was opened in 1925, and the hospital was provided with a surgeon and an ambulance. Another extension in 1929 was the result of a gift of £3,000 from Mr John Bain, of Chicago, a Lewis son who was President of no less than fourteen banks in the Mid-West. The Lewis Sanatorium was started in 1926.

Tuberculosis was at one time in the island's history a disease that caused many deaths and much sorrow. About 1930 an Assistant Medical Officer of Health was appointed, Dr R. Stevenson Doig (who died in 1965), who spent his career-life in Lewis stamping out what was called in the island the 'white scourge'; he lived long enough to see the introduction of preventive medicine and the decline of the killing and crippling diseases he found on his first years in Lewis.

In dental health, progress has, as in so many areas, been reversed. At one time the island teeth were so well known for their strength and beauty that a film was made by the Army for showing to audiences considered in need of dental-health education. In 1966 the picture had changed: a survey revealed that 95 per cent of Lewis children were in need of dental treatment. The mainland addiction to sugary foods has spread.

As distinct from the island's general medical services, centred on Stornoway, the psychiatric services are based at Inverness. What was formerly the Inverness District Asylum, now called Craig Dunain Hospital, is the only mental hospital in the Highlands area, with a few long-term beds in the Institution at Lochmaddy; the general hospital at Stornoway conducts monthly out-patient clinics. Over the area served, the rate of admission to Craig Dunain Hospital is around 3·3 persons per 1,000 of population, compared with a figure of 4·68 for Scotland as a whole, 5·5 for Lewis and 2 for Harris.

The drink problem and Lewis's relatively high rate of admissions to mental hospital both stem from the background of the

Additional modifications have been found in the division 179 182
labor. Although no Skyeman has shown a disposition to assume [162]
sponsibility for domestic work, unless he lives alone, the
men of Skye are expected to function in roles which once were
lled exclusively by men. Old men and women for many years [561]
w have continued to perform tasks which formerly were their
ties as youths and young adults. These changes, like those
have reviewed, are partially traceable to an incomplete
justment to the contractual, commercial world. This has led [162]
striking alterations in the age structure of the population
r it is the youth who forsake the island and the aged who
arn to return. Nevertheless, there have been no observable [554]
anges in the status system of the rural neighborhoods.
imitive democracy, distinguished from our form of democracy 621 554
the principle of unanimous consent rather than majority rule, 182
ntinues to operate in the townships. The existence of such
institution implies a maximum of equality co-existing with
minimum of authority. The continued ability of the crofters
maintain primitive democracy in a nation like Great Britain
possible only because there is a high degree of social
tegration. The simple system of ranking, on the basis of [561]
e and sex, has persisted. Men are the social superiors of [562]
men; old men are the social superiors of their juniors. I
lieve we shall understand how continuity of status has been
eserved if we turn to a consideration of the role of religion
the island.

If I am right in asserting that a belief in clan brother- 178 182
od was an all pervading cultural pattern in bygone days and 614

The island, for all its ills and chills, had a high birth-rate and *175 a low death-rate. Martin Martin (1695) declared: 'It is a general • 163 observation of such as live on the sea coast that they are more 165 prolific than any other people whatsoever.' In some areas of the island the birth-rate was as high as 35 per cent with a death-rate of about 12 per cent. The longevity of the islanders is well known, a fact confirmed by a glance any week at the Deaths columns of the *Stornoway Gazette*, regularly recording the decease of octogenarians, nonagenarians and some reaching their century.

*175 In 1795 the island had only one surgeon. In Stornoway, 'In- 759 oculation is performed here with success by the skill and atten- [951] tion of Mr Robert Millar, Surgeon.' Later, another doctor came to Stornoway, who attended to the sick in all parts of the island. By the turn of the century there were resident medical officers in each parish, with five doctors in practice in Stornoway.

*175 Just after the turn of the century, there was a medical club 759 in the north of Harris. This had been formed by the proprietor, 743 Sir Samuel Scott, whose crofters were supposed to pay 5s per annum and cottars 2s 6d; this subscription covered dependents. In return, Scott guaranteed the salary of a medical officer, thus securing the services of a resident doctor in the district. But there was apparently considerable reluctance to call a doctor, whether *175 the patient belonged to the club or not. The salary of the district 759 Medical Officer of Health was £35 per annum, and from the 485 North Harris Club he received some £200. Scott also provided 178 him with a home. Dr Fletcher reported in 1906 that a complete 262 change had taken place in the diet of the people within the memory of the older inhabitants, whose accounts of what they called new diseases and lowered virility he found very interesting. Good, plain wholesome diet 'has been replaced by cheap stuff, of [272] questionable quality and purity. To this change there is another nondescript article which goes by the name of tea, in the use, or rather abuse, of which they are quite intemperate and from which they extract the last dregs by boiling. The result is disastrous to the strongest digestive system.'

*175 743 In 1892 'a well-equipped medical and surgical hospital was

632 361 strips running across the slope, which are interchanged each year, whilst a large part of 427 the common grazing lands are divided into interchangeable sections ("quarters") to 311 accommodate each of the groups of crofts. See Figures 22 and 23. 233

The cultivable croftland at Kneep is relatively flat and the natural drainage is poorly 132 developed; the quality of this land, depends to a very great extent on the upkeep of a dyke [312] running across the croftland from a small marshy loch to the sea. This dyke has not been cleaned for several years, and as a result a large area has been invaded by reeds. Other parts of the croftland have been similarly overrun by 'wild rhubarb'. Such deterioration is almost inevitable when land is so fragmented.

The crofts at Reef are grouped in three separate localities. Crofts 1, 2 and 3, on the edge of the machair have probably never been occupied since the crofts were allotted in 1921 and are now used only for grazing. The main body of the crofts (nos. 3 - 13) face south - they are more compact than those in Valtos and Reef, but they vary in size from 2.9 to 13.25 acres and their boundaries are irregular in shape. Two crofts (14 and 15) are separated from the main parts of Reef: they are both small (2.5 acres) but the size is compensated by their situation on the level terrain of the machair. The old farm house [241] is used as the dwelling for both 14 and 15. Much of the cultivation at Reef, except on the machair crofts, is on lazy beds - but many of these have decayed with the advent of horse [407] and tractor ploughing; 35% of the land is cultivated by spade, and the remainder by horse plough.

433 The crofting economy is probably at its lowest ebb in Reef. Only eight of the fifteen [729] crofts are occupied and of these five are worked by disabled crofters or crofters over sixty-five. The Reef crofts were settled in 1921 by returning ex-servicemen and today seven are being worked by the original settlers; there is little evidence of a desire among the younger generation to succeed to the crofts.

[233] Until 1956, crofters on Reef used to graze both sheep and young cattle on the Flannan Islands, fifteen miles west of Uig.

162 Fig. 24 shows the age/sex structure of the population in the three townships. It tells a story familiar to crofting townships: 55% of the resident population are over forty-five years of age; 9% of the total population are permanently away; and since 1939 the population has declined by at least 15% as the result of emigration alone. But perhaps the • 163 most significant fact is the very small proportion of women of a child-bearing age and the consequence that only three children are being born each year to replace the older generations.

131 By their very position, the townships of the Valtos peninsula are isolated. Fifty years 20 ago communication with the rest of Lewis was by boat. The road to Valtos and Kneep was built originally to bring the mails from the pier at Meavaig; the motor road to Reef was completed in 1956. Shopping facilities are provided at Valtos, for the people at [443] Valtos and Kneep, and at Meavaig which serves Reef, Uigean and Cliff. These are supplemented by travelling shops which call once per week, by Indian dealers and by the local 'bus-driver who makes purchases in Stornoway on behalf of customers on the [346] peninsula. The school for the whole area is situated mid-way between Cliff and Valtos and two kirks and the doctor's house lie at the junction of the Valtos and Reef roads.

173 243 257 829 "Then the tweeds got going and the barley took too much trouble; so they had no use for the mill."

173 262 A 60-year-old woman remembers, "They depended on the potato and fished a lot. I was raised on oatcakes, barley bannocks, and salt herring. There were no vans and no school canteens when I was young; you had to carry your [264] own 'piece' to school. We had porridge with fresh milk for breakfast, oatcakes and butter for lunch. Dinner was at 4:00, of potatoes and fish and milk. We had meat maybe once a week. My father poached a lot. We ate the heads [251] and the roe of the salmon fresh, and salted the rest." Once among the cleanest, Hebridean teeth now vie with 164 British cities in extent of decay. It is not uncommon for 759 a child in his first year of school to have six teeth pulled by the travelling dentist.

261 272 Various customs associated with food which exist today reflect the days when fare was meager. Tea-drinking is [171] omnipresent in Britain, but in the islands it has 272 special significance. The taking of tea constitutes 574 the denouement of a visit, and almost always occurs when [576] someone steps over someone else's threshold. To refuse tea has some of the connotations of an insult; and to take only tea, without food, is to have a copan falamh (empty cup).

The flesh of puffins, gannets and fulmars was the staple diet of the St Kildans; the oil and feathers were the vital exports that paid the island rent to MacLeod of Harris, the owner of the group. These exports also helped to pay for the purchase of such foodstuffs as salt, sugar and tea, and other items which the island could not itself supply. The St Kildans owned some hundreds of sheep, the wool being spun and woven into tweed, and a few cattle were also kept. But the seabirds were the foundation of the island economy.

The factor which led ultimately to the desertion of the island group was isolation. The community there was throughout its history undoubtedly the most isolated in the British Isles, though until the present century this mattered little to the St Kildans. All that was deemed necessary for the continuation of the community was that, once a year, MacLeod of Harris should send his factor over from Skye to collect the island goods that were to be sold, and to bring with him those provisions which would see them through another twelvemonth. However, as the demand for the island's products declined, communications became more important: to support the family a man had to leave to find work on the Scottish mainland. Large-scale emigration began in 1852 when thirty-six islanders (with State aid) left for Australia. Island life was punctuated by loss of life; boating disasters and cliff-falls in particular deprived the community of the vital male elements needed for survival. Tetanus infantus, known on St Kilda as the 'eight-days' sickness', strangled two of every three babies born; this disease ravaged the island for almost a century and again struck harder at the male sex. About 1810 the population was about 200, a definite overcrowding. By 1861 it had fallen to 78; in 1911 it was 80, and in 1921, 73. A decade later it was nil.

Isolation tended to make the St Kildans a human menagerie. With the improvement in boat services, St Kilda became a 'must' on tourist itineraries. The tourist trade took on an economic importance for the population after July 1877, when the *Dunera Castle* steamed north and west for a voyage to the 'romantic Western Isles and lone St Kilda'. The steamers continued to call throughout the three summer months annually for sixty years, their passengers eager to buy souvenirs: tweed, quern stones, spinning wheels, stuffed birds and eggs; indeed, anything to remind them

165

ISLAND, WORK AND PEOPLE Pt. I

2. From Black House to White House

342 Discontent with the old black house grew with the
177 knowledge and experience of better housing in Stornoway
178 and on the mainland. The congestion which developed
175 during the nineteenth century meant that often one house
342 was fouled by another above it, leading to typhoid epi-
161 demics. While the smoky atmosphere of the 'black
• 164 houses' inflamed the eyes and irritated the respiratory
(364) system, the roof was high and the fire kept the air in
motion by day, ventilating it to the chimney hole, while
the lack of glass often made it necessary to work with the
door open. The ravages of tuberculosis came towards the
end of the nineteenth century, when Islanders went to our
crowded towns and, not being immunised, were danger-
ously infected. Returning home, too often to linger and
die in a house now provided with tiny, fixed panes which
permitted a closed door and made it stuffier than before,
178 patients spread infection. Flight to a tiny, air-tight
342 wooden cabin or to a small white house of stone and lime
often followed. The availability for the first time of planks
(313) and timber, a certain practice in boat-repairing, and pos-
(177) sibly acquaintance at first- or second-hand with Canadian
wooden houses, may have influenced the choice of wood.
The early 'white' houses, with an attic lit by skylight,
were airtight, for the windows were too often fixed or only
(364) opened at the bottom. The door was left open in warm
weather, but it was high enough to allow the escape
of the stale, upper layer of air which the women breathed
as they did their cooking and baking.

In the inter-war period, particularly in its last decade,
342 the 'black house' was being abandoned, not for something
746 worse, but far better. The Government-aided houses have
178
(364)

195 beginning of the constitutional movement which has given the modern crofters of the
197 Highlands security of tenure, is extensively accepted by small tenants. The process was
completed in the Scottish Highlands by the Crofters' Act of 1886, which made it
obligatory giving tenants increasingly important - is not to give the crofters more land,
but to find active crofters for the existing holdings (see Chapter III for more detailed
information on clearance and resettlement).

The general plans of the existing settlements vary considerably, depending mainly on
the terrain. Where a township is spread along a fairly straight coast line, the crofts and
dwellings lie for the craft boundaries in run at right angles to the coast and for each house
to have a frontage on the road. This is the arrangement in the Ness and Barvas, where
on fairly steep-sided coastlands, the characteristic "rigs" of cultivation, which
was re-settled in 1918. Lochsuidhe, Lochcarnan, Crulivig and Earshader also follow the
same type of layout as nearly as possible, but Tarbert, the largest township in Harris, is
more complex, with a broad and an unconsolidated township. Croir also differs:
was laid out in 1923 on a "Scattered" plan, with no regard for any previous
organisation. The site of Borve has grown up haphazardly around a sea inlet, and
consequently an essentially regular layout based along a main Loch Brusiaclete - Loch
Na Siosiadar road, and a series of irregular cross-roads. The arrangement of
Leverburgh, Finsbay and Drinishadder is similar, Crago with the exception of
physical conditions is a simple long one-street plan (Figure 22).

Within the township, with the exception of Kirkibost, the distribution of additional
342 crofts and grazing holdings are little further apart than is dictated by cases the size of the
178 problems. It would appear generally that black houses were universal in the nineteenth
century except for the Scottish at 1 Croir (the oldest "white house" in Barvas), Thurlo
342 at 20 Scalpay, and Donald Ross Lochmaddy's house at 1 Bunkirk, the former farmhouse
of the Lochmaddy Estate. Since the Second World War, however, the Crofters Act,
Districts Court and Board of Agriculture grants, housing was improved, fairly examples
being 5 Hacklate and 18 Breasclete. The resettled townships generally had improved
accommodation, and the old black houses were generally abandoned since 1951. In
most cases, as for example Borve, the housing is of very high standard, only one blackhouse and
one near blackhouse are still occupied.

342 Water supplies and sanitation are less satisfactory. Most crofts by now have their
own supplies, generally from a well, but in some cases from a stream, and a public
(364) tap serves a few. Foul or cheap or bacon is not yet widespread in Harris. Water, however,
is needed to carry the cut and dried peats to the nearest road, difficulties may arise.
The cost of hiring labour for peat cutting may be so high that it is cheaper to buy coal.

(364) Access to Harris by road is now comparatively easy. Where formerly Loch Long
provided the highway of communication, the road built to Kyrebster after the Great War
(364) and the 1937-39 bridge to Berneray Island, built in 1955, have caused a revolution of
the Harris economy. Lorries and buses have replaced the boat, and the motor vehicle
has brought its upon the narrow and winding roads, though four of the six Lowland
crofts have no connection with it, and two of the Crofting crofts, and West Earshader, are
accessible only by a bridle path. Lochsuidhe, the old east coast harbour, is now
accessible by a motor road, and Lochcarnan is aligned since the construction of the
bridge. This is a good tarred road, although it is narrow and winding. The old road
(364) from Lochcarnan was laid out in 1938, though three crofting crofts near Ravagiun
were still without a road suited to vehicles, and the branch within Breasclete remained
unmade. The road to Tarbert is a good tarred road, but it is narrow and winding,
though Scarpay, Berneray and Leverburgh are connected by a good tarred road to
Berneray, linked with Breasclete rather than with Tolsta by the footbridge and causeway
(364) port for by Congested Districts Board grant of 1905.

165 MORTALITY.--death rates (crude and corrected): infant and maternal mortality; distribution of death (e. g., by cause, season, age, occupation, local-ity); life expectancy; authentic cases of extreme longevity; most common causes of death (e. g., illness, accident, old age); etc. See also:

HEALTH AND HOUSING

ing to put their houses into better condition. The leases required 175*
inter alia, that the thatch was not to be stripped off or removed 342
for manurial purposes; that the byre was to be a separate build- 744
ing; and that the dung was to be removed regularly - a distinct 744
dung-heap. A Sanitary Inspector's Report for 1896 noted that the (231)
new houses being erected were following the old traditional pat-
terns. And though the introduction of statutory requirements did
bring real improvements, as late as 1902 it was reported: 'The lin- (165) •
sanitary houses and the impure water to which the people have
long been accustomed, would lead an enquirer to expect a high
death-rate. That is not the case, however. The island is healthy.' (164)
visited by epidemics of measles, or whooping-cough, like other
parts of the country; and there are sometimes outbreaks of dung-
fever—a preventable malady—but altogether the general health
is good."

The Sanitary Inspector's Report for 1898 described certain 175*
water supplies in the island as 'little better than cesspools for 312
surface soakings'. And five years earlier the water supply of Cro-
more was 'merely a few holes dug out amongst the arable land
next to the houses; and polluted with the manure dissolved off
their arable ground; and in some cases contaminated with liquid
sewage percolating through the soil from their houses.' In 1899 (164)
an outbreak of typhoid fever in neighbouring townships in Uig was traced
to the contaminated stream whose water was used as a drink-
ing-water supply. Improvements in the water supplies were even-
tually put into effect, with a marked decrease in the ailments
which the people had come to expect as normal to their way of
life.

The rate of infant mortality was high. The weaklings died 175*
young. Only the strong survived to withstand the inanimate sur- 165
roundings. A peculiar form of disease was associated with the 164
island: it killed a child about the fifth night after its birth and
was consequently called the 'fifth night's sickness' (According to
medical opinion this was infant lockjaw *(tetanus neonatorum)*.
The doctor of Lochs in 1892 reported that, among the surroundings
the infants of his parish, being 'most frequently met with in those
dwelling houses where sanitation in its most rudimentary form
is entirely ignored; where we have to walk to the fireplace in the

THE PEOPLE

175* centre of the mud floor through tons and tons of decomposing
165 organic matter or manure.'
164 The island, for all its ills and chills, had a high birth-rate and
175* a low death-rate. Martin Martin (1695) declared: 'It is a general
163 observation of such as live on the sea coast that they are more
165 prolific than any other people whatsoever.' In some areas of the
island the birth-rate was as high as 35 per cent with a death-rate
of about 12 per cent. The longevity of the islanders is well known,
a fact confirmed by a glance any week at the Deaths columns of
the *Stornoway Gazette*, regularly recording the decease of octo-
genarians, nonagenarians and some reaching their century.

In 1795 the island had only one surgeon. In Stornoway, 'In- 175*
oculation is carried here with success by the skill and atten- 165
tion of Mr Robert Millar, Surgeon.' Later, another doctor came 744
(95) to Stornoway, who attended to the sick in all parts of the island. 744
By the turn of the century there were resident medical officers in (165) •
each parish, with five doctors in practice in Stornoway.

175* Just after the turn of the century, there was a medical club
159 in the north of Harris. This had been formed by the proprietor,
193 Sir Samuel Scott, whose crofters were supposed to pay 5s per
annum and cottars 2s 6d; this subscription covered dependents.
In return, Scott guaranteed the salary of a medical officer, thus
securing the services of a resident doctor in the district. But there
was apparently considerable reluctance to call a doctor, whether
the patient belonged to the club or not. The salary of the district
175* Medical Officer of Health was £35 per annum, and from the
165 North Harris Club he received some £200. Scott also provided
178 him with a home. Dr Fletcher reported in 1906 that a complete
242 change had taken place in the diet of the people, and that the
memory of the older inhabitants, whose accounts of what they
called new diseases and lowered virility he found very interesting.
Good, plain wholesome diet 'has been replaced by cheap stuff, of
questionable quality and purity. To this change there is another
(292) nondescript article which goes by the name of tea, in the use, or
rather abuse, of which they are quite intemperate and from which
they extract the last dregs by boiling. The result is disastrous to
the strongest digestive system'.

175* In 1892 'a well-equipped medical and surgical hospital was
743

HEALTH AND HOUSING

an urgent necessity for the island of Lewis', and a committee was 175*
appointed to collect funds, the subscription list being headed by 943
Lady Matheson; for a period of three years donations flowed in
from all parts of the world. The Lewis cottage hospital was opened
on 1 February 1896, starting with only fifteen beds; the number
was increased to twenty in 1915. An extension was opened in
1925, and the hospital was provided with a surgeon and an ambu-
lance. Another extension in 1929 was the result of a gift of
£3,000 from Mr John Bain, of Chicago, a Lewis son who was
President of one of the largest grain banks in the Mid-West. The
Lewis Sanatorium was started in 1926.

Tuberculosis was at one time in the island's history a disease 175*
that caused more deaths than much narrow. Above 1930 an Assis- 165
tant Medical Officer of Health was appointed, Dr R. Stevenson 744
Doig (who died in 1965), who spent his career-life in Lewis stamp- 744
ing out what was called in the island the 'white scourge'; he lived (165) •
long enough to see the introduction of preventive medicine and
the decline of the killing and crippling diseases he found on his
first years in Lewis.

In dental health, progress has, as in so many areas, been 164
reversed. At one time the island teeth were so well known for 178
their strength and beauty that a film was made by the Army for
showing to audiences considered in need of dental-health educa-
tion. In 1966 the picture had changed: a survey revealed that
95 per cent of Lewis children were in need of dental treatment. (262)
The mainland addiction to sugary foods spread.

As distinct from the island's general medical services, centred 934
on Stornoway, the psychiatric services are based at Inverness.
A change had taken place in the diet of the people, and the
memory of the older inhabitants, whose accounts of what they
called new diseases and lowered virility he found very interesting.
Good, plain wholesome diet 'has been replaced by cheap stuff, of
questionable quality and purity. To this change there is another
(292) nondescript article which goes by the name of tea, in the use, or
rather abuse, of which they are quite intemperate and from which
they extract the last dregs by boiling. The result is disastrous to
the strongest digestive system'.

175* In 1892 'a well-equipped medical and surgical hospital was
743

THE PEOPLE

733 people; Lewis can be taken as representative of the Hebrides and
194 the Highlands in general. The incidence of involutional melan-
158 cholia, occurring mainly in middle life, is high and, to quote one
expert, 'It would seem profitable to consider the states of fear and
distress with which it has been associated.'

Those in Harris and Lewis aged fifty or over have their recol-
731 lections charged with little else than disaster. Not only did the
• 165 island lose an abnormally high percentage of its young men in

The age structure of the Lewis population in 1951 and 1961. The trend shows over the forty years 1861-1901 has strengthened and consolidated, so that the 1951 population is middle-aged

the 1914 war, but some 200 of those who survived the holocaust 173
were lost in the wreck of the *Iolaire* on New Year's morning, 1919 165
—the first morning of the first new year of peace, literally within 164
sight of home. Again, the effect of emigration was a loss, in many 178
small communities, of a full generation. Where religion is strong 242
and thrice-distilled, there tends also to prevail a state of mind 292
which dwells on guilt and, where people are accustomed to ex-

NORTH RONA

Though the island is but a great lump of rock, Dean Monro says [195]* that he has time an abundance of corn was grown, by delving [91] only, and an abundance of clover-grass for sheep. The island also [231] produced a fine bere-meal which the islanders stuffed into the [1027] skins of sheep and sent, as their rent or tribute, to MacLeod of Lewis, along with mutton and fowls.

Of St Ronan's Chapel, still to be seen and reckoned the oldest [18] Christian building in Britain remaining in its original state, [175]* Monro says: 'As the ancients of the country allege, they leave a [346] spade and a shull (shovel) where any man dies, and upon the [1404] morrow find the place of the grave marked with a spade, as they allege.' In 1695 Martin wrote of Rona in 1680:

The people repeat the Lord's Prayer, Creed, and the Ten Com- [288]
mandments in the Chapel every Sunday morning. They have Sheep, [1344]
cows, sheep, barley, oats, and live a harmless life, being perfectly
ignorant of most of those vices that abound in the world. They
know nothing of money or gold, having no occasion for either;
they neither sell nor buy, but only barter for such little things as
they want; they covet no wealth, being fully content and satisfied
with food and raiment; though at the same time they are very
precise in the matter of property among themselves; for none of
them will by any means allow his neighbour to fish within his
property . . . They concern not themselves about the rest of mank-
ind except the inhabitants in the north part of Lewis. They take [658]
their surname from the colour of the sky, rainbow, and clouds. [162]
There are only five families in this small island, and every tenant [1]
has his dwelling-house, a barn, a house where their best effects [1412]
are preserved, a house for their cattle, and a porch on each side
to keep off the rain or snow. Their houses are built with stone and
thatched with straw . . . When any one of them comes to Lewis,
which is seldom, they are astonished to see so many people.

Then came tragedy. Somehow, probably off a wreck, a swarm [195]*
of rats landed on the island and consumed virtually all the food. [731]
A few months later, some seamen landed and robbed the islanders [4] •
of their only bull. 'These misfortunes and the want of supply [1]
from Lewis for the space of a year occasioned the death of all [166]
that ancient race of people.' Some years afterwards a new colony [195]*
was sent to the island. In 1796, at the time of the *Old Statistical* [162]

THE OTHER ISLANDS

The flesh of puffins, gannets and fulmars [342]
was the staple diet of the St Kildans; the oil and feathers were [1]
the total exports that paid the island rent to MacLeod of Harris, [115]
the owner of the group. These exports also helped to pay for the [1022]
purchase of such foodstuffs as salt, sugar and tea, and other items [1]
which the island could not itself supply. The St Kildans owned [1]
some hundreds of sheep, the wool being spun and woven into [1]
tweed, and a few cattle were also kept. But the seabirds were the [236]
foundation of the island economy.

The factor which led ultimately to the desertion of the island group was the decline in population. The community there was throughout its history undoubtedly the most isolated in the British Isles, though until the present century this mattered little to the St Kildans [458]
themselves, as they left the island chiefly for domestic service; [1]
community was that, once a year, MacLeod of Harris should send [1]
his factor over from Skye to collect the island goods that were to [1]
be sold, and to bring with him those provisions which would see [1]
them through another twelvemonth. However, as the demand for [178]
the island's products declined, communications became more im- [1]
portant: to support the family a man had to leave his native rock [408]
on the Scottish mainland. Large-scale emigration began in 1852 [1]
when by-day-labour (wild-fowling) was the only work available; [1]
life was punctuated by loss of life; boating disasters and cliff-falls [1]
in particular deprived the community of the vital male elements [1]
needed for survival. Tetanus infantum, known on St Kilda as the [168]
'eight-days' sickness', strangled two of every three babies born; [165]
this disease ravaged the island for almost a century and again [1]
struck harder as the male sex. About 1810 the population was [1]
about 200, a definite overcrowding. By 1861 it had fallen to 78; [1]
in 1911 it was 80, and in 1921, 73. A decade later it was nil.

Isolation tended to make the St Kildans a human menagerie. [434]
With the improvement in boat services, St Kilda became a 'must' [342]
on tourist itineraries. The tourist trade took on an economic im- [1]
portance for the population after July 1877, when the *Dunera* [115]
Castle steamed into and went for a voyage to the 'romantic' [1]
Western Isles and lone St Kilda'. The steamers continued to call [1]
throughout the three summers months annually for sixty years, their [1]
passengers eager to buy souvenirs: tweed, queen stones, spinning
wheels, stuffed birds and eggs; indeed, anything to remind them,

CH. III THE ISLAND HOME

16 In the pyramid for rural Lewis (b) the differences are striking, and are mainly due to two factors: the 'natural' [162]
ratio of births to deaths, and migration. Beginning from [167]
the bottom of the pyramid, it will be seen that in 1931 there were fewer infants (from 0-5 years) than children from 5-10 years, fewer in fact than in the three older age-groups. In 1951 (c), the birth rate having risen sharply after the war and preceding depression, infants formed a much larger ratio (over 5 per cent).

In rural Lewis, emigration asserted itself earliest with all that was deemed necessary for the continuation of the com- [1]
munity was that, once a year, MacLeod of Harris should send [1]
his factor over from Skye to collect the island goods that were to [1]
be sold, and to bring with him those provisions which would see [1]
them through another twelvemonth. However, as the demand for [178]
the island's products declined, communications became more im- [1]
portant: to support the family a man had to leave his native rock [408]
on the Scottish mainland. Large-scale emigration began in 1852 [1]
when by-day-labour (wild-fowling) was the only work available; [1]
life was punctuated by loss of life; boating disasters and cliff-falls [1]
in particular deprived the community of the vital male elements [1]
needed for survival. Tetanus infantum, known on St Kilda as the [168]
'eight-days' sickness', strangled two of every three babies born; [165]
this disease ravaged the island for almost a century and again [1]
struck harder as the male sex. About 1810 the population was [1]
about 200, a definite overcrowding. By 1861 it had fallen to 78; [1]
in 1911 it was 80, and in 1921, 73. A decade later it was nil.

Isolation tended to make the St Kildans a human menagerie. [434]
With the improvement in boat services, St Kilda became a 'must' [342]
on tourist itineraries. The tourist trade took on an economic im- [1]
portance for the population after July 1877, when the *Dunera* [115]
Castle steamed into and went for a voyage to the 'romantic' [1]
Western Isles and lone St Kilda'. The steamers continued to call [1]

160

compared with 34.9 for Scotland. The death rate among Skyemen, [195]*
however, was 17.4 compared with 22.0 for Scots in general. But [1]
Scotland had a net emigration rate of only 3.6 while the Skyemen [1]
were losing at a rate of 16.5. In this decade *m* fewer than [1]
3,115 left Skye.

By the end of the third period an additional influence [195]*
of the process of commercialisation had become apparent. The [1]
social hierarchy was modified in the direction of greater [161]
socio-economic differentiation.[68] At the time of the 'Forty- [162]
five'Skye was inhabited by the families of three clan chiefs, [1]
139 tacksmen, 517 joint-tenants, 1031 subtenants, and 444 [1]
servants. There were now 10 landlords. The tacksmen had been [1]
replaced by 29 graziers and 12 small farmers. The joint- [1]
tenants, subtenants, and servants had become 3063 crofters [1]
and 1227 cottars. In the past there may have been one innkeeper, [1]
at Portree, and a few sailors; now there were 21 innkeepers, [1]
millers, and merchants.

The changes which we have been considering could not have [195]*
left the patterns of interaction undisturbed. Co-operation among [1]
the members of the township would have been unnecessary. Since [1]
all were affected by prolonged destitution, mutual aid must [1]
have been severely curtailed. The extended family was broken [1]
by emigration. The nuclear family was seldom intact for more [1]
than part of the year. It seems the majority of the able-bodied [1]
men were travelling to the east coast each spring to find [1]

acceptance of the potato, a much more productive and dependable [161]
subsistence item than grain on Skye, made it possible for more [175]
people to live on less land. The introduction of a new industry [1]
helping, provided many with employment and freed them from com- [1]
plete dependence on a subsistence economy. Vaccination reduced [155]
the mortality rate, especially among infants whose chances of [1]
reaching maturity and procreating were thus enhanced. Another [361]
important factor was the Skyemen's share in the general pros- [1]
perity of British agriculturalists during the early years of [1]
the Industrial Revolution and during the Napoleonic Wars. An [123]
especially important factor was the practice of subdividing [1]
the land among the early marriages possible, by particular after [1]
the installation of the crofting system. Finally, but by no [161]
means least significant, there was the persistence of many [175]
typical features of the culture in the days of the clan. The [182]
sentimental ties of kinship and attachment to the soil had [1]
remained.

The population decrease, partially a result of the Skyemen's [161]
involvement in the process of commercialisation, was primarily [175]
a result of a failure to fully adjust to the higher, more [184]
heterogeneous socio-economic level. By the end of the second [1]
period of the modern epoch, 1845, the people had become hostile [1]
to the potato and their own fertility. When the potato failed [1]
them, they had nothing to fall back upon, except the generosity [1]
of their landlords. The cattle and help markets had collapsed [1]
at the end of the Wars, and the subdivided land could not [1]
produce sufficient rents. The belief of many that the population had over-run the limited local resources was confirmed.

[238] finished lengths of tweed. For a tweed to be classified [143] as "Harris Tweed," it must be hand-woven by Outer [1424] Hebrideans in their own homes, but the weavers are [239] essentially employees of the mill. All the large Harris Tweed mills in Lewis, except the one in Shawbost, are located in Stornoway. A few smaller businesses, which design and market tweeds but have no elaborate machinery to process the tweed further, are scattered throughout the island.

The village of Shawbost is composed of 169 households, [621] of which 110 are headed by "crofters," persons recognised [1,604] as legal tenants of a croft. Of the remaining 59 [1,604] households, 16 rent houses which were built and are [361] maintained by the County (called "council houses"), 11 have erected houses on the crofts of relatives, and 32 have built homes on the common grazing lands. Non-[143] crofters participate in the agricultural activities of [241] the township. It would not be unusual, for example, for a non-crofter to serve as the clerk of a grazing committee.

In North Shawbost, one croft house and two non-[342] croft houses are used only when the owner returns to [1] Shawbost from the mainland for a holiday. The school-[1] master lives in a house adjoining the school, and the [1] minister in a manse located between Shawbost and the [1] neighboring village of Bragar.

To [527] many villagers, the concept of "hol- [166] more than that time in the yearly [1] [167] natives return.

175 [161] Around this time, various factors had encouraged an increase in population. After Scotland's union with England in 1707, the prohibition on the import of cattle into England was lifted, and trade in cattle became economically more important (Day 1918: 26). The numerous wars of this period caused the price of cattle to double between 1736 and 1766 (Day 1918: 180). Clan warfare diminished; the potato was introduced; and vaccine for smallpox became available.

175 161 The increase in population led to an extreme crowding of land in some areas, which made agricultural reform difficult. Many landlords tried to encourage [166] tenants of their estates to emigrate. The appearance of a market for kelp, which lasted from the middle of the 18th century to about 1815, discouraged landlords from implementing policies of depopulation that would 175 diminish their labor force. An alkaline extract of 824 kelp was used in a variety of manufactured goods, such 323 as soap and glass. The seaweed was gathered by men, 388 women and children living along the coasts, and burned in rough open kilns. Tenants who worked at this [465] occupation received L3-4, and the landlords L18-20, per ton (Mackinlay 1878: vii); the landlord received as high an income as L10,000 to L20,000 a year from the burning of kelp (Gray 1957: 42).

166 In the last half of the 19th century, many famil
were "cleared" from the district of Uig and resettled
173 Shawbost. According to a local version of village
625 history, the Constable evicted persons from North
166 Shawbost and resettled them in New Shawbost. "The
people from Uig were fishermen, so they needed to be
the sea. They wouldn't take a croft in New Shawbost
all." According to another version, the crofts once
extended all the way across from Carnan to the loch;
when the Uig people came, the crofts were chopped in
half, and the street called Baile Stigh was created.

in the far north. "There were two fishing seasons. For one season you went to Fraserburgh, Stronsay, Lerwick and Peterhead; and then the winter fishing was in England, at Yarmouth, Scarborough and Loucester. I remember in Yarmouth we didn't like the English bread, it was such a dull color. We liked the pure white Scotch bread."

They lived in small huts, and the work was hard but full of fun. Neighborhood girls used to go together, bringing bedding and different items in large chests to share in the housekeeping. Three girls worked together in a crew, and there were as many as six sharing a room, in double bunks. Some of the huts were so small that there was barely enough room for the beds and the cupboards. At night the boys would come in off the boats. "You were so tired from being up since early morning; but you were always able to dance. You were treated with respect; the youngsters today aren't so good." The women who married non-islanders that they met at the fishing were not likely to return.

When the weaving started on a large scale, the girls "were glad enough to have work at home, even though the work was hard." But many continued their temporary absences from the island, working in hotels or as

000 element, the weaver, is essential to its production.
288 In 1960 weavers receiving tweed yarns from the mills
464 totalled about 1,500 persons, a number which held for
463 about three years and then started dropping at a rate
of about 100 a year. In 1971 the number of weavers
was less than 1,000, and trends of change appeared to
presage a continued dwindling of numbers. It is
166 estimated that emigration increased during 1970-71.
464 Men have returned to the sea, have gone to Glasgow as
laborers, or have taken advantage of training courses
offered by the Labor Exchange, courses that will
eventually remove them from the island setting.

288 The instability of the industry and the fluctuation
571 in amount of weaving work available at any given time
458 has created an environment in which personal ties and
individual maneuvering rather than a widespread adherence
to impersonal rules such as equal distribution are
[602] emphasized. Strategies which involve the mobilization
of kinship and neighborhood ties and involve an emphasis
on personal relationships rather than the depersonaliza-
tion usually associated with industry are made possible
by economic factors such as the dependence of decentralized
weavers on centralized mills. The watchfulness and
consciousness of one's neighbors so characteristic of
village life prevail. Questions about the state of

Despite these aids and incentives, parents do not encourage their children to weave. The weavers themselves describe the job as dull, offering no security and no possibilities for advancement.

Referring to her young son, a mother says, "By the time he's old enough to weave, the tweeds will have failed." Another mother says, "I want him to learn some trade, if he's intelligent enough. I don't want him to stay here. The tweed is so uncertain." "There's no future in it," says the father of another young boy, "I definitely wouldn't want him to be a weaver. It would be good if he went in for engineering."

The histories of the weavers reveal many examples of shifting occupations. Weaving often alternates with work in the local mill, which is also relatively unspecialized. The Shawbost mill must tolerate this unstable labor force, as labor is difficult to find. Eldest sons tend to leave the island for more stable, permanent jobs, leaving the croft and the loom to their younger siblings. Table V shows the number of male weavers in each age group.

The fact that Shawbost has the same age structure as the rest of rural Lewis (see Table II) and less unemployment signifies that weaving has not served as an adequate incentive to keep young people on the island.

[See p. xi-Analysis]
[See p.xiii-Analysis]

Rather, the industry has provided jobs for those who, for one reason or another, would have stayed anyway.

Of the weavers between the ages of 15 and 24, eight are only sons or sons who had to begin work because their fathers became ill or died; two others live at home only temporarily and plan to work elsewhere. Of those of ages 25 to 34, two men live at home because they are disabled; one has returned from the Merchant Service for awhile; two are only sons who are encouraged to remain at home, and several are youngest sons or sons whose parents have strongly discouraged them from leaving home. Of the 35-44 age group, four have remained on the island because of various ailments such as tuberculosis and mental health problems; one had to leave the Merchant Service because of an injury; at least five have stayed or returned because of family ties, the demands of aging parents and sick siblings. In the 45-54 age category, a number of men served in the navy or other branches of the armed forces during World War II, and returned from shipwrecks and other disastrous events to the relative security of the loom.

Many of the older weavers (at least nine in the 55-64 age category) started weaving after they had returned from the United States or Canada because of the depression. Some recall the horror of wandering

government bodies and industries in cities on the mainland, rather than being relatively self-sufficient as it was at a previous time. The periodic return of relatives to the island reflects this peripheralness, as do feelings of inferiority among the islands. The island has become not only geographically but socially marginal.

A. Geographical Marginality

Geographical marginality refers to the distance of the islanders from various economic and administrative centers on which they depend. Because they are distant, they are more likely to suffer breaks in channels of communication with these centers, as when storms prevent boats from docking. They are "marginal" because they depend on central sources rather than being self-contained; and the difficulties entailed in this marginality encourage the retention of techniques and patterns of interaction derived from the days of relative self-sufficiency. The anomalous combinations of old and new found in the township may be attributed to such marginality.

A "strategy" may be thought of as a pattern of behavior which develops in a particular history of reinforcement, the parameters of this reinforcement

which official records are kept by the mills. If you say jokingly to a fisherman who has brought in a large catch that he should put some money aside for the income tax man, he is likely to reply, "He'll have to catch me first." A tradesman may be earning large sums of money doing local work as a skilled specialist at the same time that he is collecting social security.

A man may move in and out of a number of different jobs, and never report his income. "Occupational pluralism" (cf. Brox 1968) rather than economic specialization has developed as a strategy in various countries along the North Atlantic Fringe, such as Iceland, the Faroes, northern Norway and Newfoundland, as well as the west coast and islands of Scotland. In these marginal areas, income from specialized occupations is, in the long run, unpredictable and inconsistent.

In times of national economic depression, strikes, shifts between socialist and conservative governments, and other crises, crofting provides an alternative strategy. During the last war, many islanders who had left the island (including some who had been quite prosperous in the cities) returned to spend the duration of the war in the village, glad of the relative security provided by the relative abundance of food and less strict rationing. During a huge snow-fall that occurred on

Crofting constitutes a dormant strategy which can be mobilized if deterioration of land has not proceeded too far, and if the skills of land use are not lost by succeeding generations who have grown up in an environment which presented them with more appealing strategies.

B. Social Marginality

1. Linguistic Distinctiveness: Social marginality began when the Highlander had to leave his place of origin and go to the cities of the south in search of employment. The feature which most distinguished him was his Gaelic speech.

In Glasgow the common word for Highlander is "teuchter," a slang word with derogatory implications which, according to one theory, developed when Gaelic speakers coming into English-speaking cities mispronounced the word "sugar" so that it sounded like "teuchter." Glasgow Highlanders have developed their own defensive explanations: when the civilized Highlanders came down among the uneducated barbarians of the south, they came as tutors, a word which their uneducated Lowland pupils mispronounced.) According to a university student from the islands, the word was once used by the English to refer to the Scottish Lowlanders.

In nation-wide comic strips and jokes, the Highlander plays the role of the clown, the rustic country cousin. The comic strip "Angus Og" portrays a kilted Highlander, sly and canny behind his apparent simplicity, tricking the landlord and searching for the Loch Ness monster. Stories of the lazy, dour crofter abound.

When young men go away to the Army or Navy or to work on the mainland, they say that they feel like "foreigners." "Thirty years ago the island was very isolated. It was difficult to get away. There were no few education grants available. I got my teaching certificate and wanted to get a post back on the island, but was told there wouldn't be a vacancy for another fifteen years. So I went to Scotland, and found I had to be lucky to get as good as an Englishman if not better in my job to get ahead."

"When I went into the RAF, I had never seen light switches because we used paraffin lamps. An English chap told me to turn the light on, and I didn't know which way meant on or off. That memory still sticks in me."

"Even a high official in the Highlands and Islands Development Board tells a joke, that is frequently going round Westminster," of the Gaelic speaker who approached the Highlander and told him of the word "Gaelic" which he translated as "Don't go today when you can put off till tomorrow." Saying if there was a corresponding word in Gaelic, "In Gaelic," replied the Highlander, "we have so much that convays such a sense of urgency."

Within the village there are no branches of An Comunn Gaidhealach and few books written in Gaelic. Once a rural family moves to Stornoway, children often refuse to speak Gaelic, even though they understand it, and parents tend to speak only English to their children, believing this will help them "get on." In the next generation, the language is lost. Village children attending school in Stornoway often prefer talking to their Gaelic-speaking roommates in English. A young island man, married and living in Edinburgh, says she would like her baby son to learn Gaelic but feels that if he had a mixture of the two languages the other children would laugh at him.

English is the language of the larger society, the language spoken in school and the language required in most jobs and in dealing with most officials. In Gaelic-speaking areas, the speaking of English connotes high status. If an English speaker mispronounces Gaelic words, he is quickly forgiven, praised for trying to learn such a difficult language, and asked why he bothers with a language that "isn't any use anyway." But if a Gaelic speaker makes mistakes in English, he is teased mercilessly. Many nicknames derive from such mistakes; for example, "Donald Squeak" got his name by mispronouncing the word "picturesque." People "win points" by competing with each other in speaking English. "See how good you are in

2. The Exilings: An important source which supplies this sense of contrast is the large number of persons settled away from the island, often in "ghettoes" or neighborhoods in cities in which village ties are maintained. It is said that gossip about Shawbost travels more quickly in the districts called Partick Hill in Glasgow than it does within Shawbost itself. It may be argued that the "exiles," with their Lewis and Harris Societies and pilgrimages back to the village during the holidays, do a great deal to sustain the strong boundedness of the village as a sociocultural system. They and non-Gaelic-speaking outsiders (the Eminent Person writing his inevitable book in the romantic solitude of an isolated manse) help to maintain a feeling of worthwhileness in a place rife with feelings of ambivalence and negative comparison with the larger society.

Within the village, especially during the long, dark winter, complaints are often heard of the "sameness" of things. A common phrase, almost a greeting, is, "Anything fresh?"—implying that the usual mode of existence is stale, sour, exhausted, and very much with us. Although the villagers have access to the range of information available to all Britishers through forms of mass media such as newspapers, radio and television sets, very little of this information is considered relevant to village life, and thus is not attended to.

The generally low level of stimulation derives in part from values which restrict opportunities for self-expression. People are ready to gossip, i.e., to participate vicariously in the escapades of others, but are less eager to act. Stories concerning mad-cap adventures of some villagers do not belie the existence of constraints imposed on expressiveness. One of the major reasons given by young villagers for wanting to leave the island, and by emigrants for why they left, is that, "There is nothing to do. The place is dead."

In the everyday life of the village, a style of indirectness and restricted communication is encouraged. A man might be praised in an obituary by the phrase, "His voice was never heard in the community." The encouragement of a "low profile" of behavior characterizes those communities in which people meet each other frequently and know they will continue to meet and ask things of each other for a long time to come. Indirectness avoids conflict arising from divergent expectations, and embarrassment from changes in plans.

A major feature of practices of child-rearing on the island is inconsistency, which develops a style of guarded wariness and hesitance to act or express oneself. Children are teased by being offered things which are then snatched away. Punishment is inconsistent

154 sympathetic with each others' idiosyncrasies. A constant
154 joking keeps people at arm's length and discourages the
154 development of sympathy.
(526)

Accompanying this style of indirect, inhibited expressiveness and the low level of stimulation are culturally prescribed opportunities for relatively uninhibited expressiveness. Such opportunities include the ceilidh ("visit"), the drinking situation (family for men), the role of clown or "character," and holidays (as at New Year's. Although young villagers and emigrants often describe the village as "dull" and "dead," the emigrants are happy enough to return to the island for short periods of time, during which they participate in those situations in which expressiveness and limited license are accepted.

3. Ceilidh, Clown, and New Year's Festivities: Only on certain occasions is relatively spontaneous and uninhibited expressiveness condoned or encouraged within the township, and even then the form which this expressiveness takes is fairly narrowly circumscribed. The traditional
(178) ceilidh was such an occasion. In the past, people gathered
(178) regularly at night in the high ceilidh (the ceilidh house,
(526) or home of someone in which a genial atmosphere existed;
(526) the high ceilidh was often the home of someone who lived
(526) alone), where stories were endlessly repeated and elaborated,

520 Whereas at other times of the year there are specific
521 times which are considered appropriate for visiting,
526 especially if the visit includes a bottle, at New Year's
526 visitors may appear in the middle of the night or at
(513) any time during the day. Some men may stay up for four
526 nights in a row, going back home for a few hours of sleep
526 or a bite to eat before setting off again. Various games
526 are played. Men climb through the windows of darkened
526 houses, or wake up sleepers by making animal sounds. One
526 man went around the village showing a pig's foot to women
526 as though it were a penis.
(527)

But whether lasting for one night or for five, festivities end with the arrival of Sunday; and the usual comment is, "Thank God it's Sunday."

166 The "exile" prefer to return at such times as New
221 Year's, or during the summer months when the beaches are
184 inviting and the gales absent. They remember the
(526) "characters" and other features of village life which
526 give it color, often forgetting the drab background out
526 of which the color was forged. Some villagers whose
526 siblings have married and left the island continue to live
526 in the house mainly to keep the house in order for
526 their return. "I wouldn't close the house on them. They
526 come back every summer." A man thinking of emigrating

166 says, "I'll have to ask my brothers and sisters if they
221 mind, since they come back here every year." Some houses
184 which are almost empty for most of the year are over-
526 flowing during the summer months. Often the visitors
526 must come in stages.

166 The "exiles" sing the old songs with vigor, drink
221 heavily during their visit, and praise the island for
526 that "special quality" which is unmatched by life in the
526 dirty, crowded, unfriendly city. Some plan to retire in
526 the village. The villagers take up the tune that their
526 society is eminently worthwhile. When talking to strangers,
526 they ask questions pertaining to this image of themselves,
526 such as, "Don't you think this place has something which
526 you will never find in a city?" "People here during
526 the summer and they love it; they can't keep away. So
526 they must find something here. What would you do in a
526 city anyway? Out here you're free."

The visitors not only bolster the self-esteem of the
166 crofting and weaving, in contrast with the exciting but
526 risk-laden opportunities offered by the dominant urban-
(654) industrial mainland. Crofting and Harris Tweed have been
526 protected by government legislation. Various subsidies
(719) and loans are available. In times of unemployment, social
526 security is available. Extremely important is contributors
621 to boundedness are the non-economic incentives: the
156 individual has a place in a human community; he is given

166 The image of the island
489 as spiritual home is fostered by The Stornoway Gazette,
223 and by nostalgic songs, most of which were written by
204 islanders who emigrated to Canada in the first quarter
(526) of the century.

The crofting township as a strongly bounded network
632 continues to exist, although crofting as a socioeconomic
526 pattern which evolved in a situation of limited social
526 and geographical mobility, low cash reserves, and the
526 restriction of a large population to a region of limited
526 resources, is very different from crofting as defined by
526 an office in Inverness. As far as the crofter is con-
526 cerned, to be defined as a crofter by the Crofters Commission
526 and other government agencies is to have access to
526 resources which affect the environment in which he makes
526 his choices.

241 The individual is faced with the semi-security of
208 crofting and weaving, in contrast with the exciting but
526 risk-laden opportunities offered by the dominant urban-
(654) industrial mainland. Crofting and Harris Tweed have been
526 protected by government legislation. Various subsidies
(719) and loans are available. In times of unemployment, social
526 security is available. Extremely important is contributors
621 to boundedness are the non-economic incentives: the
156 individual has a place in a human community; he is given

213 Excise taxes were first levied on whiskey in 1814,
175 and stills of less than 500-gallon capacity were prohibited.
(526) Local, illegal distillation continued for a long time
526 after 1814, and throughout the Highlands and Islands
526 tales are told of "the excise man" and how he was outwitted.
213 The Island of Pabbay in the Sound of Harris was evacuated
175 in 1843, supposedly because of illegal distillation that
(142) was being carried on there. The ruins of old distilling
526 houses are found throughout Shawbost. Villagers say
526 that these were used in the time of their grandfather
526 or great-grandfather to distill whiskey for occasions
526 such as weddings.

(526) In Shawbost, until recent times whiskey was associated
526 mainly with special ceremonial occasions: the birth of
(346) a child, weddings, and wakes. When a baby was born, the
526 father went into town for whiskey to be given to visitors
526 coming to see the baby. Having whiskey at a funeral was
(241) also important; if a widow sold her cow to provide
526 it, so that people would not say it was a bad funeral.
526 A custom of sitting up all night in the house of the
526 deceased has stopped, probably in part because a prayer
526 meeting lasting from midnight until 2 a.m. was introduced
526 with the intention, according to one minister, of keeping
526 the wake from becoming too joyful an occasion. Whiskey
526 was abundant at New Year's, and at weddings. "The dance

105 The
254 fact that crofting townships are located on marginal
254 land is one reason that the larger society is not motivated
(526) to exploit the land. The Crofters Holding Act of 1886
526 and subsequent legislation ensured protection of and
526 incentives for continued maintenance of crofting and
526 the crofting township.

Protective government legislation, grants and loans for housing, subsidies for rearing livestock, relatively low taxes, and the economic protection provided by a socialist-democratic government in times of crisis have helped to maintain a core of crofting families for many generations.
105 The predominance of older persons in the township is
526 striking, but many of the younger people who have left
526 the island to work on the mainland return frequently,
526 contribute part of their salary to the remaining family
526 members, and plan eventually to marry and settle down in
526 the village or to retire there. Long-term residence of
(526) kin-linked families in a small area has in itself contributed
526 to the boundedness of the township network.

105 The policy of the government, through developmental
241 agencies such as the Highlands and Islands Development
(526) Board, has been to support economic strategies that
526 complement rather than interfere with the functioning of
526 the crofting township with its small holdings and communal
000 practices. The Harris Tweed industry is lauded as an

105 of the converted, who occasionally neglect township and
274 family obligations in favor of religious activities. The
621 increase in private transportation during the past 25 years
184 has facilitated the maintenance of closer ties within the
(544) clique. The existence of such a strongly bounded subsystem is an example of a trend toward the weakening of the township as a social boundary system, but this trend is countered by other factors that strengthen or help preserve the township as a bounded system.

People come and go from the township, but this appears
105 to maintain rather than weaken township boundaries because
621 behavior different from that prescribed within the township
621 can be performed outside it, and conformist behavior
189 reassumed upon reentry. Those unable to conform with standards of behavior prescribed within the township are not likely to return.

(526) Township members who have settled away from the island come back periodically for recreation and a sense of
526 belonging. They increase the value of the township and
(822) its way of life in the eyes of the inhabitants, and provide them with subject matter for conversation until the next holiday season, when the exiles again return.

105 The boundedness of the township is thus a qualified
621 boundedness that, over the past 100 years and especially
526 since the second world war, has decreased in strength but
526 is nevertheless strong today.

241 Cultivation for subsistence is minimal, and in 190
654 part stems from government-defined privileges and duties
233 regarding maintenance of a croft. The Harris Tweed
621 industry, which is restricted to the Outer Hebrides and
184 thus is protected from competition, has provided work
(544) for a large number of islanders. Many of the younger
526 members of croft families live in cities on the mainland,
526 and send part of their wages home; they return regularly
526 to the island, and many plan to retire there. Thus the
(142) township supplies urban workers who remain very much
(632) attached to the rural townships, which are composed of
526 aged family members and a rural proletariat. The standard
511 of living is high, and many crofters have accumulated
654 savings, although much of this surplus is used by the men
526 for alcoholic drinks.

121 In Britain, rural communities have been interpreted as lying somewhere along a rural-urban continuum (cf. Southall 1959, Frankenberg 1966). In 1959, Southall presented "an operational theory of role" by which he suggested that heterogeneous societies may be analyzed and compared. He developed the concept "density of role texture" to describe societies which lie along a continuum from rural to urban. Frankenberg (1966) uses Southall's concept along with other concepts to present a more complete model of an urban-rural continuum. The "models" of both Southall and Frankenberg are essentially liste

"I couldn't get back my health, but I
didn't want to go home, because the houses weren't so
good there as on the mainland. I went to work on a
farm. It was for the cream I was going. I was so wea

TRADE AND INDUSTRY

the nature of stopgaps in the younger, formative years and do not offer progressive training for the eventual chosen career. As an example of this, a number of island girls come to Stornoway to work in local shops and then leave the island after two years or so to take up hotel work or nursing on the mainland; many boys leave the island for apprenticeship training in trades which now require evening-class, day- or block-release educational classes. About fifty young persons leave the island each year under the Training Allowances Scheme of the Youth Employment Service, which financially assists them to live in lodgings while working away from home.

Most of the employment categories in the island of course employ less than a handful of people, either full-time adults or time-serving apprentices; they are fully staffed very quickly and opportunities arise only when an employee dies or leaves the island, or—more rarely—when an increased demand for a service (for instance television engineering at one time) creates vacancies for apprentices.

ISLAND EMIGRANTS

the MacKenzie River; he was born in Stornoway in 1764, in what was known as Luskentyre House, at the corner of Kenneth Street and Francis, where Martin's Memorial Church now stands. Another MacKenzie, Lt-Col Colin MacKenzie, was born in Stornoway about 1754 and went to Madras in 1772 as a cadet in the Engineer Corps under the East India Company. In India, MacKenzie followed a career of high professional distinction,

Population trends *c* 1755 to 1961 for the island as a whole; for Lewis, including Stornoway; for Harris; and for Stornoway. The population peak occurred in 1911. The dip in the Stornoway curve was due to the effects of emigration, as is the more pronounced dip in the island curve. Stornoway's curve in 1961 was on the upward trend, due to migration from the landward parts of the island into the town. Over the past 150 years, however, population mobility within the island has been virtually nil; movement has been emigration rather than migration

much valued in emergencies.

Scarp in fact has a small place of its own in the history of com- 175*
munications: on 28 July 1934 one of three British rocket-mail 205
experiments (for which special stamps were printed) was held 713
there. The inventor of the rocket, Herr Zucker, was later to become prominent in V-rocket work during the second German war. Herr Zucker personally conducted the firings. His rocket, a large cylinder with pointed nose, something like a heavy shell, was 3 ft long and weighed 30 lb, with capacity for several thousand letters. The motive force was ordinary high explosive contained in a large cartridge about 18 in long; the device was designed to burn with a series of rapid explosions and produce a flight speed of 1,000 mph. The firing apparatus was a flimsy wooden structure providing a runway rising at an angle from the ground, an elastic sling giving the rocket an initial impulse. The first rocket was fired on Scarp, to the mainland: it exploded prematurely and most of the mail was damaged. The postmaster applied to the backs of the damaged covers a three-line cachet in violet: 'Damaged by first explosion at Scarp—Harris.' In order that this mail should be actually flown, it was re-transmitted by the second firing made in the opposite direction, Harris—Scarp. The whole experiment was deemed a failure, however. The route taken by the mail addressed to Kirkwall was unique; rocket, ferryboat, motorcar, mail steamer, railway train, and finally by Highland Airways to Kirkwall.

Depopulation in Scarp was encouraged by the lack of 166 •
employment prospects, and centralised education, of the type 871
which has already played havoc with remote rural communities [441]
elsewhere, is felt to be a black cloud darkening the future. Much the same problem faces Scalpay Island, mentioned later. Children are removed from their home environments for higher secondary education at a central school: for Harris children this is at Portree, Skye. Many islanders argue that the scheme tends to destroy the family unit, urbanising the children so that they become unsuited to, and with no inclination for, rural life. Some sympathy must be felt for the education authorities, of course, as the pro-

A HARRIS VIGNETTE

• 166 vision of adequate educational facilities in remote spots becomes
871 increasingly difficult.

In its time Scarp has contributed more per head of population to the professions than has any other community of similar size.
[162] The last of the native Scarp population left the island in November 1971: two families totalling seven people. The island
[178] has now attracted the attentions of a hippie community.

Scalpay

*175 Scalpay Island, on the east side of Harris, was formerly occu-
361 pied by two or three tacksmen in succession before being 'crofted
429 out'. About 1843 the Harris factor settled twenty crofting families who managed to make a fair living there, but five years later another twenty families were added; some had been evicted from the island of Pabbay in the Sound of Harris. This led to some sub-
[162] division of the available land. The 1861 population was 388, but the figure rose to a peak of 624 in 1921; in 1951 it had declined to 541. It is now in the region of 450.

178 Island Scalpay is in fact one of the few places in the Highlands
621 and Islands area in which the normal trends associated with remote regions are operating in reverse. The island despite its small-
[131] ness—it is a mere 3 miles long and 1½ miles across—supports a thriving and dynamic community and is the envy of its neighbours.
[162] Scalpay is retaining its young folk; and it boasts some of the finest homes in the Hebrides. From the agricultural point of view it is
[241] not greatly different from other islands in the Hebrides. Its forty crofts produce a good crop of oats; but less than 20 acres of the land are re-seeded.

226 The land being as poor as it is, the men of Scalpay have turned their faces to the sea—for a living, not for emigration. Scalpay has the largest number of full-time fishermen and a total of thirty-
505 three boats, twelve of which are ringnetters of over 40 ft. Native enterprise is also shown in the ship-owning firm whose vessels carry freight and passengers to many parts of Scotland and on
[441] occasion to the Continent. A Harbour Association was formed on the island in 1966 to work for local amenities for fishermen and

NORTH RONA

Though the island is but a great lump of rock, Dean Monro says that in his time an abundance of corn was grown, by delving only, and an abundance of clover-grass for sheep. The island also produced a fine bere-meal which the islanders stuffed into the skins of sheep and sent, as their rent or tribute, to MacLeod of Lewis, along with mutton and fowls.

Of St Ronan's Chapel, still to be seen and reckoned the oldest Christian building in Britain remaining in its original state, Monro says: 'As the ancients of the country allege, they leave a spade and a shuil [shovel] when any man dies, and upon the morrow find the place of the grave marked with a spade, as they allege.' In 1695 Martin wrote of Rona in 1680:

The people repeat the Lord's Prayer, Creed, and the Ten Commandments in the Chapel every Sunday morning. They have cows, sheep, barley, oats, and live a harmless life, being perfectly ignorant of most of those vices that abound in the world. They know nothing of money or gold, having no occasion for either; they neither sell nor buy, but only barter for such little things as they want; they covet no wealth, being fully content and satisfied with food and raiment; though at the same time they are very precise in the matter of property among themselves; for none of them will by any means allow his neighbour to fish within his property . . . They concern not themselves about the rest of mankind except the inhabitants in the north part of Lewis. They take their surname from the colour of the sky, rainbow, and clouds. There are only five families in this small island, and every tenant has his dwelling-house, a barn, a house where their best effects are preserved, a house for their cattle, and a porch on each side to keep off the rain or snow. Their houses are built with stone and thatched with straw . . . When any one of them comes to Lewis, which is seldom, they are astonished to see so many people.

Then came tragedy. Somehow, probably off a wreck, a swarm of rats landed on the island and consumed virtually all the food. A few months later, some seamen landed and robbed the islanders of their only bull. 'These misfortunes and the want of supply from Lewis for the space of a year occasioned the death of all that ancient race of people.' Some years afterwards a new colony was sent to the island. In 1796, at the time of the *Old Statistical*

THE OTHER ISLANDS

Account, there was one family there, that of the person employed by the owner to look after the livestock. The owner was a Ness tacksman who paid £4 sterling rent per annum. The island produce was corn, butter, cheese, a few sheep and sometimes a cow, and some wild fowl and feathers.

In 1844 Rona was evacuated, its last inhabitant being, in the seventh year of Queen Victoria's reign, the 'King of Rona', Donald MacLeod, who lived in almost prehistoric conditions. Rona was without inhabitants until 1884, when a last attempt at resettlement was made by two men from Ness. This was a self-imposed exile, after a difference of opinion with the minister of their parish; in penance, they hied themselves off to Rona. In 1885 a relief boat called and found both men dead, one from natural causes, the other from starvation and exhaustion after nursing his friend. By the fireside of their hut was a pot ready for the preparation of a meal they never ate.

Today, man's connection with the island is maintained by the small party of Lewis shepherds who each year make the journey to shear the sheep which still graze on the green slopes around the now-ruined village. Otherwise, only the occasional traveller now lands there. In June 1956, North Rona with its associated rock, Sulasgeir, was declared a National Nature Reserve on account of its importance as a breeding ground for colonies of oceanic birds—guillemots, puffins, kittiwakes, and fulmars—and for its seal colony.

Sulasgeir

Sulasgeir is twelve miles west of North Rona, a lonely rock in the Atlantic, bleak and grassless, and tunnelled by caves and gullies. The only life it has ever supported is seabirds—officially. Yet one of the old buildings is said to be a chapel and is called 'Tigh Beannaicht' (House of Blessing). According to Ness tradition, Sulasgeir was once used as a prison for sheep-stealers, and it is also said that Brenhilda, sister to St Ronan, was left on the island to perish. Yet another tradition claims that it was at this rock that Prince Charles Edward made his first contact with his Scots clansmen, when the ship that carried him to Scotland was spoken to by a Ness boat making for North Rona.

ST KILDA

and to show their friends at home, that they had braved the hazardous Atlantic seas to visit St Kilda on the very edge of the world. The tourists were charitable, but this brought a psychological evil in its wake. In 1886, Robert Connel wrote: 'One cannot be long on the island without discovering the great moral injury that tourists and sentimentalists and yachtsmen, with pocketsful of money, are working upon a kindly and simple people.' It was estimated that the islanders collectively derived a profit of 5s from each of the 200 or more tourists who arrived during the short summer.

The new influx of cash into a community which required money as an exchange commodity because the original native produce was becoming less saleable, hastened the decline of effort to be self-supporting. The numbers of seabirds slaughtered steadily fell; paraffin oil replaced the traditional bird oil in St Kildan lamps. The need for daily work, to toil in fellowship with others, was dissipated; the islanders could purchase most of the food they required, provided communications with the mainland were maintained. The population was in any case dwindling, as St Kildans became more aware of 'the other life' available on the mainland of Britain.

Finally, on a misty summer's day in August 1930, at a cost to the nation of little under £1,000, St Kilda was left to the care and keeping of the changeless Atlantic. It is now preserved by the National Trust for Scotland as a crumbling monument to a small human tragedy of a kind that has been repeated, and will be repeated, in other small communities who cannot argue out the case for their survival in terms of economic viability. The island is now occupied by military personnel in connection with the Hebridean rocket range on South Uist.

St Kildans were described by Dean Monro, in 1549, as 'simple, poor folk, scarece learned in any religion'. In 1698, Martin Martin published *A Late Voyage to St Kilda*. He went there in the company of a minister who had been summoned to the island to denounce a certain false prophet who had risen among the 180 inhabitants (pretending he was an emissary of St John the Baptist). Martin found, as did later visitors, that the island economy and the quality of its life were closely dependent upon its birds,

to notice the absorption or suppression of rights held in common in 'the North and West', together with the abolition of the duties of fellow-workers to one another. Too frequently they have not troubled to enquire into the former existence of common rights and fellowship duties, the observances of which have so much to teach. Yet to judge from the completeness of the Hebridean evidence, and from wider evidence to be touched upon with reference to Norse and Lowland conditions, suppression caused a profound social and moral revolution.

Indeed, the profound character of that revolution makes it hard to recognise the common origin of features which may differ greatly today. To choose four examples, the long succession from father to son, found from end to end of an Island township, contrasts with a restless movement of farm servants, and even tenant-farmers, all too common until 1939 in Lowland Scotland and parts of Northern England. The ideals held by fellow-workers in Gaelic tradition, of kindly and courteous co-operation, contrast with the avowals of rugged individualism made on many a farm even of the southern Highlands today, and certainly of the Scottish Lowlands and Northern England. Languages have changed as English has advanced during 1500 years: the Lewis crofters' children still speak Gaelic, but children in Stornoway ceased to do so forty or fifty years ago. And in the recorded religious life of Gaelic hamlets far from any priest (or later, minister), the part of revered men and women is very different from the part played in Calvinism by the Minister and the male Elders of the Kirk. All these four contrasts are due to revolutionary changes in home, work, language and religion. Such changes, of which all trace may be lost elsewhere, are traceable from the fullest evidence among the Gael.

The historical aspect of these regional facts is extremely significant to the evolution of Scots social life, and to developments of Presbyterian worship led by Elders in ferm-toun and Kirk; although suggested by comparisons throughout this book, they have still to be seriously followed out. As to the future, regrouping of our somewhat scattered agricultural population has been strongly urged in planning for post-war housing and community life. But sound planning must be based on survey, long overdue; though elementary, this key map appears to be the first of its kind for Scotland (Fig. 2). It is from these units of farm-team and township that Scots rural society must be rebuilt, region by region.

One further contrast between the farming and the crofting communities demands attention: it lies in the types of migration—one is tempted to say, of semi-nomadism. Crofters, though they move to and from their croft and township—to the city, the sea, or the New World —return home to their native township when they can, and to no other. Many farm servants, on the other hand, though they usually spend their lives in the county or region of their birth, have been on the move from farm to farm, year after year. What is true of Lowland Scotland seems rather true of North-east England, but not of 'the English Plain'. Unmarried Scots farm servants were hired for the half-year, and frequently moved after each new hiring, the married once a year. Families were annually uprooted—if indeed they could be said to strike root at all! The war-time 'Standstill' Order for Scotland began to check this migratory life; but its effects remain. Hence many men have few ties, their wives still fewer. The children could not grow up with their schoolmates: they could look back to no "Auld Lang Syne", of which the

184 verses would ring false to them! Before 1939, two-fifths
241 of the rural pupils of most non-crofting counties came or
361 went in the school year—most of them the children of
• 166 farm servants. Their schooling suffered, and their
[182] teachers might be reduced to despair; indeed it is to
[871] educationists, rather than to agriculturists, that we owe a
[155] survey of these facts. When they leave home to be 'hired', the young folk learn to fend for themselves but may suffer in the learning: stability of character and endurance in attachment are hard to form.

It would be difficult to overstress the tragedy of the long-continued break-up of rural communities in the Low-
175 lands. From the later years of the English invasions, as
178 when Major wrote with his knowledge of Scotland in 1500,
241 this break-up continued through the early, largely unre-
361 corded phases of the agricultural revolution, down to the later phases from 1750 or 1800 to the present day. No
166 one who has worked with fellow-servants on Scots farms will under-estimate their sterling qualities. But the break-
155 up, the tragedy, happened. It was boldly sketched by the Rt. Hon. Thomas Johnston (to 1929) and verified by
[114] Miss I. F. Grant (1924 onward). Beginning from intimate study of well recorded and surviving ways in the Highlands and the Hebrides, Miss Grant realised the significance of earlier Lowland life in the farm-hamlet or ferm-toun, as Lowlanders themselves could hardly have done. Comprehension of this break-up of community brings out the value of the enduring elements of communal life still recorded, remembered and surviving in the 'Outermost' Hebrides, at the core of 'the North and West'.[1]

[1] Ideas outlined in this section are developed in A. Geddes (1938-54). Detailed references will be found in the Bibliography.

133 clay is exposed, leaving what is vividly called 'skinned'
34 land. And where drift is exposed, the mineral constituents
134 are leached out, and a hard 'moor pan' is left a few inches
[35] below the surface.

Seen from the edge of the crofts, the typical 'skinned
134 lands' of bare, blue or brownish clay, littered with stones,
137 suggest a desert. Often, only a few blades of grass or tufts of heather grow on them. Indeed, 'skinned land' seems at first too mild a term, for on it the stones—thickest on top when undisturbed, and bleached by the acids of the peat that overlay them—suggest the prophet's 'field of bones'. One can only ask, is the rest of his vision ever to be fulfilled and life to spring again? In some hilly parts to south and west, not only the 'skin', the topmost layer of peat, but the very soil, the flesh as it were, is still being
• [166] stripped bare to the bone, the actual rock. The evacuation of the islet of Bernera Beag (Uig) was largely due to this stripping. In the more level parts to the north, however, roadside pits show sections of clay with few stones, covered with perhaps six inches of clay with many stones. It is this top layer which gives the skinned land such a hopelessly stony appearance, and shows that reclamation is less miraculous than it seems.

134 With the coming of carts and lorries the increasing use
242 of shell sand has become possible, whether for spreading on the land or for slipping into pockets, together with
[178] fertilisers, for potato seed. As to soils, shell sand and
[493] boulder clay possess complementary qualities in texture and chemical composition. The shell sand of the machars provided an early home for man, the light soil allowing rye, a poor variety of oats, and herbage, to ripen early and mature in late, wet seasons when the clays are sodden with rain. Yet the sand itself is so light that drought is

827 Islanders themselves sometimes talk of a lowered
stamina and poorer health today than in the past. In-
178 breeding is widely held to account for this. Even if health
582 be really poorer, this explanation is untenable, since marriage outside the village has greatly increased in the last century. Everywhere there is movement along the
• 166 roads; a school placed half-way between two villages
[811] fosters early acquaintance; immigrants trickle in from the mainland, and emigrants occasionally marry beyond the Island. Moreover, the people of certain villages were transplanted in large numbers eighty years ago, as from
143 Valtos, Uig, northward to Shawbost. In any case, in-breeding itself does not produce degeneration; for though it may "fix" or bring out harmful tendencies where there is already some poor or dangerous strain, it can also fix good characteristics in a healthy population.[1]

178 All these changes were hastened and reinforced by two
179 new, revolutionary means. First, the physical mobility
166 suddenly brought to an area with no railway by the motor-car, van and light lorry-bus; then, towards the end of the inter-war years, the penetration of the Gaelic-speaking home by the ceaseless voices of broadcasting.

(b) TACKSMEN AND SUBTENANTRY, FACTOR AND LORD: 1611–1800

175 We saw that in the Rent-roll of Lewis in 1718 the first
427 sixty-four entries, signed personally, recorded comparatively large holdings (tacks), the annual rentals of which were
614 from £3: 6: 8 to over £10, the occupant of one (or more)
621 of which would be styled Tacksman or 'Man of the Farm-town' (*Fear Baile*). While one or two tacks were shared, a few tacksmen may have held more than one tack—though one cannot be sure, owing to the recurrence of the same
[551] Christian names in each clan. It is striking that half the tacks—though mostly small ones—were held by men of undoubted mainland names, of which there were twenty-two MacKenzies, four MacLennans and three Mathesons.
• [166] These were doubtless the descendants of gentlemen from the mainland who in 1611 had helped to win and hold the
[551] Island for MacKenzie of Kintail, later Lord Seaforth. Of native Lewis names the principal are MacAulay, Morison and perhaps MacIver.[1] Only three small tacks were held by MacLeods, who may have been of Island stock. Lochs and Eye on the east coast had largely been granted in tack to the new-comers; on the south-west and west coast MacAulays and MacIvers held much of Uig and a few farms in Cladach; but more of Cladach and most of Ness (in the north) were still held by joint tenants. Stornoway was held by burghers, of whom perhaps two-thirds bore mainland names. The peasantry remained as unnamed subtenants on these holdings, of which the total rents show

[114] [1] The writers of the Brand Report (1902) assumed that MacIver is a native name. This would seem to be borne out by its frequency as a surname today, in contrast to MacKenzie, Matheson or MacLennan, though W. C. Mackenzie (1919, p. 92) thought the MacIver tacksmen arrived with Seaforth.

175 they were composed of at least one to four or five hamlet-
427 farms. The tacksmen also had cottars for service.
614 Thus in Lewis a special reason, the accession of Sea-
621 forth, had led to the granting of many tacks to his own clansmen and to natives. Elsewhere in the Highlands the
175 procedure is noteworthy during the sixteenth, seventeenth
427 and eighteenth centuries, for the collection of rents from
614 the peasantry by means of large tenants had financial advantages for the greater landlords (I. F. Grant, 1930).
184 The tacksman's continuation as tenant depended on his paying regularly, for the lease was not a hereditary grant.
[661] A tack could also provide for a lord's younger sons or
[565] immediate relations, such as formed the gentry of the clan. Along with smaller lairds, these furnished the cadres of officers who led the clan regiments down to the 'Forty-five, and later the Highland Regiments of the line and the Fencibles down to Waterloo. Like MacKenzie, other great chiefs such as Argyle or Breadalbane leased tacks when they acquired the status of peers and took possession of fresh lands with Royal support, after vain resistance from native chiefs and their followers. In Lewis, the fiscal status of tacksmen was applied both to MacKenzie's supporters from the mainland and to those with ancient roots in the west of the Island. The latter may have thought a mere lease a poor substitute for hereditary tenure, though a legal compromise necessary if their possession was to be
• [166] continued. The lack of permanent tenure ultimately led to the departure of their descendants.

175 From the families of these tacksmen have sprung most
621 of those of Lewis birth or descent who achieved fame
614 before the twentieth century. Of the MacAulays, we saw
554 Zacharias was Chamberlain during and after the 'Fifteen.
[608] Thomas Babington Macaulay came of the same line, as

181 grants, then, in the absence of an immediate goal, the combination of the corporate interest in bad work with natural inclination to an easy time proved overwhelming! The problem of assuring good work and prompt repayment is real: it calls for the right appeal to team-spirit coupled with personal responsibility. Many short roads to small new settlements have been economically built.

175 With regard to loans for settlement and housing, similar
657 contrasts are found. Near Stornoway the farm of Aignish
476 (Eye) was divided in 1905 into thirty-two fishermen's holdings (rented at £3). The Congested Districts Board lent £3600 for housing and spent £1600 on fencing and £450 on administrative expenses, a total of about £180 per holding; but in seven years the holders had paid only one-seventh of the annuities due, and were in arrears with the rent.[1] Yet on the housing loans made on a wide scale since 1919, there was mutual aid among neighbours and the repayment has been satisfactory.

SUMMARY: 1750–1914–1919

175 The transition from the old economy of mutual aid in
178 self-support, little changed down to the 'Forty-five, to the
433 development of production for sale had proceeded far by 1914. Yet change had not continued steadily. There had been fluctuations, from the land and back again, or towards individualism with returns to common action. Kelp-making, migration, and commercial fishing alternated in importance as means to earn a living without losing the
[731] anchorage of home. After the potato famine, a century
• [166] ago, the people tended to move away from the outlying
[167] townships and emigrate; but the next generation agitated

[1] J. P. Day (1918), pp. 312-314.

After being discharged from the army, he married the Shawbost girl he had been courting, but soon after returned to Glasgow in search of work. A doctor advised him to quit the factory job he had found because the dust endangered his wounded lung. He then attended a technical college for eighteen months in preparation to set up his own business, a bakery; and again, his wound defeated him. A doctor advised him that a bakery filled with flour was the worst environment imaginable for him, and that he should go back and work the land on the islands, where the air was clean. He returned to Lewis and to the croft, and when his sons were old enough they assisted him with croft work and weaving. He still makes a yearly trip to Glasgow.

The Bodach Beag

"The Bodach Beag" is known for his shrewdness, industriousness, mechanical ability and kindness. He is one of the many Lewismen who left the island in 1924 on the ship called the Metagama, and like many others he returned to the island during the depression. His eldest brother had survived the sinking of the Iolaire, the ship returning home with servicemen after the war that sank not far from the Stornoway harbor in 1919, and was never well afterwards. "He would sit in at night, off by

159 himself. If he had a drink he might come out. When the weaving started, he took that up; and he tilled the croft, kept cattle and all that; but socially he was a misfit. It was a terrible tragedy, the Iolaire."

[402] When the Bodach Beag returned from the United States, he bought a Hattersley loom to replace the old wooden loom with which his brother had been weaving. They worked the croft together. The Bodach Beag knew he would get the croft. He married soon after he returned, and for the next forty years never left the island. His wife took a six-month course in poultry-keeping and milking, and they concentrated on cattle rather than sheep. His wife sold fresh butter to the mobile vans.

159 594 [167] Their family grew and dispersed. The eldest son attended the secondary school in Stornoway, emigrated to Rhodesia and married an English girl who was working there as a nurse. They had to return when economic earthquakes shook Rhodesia and he lost his job. He stayed at home for a year and built a new house on the croft; and then, unexpectedly, he started work to complete the necessary exams to enter a university and become a teacher.

[166] The youngest son became an engineer, married a Glasgow Highlander whose parents came from Lewis, and settled in Glasgow. Their sister married a tradesman on the mainland. The third son, unmarried but engaged to a local girl, works in the local tweed mill and lives at home with his parents.

*159 did not receive much schooling. He stayed at home for a long time, helping his brothers with the crofting and weaving, and working at the nearby dairy. For a time the brothers made concrete blocks for sale, and ran a [166] lorry. In his late 30's and still single, Padruig went to the mainland, where he takes on various driving jobs, returning home periodically.

Seonag Thormoid

*159 166 464 Seonag Thormoid left the island in 1933 at the age of 16 to work in the hotels. Her mother had worked in domestic service before the first world war. "You were raised with the idea that you would go away. I've prepared my children for the same thing. Any work that exists here is temporary. You can't depend on it. Even though things have been good since the war, they're getting bad now."

Seonag went to Glasgow with three other girls from Shawbost, and stayed with her aunt until she found a job. "Jobs were very difficult to get, and the wages were low. These were the depressed years, which didn't pick up until [465] just before the war. I earned L2/10 a month working for a Mrs. Smith. You could buy shoes then for 12/6, but that was a week's wages. The richer families in Glasgow had five or six servants. You were treated like scum.

*159 •166 464 You ate terrible food at the same time tha preparing excellent food for them. So man large houses have been broken down now int flats. The prices are higher today, but t higher, too. I heard recently," she said satisfied smile, "that Mrs. Smith can only for three hours a day now."

Seonag moved from one job to another. about becoming a nurse, but the pay was so of hers did so, but had the help of two ma Glasgow. "The only nursing that paid good mental nursing. I tried it, but I didn't harsh with the patients."

*159 She married in 1944, after her fianc returned from the war. They had known ea lives. She had spent long periods of tim jobs. He was the second son and fourth c family, and got the croft because he had of his parents. The first son and eldest family had emigrated to the United States during the depression and built a house o grazing land. Another brother married in neighboring village, and the fourth broth Glasgow. A sister married a policeman in came from the island, and another sister

The eldest sister married a Scottish tradesman and lives in the United States. The second sister lives with her mother, as her husband comes and goes from the sea.

Mairi grew up wanting to be a nurse, although she had also considered being a missionary. She worked for
•[166] awhile in a hospital in Stornoway, and then went to Edinburgh for three years to train as a nurse. "I was glad to get away from home, away from the restrictions. I wanted to live a good life, to have fun. I had enough money to spend. I could spend it as I liked. I didn't like to come home. It was so dull and cold.

*159 781 "But the more I drank and smoked and went to parties and dances, the emptier I felt. One night I was at a dance. I had chipped in with some friends and we bought a bottle. Suddenly it seemed to me that I was getting deeper and deeper in sin, and I promised that if I got home from the dance I would try and correct my ways. I went home and prayed, and was converted."

*159 She had met her husband at a dance when she was home for a visit soon after she started nurse's training. He was sailing, and he returned to sea for three years so they would have enough money to marry. When he returned,

COMMUNITY FROM PAST TO PRESENT PT. II

175 for a firmer hold upon the land and for a return to aban-
178 doned sites. The communal possession of joint farms, held
433 directly or under tacksmen, gave place to individual pos-
(731) session of crofts. Yet the legal recognition of perpetual
tenure in 1886 gave not only the crofter's home but the
(166) crofting neighbourhood a security unequalled in Britain.
The use of moor and machar in common was retained;
(162) but its control for improvement or reclamation by the
175 estate or the township was weakened, rather than strength-
178 ened, by the Crofters' Acts. Confusion grew—both upon
the arable land, subdivided, unenlarged and unimproved,
423 and also upon the common grazing, sorely overstocked in
427 spite of ever diminishing 'soumings' (or family shares) of
cattle. Rating difficulties and anomalies appeared. Com-
munal discipline, maintained at sea by fishing, was weak-
ened on land after the abolition of the joint farm-group,
and almost nullified in the townships by subdivision and
squatting.

175 A year before the potato famine of 1845, a new landlord
178 had brought good-will, capital and pioneering effort to
433 Lewis. These had been directed to experiments in the
reclamation and the industrial utilisation of deep peat.
(427) Helped by employment on these and other works, the
population of Lewis continued to increase, when increase
(311) in Harris was arrested for a generation. Yet while neither
experiment with peat met with success, little aid had been
(161) given to develop fisheries. In both parts of the Island a
growing population was supported from the 'seventies
onwards by help of earnings derived from the seasonal
herring fishing on the East Coast and from inshore line
fishing at home. Women added to the Island income by
seasonal 'gutting' and, in Harris, by their spinning and
(167) weaving. Money was earned by work on the mainland,

(c) THE OUTLOOK: 1939-54 AND SINCE

458 How then can the situation be assessed, as it was before
178 the outbreak of war and since then? By 1939 twenty years
had been partly lost; for the after-war years of the 'Lever-
hulme boom' were followed by discouragement and
poverty. During that time one might have hoped for half
(423) a generation of reconstruction and progress. On the other
hand the sore question of dividing the farms was settled,
so bringing raiding to an end. Congestion on the existing
crofts is less than it was, owing to this fact, and to the
(166) provision of feus. The poverty of many breadwinners
who had migrated to the cities first cut down the amounts
remitted to their Island dependents, then drove them home.
(433) A croft, or even a garden site, and the opportunity of
building a good house there made life still worth while,
(746) when other employment had failed. Unemployment
relief, though tempting some to idleness, gave a respite
(286) which many utilised to make a fresh start. As fishing
(226) waned, many had taken advantage of the easy beginning
offered to learn a new trade—weaving. This has made
many feel that the living to be found on the Island is
better than alternation of 'wage-earning' with unemploy-
ment, in Glasgow or abroad. They believe the situation
(311) of the Island community to be hopeful. While the land
remains little better than before, many, even of the younger
people, still care for the Island life among their own kin.
Given a clear lead, these could reorganise themselves, and
undertake the developments needed in fishing, weaving
and reclamation. The homes are sound, 'good neigh-
bourhood' endures, and given fresh opportunity, the
community could awaken to new life.

178 During and since the war, co-operative marketing was
44

The minister
was cultivating potatoes and his family were eating them
175 as an example to the crofters who were still reluctant to adopt the new crop. Some 70
(244) boats were fishing; this was mainly in Loch Roag for they were small open boats greatly
228 outnumbered in good herring seasons by boats from other parts of the kingdom. To
encourage curing, particularly of white fish, the proprietor had set up two storehouses
(251) to supply salt; he, or his agents, were probably the only buyers - indeed John Knox, who
(441) visited Lewis about 1786, tells us that the estate factor held a monopoly for trading in
cattle, dried fish and other products. The absolute power of the clan chieftain seems
(614) to have survived in Lewis until impending bankruptcy forced the sale of the estate in 1844.
But it was kelp, more than fishing, that helped to support the people of Uig in the late
175 eighteenth and early nineteenth centuries. Lewis made little kelp compared with the
232 Uists, but the Loch Roag kelp was of particularly good quality and commanded more than
(221) the average price. Further, many people from Uig migrated seasonally to make kelp in
Harris and Uist. Thus even at this time, the intrinsic resources of the parish appear
(233) to have been inadequate to support the population. In this connection it is worth noting
(163) the change in the average stock held by each family since 1792 as shown in table 3.
178

Clearance and Congestion.

175 Even after the end of the tremendous boom in kelp, brought about throughout the
228 Hebrides by the Napoleonic wars, some production continued in Uig. In 1825, when the
land rent of the old parish was £1,862, the proceeds of kelp, after deducting expenses,
175 yielded £1,010 to the proprietor. Thereafter it failed. Meanwhile Seaforth was attempt-
233 ing industrial developments and agricultural improvements. The former included short-
166 lived distilleries in Stornoway, the latter involved the removal of some small tenants in
order to introduce mainland farmers. For these Uig was particularly attractive, the
extensive mountain pasture offering good prospects for sheep graziers. The exact dates
427 of the formation of the earliest farms are not remembered nor are they precisely recorded,
but at least as early as 1826 Alexander Macrae of Kintail had the tack of Scalicro, with
(274) the extensive grazings (now partly occupied by Bernera summer pastures) east of Little
Loch Roag. About 1823 the small tenants of Mealasta and Breanish were deprived of
Mealasta Island, which suggests that a sheep farmer was already installed in that
district. About 1838 all the small tenants were cleared out of Mealasta, six families
being put into Breanish; the remainder are said to have been sent to America.

175 In Bernera Island, Kirkibost was cleared about 1822, having been lotted in individual
crofts some years earlier. Thereafter Kirkibost formed part of the large farm of
427 Linshader. Little Bernera, too, formed part of this farm. On the mainland, opposite
Bernera, small tenants were cleared from the shores of Loch Roag (e.g. Strome and
Drovenish) in the early nineteenth century, and a tacksman was installed at west
Earshader. Further east the small tenantry were cleared from Ceanhulavaig and
Linshader.

175 By 1844 the kelp shores were almost valueless to the proprietor (though seaweed as
fertiliser remained a vital necessity to the small cultivators, often working the same
land year after year). In 1841 the Chamberlain of the Lews suggested to the Select
Committee on Emigration that some 6,000 persons should emigrate because the land was
inadequate to support them. In 1844, of necessity, Seaforth sold the island. The
(162) population of Lewis was then 17,000 (Uig 3,316); little did the Chamberlain imagine that
in the following ten years it would increase by 16%, and that by the turn of the century
would reach almost 30,000. (Uig 4,463 Figure 8).

1, [See p. 18--Analyst]

175 growing family could increase the size of his holding. Secondly, in the absence of fences
427 a certain discipline of agricultural management had to be maintained; moreover the
proprietor, through the factor, grounds officers and township constables, saw to it that
311 it was. This "good husbandry", albeit at a rather low level, was maintained in the
632 interests of tenants and land-owner alike. After the arable land was lotted permanently
to individuals, there was less flixibility and less need for communal management. But
the absence of fences between the new lots, or crofts, meant that they were still common
land during the winter months. In some cases the proprietors paid the tenants to erect
fences round the newly lotted inbye land of the whole township but, even when a ring
fence existed, stock was allowed to graze indiscriminately within it from November until
April.

It is fortunate that the first Ordnance surveyors were at work in Lewis just as the lottin
was coming into effect. The new lots were not divided by fences, therefore they were not
marked by the surveyors, but in several townships they arrived in time to plot the clachans
and in some - Breasclete, for example (fig. 6) - the first edition six-inch maps show some
of the new houses, neatly spaced out on the new lots. The arrangement of the latter is
recorded in the Factor's sketch books, of which fig. 7 is an example.

175 Thus whilst we have little evidence of the appearance of the former rural landscape,
632 we have an excellent record of the birth of the new. The characteristic units of the new
178 lotting were townships divided into long narrow strips, arranged parallel and fan-wise
more or less in the direction of steepest slope. Such an arrangement was simple to lay
out; it tended to give everyone a fair share of the land of each kind - ill-drained and well-
drained, high and low. And, if a road or track passed through the township it was usually
possible to give each lot or croft direct access to it without the necessity for side-roads.
(367) Consequently the houses, when re-built, were usually put on the crofts. A dispersed
pattern of settlement replaced the little huddles of the clachans. The extent to which it
was dispersed depended on the width of the lots; the greater the number of tenants
accommodated in a given area, the narrower were the lots. In extreme cases the
be as little as 20-30 yards in width and then the houses, aligned along the road or
track might form a virtually continuous terrace or street.

CHAPTER THREE

THE CROFTING STRUCTURE

427 In the parish of Uig about 90% of the families are crofters. That is to say, they owe
their presence in Uig to their hereditary tenancy of a small-holding of croft status. To
these holdings they have a deep attachment; many of them have been inherited through
(428) several generations. Others were obtained more recently during the process of re-
settlement of farm land which followed the Napier Commission report and 1886 Act.
Many older crofters regard the resettled townships as the fruits of a hard-won victory.
Nevertheless, we have seen, very few of the holdings are in fact more than 110 years
(166) old. And, whilst some families can certainly trace their ancestors in the district for
several centuries, there has always been a good deal of movement between townships.
Thus the claim that they occupy holdings which were carved out of the barren moor by
the toil and sweat of their ancestors is, in most cases, metaphor rather than strict truth.

195 It is worth noting that the rental charged for the newly cleared farm of Garnish was
427 £55 - being £20 less than had been paid by the crofters. Thus it cannot be said that the latter were evicted purely in order to obtain more rent. The proprietor must have been taking a long term view, looking for land improvement rather than immediate gain. By the 1870's the farm rentals had increased by 55%, those of the crofting townships by only 15%. And the latter often remained unpaid.

175 Thus, whilst the farmers prospered, the tenants became crowded in their townships
427 which were correspondingly less and less able to support their increasing numbers.
511 The crofts became so reduced that in an average year the produce of the land might keep a crofter and his family for only six months; for the rest he had to find other means of
195 support. Fortunately, after the hungry years of the 'forties', fishing provided just this.
226 Starting in 1851, an annual migration began, first to Caithness and later to the whole east
464 coast of Scotland and England. By the 1880's not only were most of the able-bodied young
166 men following the herring as hired men on east coast boats, but many of the women-folk,
who had learned gutting, packing and kippering from English girls brought to Stornoway
223 for the purpose, were also earning. This was summer work, and fitted well between seed-time and harvest. In the winter, small local open boats worked long lines for white fish which were dried and salted for local curers as they still are today on the
511 Norwegian coast. Between the 1850's and 1880's there was a "condition of plenty" in Lewis "which would not have been credited by those who judged of the condition of the people by the external aspect or sanitary arrangement of their dwellings".* It was this "condition of plenty" which encouraged the people to stay at home, to sub-divide their crofts, and to live on the proceeds of paid labour rather than on the produce of the croft.

Re-settlement, 1878-1935.

175 The process of sub-division ceased only when economic conditions became less
427 favourable and emigration began to exceed natural increase. In the 1880's fishing and
166 farming suddenly became less profitable. Simultaneously, and given extra point by the
226 particular distress of the time, agitation for land reform, and in particular for the
241 relief of the most congested districts, became a political issue. This began in Uig in
175 1874 when an attempt was made to evict 56 crofters from Bernera; hundreds of crofters
668 resisted by force and subsequently marched on Stornoway. They were well received by the proprietors - who appear to have been unaware of the summary and inhumane behaviour of their chamberlain - and to the credit of all concerned the matter ended peacefully. But land agitation continued.

175 The position in Bernera was eased in 1878 when Linshader farm was deprived of the
427 old township of Kirkibost which was resettled by crofters from Bosta, the latter being let to the Tobson crofters as an enlargement to their pasture. In 1880 new holdings were formed in Hacklete, which had been the grounds-officer's farm (but which, judging from its population, had always contained a number of cottars or sub-tenants). The grazing of Laimshader was probably returned to the Borroston crofters about 1886, having been part of Linshader farm and, in 1891, six new holdings were formed at Londale, also part of the same farm. At the same period, under the new Act, the crofters of Crowlista, Valtos, and Kenep applied unsuccessfully for enlargements from the farms, but during the nineties the islands of Little Bernera and Eilean Kearstay were taken off Linshader farm and added to the townships of Bernera, and Valtos obtained Pabay Mor.

*Report....on the Condition of the Cottar population in the Lews. (C.5265), 1888, p.4.

484 As yet the tourist trade is almost entirely restricted to visiting relations but many
485 houses offer suitable accommodation for people who would appreciate quiet holidays in these very beautiful surroundings. The distance from Stornoway, the difficulty of obtaining varied food supplies - and the weather - were cited as disadvantages! Passengers on
489 a weekly coach tour from Stornoway are supplied with meals at an Ardroil house which has good access to the beach but otherwise the crofters show little interest in the possibilities of tourism.

162 In common with other crofting townships, the greatest problem here is that of an ageing
166 population because the younger people seek employment outside their township. The
464 diagram illustrates the age structure of the permanent resident group and also the numbers of the insurable population periodically or permanently away. The lack of suitable work for young women particularly, is also shown. The ages of the tenants also illustrate this problem. Of the thirty-seven tenants here, twenty or 54% are over sixty-five. Serious, too, is the loss by emigration of people between fifteen and sixty-five. Of the total 'working population', 35% have left this region since 1939. The corresponding figure for Crowlista alone, the older settlement with smaller crofts, is as high as 42%.

241 We found in this part of Uig some crofts efficiently and energetically worked by young
231 tenants, and if reasonable stock prices are obtained the larger crofts can be worked
427 profitably. However no croft will fully support a family; ancillary employment is always
511 sought by crofters with growing families yet many crofts are carrying less stock than they
[80] might because some tenants are not interested in, or able for, agriculture. The croft is increasingly thought of as a home, as part-time employment - often for older members of the family - and as a place for retirement.

000 It is easy to list schemes for improvement and change:- dairying to supply Stornoway with milk, poultry and pig keeping on a commercial scale, cultivation under glass, the tourist industry, forestry on a small scale, lobster and crab fishing, etc. Such schemes would require capital not available in the townships, careful planning, and tactful administration by people with real knowledge of this area and its people. Meanwhile even the potential production of the crofts is by no means realised.

CHAPTER SIX

AIRD

by

Madge Phillips.

131 The little township of Aird is an isolated and old-established crofting settlement along
133 the western side of the steep and narrow valley of the Amhuinn Gil na h-Airde three miles north of Crowlista. After leaving Loch Meacheit, the river flows northward through a gorge (at the mouth of which are the ruins of the old corn-mill), then across a narrow
427 flood-plain into the rocky bay of Camus na h-Airde. The crofts, roughly fan-shaped in
133 arrangement and varying in size from 3½ to 7 acres, each originally included a narrow strip of the flood-plain, stretching across from just beyond the right bank of the river, up the steep, rocky slope above the left bank and widening out over the more gently slopes between the 100 ft. and 200 ft. contours. A number of the crofts were subsequently enlarged, gaining extra land on the right bank of the stream, whilst others received additional ground to the north or south.

1. [See figures 12 (facing p.34) and 17 (facing p.39)--Analyst]

133 The 1,700 acres of common pasture stretch to the east and west of the crofts, across
231 the peninsula which terminates in Gallan Head, extending to those of Crowlista and Valtos in the south. The whole coast is broken and rocky, the land inland is peaty, and Aird
654 lacks the advantages of the machair land found further west. To the north of the village there is now an R.A.F. radar station on Rudha Caol, built on what was part of the common pasture. It dominates the landscape and makes a considerable difference to the life of the inhabitants.

241 The township, though isolated, is reached by a good road which leaves the main road
497 at the western end of Glen Valtos. Grocery vans call on Wednesday and Friday, a
493 butcher's van on Saturday, and the local people are also allowed to shop at the N.A.A.F.I. within the Camp. The road through the village approximately follows the line of the 100 ft. contour and all the houses are built directly on to the road, with byres, weaving sheds and other buildings behind, whilst in most cases hens are kept on the steeper slopes below
205 the road. Thus the settlement has far more of the appearance of an English village than
347 have most crofting townships, but there is no shop or post office. The majority of the houses are stone with slate roofs and fairly large, though some of them have been built for
354 more than fifty years. All have electric light and their own water supply and several have
312 modern byres.

427 There are ten crofts, as the enlargement of one of the original nine was subsequently
311 split off to make a separate croft. Of these, one tenant is an absentee and another an elderly woman who does no cultivation. In both these cases, grazing is let to others so
497 that there are actually eight operative units. The crofts are fenced in their upper portions, but in most cases the fencing does not extend down to the river and there is free access to the single concrete footbridge which spans the stream.

241 The only crops now grown are oats and potatoes and a few vegetables, with some sown grass; natural grass provides most of the hay crop. Lime and shell sand and artificial fertilisers are used; the two former particularly on the ground near the river where the cultivation is in narrow strips separated by drainage ditches and ploughing is done by horse.
407 Most of the cultivated land is on the gentler slopes behind the houses, where the use of a
464 tractor is possible. Before 1914 most of the land within the original turf dyke was culti-
[824] vated; here was grown and ground at the mill for meal for barley bread. Seaweed was
[23] extensively used as a fertiliser and most of the families kept eight or nine cows, so that there was a more plentiful supply of manure. Now, six of the families each keep one cow for domestic milk supply (two of the others each keep a goat). The township possesses no bull, but make use of those at Valtos or Ardroil.

233 On the other hand, the sheep soum is generally exceeded; instead of the entitlement of about 200, the total flocks grazed on the township pastures are approximately 500. The lambs are weaned early in August and put on Rudha Caol (Air Force use has not prevented this) and wedders are usually sold at the age of two or three years in Stornoway - many in October to reduce the numbers that must be pastured during the winter.

162 The total resident population of Aird consists of fifteen males and sixteen females.
Of these, twelve are over 65, six are aged 45 - 64, 11 are in the 15 - 44 age-group (there are only three married couples) and there are two children under 15. Nevertheless, most of them are complete families; only one person lives alone; no members are reported as
166 periodically working away, no men and only two women are permanently away. Neither has there been much emigration since 1939 - five women only have married out of the parish. The tenants of seven of the crofts are over the age of 65, the only one in the 15 - 44 age-group is a new-comer to the district and does little croft work.

427 joint tenants of one have moved to Geshader while continuing to work the Ungshader land.
132 Another is preparing to move to Enaclete and yet another lives on a feu at Loch Chroistean
511 Cottage. At present, three working units remain. Enaclete consists of nine crofts with ten units, one being rented by joint tenants.

22 The rhythm of work is similar to that in other parts of western Uig. Potatoes and oats are planted in April followed by lambing and peat cutting in May. In June and July the sheep are shorn and subsequently sent to the common grazings. In August the peats are carted, once they are dry, by lorry direct to the crofts. Hay-making follows. The lambs are weaned in September, harvest is then carried in and tupping and statutory dipping take place in November. The sheep are then returned to the township grazing though the lambs
241 may be fed with hay on the croft. There is little regular crop rotation and only a small number of crofters seem to undersow oats, thus improving the quality of future hay crops. Gardens are not important and only potatoes for family needs but Caryshader particularly has a number, some growing flowers as well as vegetables. Fertilisers vary widely from croft to croft as well township to township. Enaclete potatoes are still grown near the shore and thrive on seaweed; those of Caryshader are usually fed on artificials.

231 Most crofters keep one milk cow with a calf; a few rear a young beast for the autumn sales in Caryshader. However, some now rely on their neighbours for milk in return for grazing and one croft has turned to goats, as giving less trouble. The bull for the whole district is a beef shorthorn and is kept on Geshader -Ungshader common grazing as it is completely fenced; and Geshader is responsible for its upkeep.

233 Lambing seems to have been generally good in 1959 but it was not easy to get exact figures. The Moregail Estate and Gisla farm also run considerable flocks. The common pastures total 3,119 acres with an enlargement, formerly used as shielings, of 1,215 acres for Enaclete, Geshader and Ungshader through Loch Suainaval, and for Caryshader 88 acres
[319] on Floday Island. The shielings have been disused since the war. Peat is normally cut to the west of the road but at least one elderly tenant in Geshader has kept a section of his croft for this purpose to save the effort of working further afield.

241 Generally speaking the land now cropped only represents one third to one half of that
178 worked by spade 20 - 50 years ago when the crofting population was larger and when much greater numbers of cattle were kept through the winter, thus requiring more potatoes and
231 more oats. The cattle number is are much less than the total souming but sheep are in excess. In Enaclete, at least, overgrazing by sheep has caused a decline in grazing quality.

464 Clearly in these townships, apart from the very few crofts still fully cultivated, the means of livelihood is sought elsewhere. At present there are altogether fifty-three men in the working age group (15 - 64) in all four townships. Of these fourteen are away, nine permanently and five periodically. Thirty have regular or periodic employment besides crofting and of these seven work at Gisla on the hydro-electric scheme, seven weave, some of them part-time, four hire out vans, two do post-office work and others have varied occupations while only three are full-time crofters. At present there are few men in the Merchant Navy and fishing does not provide an occupation although many share rowing-boats in their spare time, and fish for domestic use.

162 The population as a whole is ageing and of the group between 15 and 64, forty-four
166 (roughly 30%) work away permanently or have emigrated. It is noticeable that there are few crofts worked by people with young families

000 In conclusion it may be re-emphasised that the fate of the crofting townships depends mor

CHAPTER NINE

THE ISLAND OF BERNERA AND

ADJACENT DISTRICTS OF THE MAINLAND OF

LEWIS

('Bernera and Bernera Shore')

by

P. Whealer

131 Of the three main sections of the parish of Uig, the Bernera district, consisting of Bernera Island (Breasclete, Croir, Hacklete, Kirkibost and Tobson) and the "Shore" (Earshader, Crulivig and Lundale together with the isolated township of Linshader), 103 presents a number of peculiarities due not primarily to physical conditions, but to isolation. 49 Bernera Island, though central to most of Uig and easily accessible over the sheltered waters of Loch Roag, yet remained relatively inaccessible overland until the recent building of the road bridge; even now it is necessary to travel over six miles to get from 101 the bridge to the main Uig road and a further four miles to Garynahine. Consequently the island, even more than the adjacent mainland settlements, has a very close-knit and self-sufficing population. Whether this community retains sufficient vitality to resist the destructive effect of better communications in addition to the general forces eroding rural and especially Highland life, remains to be seen.

13 The district shares the unpropitious physical characteristics described in the Introduction. Like the other districts it has virtually no valuable mineral resources (1), and 228 the herring and white fish industries have all but disappeared and seem unlikely to 178 resuscitated. Lobster fishing is, however, prosecuted with vigour and enterprise; it 467 provides a good living but only for a small group of families. The rest depend on regular or casual employment to eke out the proceeds of the croft. The kinds of work 164 available, and the problems of permanent or seasonal absence in search of employment are common to the whole parish; thus this account is mainly concerned with the problems of crofting agriculture.

Settlement: history and patterns.

172 The pattern of settlement in this inhospitable and discouraging environment is partly very old, and partly very recent. At least four broche are known on Bernera and various 361 standing stones of even earlier date, while continuous settlement has survived from the early Christian era. Traces of old patterns and practices remain, in tangible form as 173 in the graveyard on little Bernera, or in oral tradition. All this contributes towards the very close network of family relationships that binds the island folk and to a lesser extent those of the adjacent mainland.

195 With the exceptions of Tobson, Bosta and Breaclete, all Bernera Island had been 361 cleared by 1851. Resettlement began in 1876 when twelve families were moved from Bosta to Kirkibost, and continued at Hacklete in 1880, and subsequently elsewhere. Occasionally (as at Kirkibost) old, pre-clearance lotting patterns were re-adopted, but usually settlement was laid out afresh. The townships of Bernera Shore, were also affected: all the small tenants except those of Earshader and Crulivig were cleared, leaving the land under the sheep farms of West Earshader and Linshader. However, the Bernera Island crofters were allowed to continue their customary use of shealings on the mainland, and the transfer in 1880 of these grazings to their present position marked the

316 (1) A small deposit of diatomite has been exploited in Kirkibost since 1959. Only a few men are employed and the number is not likely to increase.

[TEXT CONTINUED ON PAGE 61]

312 There is no piped water supply and after even a short period of dry weather there is a water shortage. One prosperous crofter (where the crofter does weaving and one member of the family is periodically away with a Norwegian whaling fleet) bought a large modern Bendix electric washer only to find that there was not sufficient water to use it except on 359 rare occasions. The croft houses have had electricity since 1954, and even the three remaining inhabited thatched houses now have electricity.

311 Although there are only 4 full-time crofters, most of the crofts are carefully and well worked. Only a few crofts are decaying, and there is a tendency for these to be sub-let to the more agriculturally inclined crofters instead of allowing the land to revert. In 289 addition to the full-time crofters, 31 other men do part-time crofting. Eighteen men weave and this provides their main income, but this figure fluctuates according to the prosperity of the Harris Tweed industry; at present the figure is probably higher than 166 average. Although 32 people have emigrated from the township since 1939 (many of them young people who have married on the mainland), there are still several young people and 164 young families making their homes here. The dominant age-group of permanently resi- 162 dent adults is 15 to 44. Total population is steadily declining, but Callanish has always been a prosperous area and seems likely to remain among the more prosperous crofting communities.

BREASCLETE PARK by Margaret Grice and Doreen J. Phillips.

195 Breasclete Park, also known as New Park, Callanish, was settled by people cleared 427 from Reef in the mid 19th century. Two of the six original crofts have been subdivided, making nine. However, there are only five working units and on one there is no cultivation. There is also a feu house built in 1958.

361 The crofts, which are fenced, form broad strips perpendicular to the Breasclete-241 Callanish road. Cultivation is mainly by tractor, oats, potatoes and some clover being grown. One progressive crofter has successfully experimented with re-seeding one 231 acre of grazing land on his own croft. Common pasture for the 148 sheep and 6 cattle is shared with Callanish, and for most purposes the Park can be considered a part of that township.

162 The total population is 26 of which 4 are permanently away. There are 6 people over 65, and 8 children under 15.

BREASCLETE by Margaret Grice and Doreen J. Phillips.

131 Breasclete is situated on the east side of East Loch Roag on land which rises gently 133 from the seashore to the moorland and is interrupted by rocky outcrops of gneiss in the northern part. It is separated from the township of Callanish to the south, by a small westerly flowing stream, at the mouth of which is the site of a mill.

491 The road on which most of the houses are situated, follows a curve through the 361 middle of the crofts, but newer houses and some feus have been built along the main Callanish-Carloway road, nearer to the shore. Stornoway is 18 miles away along this road which is turned throughout. Breasclete could be served by the still unfinished Pentland Road, were it to be properly surfaced and this would make the journey shorter 492 by 4 miles. Two buses in each direction per day connect the township to Stornoway, but high fares make visits to the town infrequent.

312 The township hopes to receive the mains water supply within the next few years, but, at the moment, relies on wells within easy access of most of the houses. Many houses have piped water from private wells, some of which go dry after two or three days good weather although the wells on the lower ground never fail.

Figure 35

162 166 POPULATION: AGE and SEX composition

Since 1939,
166 54 people have emigrated whereas only 4 have immigrated. Most of the girls have to
462 leave home when they finish school as there is no employment locally. Many of them go into domestic service or nursing in Glasgow. Many of the younger men also spend time away from home, often in the Merchant Navy. Breasclete is also the temporary home of the families of lighthousemen on duty in the Flannan Isles.

288 Although the people live and work on the croft, weaving the Harris Tweed provides the main source of income. This is a rather irregular occupation owing to the uncertain demand for the tweed, and although the men are nominally self-employed they rely on the mills to supply them with work. The tweed is woven on treadle looms, which, with ancillary equipment such as bobbin winders, are all owned by the crofters.

[458] As 1959 was a good year for the tweed industry, there was an air of prosperity in the township, and with the aid of government housing grants many new bungalows were being erected. But should there be a slump, the crofts would be unable to support the population and most of the bread-winners will have to leave.

TOLSTA CHAOLAIS by Roger H. Thomas.

131 The township of Tolsta Chaolais lies in a shallow glaciated depression occupied by Loch
133 a' Bhaile and Loch Shader. Most of the crofts are situated near the shore of these lochs,
for westwards to the sea the terrain is too rocky and irregular for either settlement or
361 cultivation, whilst to the east of Loch a' Bhaile the land slopes precipitously from 250 ft. to the loch shore. As Figure 36 shows settlement takes advantage of the more gentle drift-covered slopes, generally of small extent.

137 Cultivation is very noticeably limited to three areas - along the west shore of Loch
a' Bhaile, along the north-east shore of Loch Shader, and in the valley of the small stream
[241] draining from the north into the head of Loch a' Bhaile. Most of the croft land is composed of rock outcrops, rarely exceeding 100 ft. in height, separated by damp depressions frequently filled by reeds and rushes; bracken was apparent only on three crofts. In particular, the area between the two lochs is badly in need of draining and is largely colonised by reeds and very coarse grasses, of no use whatsoever as pasture. One enterprising person suggested that the township should hire a ditching machine - this could certainly be put to use with great advantage.

632 The settlement comprises 43 registered crofts, 6 feus, 2 squatters, 1 cottar, and
311 2 holiday bungalows, with the croft holdings aligned north-east/south-west between the two lochs and the sea, except for nos. 28 and 29. The 53 holdings are unofficially
427 amalgamated in various ways and so reduced to 35 operative agricultural units. The acreage of crofts varies from 2.2 to 20.75 acres - a considerable variation. Fencing of the crofts - except for 1A, B, and C, and 12A, B, and C which are held 'run-rig' - was carried out between 1945 and 1950, whilst in 1946 the common pasture of 2,700 acres was fenced into two parks - an inner and an outer one, the division coinciding with the Carloway to Breasclete road. An area stretching from crofts 18A to 21 has, however, been most haphazardly divided. The seaward halves of some five crofts were redivided amongst seventeen crofts in the southern half of the township to compensate them for lack of grazing area within their own croft boundaries. This division is said to date from about 1886.

241 Most of the cultivation is carried out with hired tractor, although two crofts owned
[407] small mechanical cultivators. Ploughing by tractor and horse, as opposed to spade cultivation, depends either on the urgency of the operation, or on the accessibility of the plot, for any small patches of cultivation on the rougher terrain are dug by spade, as

[TEXT CONTINUED ON PAGE 95]

464 full-time crofters, 19 males have other regular employment and two have periodic
employment. 8 crofters are aged over 65. It seems that the most successful combination
463 of employment is weaving and crofting; weaving is carried on in twenty of the holdings.
238 Lobster fishing in the evening is still popular but regular small-boat fishing has disappeared:
226 one crofter took up regular fishing when weaving was slack in the autumn of 1958.

161 Of a resident population of 125, 32 males and 32 females are between the ages of 15
462 and 64, these representing the effective labour force. Thirteen persons are temporarily
away and 16 permanently away whilst at least 46 have emigrated since 1939 and 6 have
166 immigrated. Thus the number that have emigrated is nearly three times the number that are merely permanently away. With a population of 125 and an effective labour force of 64 to work 35 operative units Tolsta Chaolais would seem to be far from a dying township.

131 If not exactly progressive the township economy seems stable and moderately pros-
perous, in spite of the fact that the settlement is rather inaccessible, for the roads which
181 join the Carloway-Breasclete road are both very steep and have bad corners. To add to the apparent isolation there is only one Post Office-shop in the village but most commodities
000 are bought from vans. A reallocation of the smaller crofts to younger, more ambitious tenants at the deaths of the older tenants could reduce the number of operative units to about 25. Admittedly, little can be done with the rougher terrain, and although cattle stocks could be increased there would be the added problem of sufficient winter feed. With better drainage more land could be taken into cultivation - especially between the two lochs, an area largely wasted at the moment - whilst weaving might supply a surer source of income, especially in the winter. Tourism on a small scale might be a further possibility for the coastal scenery is very fine and the immediate setting of the village is very attractive. It would be more realistic however for Tolsta Chaolais to find future prosperity within its own boundaries.

Figure 46

The search for employment

a temporary feature in 1959 due to the casual employment provided by a hydro-electric scheme at Gisla (Figure 46).

In this respect the critical age-group is 15-44 years (table 54). Few older people take work away from home. Of this age-group, 338 (out of 931) persons are away. Women account for 199, men for only 139; the difference is a strong indication of the lack of employment opportunities for women in Lewis. The contrasting experiences of the different districts are quite remarkable (figure 46). A far greater proportion of men goes away from the two northern districts than from Bernera and the South, and this despite the greater importance of weaving in the north. The explanation for this lies partly in the generally smaller size of crofts of the north, partly in the type of employment available locally and partly in the customary choice of employment away, which differs from district to district. Social custom, which may vary as between one township and the next, has a strong bearing on whether and where young men and women choose to work.

Note: (1) the figure in parenthesis refers to females who emigrated on marriage.

161/ In the northern townships, stretching from Garynahine to Loch Carloway, quite the
162 reverse is seen. Here there are actually more people now than in 1841 (1,261, c.f. 1,204), although there has been a marked decline since 1891 when 2,106 were enumerated. Thus this area, which had less than one third of Uig's population in 1841, now has more than half. The main change occurred before 1891 and was associated with the prosperity of fishing, both locally and on the east mainland coast, but, in addition, this area did not lose population as rapidly as did Bernera and the southern townships in the 'twenties and 'thirties, nor since 1951, and this can undoubtedly be ascribed to the early establishment, especially in the Carloway district, of Harris Tweed weaving.

* Immigrant R.A.F. and Ministry of Civil Aviation staff and families are excluded.

Migration

1/ One of the objects of our enquiries was to discover something of the processes of population change in recent years. To this end we tried to record some details of migrants, from and to the parish since 1939 (see croft record questionnaire, frontispiece to Part I). We also attempted to record war and other casualties away from home. Finally, we recorded natural population changes by extracting details of births and deaths from the official registers for the period October 1939 - December 1958 (the 1959 registers were not available). The results are summarised in table 50.

166 Our record of migration depends on the memories of our informants and cannot be expected to be complete, nor can the 1939 (National Registration) population figure be

464 [288] shopkeepers and so on. But none vies with weaving as a source of regular income. Without the weavers most of the others would find little demand for their wares or services.

Periodic work is taken locally, usually in default of regular employment, and often by older men who formerly worked away from home. This is usually casual labour and is particularly important - for lack of other opportunities - in South Uig. Whilst our survey was in progress a number of men from South Uig were thus engaged at the Gisla hydro-electric scheme. In South Uig, also, weaving tends to be less regular than elsewhere. For this some weavers blamed the Stornoway producers, who, it was claimed are not inclined to send work as far out as this unless it cannot otherwise be done. There is some truth in this, particularly with respect to the 'small' (i.e. non-mill) producers, but our observations also showed that some men in South Uig regarded weaving as an 'extra' and were not prepared to do it when alternative employment, on the croft or for wages (as at Gisla), was offered. This may be a vicious spiral - the less weaving a man does the less good he becomes, he takes longer to complete a web and may suffer more deductions for faulty work. He becomes less inclined to weave and the producer becomes less inclined to send him work.

Carloway	22*	3	25	12	5	3	11

* including five working seasonally on whalers.

Those taking permanent employment away from home (table 56) tend to choose particular occupations. Amongst men, the Merchant Navy is most popular, especially from the Carloway and East Loch Roag districts; many of the others work at skilled or semi-skilled jobs, including the police forces; relatively few are un-skilled casual labourers. Amongst women, nursing is by far the most important occupation and is particularly popular amongst young women from South Uig and Bernera; most of ther others take 'domestic work' - in hotels and hospitals, rather than in private homes - and a few work in offices and shops. The category 'professions' in the table is almost synonymous with school-teaching.

Periodical, including seasonal, absence from home is less common than from some island districts; 14% of the 15-64 age-group is classified as "periodically away" (compare 27% from Park, 16% from Harris, 13% from Barra). Of these, half the men and a third of the women are students. Seasonal hotel work, for women, is the most important single category.

Population trends

162 126 The diagrams, figure 48, summarise much of this chapter. They have been constructed so that the area of each horizontal bar is proportionate to the number of persons in the

CHAPTER FOURTEEN

CONCLUSIONS

H. A. Moisley

121 The relationships between Place, Folk and Work are seldom simple; in a crofting community such as Uig they are particularly complex. The object of our survey was to make an impartial, factual record of the physical and human resources and their utilisation, as described in the Preface (Part I, page i). The primary purpose of this report is to make our observations available to others and to this end we have included a great deal of fact leavened, we hope, by a modicum of personal impression. In conclusion, however, it seems appropriate to add certain personal conclusions based on the detailed observations and data relating to the crofts and townships visited.

464 [166] The outstanding fact is that, over the whole parish more than a quarter of the population between the ages of 15 and 64 has to leave home in order to make a living. Of those who remain at home, 80% of the men are more or less engaged in agriculture; almost all of these have some other source of income, usually weaving, and in most cases the cash income from agriculture must be less than £100. Although we classified some 60% of resident males as 'crofters with regular employment' this must not be taken to be necessarily the same as having a full-time job. The average income of a weaver in South Uig, for example, is only of the order of £250 per annum. Thus crofting with ancillary employment, or employment with ancillary crofting as is more often the case, conceals a good deal of under-employment. Such low incomes and hidden unemployment are characteristic of West European under-developed regions.

[434]

427 433 000 The crofting system can never provide an ideal structural system for agriculture, but that is not its real purpose. It is a social system and, whether it is economically efficient or not, it exists. It should not be allowed to decay for that would not only cause hardship to the crofting communities but would also, in the case of islands and other remote districts lead to the abandonment of potentially productive resources of land and people. Nor should it be preserved unchanged; preservation would mean fossilisation and fossils are dead. The present crofting system was cast in a legislative mould in the late nineteenth century when population pressed heavily on the resources of the islands. Circumstances have now changed and the mould must be altered or the communities will slowly die.

This is not to say that wholesale reorganisation is required, at least not in Lewis. But the authorities charged with the welfare of the crofting townships, and of the island as a whole, have a duty to see that crofting evolves towards something more, and not less, productive. Subsidies alone are a confession of defeat. It is not good enough merely to spend money to alleviate the symptoms of a disease which it is now fashionable to call 'under-development'. Realistic planning is required so that the special public expenditure incurred in such regions becomes a productive investment and not merely a disguised form of charity.

It is encouraging to note that such economic and technical developments as have taken place (particularly the development of weaving and the improvement of common pastures) owe a good deal to local initiative and local investment. This suggests that, given suitable guidance and encouragement, the crofting townships can do much to help themselves. It would be an excellent thing if, in each district, informal and quite unofficial discussion groups could be started to think about the future of their particular townships in terms of development and not decay.

Realistic discussion of development must face certain facts even though in some cases they may be unpalatable or politically unpopular. Amongst the most important are these

TABLE 50

The Population balance sheet, 1939 - 1959

trict:	Population:		Decline, 1939 - 1959:			Net Migration:	
	1939	1959	Total	Natural:	Casualties:	Deduced	(Recorded)
th Uig	909	677	232	32	16	184	(95)
rnera	638	425	213	30	11	172	(76)
t Loch Roag	764	619	145	19	7	110	(130)
rloway	874	669	205	39	10	156	(121)
	3,185	2,393	792	120	44	622	(422)
. Park	1,500	908(1958)	592	(+13)	33	572	(355)

ictly comparable with our own. A check is possible, as shown in the table, for we can mpare our records of net migration (last column in table 50) with that obtained by ducting natural change and casualties from total change. Thus, since 1939, the deduced loss due to migration appears to be 622, c.f. our record of 462. This deduced figure certainly too high, because it does not take account of excess of deaths over births in 59, nor is it likely that we have recorded all "casualties", i.e. deaths outwith Uig of rsons normally resident there. The Park survey showed a slightly greater discrepancy. any event the 1939 and 1959 figures are not completely comparable; the data provide a oad picture of the changes rather than census-like statistics. But they do provide for re geographical detail than the official Census.

They show that the decline in population is due, in all parts of the parish, both to igration and to an excess of deaths over births. Over the whole parish migration counts for nearly 80% of the loss, natural change for 15%, casualties for 5%. By tricts the proportions are:

	Migration:	Natural change:	Casualties:	Total change:
th Uig	79%	14%	7%	100%
rnera	81%	14%	5%	100%
t Loch Roag	81%	14%	5%	100%
rloway	76%	19%	5%	100%
. Park	97%	(+3%)	6%	100%

s is quite a different picture from that found in Park district, where migration alone the apparent cause of population decline and where, over two decades, births slightly ceeded deaths.* Uig lost 20% of its 1939 population by migration whereas Park lost 38% slightly shorter period, 1939 - 1958 c.f. 1939 - 1959 for the Uig data. Even the re remote districts of Uig have not lost population at much more than half the rate of from Park.

Net migration is made up of a large outflow, mainly of men and women under 45, and mall return flow, mainly of older people such as retired policemen and similar sioners. Families entering the area to perform some particular service (school chers, ministers etc.) more or less balanced the outward movements of their pre- essors and may be discounted. Examination of the individual croft records shows

Caird J.B. et al. Park: a geographical study of a Lewis crofting district (G.F.G. 1959), table XV.

166 that the movement of whole families is unusual, although a few have migrated to Stornoway, particularly from the south. In this respect Uig, except to some extent the south, differs from Park; only 15% of emigrants have gone to Stornoway, c.f. 32% from Park.

TABLE 51

The Destination of Emigrants, 1939 - 1959

Destination	Males (No.)	Females (No.)	(1)	Total (No.)	(%)	c.f. Park (%)

Overseas	28	19	(8)	47	(9)	(5)
All destinations	236	291	(206)	527	(100)	(100)

Note: (1) The figure in parenthesis under 'females' indicates those who became 'migrants' on marriage.

Male emigrants from Uig go mainly to Glasgow and other parts of the mainland (table 51). Since 1939 (in effect since 1945) only 12% have gone overseas; 16% have moved to Stornoway and a further 10% to other parts of Lewis. This is almost entirely a movement in search of work. Female emigrants from the parish are less widely dispersed: more went to other parts of Lewis and fewer overseas. There is a special factor in the case of female emigrants. Social intercourse between the different island districts is 582 very active, despite the apparent lack of facilities; almost a third of the female emigrants 562 from Uig became migrants on marriage into other Lewis parishes. Even if we discount 288 such migration, more women than men migrated from Uig between 1939 and 1959. Weaving retains young men but not the young women.

Migration from a crofting district is a somewhat indeterminate process. Young people of both sexes go to Glasgow or elsewhere in search of work. For a while they maintain their island homes but, eventually, they set up homes of their own. Our criterion of 'migration', as against (working permanently away', was this setting up of a home. Thus the critical point is often marriage and it will be noted (table 51 and Appendices B(3) and D(3) that a very large proportion of female emigrants appear to have emigrated on marriage in the case of migration outwith Lewis this usually means that for some time previous to their becoming 'emigrants' they had seasonal or permanent employment away from home. Indeed, our enquiries showed that the great majority of young women who took employment on the mainland eventually married and settled away from Lewis. Only a small minority returned, often giving up their employment in order to care for ageing 582 relatives. An island man may occasionally return with a mainland wife but cases of island girls bringing mainland men to settle in the island are rare indeed.

166 island girls bringing mainland men to settle in the island are rare indeed. Thus migration remains, as it has long been, a one-way traffic and this is almost certainly related to the problem of establishing technical innovation*.

Age structure

162 [121] The age structure of the population reflects the changes that have taken place in recent years. The population of Uig, as is usual in areas of declining population, is ageing. It is one advantage of a survey such as ours that the data may be analysed in greater geographical detail than is possible from the published figures in the official Census reports. This is particularly important in the crofting region where neighbouring communities may show quite different demographic - and economic - trends. Table 52 compares the 1951 Census figures for rural Lewis with those of Uig parish and with certain other districts, one (Park) remote like Uig, the other (Point) being most accessible to the urban facilities and employment offered by Stornoway. Uig has an even greater proportion of old folk than has Park, but it also has more children. This is probably related to the smaller proportion of Uig's population finding it necessary to leave the parish in search of work (16%, compare 28% from Park).

The proportion of the population over 65 years of age has increased from 17% in 1939 to 21% in 1959; it is thus more than twice the national average and well above the figure for rural Lewis. The proportion between 45 and 64 has also increased whilst that between 15 and 44 has markedly declined. The actual number of persons aged between 15 and 44 had declined from 1,263 in 1939 to 752 in 1959. It is to this age group in particular that one should look when seeking economic development but it is by no means certain that this decline is an unmitigated evil.

TABLE 52

Employment - the search for work

121 464 166 When an island community outgrows the local intrinsic resources permanent emigration is not the only solution. It is one of the outstanding demographic characteristics of island communities that a proportion of the population seeks employment beyond the island whilst maintaining its island homes. We therefore classified the population, in the first place, according to whether it was:

(a) permanently resident in the parish

(b) leaving the parish seasonally or otherwise irregularly in search of work, and

(c) working permanently away yet without a permanent home except in the parish.

TABLE 53

Location of employment

162 166 469

	Proportion of total population:				
	Resident:	Periodically away:	Permanently away:		
Uig Parish	83.7%	6.5%	9.8%	100% (2,652)	
Districts					
South Uig	87.7%(1)	3.1%	9.2%	100% (746)	
Bernera	85.2%	7.2%	7.6%	100% (460)	
East Loch Roag	81.3%	7.0%	11.7%	100% (701)	
Carloway	81.2%	8.6%	10.2%	100% (745)	
O.P.					
Park	72.2%	11.0%	16.8%	100% (1,092)	(1958)
Point (Stornoway)	86.8%	2.3%	10.9%	100% (1,068)	(sample: 1960)
Harris (mainland)	80.8%	6.9%	12.2%	100% (2,768)	(1961)
North Uist	87.7%	2.3%	10.0%	100% (432)	(sample: 1960)
South Uist	86.0%	3.5%	10.5%	100% (3,690)	(1956)
Barra	70.6%	4.0%	25.5%	100% (1,906)	(1961)

Note: (1) Including at least 27 temporarily employed on construction work at the Gisla hydro-electric scheme, and 28 permanently employed at government sites (equivalent to 7.4% of the total population). Many of these men would otherwise seek employment outwith Uig.

On this basis some 16% of the population of Uig is periodically or permanently away. This may seem low compared with 28% in Park and 30% in Barra but, on the other hand in the Point district, near Stornoway, the proportion is only 13%, and in North and South Uist it is around 12 - 14%. In Harris (Scalpay and Bernera islands excepted) the proportion is 19%. Various factors influence this state of affairs; they may be summarised as the age-structure of the population, the relative viability of the crofts and the opportunities for local employment. Within Uig the situation differs from district to district; the particularly low proportion classified as 'periodically away' in South Uig was probably

464 permanent employment furth of Park (See Table VIII).

Employment within Park

288 Table IX shows that opportunities for local employment are strictly limited. Weaving of
464 Harris tweed is the most important single source of employment. It is significant that those engaging in it are almost all crofters working in their abundant spare time. Weaving is an ide adjunct to croft work as it is unaffected by weather or hours of daylight and thus can be performed during periods of agricultural inactivity. The vagaries of the Harris tweed market make the occupation precarious; Park is one of the more inaccessible areas of Lewis and the mills are apt to give their commissions to the weavers nearer at hand around Stornoway when
[178] work is scarce. Since 1952, the number of weavers in the fishing townships of Cromore, Marivig, Calbost and Gravir has grown from 11 to 22 and much of the credit for this is due to
[228] the activities of the Pairc Association. Fishing, on the other hand, has lost ground in the sam period: the number of fishermen has declined in these townships from 20 to 14[1]. Apart from
463 weaving, service occupations form the only other employment available, shop-keeping, driving
464 and road maintenance being the chief occupations in the service group. There are very few craftsmen: with such a small population, and the long established tradition that the crofter builds his house and is his own tradesman, there is little opportunity for a trained builder, join or even shoemaker to make a livelihood. The professional class is small and entirely composed of the minister and missionaries, the doctor and several schoolmasters.

[462] There is little opportunity for women to find employment in Park, apart from nursing, shop-keeping and school teaching, and a few domestic service posts (See Table IX).

Employment furth of Park

166 The persons in the 15-44 age group form the main body of those working away from home.
167 The distinction made between 'seasonally away' and 'regularly away' is that the former group
462 spend part of the year elsewhere, the men on whalers in South Georgia or with the Tay Salmon
463 Fisheries at Perth, or labouring on the mainland. The women are in domestic service, mainly
464 in hotels. A majority of the men in the latter category are in the Merchant Navy; in some cases these men take leave to coincide with the spring work and the harvest. The majority of the women are in domestic service (See Tables IX and XI).

An interesting comparison in the 'regularly away' group exists between men and women in the professional classes (Tables IX and XI). The sample is small, but it is clear that more women than men attain professional status. The number of domestic servants, nurses, and merchant seamen is a reminder that the crofting districts provide a pool of labour for certain vital occupations, some none too popular in Britain as a whole. In people alone, one can say that Park makes a distinct contribution to the fabric of the national economy and this contribution is much more apparent outside Park than within the district. At the same time a majority of those who are temporarily or permanently away eventually marry and settle outside the district and thus a most valuable section of the community is constantly moving southwards. Only 35 per cent of the men in the 15-44 age group are wholly resident in Park, and 46 per cent of the women in the same age group, a reflection of the poor prospects and utter inadequacy of resources on the most of the crofts.

1 The 1952 figures are abstracted from the Lewis Survey Report on part of South Lochs.

161 162 [228] Figure 6 and Table XII give the population of Park tabular form. The 1830-51 decline was due to eviction from 1861 until 1911 can be almost wholly ascribed to t comparison of the graphs of the selected agricultural a The decline since 1911 has been very rapid, and is mai employment. The 1939 figure in the graph appears to decline but it may be that there was an influx of evacue enumeration was made.[1] The 1951 Census confirmed t the enumeration of 1958.

An investigation of the age structure of the populati that not only is the population declining but also that it of the population were under school age, as compared single group in 1939 was the 15-44 age group, the mos the community; in 1959, the 45-64 age group emerges group has increased by 5.2 per cent since 1939.

As the 1939 and 1958 enumerations were not obtain Census, the figures for Lewis, excluding Stornoway B unfortunately the published Census material does not g groups for Lewis. By including those persons in seas months) and excluding those permanently away, the Ce comparable, but it is possible that in the enumeration (See Table XX). From these comparisons, it would app is unbalanced in comparison with the rest of rural Le for this is the fact that so many people are working pe From a study of the population structure it is clear th population, a significantly low proportion of children 65 and over age group than either rural Lewis or Scot

166 167 An attempt was made to record migration from the it is clear that all migrants were not recorded in the explained by two other factors. The evacuees from S their city homes may well account for some and more away from home than was the case in 1939.

The destination of the emigrants (Table XVI) is si heads the list and so many of the Park families have place on the island where employment is available. T permanently to Glasgow; many of those in permanent and still part of the croft household) work in Glasgow significant that only 16 per cent of the emigrants settl one-third of the recorded migrants settled in the only Hebrides needs further investigation but one possible available in Park, the migration rate would be drasti

2. Adjusted for war casualties = Agricultural Townships 5, Fishing Townships, 20

/Turning p. 14/

[Seafortheadl]

Table XVII reveals the fact that there is a striking dichotomy between the agricultural and fishing townships. The former are characterised by a more stable population trend, significantly lower at the population end, permanent employment forth of Park, and a smaller loss by migration. In the fishing townships, where growth and decline have been equally meteoric, there is a larger proportion of persons in permanent employment forth of Park, and migration losses have been greater. It is also significant that there is a smaller natural increase of 0.5 per cent in the agricultural townships. The only township which shows a natural decrease over this period is Cuisnest, one of the fishing townships.

SEAFORTHEAD AND SHIELDERNISH

Rachel A. Hirst

Seafortheadl and Shielderaish are separated by 4,485 acres of rough grazing, the former lying on the northern shore of Loch Seaforth and the latter on the southern shore of Loch Erisort.

SEAFORTHEAD

Seafortheadl, the most isolated of all the Park townships, consists of three crofts and a gamekeeper's holding. The township boundary is situated between the 50 and 75 foot contours which at the highest point are only 150 yards inland and a-half mile deep hinterland of common grazing. The extreme elevation is 270 feet and the average from 125 feet to 175 feet, but the crofts, mostly arranged in rectangular strips at right angles to the coast, are lower (maximum 125 feet) and include three main zones (Fig. 8):

(a) From the low cliffs of the shore to the road, approximately, a zone mainly below 50 feet, distected by four rejuvenated valleys. The soils of the greater part of this zone have a distinctive profile and tend to be moderately heavy, wet, and unsuited to fertilisation by seaware. The smaller hillocks in this zone have thinner soils of the same sort, but the main hill (crofts 10/11) is an exception of zone (c).

(b) A zone between 50 feet and 75 feet with hills rising to over 100 feet. The lower areas have varied soils, easily fertilised, and intermediate in type between those of (a) and (b), with peaty-loam characteristics, resulting squifirous gravels. The higher areas have thinner soils of the same kind with poor grassy pasture; in places there are signs of former skinning.

(c) A zone of hallows with deep moss soils requiring intensive drainage and reacting well to heavy fertilisation with seaware and intervening heights covered with blanket bog, partly skinned, bader and grass. This zone passes into the common grazing.

Crofts 10, 11 and 12, irregular in disposition, have a steep coast line with gentler slopes over 50 feet; crofts 2 to 8, steep slopes in parts of zone (b), and crofts 1 and 9, again of irregular shape, are intermediate (Fig. 5).

In Seafortheadl, there are thirteen legal crofts and twelve operative units. The crofts vary between 4.4 and 18 acres, with a maximum of 3 acres reputed arable. In all, there are 23.45 acres reputed arable and 110.35 acres outrun. 24.5 acres are in fact under crop (note 18.5, potatoes 6.5), and 9.5 acres under sown grass; and of the remaining 99.8 acres, mainly natural grass

[Ioboat] [Kershader]

Of the 52 residents, 19 are over 65 and only 5 under 15 years, leaving a working population of 29: seven are in permanent employment elsewhere. The population has been steadily declining since its peak of 121 in 1901.

Since 1946, the township has changed considerably. It has been completely fenced and the method of cultivation has changed from spade and horse-plough to tractor and cultivators. A further fence has been erected for a lamb park and much land has been re-seeded; an increasing area has been put down to hay. It would seem that fattening of stock for market is intended, and better attention is being paid to stock. Yet the population is ageing and there are few young men to take the place of the older crofters, when working-units become larger and stock decreases to a figure nearer the real carrying capacity of the grazing, the croft could become a profitable concern: at the moment, the croft is only maintained through grants and ancillary earnings. Should that happen, however, there must be more re-seeding and an increase of cultivation to provide winter fodder.

KERSHADER

Philip W. Wheeler, M.A.

Kershader is a township of forty-three permanent residents on thirteen crofts, which stretch for a mile along the southern shore of Loch Erisort. The crofts extend up to one-third of a mile inland and are separated from a second-a-half mile deep hinterland of common grazing. The extreme elevation is 270 feet and the average from 125 feet to 175 feet, but the crofts, mostly arranged in rectangular strips at right angles to the coast, are lower (maximum 125 feet) and include three main zones (Fig. 8):

(a) From the low cliffs of the shore to the road, approximately, a zone mainly below 50 feet, distected by four rejuvenated valleys. The soils of the greater part of this zone have a distinctive profile and tend to be moderately heavy, wet, and unsuited to fertilisation by seaware. The smaller hillocks in this zone have thinner soils of the same sort, but the main hill (crofts 10/11) is an exception of zone (c).

(b) A zone between 50 feet and 75 feet with hills rising to over 100 feet. The lower areas have varied soils, easily fertilised, and intermediate in type between those of (a) and (b), with peaty-loam characteristics, resulting squifirous gravels. The higher areas have thinner soils of the same kind with poor grassy pasture; in places there are signs of former skinning.

(c) A zone of hallows with deep moss soils requiring intensive drainage and reacting well to heavy fertilisation with seaware and intervening heights covered with blanket bog, partly skinned, bader and grass. This zone passes into the common grazing.

Crofts 10, 11 and 12, irregular in disposition, have a steep coast line with gentler slopes over 50 feet; crofts 2 to 8, steep slopes in parts of zone (b), and crofts 1 and 9, again of irregular shape, are intermediate (Fig. 5).

In Kershader, there are thirteen legal crofts and twelve operative units. The crofts vary between 4.4 and 18 acres, with a maximum of 3 acres reputed arable. In all, there are 23.45 acres reputed arable and 110.35 acres outrun. 24.5 acres are in fact under crop (note 18.5, potatoes 6.5), and 9.5 acres under sown grass; and of the remaining 99.8 acres, mainly natural grass

[Kershader]

(b) From New Year to mid-April most sheep are kept on the common grazing. Practices, however, are irregular: some flocks are usually hand fed, others only rarely. In the former case they have to be housed at the upper limit of their home croft and some family close at hand. Most crofters hand-feed their lambs, probably housing them at night, allowing them bay in the morning and turning them on to the common grazing in the evening. This is naturally depends on weather conditions.

(c) From mid-April to May, lambing takes place on home parks.

(d) At the end of June, gimmers and wedders are clipped.

(e) In mid-July the ewes are clipped.

(f) The lambs are weaned in the first and second weeks of August.

(g) The dipping takes place in October and the rams are brought on the crofts.

There is no general sale time, sheep being sold or slaughtered at all seasons. There is no club stock, but all but one of the Kershader crofters, along with crofters from the other Lochs and Ardroil, take full advantage of the arrangement, first established in 1941, to graze sheep at 2/- per sheep and 1/- per lamb in Park Deer Forest. Hence irregularities of rhythm are introduced or exaggerated.

Sheep are not particularly profitable: in general, wedder fleeces give 3½ to 4 lb, ewe fleeces about 3 lb, and the wool is sold to the Stornoway mills and to the Wool Marketing Board. Average lamb and sheep carcass weight is reckoned to be 41 lb, and the price rarely rises above 8 and almost never above £4. Bracy and fluke are kept under by medicaments but remain potential dangers; 'Black leg' is still a serious problem. Many sheep are drowned in the bogs in Spring and late snows (1955, 1958) are disastrous for lambing.

Under-employment is a serious problem in Kershader. There are nine males classified as full-time crofters, but probably only four of these (two on one croft) are in fact in this category, and of the total of thirty males with their homes in Kershader, only fifteen of the insurable population are permanently resident. There are twenty-eight females with their homes in this township, but on only six crofts do any of twenty permanently resident females help with croft work. Local ancillary employment consists of weaving, fishing (for domestic consumption only), peat work on the roads. Boats, one with outboard motor, are owned by three crofts. The only resident professional worker is a nurse. Ancillary employment must be, and is, sought away from the township. As a result, of the 73 persons recorded as having migrated since 1939 or as being absent, probably or temporarily away and permanently away in 1958, 19 have left the area for good, 4 are permanently away, 8 periodically away, and only 43 are resident. Only one person has entered the township since 1939. The age structure of the population, too, is far from an optimum. The school in Kershader, which had 20 pupils in 1873, reached a peak of 110 in 1907 and declined to 28 pupils in 1953, now has but 17, although it serves Cuveasta, Garyvard, Kershader and Habost. Maximum population was attained in 1881, but the total remained fairly constant till 1931, after which decline was marked. Since 1950 this decline has markedly increased.

It will thus be seen that the most serious problem facing Kershader is that of stabilising the population and giving it a stronger economic basis. Apart from the potential development of tourism, fishing, weaving and other home industries, the only possible occupation is in agriculture with perhaps a little forestry. Forestry, though important as shelter provision, cannot be a practical proposition in large blocks or on a large scale, as it would dislocate the

[Cuveasta] [Cromore]

The 1914-18 war had a marked effect on the Cuveasta population - 16 out of 54 (29 per cent) left after 1911 and no re-population took place. Since 1939, seven people have migrated to Stornoway or the mainland (18 per cent of the total 1939 population), and six of these were from Toriste (i.e. 50 per cent of the 1939 Toriste population): only one family now remains there. The demographic position is becoming more acute for there are no young married couples and no youngsters growing up. The girls have left to marry and most of the men have sought temporary or permanent employment elsewhere, for with better communications, education and the radio, the pull to the towns has become stronger. There are now only two people in the township who could be described as full-time crofters, earning no supplementary income by weaving tweed on commission from the Stornoway mills.

Cuveasta is not one of the most progressive of the South Lochs townships. Although the crofts are fenced, the common pasture is not visibly delimited from either the Cromore or Garryvard pastures. In winter, the grazing is fully stocked according to the sount, but the composition has not as yet initiated any re-seeding schemes. As the pasture is not of the best quality, some newly sown grass would benefit every crofter. Loch of manpower may in part account for this deficiency but even a small acreage of re-seeding would be a great asset.

The future position of the township is rather doubtful: it is not the best type of land for mechanisation and is badly served by communications. The future of Toriste appears to be probably one of abandonment, unless it is more easily linked with Cromore. The possibility of a good road being built here is remote, as there is only one family to serve. The main part of Cuveasta is also open to question. Amalgamation of the crofts would not necessarily make more efficient units for the present units are not used to their full extent. Amalgamation with Garyvard might benefit the township a great deal, as the Cuveasta population is rather small to flourish in isolation. The future of Garyvard, Kershader and Habost is one of hope, but unless some change in population pressure soon, it is to be feared that Cuveasta and Toriste, following the same course as Calibost and in thirty to forty years being little more than grazing land.

[Cromore]

G. Mary Swindell, B.A., and Dennis F. Fancett, B.A.

Cromore is situated on a peninsula between Loch Erisort and Loch Cromore. Approaching it from the access road, Cromore has the appearance of a nucleated settlement, but in fact each house is situated on the owner's croft. The crofts are so arranged that each has a portion of land on the more level surface of drift deposits; houses 1 to 20 stand at the junction of the drift and the Lewisian gneiss. Soils are poor and thin, and there are numerous outcrops of barren rock amongst the arable land. The natural vegetation is heather moorland with extensive patches of rushes and cotton grass, the pattern of moor is the 'mirror' image of that 'out' around Cromore.

The township comprises twenty-seven crofts and there are twenty-seven working units; two crofts are subdivided while another four form double crofts. In addition there are five cottars and the Schoolhouse fee. Outside the township dyke there are two fees and four squatters. The croft layout differs from most other townships as each croft is in four non-adjacent pieces, one piece around the house, another above Cross Cromore and two pieces on another area of enclosed land on the common. Two crofts on the eastern side of Loch Cromore, have most of their arable land around the croft-house while three crofts have only one share in the other area of enclosed land.

Until the decade all the land around the houses, and much of that above Cross Cromore, was regularly cultivated. Some of the lazy-beds on the higher land are being cut for hay this year but cultivation is limited to the land around the croft houses and is completely unmechanised. The only crops at present are oats and potatoes and these are usually grown in rotation. The crofters sowed

The crofters sowed clover with their oats in 1957; the quality of most of the natural grass could be improved considerably by extending this practice. Several of the crofters have taken advantage of the facilities for obtaining manure and fertiliser and have used very large quantities of both. Only seven crofts have vegetable plots this year but that of No. 23, (partially enclosed by a dry-stone wall) has produced crops of lettuce, cabbage, turnips and carrots.

The souming for Cromore is one cow, one heifer and eight sheep per £1 rental, but is not enforced. The crofters keep the stock which they can manage to maintain throughout the winter and no one appeared to be dissatisfied with this arrangement. In fact the souming is exceeded by only seven crofters and the total stock for the township is only 75 per cent of the souming. Lambing takes place in April and May and often a high proportion of ewes and lambs is lost. The sheep are clipped in July and each crofter usually clips his own sheep. He either sells the fleece or has it spun in Stornoway before weaving it himself. The lambs are taken from the ewes during the second week of August and are then dipped. Dipping takes place in October in the tupping period and almost every crofter had his own ram. Most crofts have 1 cow and 1 calf and the crofters like the calves to be born in March so that they are six months old in October for the Garyvard sales. The cows are served by an Aberdeen-Angus bull from Creagg Farm. The township gates are opened in October and the cattle remain within the bounds until May. An interesting regulation enforced by the Grazing Committee is that each crofter can have only one dog, and that it cannot be taken on to the Common grazing without special permission, or on fank days.

Shielings, situated on the common grazing between Calbost and Cromore, were used until the 1890's. Active land use has gradually declined; in the 1920's, much of the outrun was under cultivation and there was an air-photograph taken in 1928 showing a large area of cultivation above Cromore in 1946. The present trend is a continuing decrease in the amount of arable land: this year two crofters formed a group to enclose and improve a ten-acre plot on the common grazing. It is unfortunate that all crofters are not willing to take part. Peats are now being cut near the road between Cuveasta and Gravir, about three miles south-south-east of Cromore and one mile north of Gravir.

Cromore was once a prosperous fishing village but now it has no fishing boats. Two Cromore fishermen work on other boats (one from Marivig and one from Stornoway) and there are a few men who would value the opportunity to start fishing again. There seem little prospect of this. However, The landing-stage, completed in 1957, is regarded by many as a 'white elephant' and, in fact, it is low-tide it is useless. So much for the hope that it might have been used by cargo vessels bringing goods to Park.

In Cromore there are fourteen looms for the weaving of Harris Tweed. Tweeds are obtained in bulk from two mills in Stornoway and one in Airibhavaig. At present the average production is only one tweed per loom per week and the weavers could easily double their production. During the past two years this industry has been comparatively prosperous. Knitting is a winter pastime only for pleasure, although one household possesses a knitting machine.

In common with the rest of Park, Cromore has a high proportion of old people. Many from the middle age groups have sought employment on the mainland, and the teenagers, many of whom have been at school in Stornoway, seek jobs there or on the mainland, returning for holidays and assisting with the croft work. Some younger folk are resident to care of aged parents.

Cromore is only eight miles by sea from Stornoway yet all communications with the town are by road - a distance of thirty-two miles. There is a daily bus service and the sub-postmaster has a shop which is occasionally hired. Some people recalled that the only route to Stornoway was once by boat to Crossbost and thence by bus. One resident owns a lorry and this is used for most of the haulage in Cromore, particularly for bringing home peats during the summer. As a result of the additions to the roads, only three crofts remain inaccessible to vehicular traffic. There are no shops in Cromore but grocery vans call on Monday, Tuesday, Wednesday, Thursday and Saturday.

[Martvig]

There are only fifteen cows, two yearlings and four calves in the township, and the crofters with no cow rely on neighbours, or on lire, for their milk supply. All but two of the crofters keep a few sheep; there being four hundred and eleven ewes, one hundred and eighty-five sheep and two hundred and thirty-four lambs belonging to the township. The common grazing (including the off-shore islands which are grazed by five different crofters each year) is used for the sheep in summer, while all but one of the crofters winter their sheep in the township dyke on the crofts. Most crofters keep hens, and surplus eggs are sold to the Stornoway vans.

Peats cut on the common are transported by lorry to the crofts, while peats from the north end of the township are transported by Loch Mealindy from the sea mass be carried in creels.

Nearly every crofter owns a rowing boat (the boats are moored in the loch off the end of his croft, and with this supplements the family food supply. One herring boat, operating out of Stornoway, returns to Martvig at weekends. In all that is left of a fairly large fleet which operated before the war. A second boat, owned by a Stornoway man, lies in the loch, and two others are wrecks. Over fifty years ago there was a curing station at Martvig. One crofter fishes lobsters during the winter and markets them in Lochmaddy.

Of the other crofters, only two supplement their income by weaving, one by working on the roads while several men work partly on the crofts but are periodically away whaling in South Georgia, fishing, or on hydro-electric schemes. Several are employed in the Merchant Navy. The problem of migration from Martvig, especially of the young people, is reflected in the high average age of the permanent residents, and in the numbers in the school - over one hundred pupils in 1905, but thirty-nine (including sixteen from Calbost) in 1946; but only nine (none from Calbost) in 1958. The young people leave the township to train or seek employment in Stornoway (generally in Glasgow) or in Stornoway, while their elders accept the view that "there is nothing for the young people here".

The township has a Post Office and telephone kiosk which also serve Calbost, while lack of a shop is partially compensated by a choice of four vans from Stornoway and one from Gravir. There is a daily bus from Gravir via Martvig to Stornoway and back: the return is over 10/-. The road which reached the township from the west in the late 1920's has a tarred surface and is much better than the later road southwards to Gravir which is unarred. There is no church in Martvig and most of the population attend the Free Church in Gravir.

Within the township the two arms of the township road serve all but two of the crofts and the office. Apart from the two houses, few of the crofts are visible from the road, tend to be set back, while the ruined houses found on most crofts are often nearer the sea. Only two thatched houses remain and the other inhabited houses are built of concrete and roofed with asbestos or corrugated iron. All the crofts are supplied with electricity from the grid, but very few have a piped water supply: rainwater is collected from the roofs and piped for washing, with a separate piped supply from a well for drinking. All other houses draw water from wells.

The stormy winter weather, rocky terrain and poor soil are all blamed by the residents for the drift of population away from the crofts, but those who remain have little incentive to work the crofts more efficiently owing to the very total labour involved. It is suggested that with more intensive cropping and more cattle, each croft could make a comfortable profit and surplus milk, potatoes and eggs could be marketed in Stornoway - the milk replacing that at present brought from the mainland. Such development, perhaps on a co-operative basis, together with a revival of the fishing industry and introduction of a tourist industry, by building a small hotel in good house and attracting anglers as well as those who simply wanted scenic beauty, might bring prosperity back to a township which otherwise may well be derelict in the next twenty years. But the capital required for the two latter enterprises is not available within the township.

[L-Ibost] [Gravir] [Glengr-vtr]

The present situation in Calbost is best illustrated by reference to the population statistics. There are only 17 people living there at present, seven of whom are squatters and only eight houses are occupied within the four-mile road distance. Of the male population under fifteen years, one man in the 15-44 age group, three between 45 and 64 years and two over 65. This clearly indicates that the area is not viable. The common grazing (including the off-shore islands) is insufficient for the community. However, even these figures are not so striking as the numbers of emigrants as no less than 39 men and 40 women have left Calbost since 1939.

A community of 120 persons has shrunk to less than 20 in only twenty years as the younger people have left to find employment on Stornoway and the mainland. The present population structure seems to indicate a continuation of the downward trend.

GRAVIR AND GLENGRAVIR

Gravir, the largest Park township numerically in population and crofts, lies astride the major east-west inlet of Loch Ouirn, a glacially modified line of structural weakness. The site of the township is perhaps the most picturesque in all Park, but the steep slopes, lack of cover, the small area of good arable land, and the valuable population existing on slim resources, problems common to Park as a whole, are all epitomised in Gravir.

On the south-facing slope above the loch and the continuation of the trough in the valley to the west, there are a few terraces which have been cultivated from time to time, some before 1800, and some in the process of the abolition of run-rig which was accomplished in the years 1850 to 1852. Originally, these arable strips have been fairly crofted, but their west gables added during the nineteenth century, two at each end of the line, and in 1934 a further fifteen were cut out of the common grazing, a mile to the west of Gravir. On the south end of the township there are 3.6 to three acres of lamb sell for as little as £2 10s to £3 10s, an indication of the consequence of over-stocking. The cattle stock is believed to be nearing and the people of the township are alleged to be changing to the agriculture since the 1950's for at that time as many as six cattle were kept on the larger crofts. The sheep stock kept in Gravir and Glengravir exceeds the crofting by thirty-five per cent.

The great majority of the crofts can certainly not be considered economic units. Judging from the sowing of one cow and follower and eight sheep per pound sterling of rent in a township where good arable crofts may be rented for £1 per acre, and pasture for £1 per acre, it is clear that these are not units in which the crofters are willing to supplement the food producing capacity of the holdings. The method of division and allocation appears of a period when a subsistence economy could serve presents from over-population,necessitated fair shares for all. The last of these common was in cultivation until 1951. Although commercial crofting has been obsolete since then, there is as yet no move towards a regularisation of the layout.

The congestion which necessitated the reclamation of the arable common developed mainly during the nineteenth century when population reached a peak in 1881 with 1,000 people. At that time there were two curing stations in Gravir. With relative prosperity from an ancillary industry, cottars were allowed to settle on the common (from 1841 to 1881 reaching a peak of 150 cottars in 1911. The collapse of the industry after 1914 began the downward trend which has certainly not yet ceased. Gravir reverted from 1918 to a township of agriculture and a source for employment forth of Lewis, although there have been spasms of successful fishing activity since.

Stock raising is now the function of the township and the agricultural resources and conditions are hardly conducive to the development of economic holdings. The Gravir and Glengravir crofts vary between 1.5 and 26.5 acres in size: no croft has more than four acres of 'arable'. In the days of subsistence agriculture, and indeed until the 1930's, cultivation, all in narrow lazy-beds, ended up with stones at the downward extremity on the steep slopes, was much more efficient. All the cultivable land was at one time under crop, heavily manured with seaweed cut as far away as Cromore or the coast south of Kebost Head. About one-third of the maximum lazy-bed area is now cropped and the more inaccessible areas of the crofts have reverted to pasture; some of the lazy-

[Or-vtr] [Glengr-vtr]

beds are now covered by sphagnum moss and heather. Some lazy-beds are permanently in natural hay; only thirty per cent of the land classified as 'old arable' is now in oats and potatoes. If fertilisers be to be used, the lazy-beds are inadequate for the production of the herring fishing; further the so-called old arable; this suggests that the cultivated area was pushed beyond the limits of the old arable land when the population of the area was at its peak. The fishing industry was once in infinitesimal for only four of the fifty-eight operative units actually sow grass. The wintering capacity of the crofts could be greatly increased by the general adoption of the practice of underseeing.

There are forty-three legal crofts in Gravir but nine are sub-let, in every case to relatives. All the crofts are taken up and there is evident pressure of population on the land. In addition to the crofts, there are a further ten crofters, and non-crofters, living on the fifteen legal Glengravir crofts (ten operative units) which have no share in the Gravir common. The common has been reached on by several face lift schemes, the last being in 1951 when the Church of Scotland and Manse, the doctor, one of the two district nurses and two of the missionaries (ministers) are all entitled to share in the lots.

Gravir and Glengravir thus have fifty-eight legal crofts and fifty-nine operative units. Less than half of the crofts with grazing rights are fully stocked and one quarter have under fifty per cent of the common, including five without any stock. The common pasture of 2,652 acres is in general of poor grazing quality, dominated by the less nutritive species of grass and poorly drained. In 1957, a test area of 50 acres was fenced and re-seeded; the results pass the limits of this report but the reclamation work, and the ages of the participants ranged between 27 and 58 years; this is significant as aged tenants are unable to carry out such work. The scheme could be extended annually; if potential improvements to the crofts are limited, pasture improvement is virtually without limits. Re-seeding on a large scale would enable better stock to be kept rather than greater numbers; at present the ewes are kept on the hills in the winter, and the lambs are sold at 14 weeks and lambs sell for as little as £2 10s to £3 10s, an indication of the consequence of over-stocking. The cattle stock is believed to be nearing and the people of the township are alleged to be changing to the agriculture since the 1950's for at that time as many as six cattle were kept on the larger crofts. The sheep stock kept in Gravir and Glengravir exceeds the crofting by thirty-five per cent.

The township consists of three distinct areas. A flat, poorly drained area at about 100 feet, part common pasture and part reclaimed as extensions to the crofts, locally known as 'the Ouiend', forms the main agricultural area. Further west, in a hollow between two steep slopes, is the village of Gravir. Fishing was the complementary economic activity, and in 1901 no fewer than nineteen boats and eighty-nine fishermen were registered at Gravir. Today, only one boat fishes commercially for herring.

If agriculture is singularly unrewarding, weaving occupies six of the males of insurable age and service occupations a further ten males and five females, but neither weaving nor service occupation are sufficient to absorb or relative to keep the insurable population in the district. Twelve of the males between fifteen and sixty-four years take seasonal employment and forty-six are in permanent employment forth of Lewis, in all sixty per cent of the potential male resident population.

The economic problem of Gravir, in common with the other 'fishing' townships, became acute after the fishing industry collapsed after 1914; in the hey-day of the fishing most of the men fished all the year round, fishing as far north as Lerwick, and south as east of Scotland. Earnings fluctuated but a man might make as much as £90 in a good year or as little as £5 in a poor year. Apart from the sale of young cattle, and wool and pelts, and to home spinning requirements, the fishing earnings constituted the bulk of the croft income. Today, on the basis of the sowing, the income of the largest croft (including subsidies) could only be approximately £150 excluding the amount to be set aside for home consumption of potatoes and milk.

[Gravir] [Glengravir] [Lemreavy]

Recent trends also point to a decline in the numbers of sheep, although more are kept now than at the beginning of crofting. Over-stocking in sheep, an attempt to increase the income from a fifteen years ago. From 1941-51 the numbers were more than doubled (263-565). A great deal of income was present when there was a result of the sow subsidy, but part at least may be connected with the war and post-war boom in Harris tweed. By 1955, when the sow subsidy was ended, the crofters had already begun to decline from the peak of the post-war prosperity. This year the township has only 37 breeding ewes while the rearing of only 236 lambs would suggest a further decrease in the future.

All the crofters keep some sheep although individual stocks vary from 15 to 150. For most of the year these sheep are grazed on the common pasture on the moor or on the eighteen acre island in the bay. In August, however, the lambs are gathered in for weaning and digging; in November the gates are opened and all the sheep allowed to graze on the cleaner pasture within the croft boundaries. If necessary they are given hay, but from the beginning of January they are encouraged to return to the moor, although the grass are not the 'officials' crofts until mid-March.

Until a major reorganisation of the croft is carried out, a vigorous attempt to re-seed large areas of the common pasture and the three former arable common, and the development of a crofting-type of tourist industry, are the only hopes for the future. The agricultural technique is well-known; there is a demand from the city dweller for simple accommodation and good plain fare in a clean atmosphere, with the possibility of hill walking and fishing on fresh and salt water. Yet, until the proposed water-scheme becomes a reality, the tourist industry is a crofting scale can hardly be contemplated.

One can only conclude that until reorganisation takes place and transforms Gravir into a township of viable agricultural holdings, any stabilisation of the present trends is out of the question. A decline in the number of holdings is inevitable but it may be long run but a planned reduction over a number of years would bring about a more viable community than the disintegration which will occur without such planning. Until this is achieved, the young men and women have little incentive to remain in Gravir.

LEMREAVY

Beth Blowers, Brenda G. Turner
and John E. Wearmouth

Lemreavy, the southernmost township of Park, comprises 290 acres arable and outrun divided into thirty-three crofts and 3,025 acres of common pasture. The township is situated on the north side of Loch Shell and forms a bay in the shelter of Eilean Iverach.

The township consists of three distinct areas. A flat, poorly drained area at about 100 feet, part common pasture and part reclaimed as extensions to the crofts, locally known as 'the Ouiend', forms the main agricultural area. Further west, in a hollow between two steep slopes, is the village of Gravir. Fishing was the complementary economic activity, and in 1901 no fewer than nineteen boats and eighty-nine fishermen were registered at Gravir. Today, only one boat fishes commercially for herring.

If agriculture is singularly unrewarding, weaving occupies six of the males of insurable age and service occupations a further ten males and five females, but neither weaving nor service occupation are sufficient to absorb or relative to keep the insurable population in the district. Twelve of the males between fifteen and sixty-four years take seasonal employment and forty-six are in permanent employment forth of Lewis, in all sixty per cent of the potential male resident population.

The economic problem of Gravir, in common with the other 'fishing' townships, became acute after the fishing industry collapsed after 1914; in the hey-day of the fishing most of the men fished all the year round, fishing as far north as Lerwick, and south as east of Scotland. Earnings fluctuated but a man might make as much as £90 in a good year or as little as £5 in a poor year. Apart from the sale of young cattle, and wool and pelts, and to home spinning requirements, the fishing earnings constituted the bulk of the croft income. Today, on the basis of the sowing, the income of the largest croft (including subsidies) could only be approximately £150 excluding the amount to be set aside for home consumption of potatoes and milk.

Recent trends also point to a decline in the numbers of sheep, although more are kept now than at the beginning of crofting. Over-stocking in sheep, an attempt to increase the income from a fifteen years ago. From 1941-51 the numbers were more than doubled (263-565). A great deal of income was present when there was a result of the sow subsidy, but part at least may be connected with the war and post-war boom in Harris tweed. By 1955, when the sow subsidy was ended, the crofters had already begun to decline from the peak of the post-war prosperity. This year the township has only 37 breeding ewes while the rearing of only 236 lambs would suggest a further decrease in the future.

All the crofters keep some sheep although individual stocks vary from 15 to 150. For most of the year these sheep are grazed on the common pasture on the moor or on the eighteen acre island in the bay. In August, however, the lambs are gathered in for weaning and digging; in November the gates are opened and all the sheep allowed to graze on the cleaner pasture within the croft boundaries. If necessary they are given hay, but from the beginning of January they are encouraged to return to the moor, although the grass are not the 'officials' crofts until mid-March.

Until a major reorganisation of the croft is carried out, a vigorous attempt to re-seed large areas of the common pasture and the three former arable common, and the development of a crofting-type of tourist industry, are the only hopes for the future. The agricultural technique is well-known; there is a demand from the city dweller for simple accommodation and good plain fare in a clean atmosphere, with the possibility of hill walking and fishing on fresh and salt water. Yet, until the proposed water-scheme becomes a reality, the tourist industry is a crofting scale can hardly be contemplated.

One can only conclude that until reorganisation takes place and transforms Gravir into a township of viable agricultural holdings, any stabilisation of the present trends is out of the question. A decline in the number of holdings is inevitable but it may be long run but a planned reduction over a number of years would bring about a more viable community than the disintegration which will occur without such planning. Until this is achieved, the young men and women have little incentive to remain in Gravir.

LEMREAVY

Beth Blowers, Brenda G. Turner
and John E. Wearmouth

Lemreavy, the southernmost township of Park, comprises 290 acres arable and outrun divided into thirty-three crofts and 3,025 acres of common pasture. The township is situated on the north side of Loch Shell and forms a bay in the shelter of Eilean Iverach.

The township consists of three distinct areas. A flat, poorly drained area at about 100 feet, part common pasture and part reclaimed as extensions to the crofts, locally known as 'the Ouiend', forms the main agricultural area. Further west, in a hollow between two steep slopes, is the village of Gravir. Fishing was the complementary economic activity, and in 1901 no fewer than nineteen boats and eighty-nine fishermen were registered at Gravir. Today, only one boat fishes commercially for herring.

If agriculture is singularly unrewarding, weaving occupies six of the males of insurable age and service occupations a further ten males and five females, but neither weaving nor service occupation are sufficient to absorb or relative to keep the insurable population in the district. Twelve of the males between fifteen and sixty-four years take seasonal employment and forty-six are in permanent employment forth of Lewis, in all sixty per cent of the potential male resident population.

The economic problem of Gravir, in common with the other 'fishing' townships, became acute after the fishing industry collapsed after 1914; in the hey-day of the fishing most of the men fished all the year round, fishing as far north as Lerwick, and south as east of Scotland. Earnings fluctuated but a man might make as much as £90 in a good year or as little as £5 in a poor year. Apart from the sale of young cattle, and wool and pelts, and to home spinning requirements, the fishing earnings constituted the bulk of the croft income. Today, on the basis of the sowing, the income of the largest croft (including subsidies) could only be approximately £150 excluding the amount to be set aside for home consumption of potatoes and milk.

An examination of the agricultural situation reveals that there are insufficient resources to make the development of viable crofts. Overstocking in sheep, an attempt to increase the income from a fifteen years ago. From 1941-51 the numbers were more than doubled (263-565). A great deal of income was present when there was a result of the sow subsidy, but part at least may be connected with the war and post-war boom in Harris tweed. By 1955, when the sow subsidy was ended, the crofters had already begun to decline from the peak of the post-war prosperity. This year the township has only 37 breeding ewes while the rearing of only 236 lambs would suggest a further decrease in the future.

All the crofters keep some sheep although individual stocks vary from 15 to 150. For most of the year these sheep are grazed on the common pasture on the moor or on the eighteen acre island in the bay. In August, however, the lambs are gathered in for weaning and digging; in November the gates are opened and all the sheep allowed to graze on the cleaner pasture within the croft boundaries. If necessary they are given hay, but from the beginning of January they are encouraged to return to the moor, although the grass are not the 'officials' crofts until mid-March.

Until a major reorganisation of the croft is carried out, a vigorous attempt to re-seed large areas of the common pasture and the three former arable common, and the development of a crofting-type of tourist industry, are the only hopes for the future. The agricultural technique is well-known; there is a demand from the city dweller for simple accommodation and good plain fare in a clean atmosphere, with the possibility of hill walking and fishing on fresh and salt water. Yet, until the proposed water-scheme becomes a reality, the tourist industry is a crofting scale can hardly be contemplated.

One can only conclude that until reorganisation takes place and transforms Gravir into a township of viable agricultural holdings, any stabilisation of the present trends is out of the question. A decline in the number of holdings is inevitable but it may be long run but a planned reduction over a number of years would bring about a more viable community than the disintegration which will occur without such planning. Until this is achieved, the young men and women have little incentive to remain in Gravir.

Since the decline of the fishing industry, the fishing townships have progressively declined. Income from weaving has replaced earnings from fishing as a means of combining croft work and ancillary employment in the middle 4 living, but the decline in the sheep stock, the supply of weaving contracts is not regular and greatly depends on the state of the world market. The proposed centralisation of the Harris Tweed industry in Stornoway is not favourable to the Park weavers: the "Harris Tweed (Park Association" that a spinning mill be set up in Park would certainly help the local weavers.

If the present number of agricultural units and level of husbandry on them is to be maintained, a large scale water-scheme is necessary, and, as a consequence, the provision of a water-supply and service occupations alone certainly cannot provide it in sufficient quantity, temporary and regular employment forth of Park is bound to continue, and as this grades into permanent employment, the population must continue to decline and age. The capacity of the area for tourism is also limited. On the other hand the fishing industry which broached at present that Lemreavy would have to face: the establishment of manufacturing or assembling employment is also unlikely.

A revival of the fishing industry holds out most hope but must take place before all the second-hand vessels with other present generation of fishermen. The fishing grounds are within reach of the modern £20,000 boat: by co-operation between crews, fish could be taken to mainland markets as a village. As indeed happens at present. Lobster fishing could be integrated with herring and white fishing. Such a combination of fishing and crofting would be a viable proposition and the Herring Subsidy would be a guaranteed element of income. It must be agreed that if mainland fishermen are to come and use inlets of Park, there seems little reason why local boats could not also be successful.

As far as the land is concerned, the survey leaves no doubt that improvements in husbandry and pastures are definitely possible. Yet, until viable agricultural units have been created, there is little incentive for large scale improvement in either sphere. It is an expert's opinion that no crofter working on a croft in Park which would bring in £300 a year would have time to engage in auxiliary work and at the same time fully work his holding in accordance with the rules of good husbandry. If this opinion is accepted, and it is also accepted that such crofts are desirable and the present successful crofts in the agricultural townships where there is a higher proportion of full-time crofters than elsewhere would bear this out, it follows that auxiliary employment on such units would have to be ruled out.

1. Park Association Annual Report, 1956.

000. The reduction of the present number of agricultural units then becomes desirable. There are two ways in which this could come about; firstly by continued depopulation, but amalgamations consequent on such an uncontrolled run-down of the community would lead to scattered holdings; such is the experience of other depopulated crofting districts. The second point to be made is that if overall planning were possible, it would be desirable for holdings to be amalgamated as they becom vacant as a satisfactory rearrangement of the townships would then follow.

Concurrent with such a policy would be the aim to create distinct crofting and non-crofting groups. Employment for the non-crofting section of the community, be it fishing or weaving, woul first have to be assured. As has already been stated, fishing would appear to offer the best prospe while tourism could play a minor role in providing an opportunity for the enterprising crofters' wife or non-crofting household. One problem above all remains, the maintenance of an overall viable population. A certain minimum level of population is essential to maintain the operation of local transport, post office, educational and medical services. Such considerations suggest that further research is necessary to assess the optimum number and structure of population which a district such as Park could reasonably support. In the same way, a detailed examination by an agricultural expert is desirable, in order to assess the number of economic holdings which could be supported on the land of each township.

In conclusion, it is clear that, short of unexpected industrial employment becoming available i Park and unless major reorganisation of the present agricultural units and communities is carried out, the present population trends must continue. However, if such radical changes cannot be contemplated, then considerable improvements in the standard of husbandry, the re-seeding of croft out-runs and common pastures, and the fencing and general improvements of the crofts are possible and will increase agricultural productivity. Until there are some radical changes, the present pattern of the most enterprising members of the community engaging in ancillary employm which takes them furth of the district, and the serious degree of permanent migration to Stornowa and the Scottish Lowlands, will be maintained and increased.

APPENDIX A

PARK IN COMPARISON WITH OTHER CROFTING DISTRICTS.

462 464 241 Table XVIII gives an analysis of the occupational structure of the male population of insurable age in four crofting districts studied by the Crofting Survey. In all four areas, a considerable proportion of the insurable population is not resident in the crofting area for more than an annual holiday period. This proportion varies in relation to two main factors - the viability of the crofts and the availability of ancillary employment within the district. South Uist and Benbecula stand out as the districts where such permanent absences are least marked: the crofts in these islands a larger and more employment is available. In Barra, there are few large agricultural units and, a in Park, the decline of the fishing industry has led to economic disaster in many townships. Fewe than half of the men in this age group are fully resident in Barra. Park is in many respects comparable to Waternish (Skye) for both districts are isolated and have experienced serious depopulation. (see Table XIX).

It is a significant fact that in none of these districts are more than 20 per cent of the male population solely engaged in full-time croft work, and this is a measure of the inability of the croft to support a family without ancillary earnings. The amount of permanent employment available varies from district to district; in South Uist and Barra there are minor service centres which are urban in character and 23.2 per cent and 13.6 per cent of the respective insurable males are engaged in non-crofting employment on these islands.

[166] [167] It is clear that the occupational structure of these four crofting areas is far from stable for ove one-third of the potential labour force is away for all or part of the year. It is also clear that basically the absence of sufficient natural resources, coupled with the varying degrees of isolation from the industrial centres of Scotland, are the root causes of the present position.

161 Table XIX summarises the population structure and trends for the four districts. It is a
162 that the two districts without service centres, which provide a range of ancillary employmen
166 experienced more severe depopulation since 1939. This table also underlines the fact that e
167 from seasonal employment are insufficient: the incidence of permanent employment furth of
434 districts is three times as great as the incidence of seasonal employment.
464

APPENDIX B

SHIELINGS - A NOTE

John E. Wearmouth with illustrations by Beth Blowers

175 From Figure 1, compiled from the First Edition six-inch map of the Ordnance Survey (18
233 to 1852) and from personal observations, it is clear that the shieling system was at one time
an overall feature of Park for the whole peninsula has traces of this transhumant economy.

361 The rudimentary structures, some of turf, others of stones and roofed with bracken or
342 heather thatch, are all sited on well drained sites, the majority on mounds. Almost all the
sites are close to lochs or streams. The majority are in loose groups of from two to nine
buildings, although there are some in isolation; no site has as many as twenty-six building
as found at Airidh na Ganithe in North Uist.

342 There appears to be two distinctive shapes of building - oval and rectangular (Fig.10).
All shielings measured exhibited a remarkable similarity in dimensions, from 17½ by 9 feet
to 13 by 12 feet. The oval structures are generally larger than the rectangular ones. Mos
of the shielings had two entrances, often, but not always, opposite each other.

195 The shieling system died out in Park about 1880 but the cattle continued to graze around
233 shielings on the better grass, and the crofters had still to go out to milk the cattle at the shi
although they no longer lived there. The sheep still use the mounds for shelter and grazing.
These features of an obsolete economy are still easily recognisable from the luxuriant grass
cover in a wilderness of peat bog and bare rock.

APPENDIX C

NORSE SETTLEMENTS NAMES IN NORTHERN PARK, LEWIS

Bridget M. Gordon, B.A., B.Litt.

103 See: Magne Oftedal, The Village Names of Lewis in the Outer Hebrides; in Norsk Tidskrift
113 Sprogvidenskap, vol. XVII, 1954, (Oslo), pp. 363 ff.

103 Professor Oftedal points out the difficulties of these Norse-Gaelic settlement names: in
accurate spellings even in modern times, and lack of any useful evidence from older sources
make almost all the derivations a matter of conjecture. Sometimes two or more ON equival
are possible (e.g. for Calbost), sometimes no satisfactory solution can be found (e.g. for
Lemreway). Since Professor Oftedal frequently bases his explanation on pronunciations no
recorded in written forms, his evidence is largely followed here.
SHIELDERNISH: the second element is N nes, 'headland'. Oftedal's explanation of the firs
as silda, genitive plural of N sild, 'herring', is satisfactory linguistically, but seems unlikel
in meaning.

Early Scotland ES6

[For information on the early history of the islands of Lewis and Harris prior to 1603, with particular emphasis on foreign relations, immigration and clans, see ES10 Highland Scots, 2: Thompson, Category 116, pp. 31-44.]

527 To
166 many villagers, the concept of "holiday" has no meaning
• 167 other than that time in the yearly cycle when the natives return.

288 Rather, the industry has provided jobs for those who,
464 for one reason or another, would have stayed anyway.
162 Of the weavers between the ages of 15 and 24,
166 eight are only sons or sons who had to begin work because their fathers became ill or died; two others live at home only temporarily and plan to work elsewhere. Of those of ages 25 to 34, two men live at home because they are disabled; one has returned from the Merchant Service for awhile; two are only sons who are encouraged to remain at home, and several are youngest sons or sons whose parents have strongly discouraged them from leaving home. Of the 35-44 age group, four have remained on the island because of various ailments such as tuberculosis and mental health problems; one had to leave the Merchant Service because of an injury; at least five have stayed or returned because of family ties, the demands of aging parents and sick siblings. In the 45-54 age category, a number of men served in the navy or other branches of the armed forces during World War II, and returned from shipwrecks and other disastrous events to the relative security of the loom.

288 Many of the older weavers (at least nine in the
464 55-64 age category) started weaving after they had
• 167 returned from the United States or Canada because of
162 the depression. Some recall the horror of wandering

288 through alleys to rummage through the trash cans of
464 hospitals or other large institutions for food. The
• 167 occupational histories of the weavers support the
162 generalization made by an official of the Harris Tweed Association that the younger weavers leave because they do not like the weaving and they are replaced mainly by older men who want to settle down after a life at sea. (See Appendix A for several life histories of weavers.)

E. Crofting as Strategy

241 Because of the relatively high income provided by
288 the Harris Tweed industry, those who remain within the
434 township have tended to emphasize weaving and neglect the croft.

592 1. Croft as Place of Residence vs. Agricultural Unit

Most of the 169 households consist of married couples wit
(582) their unmarried children. A tendency to marry rather late in life and for children not to marry while their parents are still living is evident in Table VI (Partial List of Households According to Type of Household and Age of Household Head).

Fourteen households of married couples and their children (not included in Table VI) include at least one

1, [This source as received did not contain this table--Analyst]

*159 himself. If he had a drink he might come out. When the weaving started, he took that up; and he tilled the croft, kept cattle and all that; but socially he was a misfit. It was a terrible tragedy, the Iolaire."

[402] When the Bodach Beag returned from the United States, he bought a Hattersley loom to replace the old wooden loom with which his brother had been weaving. They worked the croft together. The Bodach Beag knew he would get the croft. He married soon after he returned, and for the next forty years never left the island. His wife took a six-month course in poultry-keeping and milking, and they concentrated on cattle rather than sheep. His wife sold fresh butter to the mobile vans.

*159 Their family grew and dispersed. The eldest son 594 attended the secondary school in Stornoway, emigrated to • [167] Rhodesia and married an English girl who was working there as a nurse. They had to return when economic earthquakes shook Rhodesia and he lost his job. He stayed at home for a year and built a new house on the croft; and then, unexpectedly, he started work to complete the necessary exams to enter a university and become a teacher.

[166] The youngest son became an engineer, married a Glasgow Highlander whose parents came from Lewis, and settled in Glasgow. Their sister married a tradesman on the mainland. The third son, unmarried but engaged to a local girl, works in the local tweed mill and lives at home with his parents.

Iain the Basher

*159 Hard-drinking and with a bitterness that seems ready to erupt in hostility at any moment, Iain "the Basher" at the age of 70 has enough painful memories locked inside his rawhide-covered heart to interfere with any normal • [167] bloodstream. He left the island for the United States on the ship Metagama, but returned during the depression. "I remember a night in New York. It was so hot your feet fried in your shoes. I was walking barefoot, carrying my shoes in my hands. A cat screamed in an alley. I heaved a shoe into the shadows and hit a man who was standing there. He started chasing me, throwing bottles so that they broke in front of me. I had to run through the broken glass in my bare feet. He finally stopped chasing me, but I had to go back--the bloody shoe was still in the alley. He was standing there with some of his chums talking to a policeman. I told them what happened, that I had thrown the shoe at a cat and accidentally hit the man. 'You didn't hit him hard enough,' said the policeman, 'You didn't hit him bloody hard enough.'"

Iain married twice and had several children, all of whom after his wives' deaths were raised by his sister, who never married. He was drunk the night his first wife died [164] in childbirth. His second wife died of cancer, and soon afterwards he set fire to his house. The insurance company

The insurance company
*159 paid him L600, and the pubs let him drink half of that
[945] before he even got the money. The house, in which he continues to live, stands as it was left by the fire, with walls blackened, blistered and bare.

Uilleam Glen

Uilleam, named after the owner of a fishing boat on which he used to serve as a crew member, is the 70-[598] year-old head of a croft household. He came from a family of four sons and two daughters. He was not the eldest son but he was his father's favorite. Before his father died he built the house in which he presently stays so that he would have some claim to the croft. The eldest brother was sailing, and upon his return he married a girl with a croft. Uilleam Glen made his living from the croft--he had a reputation for being good with livestock--and from occasional wage labor in Stornoway; he also followed the fishing.

Another brother of Uilleam Glen married into another croft in Shawbost, after serving in World War I as a sailor, and a sister married a boy from a neighboring • [167] village. The youngest brother, Murdo, emigrated to the United States with the second sister, and they lived and worked together in Detroit until the depression drove them home again. They then lived with Uilleam Glen, who had

FIRE AND SWORD

FIRE AND SWORD

Recorded history begins with the Icelandic sagas. In 1098 Magnus 175*
Bareleg plundered Lewis and devastated the island with both fire and sword. A skald named Bjorr Cripplehand, who accompanied Magnus on the expedition, reported that 'Fire played in the fig-trees of Liodhus; it mounted up to heaven. Far and wide the people were driven to flight. The fire gushed out of the houses.' The *Irish Annals* tell us that Skye was pillaged by the Norse in 794, and no doubt Lewis did not escape their attentions, then or earlier. Towards the end of the ninth century a stream of Norse 175*
folk left their homes to start the work of colonisation. Iceland, 648
the Faroes, the Orkneys, the Shetlands and the Hebrides soon 167 •
became thriving communities in which the earlier native population were as thralls, serving ruthless masters.

By about AD 1000, the island, with others as far south as Man, was in the sure and steady grip of men of Scandinavian or semi-Scandinavian origin, who were destined to become premier clans such as Clan Donald. It was not until the Battle of Largs in 1263 that this grip was loosened. In 1266 the Western Isles were ceded by Norway to Scotland, following which event the Gaelic people and their former Norse masters were soon to be merged in the marriage bed. As for the common language, it was [197] the Celtic elements which took over after, one supposes, some generations of suppression. The result in any case was a highly individual people, strong in character, and resilient enough to take the rough times with the smooth.

In the thirteenth century, Harris was in the possession of the 175*
MacLeods of Harris, and Lewis belonged to three powerful clans: 614
the Morisons in Ness, the MacAulays in Uig, and the MacLeods [551]
of Lewis in the remainder of the island. Other smaller clans were the MacIvers, the MacRaes, and the Nicolsons. The Harris MacLeods were allied by kinship to the Lewis MacLeods, though the relationship was to become quite distant—and their destiny more fortunate. History from this time is one of disputes, internecine warfare, murders, and similar crises deemed to be of the highest importance by the clans, both inside the island and between the islanders and strangers. An enormous amount of blood was spilled

HISTORY

241 documented; and Harris and Lewis played out their part in the
614 agitation for more land. Briefly, when the clan system was broken
182 down, the clansman found himself freed of the obligation of ser-
311 vice to the chief. The chief, on his side, found himself thrown to
*175 the economic dogs. Payments in kind were no currency; a house in London or in Edinburgh had to be paid for in cash, and a London hairdresser would hardly accept half a dozen eggs for his services. The effect of the Heritable Jurisdictions Act was like a butcher's chopper. With a stroke a social organisation was given notice to change overnight, with no period of transition allowed. The chiefs looked to the land for their money. In the old system, their prosperity had been largely measured in fighting men. Now the pressures of economics demanded increased rents from those who were being called tenants. Increased rents can, however, be paid only when the land's productivity rises. The agricultural changes percolating through the Lowlands of Scotland had not [429] even begun to penetrate to the Highlands area. Many tenants found that, unable to pay the increased rent demands, they were ejected from the lands which, incidentally, they had held by traditional understanding—written deeds were rare. Emigration • [167] started, and the vacant lands went to sheep-farmers, well able [233] to pay good money for the grazings.

Some chiefs did give their tenants time to change to new
241 methods of land use, and were careful not to make a breach be-
614 tween agriculture and grazing. Their tenants in turn improved
311 the land, changing in particular from the old run-rig system,
423 whereby a man working a piece of ground one year had the same
*175 piece the following year only if the dice were thrown his way. But the class of farmers' tenants called crofters (who had no security of tenure) or cottars (a squatter type with no legal recognition) found themselves on the verge of starvation. The few acres of ground they had, or to which they had been removed, were quite unsuitable for intensive cultivation to produce even the basic necessities of life.

*175 The picture of land use was that of a great black pot boiling
423 furiously with a brew of which the final taste was quite uncertain.
311 When the boiling was controlled, the land began to be parcelled
241 out, a share to each family. This led to a rigid, almost monolithic,

[TEXT CONTINUED ON PAGE 55]

with many of its neighboring Caroline Islands.[45] A similar tendency has been reported for the Aleutians.[46] On the other hand, there are the Pueblo,[47] who have recently begun to increase, and the Navaho,[48] who have grown in numbers at a rate no less striking than the decline of innumerable tribes in the non-Andean areas of South America.[49]

Although the fate of any one community in contemporary United States may be insignificant to the social scientist who is interested in culture change, social instability among folk and peasant peoples is a factor which should not be overlooked. I am certain that it is not a criterion of cultural discontinuity, unless the tribal or peasant group suffers complete obliteration. I am equally sure that it is commonly symptomatic of cultures which have been unable to make a complete adjustment to the new and higher sociocultural organization reaching down to them. Some tribes, it is true, have succeeded in making a pretense at adjustment. Noted for

The trend to sheep farming, developing from as early as 1810, led to a sweeping disregard for the customary rights of the Skyemen. The factors (estate managers) of the absentee landed gentry, the new landlords, and the graziers had no associations with the tenantry and no use for their labor. Thinking only in commercial terms, they were only interested in seeing the higher grazings, the crofters' shielings, under sheep flocks in summer and the lower pastures, including the crofters' arable, in use during the winter. Thus, the "Clearances" took two directions.[55] The majority of the people seem to have lost their common grazings. In Kilmuir, according to several informants, they were left with only one small area of hill. Glendale suffered from the same policy. Many of the tenants were removed from their townships, by force or persuasion. To be exact, no fewer than sixty-two townships were cleared by the end of this period.[56] The evicted crofters were left to their own devises to reclaim a piece of the open moor, settled in existing townships, or banished from the island. In the area immediately to the north of Portree, forty crofters and

eighty cottars in four townships were replaced by two shepherds brought in from the mainland.[57]

As the interests of the proprietors and their tacksmen had clashed at an earlier time, those of the landlords and their tenantry were now irreconcilably opposed. The appearance of the latifundia in England has been described as being characterized by absentee landlords, pastoralism, and a decline in the rural population through death and migration.[58] A process which had begun three centuries earlier in England and which had reached the Scottish Borders two centuries earlier had at last become operative on Skye. Let us examine the effects of full scale commercialization on the Skyemen.

The effects are evident. Commercialization and the evictions, which were a necessary counterpart, prompted emigration and confined the people within narrow limits, often, on inferior land.[59] By 1865 it was possible to describe Sleat as a quiet pastoral land, desolate and deserted.[60] The people had been pushed into a few isolated, badly subdivided townships. In Bracadale, the first parish to be fully commercialized, there were once thirty-six runrig farms; in 1882 there were six large grazing farms.[61] The bulk of the population, 922, were

squatters without any legal hold on the land. In Duirinish parish, which includes Glendale, only twenty-one families had enough land to meet even subsistence needs.[62] In one Glendale township, Holmisdale, some crofts of four acres had as many as fifteen people to support.[63] Part of this extreme congestion was due to the continued practice of subdividing one's croft when a child married. Although the population in 1831 had fallen to 17,660, from 23,084 in 1841, almost every township had two or three times the number of families which had lived in them in 1841.[64]

The loss of the summer shielings and the common grazings meant few could keep sheep.[65] The looms were silent. Since the rent continued to be based on the value of livestock and was wholly or partially paid from the sale of cattle, all oats, which the graziers' sheep did not eat, went to feed the cattle. The mills were all but idle. The people had to buy flour, meal, and bread imported from Glasgow. Almost all were heavily in debt to the local merchants, who seem to have been newcomers with more associations with the graziers than the crofters and cottars. Milk became a precious commodity. Frequently, the old cow had only enough for her calf. Unable to keep horses, the women became beasts of burden. They carried

wealth, rose above the indigent crofters and cottars.

These changes had a pronounced effect on the culture and the population. Economic hardship and evictions prompted emigration, forced many men and women to seek seasonal work away from home, and led to a reduction in the marriage rate. Crofting which had already become part-time agriculture now was a spare-time pursuit. The Sgiathanach was dependent on money, on the wider economy, for the satisfaction of most of his needs. The croft was providing no more than a few potatoes for the table and some oats for the cattle, the crofter's only export. Still, no landless working force appeared. Portree had grown and there was a woolen mill, but there does not seem to have been any marked movement into the village by the crofters.

While much of what was meaningful to the people was being lost, the religious Revival continued. The conservatism of the "Men" became an official policy of a new church. The emotional approach of the ministers and the "Men," who were now elders in the church, and the emotionalism of the large outdoor meetings functioned to restore the social disequilibrium. Although the extended family, township, and nuclear family suffered from instability, the people found intelligible roles within the religious sphere of activity. Their religion was reinforcing their way of life. The abhorrence of much of the old culture was accompanied by a strengthening of many traits which reaffirmed the desirable status values. The culture found a new focus in congregational religion and was able to maintain a continuity while the content changed.

the people to overstock. No land could be assigned as an enlargement if it would impair the value of a sheep farm or deer forest. The remainder of the island was already possessed by crofters. Moreover, there was no one to regulate the use of the common grazings. As the Crofters Commission usurped the functions of the landlord, estate management became lax. The township constable had disappeared. The cotters, 36 percent of the population, had been omitted from the provisions of the Crofters Act. Later when the government provided for a grazing committee to draft voluntary regulations forsharing the common grazing and, finally, coerced the crofters to elect a grazing committee, the regulations could not be enforced, except by appealing to the sheriff.

At length another commission of inquiry visited the Highlands to decide how the resettlement program might be extended. Then, in 1897, the Congested Districts Board was created. The Board was given power to purchase land for enlargements and for creating new holdings, to resettle crofters and cottars from congested districts, to foster the development of stock breeding, agriculture, fishing, and home industries, and to improve communications. It was not intended that the government should become a landlord. The crofters, like the Irish small farmers, were supposed to have acquired a desire to own their own land. In 1904 the estates of Glendale, the present twelve townships, and Kilmuir, the whole parish and part of the parish of Snizort, were purchased. On the Kilmuir Estate there were 450 crofts in 35 townships and 10 large farms.

Heavy rackrenting in the past had led to dissatisfaction and arrears in rent, the crofters' weapon against the landlord. The rents were revised and most of the arrears were cancelled. All the farms but one were subdivided to form 79 new holdings in 7 reorganized townships and to make enlargements to the other townships. The Glendale estate received similar treatment, being made over into 147 crofts in 12 townships plus a jointly held club farm. Both estates were sold to the crofters on a fifty year annuity basis. Then came a rude awakening. Within ten years the crofters found ownership to be a dubious privilege, especially since it excluded them from the benefits of legislation favoring the small tenant. The Kilmuir crofters were released from the contract, but the government refused to accept the petition of the Glendale people, who still are not pleased with their rather unique position. Private ownership of the land might be said to be as alien to their heritage as village settlements.

Land settlement continued, with the introduction of certain refinements, the most important of which was the power to use compulsion to acquire land for crofting in the national interest. Today over half the Island is owned by the national government and administered by the Department of Agriculture. The tendency in recent years has been to create more adequate holdings. On the Kilmuir estate the number of crofts has been reduced from 530 to 442. The process of resettlement, or de-commercialization, has been carried further on Skye than in any other Highland area.[82] It has also included the only major

[82] Cf., e.g., Collier, op. cit., pp. 90-113; and Hance, op. cit., pp. 61-62, 64-68.

migration scheme to be attempted. In 1923 sixty-eight families from the Isle of Harris, in the Outer Hebrides, were brought over to Skye and settled in Bracadale. Probably, close to 300 new holdings and in the neighborhood of 200 enlargements have been made since 1897. This clearly reflects the limited space available for crofting at the end of the "Clearances."

In addition to land settlement, the government has continued to stimulate improvements in stock breeding techniques and to foster more efficient land utilization. Credit facilities, by grant and loan, were offered to enable the crofters to purchase stock, especially sheep, and to build new cottages. Grants and subsidies, in an ever increasing number, have been made available to promote a fuller use of the land. Initially, under the Congested Districts Board, these facilities were devised specifically for the Highlands. By the time the Congested Districts Board was abolished, the crofters had become officially integrated with the national agricultural scene so that specific subsidies, grants, and loans were replaced with an opportunity to apply for assistance within the national program of agricultural development. Instruction in scientific methods of agriculture has been another continuing function of the government through a series of advisory services and, more recently, by a program of demonstration crofts and farms. Access to markets has similarly been facilitated by improving communications by land and, to a lesser extent, by sea.

Security and protection for the crofters has been another unfailing interest of the government. Again, with official integration, the scope of legislation has been extended to

COMMUNICATIONS

The first trans-Atlantic call came in 1935, when the Lewis Woollen Mills were called up by a Toronto mill.

Beam radio came in 1938-39 with two circuits. The stations were on Bennadrove Hill, outside Stornoway, and at Ullapool. In 1942 a twelve-channel link was opened to Gairloch. Outlying villages worked into Stornoway on single-wire circuits, with an earth return, Great Bernera being the last exchange to be served single-wire. One of the island's most remote inhabited satellite islands, Scarp, received its first telephone service only in 1947. Scarp was deserted by its native population in 1971.

The rate of increase in the use of telephone services in the island has been considerable. In 1965 some 1400 customers of the Post Office made almost 250,000 trunk calls. In 1972, the number of subscribers was 2,300. The projected number for 1975 is in the region of 3,500 subscribers who will make an estimated 500,000 calls per annum. In each case, the figure for local calls is very much higher. Every telephone exchange on the island has grown in size; of the twenty-one exchanges, the three largest are at Back, Carloway and Shawbost. In 1964 the Post Office set up a working party to examine the development of the telephone service in the Highlands and Islands. As a result of the party's report a scheme of improvement involving a capital expenditure of £7½ million will be spent on new buildings and access roads, exchange equipment, underground cables and radio equipment.

Stornoway has been provided with a new telephone exchange, and underground cables have been laid both in the town and in the outlying districts. Smaller exchanges in the country areas will have new equipment fitted. A modern radio system between Stornoway and Tarbert is being constructed. To link the island with the South, a new underground cable, costing £1 million, will link Inverness to Ullapool and Gairloch. It is estimated that by 1975 most townships in Lewis and Harris (the latter through a new Exchange building) will be on STD, at a cost of £500 for every connected subscriber in the island.

AGRICULTURE AND FISHING

With the disappearance of the middlemen, their sub-tenants became tenants of the proprietor; and the descendants of these are most of today's crofters. Mr Thomas Knox, who became Chamberlain of Lewis in 1833, was examined before a Select Committee of the Houses of Parliament on the question of emigration from the island in 1841. At that time there were 1,913 small tenants on the island who paid yearly rents varying from 63s 9d to 72s 3d. He stated that the country produced sufficient corn for the use of the people in most seasons. The years 1836-7 were exceptional and outside relief became necessary. But he did not consider that any person in Lewis was poor who had a lot of land, however small, if it were sufficiently stocked. There were, however, in the island, small tenants occupying land unsuitable for raising grain; and in order to avoid such distress as had occurred in recent years he had advocated the emigration of about 6,000 people, the vacant ground to be put under sheep. This course had been followed in 1838, when five families numbering about seventy people were removed and the land they had occupied was converted into sheep farms.

In the end, however, only a small fraction of the proposed 6,000 persons ever left Lewis under Knox's scheme. Those who were left worked their land under a cloud of increasing distress, in a system which had them in an iron grip. Eventually the bubble burst, as indicated in Chapter 3. The pressure of social conditions, and the events of historical progress, were manifested first in the social action against the agricultural system and finally in the legislation which gave the crofter certain rights.

CROFTING CHANGES

In general, the island during the last century was able to support its population, failing to do so only when disease struck at the staple potato. Each family unit in the crofting township was self-sufficient in most grown produce and the milk products from the family cow. Very poor families grew potatoes only and depended on neighbours for milk. But when the potato crops failed, distress knocked at almost every door, the fishing communities on the island tending to relieve hunger by looking to the sea. The removal

HEALTH AND HOUSING

The age structure of the Lewis population in 1951 and 1961. The trend shown over the forty years 1861-1901 has strengthened and consolidated, so that the 1961 population is middle-aged

the 1914 war, but some 200 of those who survived the holocaust were lost in the wreck of the *Iolaire* on New Year's morning, 1919 —the first morning of the first new year of peace, literally within sight of home. Again, the effect of emigration was a loss, in many small communities, of a full generation. Where religion is strong and thrice-distilled, there tends also to prevail a state of mind which dwells on guilt and, where people are accustomed to ex-

THE PEOPLE

eighty visitors each year, but there is nothing similar in Lewis. Hostellers who visit Stornoway can do little more than march through the town to the mail-boat, or else return to Harris by the next bus.

As might be expected, the reading tradition is strong, stemming from a natural desire to learn and from the fact that the ceilidh could only partly satisfy the need for mental stimulation, not to mention the need to alleviate loneliness. A century ago three books were to be found in many island homes: the family Bible, often a massive volume clad in hairy calfskin, *Turus a' Chriosdaidh (Pilgrim's Progress)* and *Gras am Pailteas* (Bunyan's *Grace Abounding*). As horizons became wider a public library was set up in Stornoway in 1907 (see Chapter 8); a library was in fact established there earlier, before 1897, but it was not a free one. In round figures, the 15,400 people of landward Lewis (Lewis excluding Stornoway) borrow some 70,000 books annually, though of course the actual readership figures are higher, books borrowed being passed round the family and exchanged with others until the 'mobile' calls again. The mobile library service was established by the Ross & Cromarty County Council in 1955 for rural villages in thirty-one school districts.

ISLAND EMIGRANTS

For all that the island is a tight-knit community, paradoxically it breeds many men and women whose destinies are not worked out within the confines of its own shores, but at the ends of far horizons. This is typical of most Highland areas: some who leave them make a mark on other societies often greatly exceeding the size of the community they left behind. Many 'great' people are also directly descended from a crofting ancestry; minds and spirits bred in the Highlands and Islands have potential for development not always apparent on native soil but sometimes fully realised in alien surroundings and conditions.

Harris and Lewis have contributed their share, and still do, to the general weal of skill, ability and intellect in all fields of human endeavour. For centuries, the export of brains was normal. Possibly the best known is Sir Alexander MacKenzie, who discovered

the MacKenzie River; he was born in Stornoway in 1764, in what was known as Luskentyre House, at the corner of Kenneth Street and Francis, where Martin's Memorial Church now stands. Another MacKenzie, Lt-Col Colin MacKenzie, was born in Stornoway about 1754 and went to Madras in 1772 as a cadet in the Engineer Corps under the East India Company. In India, MacKenzie followed a career of high professional distinction,

[TEXT CONTINUED ON PAGE 157]

Population trends c 1755 to 1961 for the island as a whole; for Lewis, including Stornoway; for Harris; and for Stornoway. The population peak occurred in 1911. The dip in the Stornoway curve was due to the effects of emigration, as is the more pronounced dip in the island curve. Stornoway's curve in 1961 was on the upward trend, due to migration from the landward parts of the island into the town. Over the past 150 years, however, population mobility within the island has been virtually nil; movement has been emigration rather than migration

surveying Mysore (40,000 square miles), a work of great difficulty, and ultimately becoming Surveyor-General of India. Though not island-born, Thomas Babington MacAulay, the first and only Baron MacAulay of Rothley, was an issue from the very heart of the Hebrides. He was only one generation removed from Gaelic-speaking ancestors. His grandfather was born in the Manse of Harris, and a great-grandfather in the far-off parish of Uig, in Lewis; a great-grandmother was born in the old Manse of Stornoway.

The MacIvers of Liverpool were a Lewis family who took a leading part in the development of regular steamship travel across the Atlantic and in the foundation of the Cunard Line. The brothers David and Charles MacIver first operated with passenger ships (the City of Glasgow Steam Packet Company, 1844) on the Clyde coast. Before that they ran a petty smack between Loch Roag and Campbeltown. Kenneth Morison, the founder of the Railway Clearing House, was born in Stornoway in 1805; in an unusual field there was Aeneas MacKenzie, who scripted many Hollywood films; W. E. Gladstone's mother was a native of Stornoway; and the last of the tea-clipper skippers was Captain Murdo Stewart MacDonald, who skippered the *Sir Launcelot*. Yet another local boy who made good is R. M. MacIver, who left Stornoway at the age of sixteen to make a journey, first to Edinburgh University and then on to Oxford, Canada and America. He has in his lifetime collected eight Honorary Degrees, became Lieber Professor of political philosophy at Columbia University, and President, and then Chancellor, of the New School for Social Research.

rocks about intrusions or dykes of more resistant crinanite. Second, the better nature of the soil derived from the weatherings of the sandstones and conglomerates has aided reclamation and cultivation.

In the long years of its existence the town has been a focal point of island history, fanning out to many corners of the world, where it has been merged with the wider history of Britain, the Commonwealth and elsewhere. Detached as it was from the rest of Scotland by the Minch, Lewis often went its own way. In the reign of Queen Elizabeth, when England and Sweden plotted against the Scottish crown, the emissaries of these countries met in Stornoway. Later, in April 1719, a council of war was held in a room in Stornoway to plan the overthrow of the Hanoverian dynasty of Britain; included in the assembly were the Earl of Seaforth, the Marquis of Tulibardine, George Keith, the hereditary Earl Marshal of Scotland, and his younger brother James, who was to become the famous Marshal Keith. Prince Charles Edward, though not setting foot in the town, looked at its twinkling lights from across the Bay, at Arnish, while his pilot tried to obtain a boat to take the royal fugitive to France.

The harbour has seen many kinds of ships on its waters. In the twenties, the *Metagama*, the *Marloch*, and the *Canada* came to take away almost a generation of young Lewis folk to the new lands across the seas, because their own island could not support them. The *Iolaire* sank within sight and sound of the harbour mouth and dragged about 200 Lewismen with her into an island memory. The *Cervona*, of Dundee, dropped her anchor just by Arnish lighthouse in July 1904, carrying survivors from the emigrant ship *Norge*, sunk at Rockall with appalling loss of life. The *Victoria and Albert* visited Stornoway in September 1902, the first visit to the town by a reigning monarch. That was a great day, the result of a letter from Provost Anderson of Stornoway in which he pointed out to His Majesty, King Edward, that with less than 30,000 inhabitants Lewis had 2,300 men in the Royal Naval Reserve, trained at the local Battery, the largest in Britain. There were also 1,100 men in the Seaforth & Cameron Militia, all of whom volunteered for foreign service in 1899, and 900 of whom did garrison duty in Egypt. Between 300 and 400 Lewis-

secondary school, the 'Nicolson', has had since its inception a formidable academic record. Back in 1907 work from the school was included in the educational section of an International Exhibition held in Christchurch, New Zealand: this was appropriate because emigrants from the west Highlands, notably from Harris and Lewis, were among the pioneers of New Zealand education a century ago. In 1957 new extensions were opened, costing about £300,000 and making the school the largest of its kind in the Highlands area. It is co-educational, its primary and junior secondary departments taking only Stornoway children and its senior secondary department catering for those from both Stornoway and rural Lewis. Many board out in the town during the week, returning home at weekends.

In providing social facilities, the town has placed itself in the position of an agent for those things deemed necessary for life, and is a middle-ground between the rural repression of the Free Church and the city abandon of the mainland, with resulting dilemma. The public houses, the cinema, youth clubs, dances and juke boxes are all in direct opposition to the preaching of the Free Church. The result is tension between the town's desire to act as a host for tourists and its wish to fulfil its duty on a religious plane; to instance this, the Stornoway Sabbath is less strict than the Lewis Sabbath. In keeping with the rest of Lewis, social standards are extremely high. Home is the centre of life, as it always was; the sense of community and communal responsibility is there. Divorce is practically unheard of, and the incidence of crime, as such, is extremely low.

A HARRIS VIGNETTE

has direct or indirect communication with Glasgow, Stornoway and North Uist. In summer a thrice-daily bus runs to Stornoway, and once a day a bus makes the round trip of East and West Harris. The township, linear in pattern, east to west, includes sixteen shops which cater for most of the needs of the population within reasonable travelling distance; it also has two cafés, a post office, a licensed hotel, a hall for social functions, a masonic hall and two churches. The Sir E. Scott School here is the only secondary school in Harris with an academic stream. Most of the working population is employed in the service industries, the professions and the tweed industry. Tarbert was a fishing port of some significance in the past, and is now a refuelling point for ships.

The absence of organised industry on a large scale, such as Lewis has, is a factor which tends to bring nearer to reality any desire on the part of Harris natives to leave their native soil. There are small pockets of industry, but these are only dabs of easing ointment on the excessive unemployment sore of 27 per cent. The main occupation is of course crofting, the income from it being augmented from a variety of sources. Some crofters concentrate on the production of Harris Tweed, perhaps using the wool from their own sheep; the natural dyes from the lichens which grow on the rocks and from other plants are still used occasionally. Others specialise in knitwear. Recently shell-craft and wood-turning have been added to the traditional crafts, with a view to the tourist market. Fishing, of course, plays a part in the economy in some communities. The interest of such organisations as the Scottish Country Industries Development Trust has been concentrated on the potential in shell-fish processing, and the production of knitwear on a larger scale than exists at present. Roadwork gives employment to about thirty men, but is of course seasonal.

An apparently bright light on the employment horizon showed itself in 1965, with the opening of a quarry at Lingerbay. The mineral quarried was anorthosite, a white granite used as an abrasive in cleaning products. A 99-year lease was taken out by a subsidiary company of William Robertson (Shipowners) Limited, Glasgow. But the quarry was closed in 1967 due to lack of orders.

THE OTHER ISLANDS

The flesh of puffins, gannets and fulmars was the staple diet of the St Kildans; the oil and feathers were the vital exports that paid the island rent to MacLeod of Harris, the owner of the group. These exports also helped to pay for the purchase of such foodstuffs as salt, sugar and tea, and other items which the island could not itself supply. The St Kildans owned some hundreds of sheep, the wool being spun and woven into tweed, and a few cattle were also kept. But the seabirds were the foundation of the island economy.

The factor which led ultimately to the desertion of the island group was isolation. The community there was throughout its history undoubtedly the most isolated in the British Isles, though until the present century this mattered little to the St Kildans. All that was deemed necessary for the continuation of the community was that, once a year, MacLeod of Harris should send his factor over from Skye to collect the island goods that were to be sold, and to bring with him those provisions which would see them through another twelvemonth. However, as the demand for the island's products declined, communications became more important: to support the family a man had to leave to find work on the Scottish mainland. Large-scale emigration began in 1852 when thirty-six islanders (with State aid) left for Australia. Island life was punctuated by loss of life; boating disasters and cliff-falls in particular deprived the community of the vital male elements needed for survival. Tetanus infantus, known on St Kilda as the 'eight-days' sickness', strangled two of every three babies born; this disease ravaged the island for almost a century and again struck harder at the male sex. About 1810 the population was about 200, a definite overcrowding. By 1861 it had fallen to 78; in 1911 it was 80, and in 1921, 73. A decade later it was nil.

Isolation tended to make the St Kildans a human menagerie. With the improvement in boat services, St Kilda became a 'must' on tourist itineraries. The tourist trade took on an economic importance for the population after July 1877, when the *Dunera Castle* steamed north and west for a voyage to the 'romantic Western Isles and lone St Kilda'. The steamers continued to call throughout the three summer months annually for sixty years, their passengers eager to buy souvenirs: tweed, quern stones, spinning wheels, stuffed birds and eggs; indeed, anything to remind them,

11 ISLAND LIFE

As one might expect with an island that is not obviously surrounded with water, life in Harris and Lewis is lived out by an amalgam of communities somewhat similar to those found in very large cities, with defineable districts and recognisable boundaries. The island is too large for any physical feature to demonstrate that it is unconnected with a larger land mass. One looks to the horizon, down the coasts, at the satellite islands, and concludes that if indeed it is an island, the separate elements which combine to make an islander must be found elesewhere than in the landscape. And so they are: in the people, their way of living, their economic problems, their attitudes, and their own consciousness of the fact that distance over the hills and the moors to the sea is significant, in that one eventually comes to the end of a road or track; or that a river or stream runs itself out for ever into the sea. Harris and Lewis is the biggest of all the 'small' islands off the shores of Britain, and has been fortunate in its size: large enough to support a significant number of people who, despite emigration, have managed to maintain their numbers reasonably well and who are now making efforts to reduce emigration and its effects on the island communities to a bearable level.

Because it is an island, however, external influences are felt like cold winter winds. The 1966 seamen's strike was an example; Government intervention was needed to supply essential goods. After the strike many questions were asked. All had their roots in the island's dependence on the outside for not a few of the necessities which could be produced on Harris and Lewis itself, with either its own resources or the resourcefulness of the island folk. To be short of fish, for instance—and this occurred—while the seas around the island were teeming, was unhappy history repeating itself, a harking back to former times when starvation levels could have been avoided by looking around for the means to harvest the crop lying around. The strike also threw into relief the question of the viability of crofting as a full-time occupation.

1901, the average was only 5·086, the county average being 3·983. The population was still to reach its peak in Lewis, some 30,000 in 1911. Emigration was at a fairly high rate, some 2,000 every decade, but this was no relief with births between 8,000 and 9,000 during the same period. In 1894 it was estimated that the number of cottars (or squatters) as distinct from crofters was in the region of 1,000. These people, mostly relatives of crofters, constituted a serious incubus on every crofting township.

Elsewhere in the Highlands, the enlargement of crofting holdings relieved the land-hunger situation. It was not possible for the same to be done in Lewis, and Harris possessed even less useful land to share out. Many applications were made by crofters either for an increase in their own holdings or an increase in the acreage of common grazings held by each township. Though some 500 acres were in fact handed over by the estate management for crofting purposes, there was a steady refusal to diminish the acreage of farms.

The Congested Districts Board was appointed in 1897, supervising public works to relieve the people of a certain amount of their ills. It carried on until 1912, when it passed into the newly-formed Board of Agriculture. The Congested Districts Board could have achieved much more than it did. It scraped away only a little of the vast problem. The next major landmark in the history of crofting legislation was the Small Landholders (Scotland) Act of 1911. It extended certain provisions introduced for the crofter in 1886, and further increased the class of tenants who benefited by bringing in the tenants of holdings rented at not more than £50 (£30 in Lewis) or not exceeding 50 acres (30 acres in Lewis). The 1911 Act also brought into existence the Scottish Land Court in place of the Crofters Commission. In Lewis, however, the hunger for more land went on unabated and reached a not insignificant peak during the later years of Lord Leverhulme's regime.

A new Crofters Commission was set up in 1955, following on the report of a Commission of Enquiry under the chairmanship of the then Principal T. M. Taylor of Aberdeen University. Fresh provision for the reorganisation, development and regulation of the crofting system in the seven crofting counties of Scotland

trappings of nineteenth-century civilisation, however, they grew to depend on items brought by sea. Imported food, clothing, wood, metal domestic utensils and the like were slowly assimilated as indispensable everyday articles. But there was relatively little export in return; then as now, any transport operator struggled with the fact that traffic was one-way and the freight charges must pay for the double voyage. Though the fishing industry and later the Harris Tweed industry were, around the turn of the century, to do much to determine and stabilise shipping developments, both passenger and cargo services were always facing loss rather than profit.

On the social side of the picture, the regular call of ships to the island, to Stornoway in particular, was a welcome, quickening sign that the island was significant in some way to the outside world. The ships brought visitors who made the island, and the Hebrides in general, better known to other prospective travellers. The exposure of the island and its folk to the gaze of the mainland led to a wider knowledge and understanding which without doubt brought improvements in social welfare and a basis for economic development. When many islanders found it necessary to go to Glasgow and the south for work, the ships of the Minch served as a firm link with home, to which they returned whenever they could. This feeling for home is still manifest today in the Lewismen in Canada who charter an aircraft to Prestwick each year so that they can holiday on the island. Since 1900 or so, passenger traffic has been two-way: emigrants, migrants, visitors and business travellers. When the fishing industry was in its heyday, the ships carried hundreds of fisherfolk across the Minch to ports as far south as Great Yarmouth to 'follow the herring' round the shores of Britain and back to the Minch again. Traffic today is still considerable, with the air-link with the island being used to its capacity.

In a community where Sabbath observance is an integral strand of religious belief, ministers have on occasions tried to preserve the Mosaic sanctity of the Sabbath Day by restricting the movement of ships in Stornoway harbour. In deference to local feeling the Stornoway steamer has always docked for twenty-four hours over Sunday, to leave port for Kyle just after midnight.

178 and practical support, could win through to make marks on the island scene.

185 A significant event occurred in 1964: the establishment of 654 the Highlands & Islands Development Board. This was Britain's 433 first regional development authority run by members who are either full- or part-time. The Board is grant-aided and has two broad functions: to improve the social and economic condition of the Highland people and assist in making the region more significant in a national context. The Board's attention in the Western Isles has been concentrated in the expansion of the [184] fishing industry and the development of tourism. In both these [505] fields there has been a considerable success: upwards of 100,000 visitors per annum visit the islands; and a fleet of over thirty boats, equipped with the latest gear, operate out of Stornoway.

433 Also in 1964 was produced the Development Plan for the 185 County of Ross & Cromarty. So far as Lewis was concerned, the Plan was based on an average decrease in population of some [167] 1,500 persons for every year in the future of the island. This, if carried to its logical conclusion, will see complete desertion in fifteen years or so! However, even if nothing further is done to halt emigration, particularly in the landward areas of the island, the population will remain around a stable 15,000. The County Development Plan contains much food for thought, but as with most county plans, does not indicate actual development projects. Rather, it lists all the resources of the island for the attention of those concerned. Potential developments include the setting up and exploitation of predominantly-fulltime crofts, shell-fishing, and inshore white fishing, herring and offshore white fishing, forestry, tourism and holiday accommodation, minerals, peat utilisation, hill-land improvement, marine reclamation and seaweed resources. This list is significant and merits the attention of the Highlands & Islands Development Board.

Harris, on the other hand, presents possibilities on a much smaller and limited scale. However, there are expansion potentials in tweed, knitwear, and craft industries, with tourism promising to be a good base for the island's economy. As the age-structure of the crofting population changes, there will be a useful re-organisation and enlargement of existing holdings to make for

175 29,000 and Harris 5270. From 1901 to 1911 rural growth 162 slowed down and ceased thereafter; but even by 1921 there had been little change (rural Lewis, 28,380; Harris, 5280).

FIG. 12.—Graph showing changes of population in Lewis-and-Harris from *c.* 1701 to 1951. (Because of boundary changes the curves for the parishes of Barvas, Lochs and Uig have been averaged and are shown as B.-L.-U.)

• 167 The great exodus from the Island came three years after, in 1924–25, when Leverhulme's expenditure on labouring wages was over, the war bounties had been spent —partly upon the refitting of boats—and when fishing was hard hit by the destruction of the Russian market. Simultaneously, a wet summer spoiled the crops and prevented even the drying of the peats.

• 167 Emigration set in, both individually and by help of schemes for group settlement in Canada, and in 1931 rural [162] Lewis returned only 21,200 and Harris 4500. The curve of average parish increase illustrates the fairly steady numerical increase to the close of the last century, then the lessening increase, and after 1921 a fall, recorded in 1931.

162 The census of April 1951, which recorded the population of Stornoway burgh as nearly 5000 (a net increase of 16 per cent since April 1931), recorded little or no change in the population of rural Stornoway parish but losses of 11 to 19 per cent in the Island's four outlying parishes. The average net rural loss approached 9 per cent. But—as indicated in the curves drawn for Fig. 12 which are based upon statistical estimates that corroborate observation—the loss did not take place smoothly over the twenty-year period to 1951. Much of the loss occurred in the two preceding years, 1949 to 1951. Although partly due to a long term trend, this loss was greatly caused by crisis.

2. *Present Population Trends and the Outlook*

167 After 1931, as a result of the trade depression in the Empire and the United States, many emigrants returned, frequently putting what was left of their savings into the purchase of a loom, giving some months to the building of a new house with the help of Government loans, and setting about the improvement of their parents' holding [162] or the reclamation of a new allotment. Soon after 1931— [168] at a time when the Press read the census results as a portent of steady and drastic Island depopulation—Islanders remarked that unless unexpected attraction came from outside the Island, accompanied by lessened prosperity in

162 weaving and fishing, the fall in population would probably • [167] be small, if any, in 1941. This fall in the total figure was [168] not so much a decrease in the number of families as in the number per family. The Island was only then following the restriction of population begun half a century before in the rest of Protestant Britain, though the causes, social and economic, are very dissimilar. Actually, little did occur to change either the rural situation or that of Stornoway, until the outbreak of war in 1939.

162 Since 1931 there had been no real decrease: Lewis is 178 a land of house-building, not of ruin and abandonment; 369 of increase of holdings, not diminution, and even of agri- cultural improvement. No doubt 'artificial' causes were [657] at work: first, loans, grants and unemployment insurance and assistance—once known as 'the dole'—and, secondly, [593] the money sent to elderly parents and dependants at home [888] by young folk in Glasgow or abroad, or savings brought back by the young people themselves. Yet there is some [226] fishing and agriculture still. Above all, 'hand-weaving' has grown, even if this be partly 'artificial'. Recently it [241] was not only the elders who had returned to the Island, but [286] men and women in the prime of life, so that the question of resources, livelihood and population in Lewis needs to be re-examined afresh.

167 The emigration which took place from 1949 to 1951 followed directly upon the losses and the unemployment [464] in the Island's Harris tweed industry. This crisis resulted [651] from the imposition in 1949 of a Purchase Tax on hand- [162] woven Harris tweed of 666 per cent. If the tax had been maintained and no adequate adjustment made, the effects on population would have been far-reaching.

16 In the pyramid for rural Lewis (b) the differences are striking, and are mainly due to two factors: the 'natural' 162 ratio of births to deaths, and migration. Beginning from the bottom of the pyramid, it will be seen that in 1931 there were fewer infants (from 0–5 years) than children from 5–10 years, fewer in fact than in the three older age-groups. In 1951 (c), the birth rate having risen sharply after the war and preceding depression, infants formed a much larger ratio (over 5 per cent).

162 In rural Lewis, emigration asserted itself earliest with • 167 girls, as they left the Island chiefly for domestic service; but soon after the age of 20 as many young men left as young women. In 1931 the discrepancy was most marked [165] from the age of 30 to 35. This was further accentuated [722] by the heavy death-roll among the younger men during the 1914–18 war, deaths having totalled more than 1100, perhaps the heaviest proportionate loss in the Empire. Only when they marry and return, permanently or for a period, to the croft (vacated it may be by the death of a parent), do the numbers of men tend to balance those of women. Thereafter the falling away among men is due to their shorter life expectation.

16 In 1951 National Service had drawn away lads of 18 to 20, so that the difference between the sexes is much less marked in the 15–19 age-group than it was in 1931. Mortality in the 1914–18 war contributes to the shortage of men between 50 and 55 in 1951, and the mortality of the 1939–45 war has also left its trace—or the birth rate would have been still higher (always excluding the factor of migration). For the men, those jobs not requiring per-

has improved, but detailed analytical statistics for 1951 were not available by 1954. Allowances being made for the effects of the wars, for the high ratio of births immediately after, and for emigration from Lewis after 1949, the age-grouping in the island changed but little from 1931.

175 growth followed the increases in potato-growing and fish-
178 ing, in income and food production, and the introduction
434 of vaccination against smallpox, which had formerly taken a heavy toll of child life.[1] This increase found an outlet [433] in emigration to the Colonies, often led by departing tacks-[751] men though discouraged at first by the Island lairds. For example, in July 1773, 840 people sailed from Lewis. 175 "Alarmed by this, their master . . . came down from 434 London to treat with the remainder of his tenants. What are the terms asked, think you? 'The land at the old • 167 rents, the augmentation paid for three years back to be refunded, and his Factor to be immediately dismissed!'" [214] Although the *Edinburgh Evening Courant*, from which this quotation is taken, went on to say that it was expected that the demands would be acceded to, or the Island would become a desert, the Factor was retained.

175 The pressure of population can be imagined when the 167 appalling conditions of transport overseas are remembered. 505 A case is known of 700 Gaelic emigrants setting out from the Clyde across the Atlantic in a vessel for which the maximum human cargo of negro slaves permissible was 400. The regulations governing the transport of slaves did not apply to the transport of 'freemen'. In quoting this case, D. F. Macdonald suggests that while it was in the interest of slave-owners that their slaves should arrive in the Plantations alive, it was rather in the interest of manufacturers to discourage emigration so as to keep a supply of labour at home with which to meet their growing demands and fill the gaps due to a high mortality, particularly among workers newly arrived from the country.[2] It would also seem as if it had not been in the interests of landlords to improve passenger regulations at that time,

[113]

[1] Brand Report, 1902, p. xiv.

[2] *Scotland's Shifting Population, 1750–1850* (1941).

000 landlords to improve passenger regulations at that time.

175 Wars brought enlistment in the Highland regiments,
162 the Navy and Merchant Marine. Owing to migrations of all kinds, males came to be outnumbered by females, then [702] as later (100 males to 114 females, 1931).[1] In Lewis in • [167] 1795 the proportion was 100 to 111, and in Harris 100 to 124. From this period onwards the 'export of men' con-175 tinued, modified by the reserve for war. Men were trained 162 for the Naval Reserve and Militia; and in 1900 for instance 702 800 men were training at Fort George and 2500 sailors were in the Reserve. The maintenance of a reserve for the Navy was one of the strongest pleas for the framing of the Crofters Act.

175 A new resource, important to the Islanders after 1750,
824 was kelp-making, the cutting and burning of seaweed upon
323 the shore, for use in the manufacture of alkali in the glass
388 and soap industries. From 1770 onwards the price rose, heightened first by an import duty, then by the Napoleonic 175 Wars. Estimating from the high prices, averaging over 824 £10 per ton from 1800 to 1823, Sir John Sinclair put the 435 value of the annual produce (20,000 tons) at £200,000. "It may appear surprising", he remarks, "how that sum could be of such importance to 80,000 people"; but he goes on to point out that this gave the additional cash needed to supplement their subsistence. But even when Sinclair wrote in 1825, the industry was in peril. Failure and loss occurred almost immediately after, with disastrous effect.

175 It is complained in the *New Statistical Account* that
433 owing to the summer-time work of kelp-making up to 1830, the people could give little attention to the crofts, so [511] that their extension must almost have ceased. Nor could

[1] In 1951 the ratio in Lewis was 100 males to 112 females, and in Harris, 100 to 110.

175 was to share; the children needed milk and the wome
632 wool to work, while the men fished. As the Crofter
423 Commission put it at the time, "Necessity has no law an
671 . . . it is scarcely possible to carry out . . . the Grazing Acts in this island". The position remains little change [476] Still, in spite of sixty years' delay, and the law's failure [462] restore an executive, the Constable, to perform specifie duties as a member of the community, the Grazings Com mittees do perform useful functions with credit. The form nuclei with which proprietor, Government or co operative agency actually deal, and the voluntary Cle may shoulder considerable responsibility.

175 With regard to small occupiers paying less than £
423 rent per annum and holding less than 10 acres and 25
671 acres of souming (or share of pasture), the Napier Com mission declined to recommend the bestowal of rights o immunities tending "to fix them in a condition from whic they ought to be resolutely though gently withdrawn The Act, however, did grant small occupiers immuni from eviction, and made it hard for either landlord, Sta or fellow-crofters even to refuse house sites or fresh hol ings, particularly in the crowded Lews. The squatte continues; indeed he is favoured, by escaping the paymen of rent and rates though he shares in benefits. The rate payers are proportionately, and unjustly, handicappe But as isolation has diminished, landless squatters hav been allowed to 'resume' portions of the common grazin for new holdings, as by common consent at Ness and i Lochs, after Lord Leverhulme's death.

175 A further recommendation of the Napier Commissio
168 was to aid emigration. Now Sir James Matheson's aid i 1863 proved successful, but his later efforts met with n • 167 response. There were then, and still may be, in the Islan

Lewis and Harris

167 left the Island. Yet after 1931 many returned, owing to losses and unemployment both in British towns and over-
[288] seas. When emigrants began to come home the 'Harris'
[178] tweed industry had spread to Lewis and offered increasing
[464] employment. Some men still fished in family-owned
[226] Island boats, and others as paid hands (on boats from the East Coast), though losses and unemployment were suffered.

178 Inter-war changes were hastened not only by movement
177 beyond the Island—an influence at work for three or four generations before—but by mobility within it. In 1919 a
493 small mail car made its way daily from Stornoway along
[205] each of the five main roads, with an occasional passenger. When crofters crossed the Island to Stornoway they went on foot or took the pony and cart at a slow walk: it was a day's journey. Ten years later, Ford vans, bought second-hand, ran daily to Stornoway from every township. Frequency, ease and relative cheapness of movement came late in an Island with no railway: the mobility of the motor for marketing and shopping brought rapid change.

178 'Hand-loom' weaving had become an important, if
286 precarious, resource, important because of the capital
[433] invested and the labour employed, yet precarious because
[462] of its dependence upon name and sentiment, not only upon intrinsic value. In Harris many women had spun and woven for sale for over a generation before 1914, mostly weaving pure hand-spun yarn, and they continued to do so. For many years before 1914, an occasional weaver was to be found in villages in Lewis too, generally weaving a handspun weft upon a mill-spun warp. By 1939 it was estimated that there were about 1200 looms in the Island, chiefly weaving mill-spunyarn, most of it spun in the two principal Stornoway mills. A carding mill

Lewis and Harris

177 most of the young men of the Islands were away. Hitherto,
[464] though people from the Isles had gone out into the world and rubbed shoulders with all sorts of men and women, from best to worst, their own homes and townships had remained inviolate. Now, however, there came men in numbers from distant homes, with little to do when off duty and with money to spend, either on tweeds, which were virtually free of controls, or on pleasures, if they could find them. The temptations offered to a community so unaccustomed to town ways were considerable.

729 Those who returned least changed in their outlook upon
178 rural life were ex-prisoners-of-war, from the 51st Highland Division. At their own wish, they had received instruction
[473] in modern small-holding; and the demand from prison camps for land when the Highlanders would come home was upheld. It is especially among these men that agencies such as *An Comunn Gaidhealach* kept Gaelic tradition alive, linking it to the Highlanders' long thoughts of home. Next to these come naval seamen, while those most subject to urban influences were those who worked in factories. But whatever their experiences, home exerted a strong attraction. If work and a fair wage can be found in the township and on the crofts, and if social life can be renewed, many who returned will stay.

726 As in the First World War, so in the Second: few communities in Britain have had so large a proportion of their men in the Forces, in the fighting line and at sea,
[177] from the outbreak of hostilities. The Island community
[167] is almost without the exemptions due to 'essential occu-
[729] pations' such as commercial agriculture in the country, or war industry and administration in the towns. The toll has been heavy, and the nation's debt to the Islanders should be remembered.

1. Principal workers of crofts: most women take some part in the working of crofts, planting potatoes, harvesting and harvest work, peat securing, etc.

/p. 10-C/

166 167 464 However, not all such employment is available in Park; 47 percent of the insurable male population leave the Hebrides to find employment; one third take seasonal employment, and two-thirds permanent employment furth of Park (See Table VIII).

Employment within Park

288 464 Table IX shows that opportunities for local employment are strictly limited. Weaving of Harris tweed is the most important single source of employment. It is significant that those engaging in it are almost all crofters working in their abundant spare time. Weaving is an ideal adjunct to croft work as it is unaffected by weather or hours of daylight and thus can be performed during periods of agricultural inactivity. The vagaries of the Harris tweed market make the occupation precarious; Park is one of the more inaccessible areas of Lewis and the mills are apt to give their commissions to the weavers nearest at hand around Stornoway when work is scarce. Since 1952, the number of weavers in the fishing townships of Cromore, Marivig, Calbost and Gravir has grown from 11 to 22 and much of the credit for this is due to the activities of the Pairc Association. Fishing, on the other hand, has lost ground in the same period; the number of fishermen has declined in these townships from 20 to 14[1]. Apart from weaving, service occupations form the only other employment available, shop-keeping, driving, and road maintenance being the chief occupations in the service group. There are very few craftsmen: with such a small population, and the long established tradition that the crofter builds his house and is his own tradesman, there is little opportunity for a trained builder, joiner or even shoemaker to make a livelihood. The professional class is small and entirely composed of the minister and missionaries, the doctor and several schoolmasters.

[178] [229] 463 464

462 There is little opportunity for women to find employment in Park, apart from nursing, shop-keeping and school teaching, and a few domestic service posts (See Table IX).

Employment furth of Park

166 167 462 465 464 The persons in the 15-44 age group form the main body of those working away from home. The distinction made between 'seasonally away' and 'regularly away' is that the former group spend part of the year elsewhere, the men on whalers in South Georgia or with the Tay Salmon Fisheries at Perth, or labouring on the mainland. The women are in domestic service, mainly in hotels. A majority of the men in the latter category are in the Merchant Navy; in some cases these men take leave to coincide with the spring work and the harvest. The majority of the women are in domestic service (See Tables IX and XI).

An interesting comparison in the 'regularly away' group exists between men and women in the professional classes (Tables IX and XI). The sample is small, but it is clear that more women than men attain professional status. The number of domestic servants, nurses, and merchant seamen is a reminder that the crofting districts provide a pool of labour for certain vital occupations, some none too popular in Britain as a whole. In people alone, one can say that Park makes a distinct contribution to the fabric of the national economy and this contribution is much more apparent outside Park than within the district. At the same time a majority of those who are temporarily or permanently away eventually marry and settle outside the district and thus a most valuable section of the community is constantly moving southwards. Only 35 per cent of the men in the 15-44 age group are wholly resident in Park, and 46 per cent of the women in the same age group, a reflection of the poor prospects and utter inadequacy of resources on the most of the crofts.

1 The 1952 figures are abstracted from the Lewis Survey Report on part of South Loche.

/ Facing p. 12/

some whose feelings and interests opposed emigration. Free Church ministers foresaw that the beliefs they had introduced would be shaken by travel; and their income, like that of the merchants, would have disappeared as a result of depopulation. The Congested Districts Board, however, sponsored two schemes of colonisation in 1888–89. In the first scheme thirty families, and in the second, fifty families were taken to Canada, mostly from the Island.[1] The first and smaller group repaid their loans and received their lands; but the second failed to do so, and the State was only reimbursed by sale of the land.

The story of the schemes suggests the lack of four elements needed for success: promptitude in organisation; sympathy with strictness, and a sufficiency of funds; a year's experience of new conditions or technical guidance, rather than segregation of the inexperienced without leadership; and choice of vocation as farmer or as farm servant. Many a crofter-emigrant has succeeded as a shepherd and farm hand or as an independent farmer; but not every Islesman, particularly a cottar or landless squatter, is fit to conduct a farm. Technically, an all-round experience of part-time crofting and fishing by rule of thumb does not train a man for farming in a new environment without even a year's apprenticeship. Success is possible in schemes which overcome initial difficulties by providing training, companionship and community life, in a suitable physical environment.

One further principle of communal life was the spiritual, which Parliament and administration failed to grasp. The most significant evidence in the Napier Commission was that of A. Carmichael; and from this the Commissioners

[1] J. P. Day, 1918, pp. 123-125, from Reports of Congested Districts Board, and Crofters and Colonisation Commissioners (Fifteenth Report).

grants, then, in the absence of an immediate goal, the combination of the corporate interest in bad work with natural inclination to an easy time proved overwhelming! The problem of assuring good work and prompt repayment is real: it calls for the right appeal to team-spirit coupled with personal responsibility. Many short roads to small new settlements have been economically built.

With regard to loans for settlement and housing, similar contrasts are found. Near Stornoway the farm of Aignish (Eye) was divided in 1905 into thirty-two fishermen's holdings (rented at £3). The Congested Districts Board lent £3600 for housing and spent £1600 on fencing and £450 on administrative expenses, a total of about £180 per holding; but in seven years the holders had paid only one-seventh of the annuities due, and were in arrears with the rent.[1] Yet on the housing loans made on a wide scale since 1919, there was mutual aid among neighbours and the repayment has been satisfactory.

SUMMARY: 1750—1914—1919

The transition from the old economy of mutual aid in self-support, little changed down to the 'Forty-five, to the development of production for sale had proceeded far by 1914. Yet change had not continued steadily. There had been fluctuations, from the land and back again, or towards individualism with returns to common action. Kelp-making, migration, and commercial fishing alternated in importance as means to earn a living without losing the anchorage of home. After the potato famine, a century ago, the people tended to move away from the outlying townships and emigrate; but the next generation agitated

[1] J. P. Day (1918), pp. 312-314.

for a firmer hold upon the land and for a return to abandoned sites. The communal possession of joint farms, held directly or under tacksmen, gave place to individual possession of crofts. Yet the legal recognition of perpetual tenure in 1886 gave not only the crofter's home but the crofting neighbourhood a security unequalled in Britain. The use of moor and machar in common was retained; but its control for improvement or reclamation by the estate or the township was weakened, rather than strengthened, by the Crofters' Acts. Confusion grew—both upon the arable land, subdivided, unenlarged and unimproved, and also upon the common grazing, sorely overstocked in spite of ever diminishing 'soumings' (or family shares) of cattle. Rating difficulties and anomalies appeared. Communal discipline, maintained at sea by fishing, was weakened on land after the abolition of the joint farm-group, and almost nullified in the townships by subdivision and squatting.

A year before the potato famine of 1845, a new landlord had brought good-will, capital and pioneering effort to Lewis. These had been directed to experiments in the reclamation and the industrial utilisation of deep peat. Helped by employment on these and other works, the population of Lewis continued to increase, when increase in Harris was arrested for a generation. Yet while neither experiment with peat met with success, little aid had been given to develop fisheries. In both parts of the Island a growing population was supported from the 'seventies onwards by help of earnings derived from the seasonal herring fishing on the East Coast and from inshore line fishing at home. Women added to the Island income by seasonal 'gutting' and, in Harris, by their spinning and weaving. Money was earned by work on the mainland,

and savings were sent by emigrants who remained faithful to parents and home.

If it be asked why most of the people kept to their Island home in spite of its poverty and earned so little away from it, one answer must be that their native tongue formed a barrier encircling them as a community at home and cutting them off from the rest of the nation. Seventy-five years ago the new Education Acts were not yet in full operation. Comparing the relative well-being in the Shetlands with the extreme poverty in the Hebrides at that time, a northern agriculturist wrote that in Scotland, only in the Hebrides "is the food obtained by the peasant occasionally so scanty" as to be unable "to maintain a labouring man in vigorous health". Inquiring why there should be so great a difference between the Shetlanders and the Hebrideans, living in similar, distant isles, he wrote, "We think the answer may be given in one word—*language*. . . . The population of the Hebrides cling to their ancient Gaelic with consequences most disastrous to themselves. . . . It handicaps them in the race for life . . . is a hindrance in the cities and a check to the emigration of both sexes to those world-wide regions where all who speak the English tongue find themselves at home."[1] He concurred with the Census Report of 1871, which stated: "The Gaelic language may be what it likes, both as to antiquity and beauty, but it decidedly stands in the way of the civilisation of the natives making use of it, and shuts them out from the paths open to their fellow-countrymen who speak the English tongue". The Report concludes: "It ought therefore to cease being taught in all our national schools. We are one people and we ought to have but one

Islands Distress Fund was raised in the Lowlands. The Committee organising it distributed relief, and purchased seed potatoes, etc. They also drew attention to some important features of Island conditions. Among others was that of the scale of charges for transport of goods and passengers. These charges had risen by from two to four times what they had been.[1] The steerage passengers were poorly provided for; and a later improvement in cabin comfort was not accompanied by improved steerage accommodation. One remembers in particular the suffering of the 'fisher girls'. In good weather the passage home (by day) was bearable; and though the song that 'lifted' as the boat left Kyle for the last lap to Stornoway sank pathetically as the steamboat left the shelter of Skye, voices began to rise again in the shelter of Stornoway Bay, sounding clear as the boat drew in. In bad weather the crowded women suffered sorely. Five hundred might be packed on the deck with little or no shelter, or covered the benches and floor of the steerage, sick and distraught. The Committee pointed out that "the Government increasingly accepted responsibility for the roads of the kingdom", and that sea communications were even more vital than roads to Islanders, for they serve in place of both road and rail. Some action was taken, but charges remained high.

As a result of all these difficulties, many young men

[1] Examples were given of the rise in charges from 1914 to 1924, *e.g.* a web of tweed, Harris to Glasgow, from 1s. to 3s.; a box of lobsters, Harris to London, 4s. 6d. to 11s.; a barrel of herring, Stornoway to Kyle, 1s. to 3s. and so on. Although the rise on larger consignments was less, these were of no benefit to 'small folk'. Typical charges for the export of livestock were: (Lochmaddy, N. Uist, to Oban, or from Harris) for sheep the rise was from 9d. to 2s.; for lambs, 6d. to 2s.; for horses or cows, 5s. to 18s.; for stirks, 2s. 6d. to 11s. 6d. The Committee's report was privately printed.

POPULATION

161
162
[228]

Figure 6 and Table XII give the population of Park from 1830 to 1958 in graphical and tabular form. The 1830-51 decline was due to evictions. The rapid increase in population from 1861 until 1911 can be almost wholly ascribed to the success of the fishing industry: a comparison of the graphs of the selected agricultural and fishing townships makes this clear. The decline since 1911 has been very rapid, and is mainly a reflection of lack of ancillary employment. The 1939 figure in the graph appears to show a slight check in the rate of decline but it may be that there was an influx of evacuees from Glasgow just before the enumeration was made.[1] The 1951 Census confirmed the continuing downward trend as did the enumeration of 1958.

An investigation of the age structure of the population (Table XIII and Figure 7) reveals that not only is the population declining but also that it is ageing. In 1958, only five per cent of the population were under school age, as compared with 9.4 per cent in 1939. The largest single group in 1939 was the 15-44 age group, the most enterprising and energetic members of the community; in 1959, the 45-64 age group emerges as the largest. The 65 and over age group has increased by 5.2 per cent since 1939.

As the 1939 and 1958 enumerations were not obtained under the rigid conditions of the Census, the figures for Lewis, excluding Stornoway Burgh, have been added for comparison; unfortunately the published Census material does not give individual parish statistics in age groups for Lewis. By including those persons in seasonal employment (mainly in the summer months) and excluding those permanently away, the Census and enumeration figures are more comparable, but it is possible that in the enumeration there may be an error of five per cent. (See Table XX). From these comparisons, it would appear that the population structure of Park is unbalanced in comparison with the rest of rural Lewis, and Scotland as a whole. The reason for this is the fact that so many people are working permanently away from home. (See Table XIV). From a study of the population structure it is clear that Park has all the attributes of an ageing population, a significantly low proportion of children and a higher proportion of the 45-64 and 65 and over age group than either rural Lewis or Scotland as a whole.

166
167

An attempt was made to record migration from the townships since 1939. From Table XV it is clear that all migrants were not recorded in the enumeration but the discrepancy may be explained by two other factors. The evacuees from Scottish cities who returned after 1939 to their city homes may well account for some and more people may now be working permanently away from home than was the case in 1939.

The destination of the emigrants (Table XVI) is significant. Stornoway Burgh (32 per cent) heads the list and so many of the Park families have not left Lewis but have gone to the one place on the island where employment is available. The second largest group have migrated permanently to Glasgow; many of those in permanent employment furth of Park (unmarried and still part of the croft household) work in Glasgow, and eventually marry there. It is also significant that only 16 per cent of the emigrants settled in crofting areas. The fact that over one-third of the recorded migrants settled in the only truly urban community in the Outer Hebrides needs further investigation but one possible conclusion is that if employment were available in Park, the migration rate would be drastically cut.

1 For discussion of this point, and of the population statistics in general, the author is greatly indebted to R. S. Barclay, B. Sc., Ph. D., F. R. S. E.

TABLE XVII

SELECTED POPULATION STATISTICS FOR THE AGRICULTURAL AND FISHING TOWNSHIPS

/facing p. 14/

[Seaforthhead]

161 Table XVII reinforces the idea that there is a striking dichotomy between the agricultural
162 and fishing townships. The former are characterised by a more stable population trend,
166 significantly fewer of the population in permanent employment furth of Park, and a smaller loss by
167 migration. In the fishing townships, where growth and decline have been equally meteoric,
241 there is a larger proportion of persons in permanent employment furth of Park, and migration
228 losses have been greater. It is also significant that there is a smaller natural increase of
632 0.5 per cent in the agricultural townships. The only township which shows a natural decrease over this period is Calbost, one of the fishing townships.

SEAFORTHHEAD AND SHIELDERNISH

Rachel A. Hirst

131 Seaforthhead and Shieldernish are separated by 4,485 acres of rough grazing, the former lying on the northern shore of Loch Seaforth and the latter on the southern shore of Loch Erisort.

SEAFORTHHEAD

135 Seaforthhead, the most isolated of all the Park townships, consists of three crofts and a
361 gamekeeper's holding. The township boundary is situated between the 50 and 75 foot contours which at their furthest extent are only 150 yards from the shore. Immediately behind the road the land rises very steeply in rough uncultivable moorland covered with many boulders but generally below the road the land slopes gently at about 5-10 degrees, in places being
[241] completely flat. Here, however, the lazy-beds are very boggy and rushes have appeared in the ten years since cultivation ceased.

154 The soils are deep near the shore due to soil creep; higher up they are very thin and peat
167 accumulates to at least 3 feet both below and above the road. There is little cover; bracken is rare, but silverweed and heather, moorland sedges and grasses soon colonise disused lazy-beds.

241 Legally there are three crofts but only one is still cropped, the other two being used solely
[253] for grazing. There is, however, a gamekeeper's holding within the township boundary worked as a croft. The other two crofts are used as ancillary grazings to holdings in Airidhvruach and Balallan and have not been lived on for forty years and ten years respectively.

[244] The chief crops are oats and potatoes, though the gamekeeper had a patch of turnips and the other croft had grown them during the last few years until 'finger and toe' developed.
[407] Patches, about half an acre in extent, are drained with stone drains and ploughed by tractor, after which potatoes are grown to clean the soil, followed by oats for one year and then sown hay for three to four years. This is not strictly adhered to and several lazy-beds appeared to be
[314] in natural hay. There is no peat-cutting on the crofts as peat is secured just outside the township fence on the common pasture. Lambing has been poor for the past two years being
[251] only 50 per cent in 1958; the stock carried is twice the sheep soum. The cattle, Highland and Ayrshire or Shorthorn crosses, are below the soum, but previously nine cows and followers have been kept.

161 There has been a great decrease in population and cultivation since the resettlement in
162 1886. In Seaforthhead and Shieldernish as a whole, there were twelve crofters before the
241
178

[Habost] [Kershader]

464 Of the 53 residents, 19 are over 65 and only 5 under 15 years, leaving a working population
161 of 29: seven are in permanent employment elsewhere. The population has been steadily
162 declining since its peak of 121 in 1901.
166
167

Since 1946, the township has changed considerably. It has been completely fenced and the method of cultivation has changed from spade and horse-plough to tractor and cultivators. A
178 further fence has been erected for a lamb park and much land has been re-seeded; an increasing
241 area has been put down to hay. It would seem that fattening of stock for market is intended, and
251 better attention is being paid to stock. Yet the population is ageing and there are few young men
407 to take the place of the older crofters; when working units become larger and stock decreases to
[162] a figure nearer the real carrying capacity of the grazing, the croft could become a profitable concern: at the moment, the croft is only maintained through grants and ancillary earnings. Should that happen, however, there must be more re-seeding and an increase of cultivation to provide winter fodder.

KERSHADER

Philip W. Wheeler, M. A.

131 Kershader is a township of forty-three permanent residents on thirteen crofts, which stretch
161 for a mile along the southern shore of Loch Erisort. The crofts extend up to one-third of a
162 mile from the coast with a two-and-a-half mile deep hinterland of common grazing. The extreme
135 elevation is 270 feet and the average from 125 feet to 175 feet, but the crofts, mostly arranged
361 in rectangular strips at right angles to the coast, are lower (maximum 125 feet) and include three main zones (Fig. 8):

241 (a) From the low cliffs of the shore to the road, approximately, a zone mainly below 50 feet,
154 dissected by four rejuvenated valleys. The soils of the greater part of this zone have a
361 distinctive profile and tend to be moderately heavy, wet, and unsuited to fertilisation by seaware. The smaller hillocks in this zone have thinner soils of the same sort, but the main hill (crofts 10/11) is an extension of zone (c).

(b) A zone between 50 feet and 75 feet with hills rising to over 100 feet. The lower areas have varied soils, easily fertilised, and intermediate in type between those of (a) and (b), with peaty-loam characteristics, overlying aquiferous gravels. The higher areas have thinner soils of the same kind with poor grassy pasture; in places there are signs of former skinning.

(c) A zone of hollows with deep moss soils requiring intensive drainage and reacting well to heavy fertilisation with seaware and intervening heights covered with blanket bog, partly skinned, heather and grass. This zone passes into the common grazing.

Crofts 10, 11 and 12, irregular in disposition, have a steep coast line with gentler slopes over 50 feet; crofts 2 to 8, steep slopes in parts of zone (b), and crofts 1 and 9, again of irregular shape, are intermediate (Fig. 5).

241 In Kershader, there are thirteen legal crofts and twelve operative units. The crofts vary bet-
511 ween 4.4 and 18 acres, with a maximum of 3 acres reputed arable. In all, there are 23.45 acres reputed arable and 110.35 acres outrun. 24.5 acres are in fact under crop (oats 18.5, potatoes 6.0), and 9.5 acres under sown grass; and of the remaining 99.8 acres, mainly natural grass

[Kershader]

253 (b) From New Year to mid-April most sheep are kept on the common grazing. Practices,
311 however, are irregular; some flocks are usually hand fed, others only rarely. In the
221 case they heft near the upper limit of their home croft and remain fairly close at hand.
251 Most crofters hand-feed their lambs, probably housing them at night, allowing them ha
in the morning and turning them on to the common grazing in the evening. All this naturally depends on weather conditions.

(c) From mid-April to May, lambing takes place on home parks.

Most crofters let their ewes-with-lamb out at one date.

(d) At the end of June, gimmers and wedders are clipped.

(e) In mid-July the ewes are clipped.

(f) The lambs are weaned in the first and second weeks of August.

(g) The dipping takes place in October and the rams are brought on the crofts.

[632] There is no general sale time, sheep being sold or slaughtered at all seasons. There is no clu
stock, but all but one of the Kershader crofters, along with crofters from neighbouring townshi
take full advantage of the arrangement, first established in 1941, to graze sheep at 2/- per she
and 1/- per lamb in Park Deer Forest. Hence irregularities of rhythm are introduced or exaggerated.

251 Sheep are not particularly profitable: in general, wedder fleeces give 3½ to 4 lb, ewe fleece
[254] about 3 lb, and the wool is sold to the Stornoway mills and to the Wool Marketing Board. Aver
[455] sheep carcass weight is reckoned to be 41 lb. and the price rarely rises above £3 and almost never above £4. Brasy and fluke are kept under by medicaments but remain potential dangers; 'Black leg' is still a serious problem. Many sheep are drowned in the bogs in Spring and late snows (1955, 1958) are disastrous for lambing.

241 Under-employment is a serious problem in Kershader. There are nine males classified as
161 full-time crofters, but probably only four of these (two on one croft) are in fact in this category
162 and of the total of thirty males with their homes in Kershader, only fifteen of the insurable
167 population are permanently resident. There are twenty-eight females with their homes in this
166 township, but on only six crofts do any of twenty permanently resident females help with croft
464 work. Local ancillary employment consists of weaving, fishing (for domestic consumption
[463] only) and work on the roads. Boats, one with outboard motor, are owned by three crofts. The
[501] only resident professional worker is a nurse. Ancillary employment must be, and is, sought away from the township. As a result, of the 73 persons recorded as having migrated since 193 or as being resident, periodically away and permanently away in 1958, 19 have left the area for good, 4 are permanently away, 8 periodically away, and only 43 are resident. Only one perso entered the township since 1939. The age structure of the population, too, is far from the
[195] optimum. The school in Kershader, which had 20 pupils in 1873, reached a peak of 110 in 1907
[193] and declined to 28 pupils in 1953, now has but 17, although it serves Caversta, Garyvard,
[371] Kershader and Habost. Maximum population was attained in 1881, but the total remained fairly constant till 1911, after which decline was marked. Since 1950 this decline has markedly increased.

182 It will thus be seen that the most serious problem facing Kershader is that of stabilising the
241 population and giving it a stronger economic basis. Apart from the potential development of tourism, fishing, weaving and other home industries, the only possible occupation is in
[413] agriculture with perhaps a little forestry. Forestry, though important as shelter provision, cannot be a practical proposition in large blocks or on a large scale, as it would dislocate the

tradesmen are respected, but since most are crofters, they are 554 treated like all other men.

The Village. The village contains a heterogeneous population. 621 At least a third of the families have arrived in the recent 162 past. They have come to fill positions in the county and 167 national government offices; in Lowland directed banks or business houses which have extended their field of operations to Skye; and in the professions as doctors, lawyers, ministers, and schoolteachers. A few have come to Skye to open a shop or offer their services as tradesmen. The remainder are either Skye folk who have recently moved into the village to see employment or families that have been in Portree for one or more generations. Very few families seem to have lived in the village for more than three generations.

While there are many opportunities for an individual to 554 achieve status in Portree, the cultural heritage and the 184 economic limitations under which the Sgiathanach labors has not allowed him to compete with the newcomers. His ability to compete is further restricted by the prevailing policy of the government and the national corporations to bring in managerial and, often, clerical personnel from the outside. As 545 All share one socio-economic trait; they are non-crofting. yet there is no class structure beyond the polarity of the landed gentry and the crofters who participate in village life. There is verticality. Highest prestige status is accorded to those who have been accepted among the local aristocracy. Below them rank the ministers, doctors, and school teachers.

*175 They were frequently accused of failure to conform to orthodoxy *178 and of a disinterest in their calling.[19] 793

*175 In time a second trend appeared which was marked by *178 conservatism and an emphasis on doctrinal dogma. Toward the 182 close of the eighteenth century, it became apparent that the 161 population had pressed too hard on the means of subsistence.[20] Commercialization was continuing and sheep flocks were beginning to replace men in one parish.[21] 167 The people, many of them destitute, were finding a solution for their plight in migration to the New World, or in seasonal migrations to the Lowlands for work.[22] Those who remained were land hungry. *175 Gradually, they were losing respect for their ministers and *178 turning to evangelical missionaries who had begun to appear in 182 the Isles.[23] 772 The crucial fact would seem to be that the ministers 777 were upholding values and symbols which no longer contributed to group solidarity. The Island was on the verge of a period 792 of social disintegration and cultural instability. Under the changes that were to follow, the evangelical movement grew into a large scale revival.

Each man received a permanent, compact plot of arable in place *175 of his former concurrent right to a whole farm. The change, on *178 the surface, seems to have been superficial. The grazings 427 remained common property and the arable land became common property after the harvest. The significant fact is that commercialization had not yet led to a disregard for the customary rights of the small tenant, except in a few isolated areas.

There were other effects of the change in tenure beyond a leveling of the social hierarchy. By giving more people 167 a direct share in the land emigration was stopped. The practice 161 of subdividing the crofts among the children, as they married, 553 at once favored an increase in population and strengthened the family of orientation, if not the extended family. At the same time, it placed a greater dependence on the potato; the people became hostages to the health of the potato and their own fertility. In time progressive economic deterioration began. *175 The old subsistence economy had been weakened by subdivision *178 of the small plots, increasing dependence on external markets for 731 profits from the sale of cattle, and wages from kelping or a little fishing. When the markets broke, destitution and emigration reappeared. Finally, with a failure of the potato, the economic structure collapsed. The population trends were reversed. The people had remained unspecialized in a nation of specialists.

The next stage in the process of commercialization, the *175 growth of a village and the extension of communications, had *178 621 little perceptible effect on the Sgiathanach. Villages were

means to acquire capital because he worked on very narrow 17 margins nor the ability to specialize because his communal 17 system forced him to conform to traditional techniques. 23

The trend to sheep farming, developing from as early as 1810, led to a sweeping disregard for the customary rights of the Skyemen. The factors (estate managers) of the absente landed gentry, the new landlords, and the graziers had no associations with the tenantry and no use for their labor. Thinking only in commercial terms, they were only interested in seeing the higher grazings, the crofters' shielings, under sheep flocks in summer and the lower pastures, including the crofters' arable, in use during the winter. Thus, the "Clearances" took two directions.[55] The majority of the peopl seem to have lost their common grazings. In Kilmuir, accordi to several informants, they were left with only one small are of hill. Glendale suffered from the same policy. Many of th tenants were removed from their townships, by force or persua To be exact, no fewer than sixty-two townships were cleared b the end of this period.[56] The evicted crofters were left to their own devises to reclaim a piece of the open moor, settled in existing townships, or banished from the island. In the area immediately to the north of Portree, forty crofters and

eighty cottars in four townships were replaced by two shepherds brought in from the mainland.[57]

As the interests of the proprietors and their tacksmen had clashed at an earlier time, those of the landlords and their tenantry were now irreconcilably opposed. The appearance of the latifundia in England has been described as being characterized by absentee landlords, pastoralism, and a decline in the rural population through death and migration.[58] A process which had begun three centuries earlier in England and which had reached the Scottish Borders two centuries earlier had at last become operative on Skye. Let us examine the effects of full scale commercialization on the Skyemen.

The effects are evident. Commercialization and the evictions, which were a necessary counterpart, prompted emigration and confined the people within narrow limits, often, on inferior land.[59] By 1865 it was possible to describe Sleat as a quiet pastoral land, desolate and deserted.[60] The people had been pushed into a few isolated, badly subdivided townships. In Bracadale, the first parish to be fully commercialized, there were once thirty-six runrig farms; in 1882 there were six large grazing farms.[61] The bulk of the population, 922, were

squatters without any legal hold on the land. In Duirinish parish, which includes Glendale, only twenty-one families had enough land to meet even subsistence needs.[62] In one Glendale township, Holmisdale, some crofts of four en acres had as many as fifteen people to support.[63] Part of this extreme congestion was due to the continued practice of subdividing one's croft when a child married. Although the population in 1831 had fallen to 17,680, from 23,084 in 1841, almost every township had two or three times the number of families which had lived in them in 1841.[64]

The loss of the summer shielings and the common grazings meant few could keep sheep.[65] The looms were silent. Since the rent continued to be based on the value of livestock and was wholly or partially paid from the sale of cattle, all oats, which the graziers' sheep did not eat, went to feed the cattle. The mills were all but idle. The people had to buy flour, meal, and bread imported from Glasgow. Almost all were heavily in debt to the local merchants, who seem to have been newcomers with more associations with the graziers than the crofters and cottars. Milk became a precious commodity. Frequently, the old cow had only enough for her calf. Unable to keep horses, the women became beasts of burden. They carried

[65] The following is drawn from the evidence presented to the Napier Commission by the crofters and cottars of Skye; see Napier Report, Appendix 1, pp. 1-82.

compared with 34.9 for Scotland. The death rate among Skyemen, however, was 17.4 compared with 22.0 for Scots in general. But Scotland had a net emigration rate of only 3.6 while the Skyemen were leaving at a rate of 16.5. In this decade no fewer than 3,115 left Skye.

By the end of the third period an additional influence of the process of commercialization had become apparent. The social hierarchy was modified in the direction of greater socio-economic differentiation.[68] At the time of the "Forty-five"Skye was inhabited by the families of three clan chiefs, 139 tacksmen, 517 joint-tenants, 1031 subtenants, and 444 servants. There were now 10 landlords. The tacksmen had been replaced by 29 graziers and 12 small farmers. The joint-tenants, subtenants, and servants had become 2043 crofters and 1227 cottars. In the past there may have been one innkeeper, at Portree, and a few millers; now there were 32 innkeepers, millers, and merchants.

The changes which we have been considering could not have left the patterns of interaction undisturbed. Cooperation among the members of the township would have been unnecessary. Since all were affected by prolonged destitution, mutual aid must have been severely curtailed. The extended family was broken by emigration. The nuclear family was seldom intact for more than part of the year. It seems the majority of the able-bodied men were travelling to the east coast each spring to find

000 The reduction of the present number of agricultural units then becomes desirable. There are two ways in which this could come about; firstly by continued depopulation, but amalgamations consequent on such an uncontrolled run-down of the community would lead to scattered holdings; such is the experience of other depopulated crofting districts. The second point to be made is that if overall planning were possible, it would be desirable for holdings to be amalgamated as they becom vacant as a satisfactory rearrangement of the townships would then follow.

Concurrent with such a policy would be the aim to create distinct crofting and non-crofting groups. Employment for the non-crofting section of the community, be it fishing or weaving, woul first have to be assured. As has already been stated, fishing would appear to offer the best prospe while tourism could play a minor role in providing an opportunity for the enterprising crofters' wife or non-crofting household. One problem above all remains, the maintenance of an overall viable population. A certain minimum level of population is essential to maintain the operation of local transport, post office, educational and medical services. Such considerations suggest that further research is necessary to assess the optimum number and structure of population which a district such as Park could reasonably support. In the same way, a detailed examination by an agricultural expert is desirable, in order to assess the number of economic holdings which could be supported on the land of each township.

In conclusion, it is clear that, short of unexpected industrial employment becoming available i Park and unless major reorganisation of the present agricultural units and communities is carried out, the present population trends must continue. However, if such radical changes cannot be contemplated, then considerable improvements in the standard of husbandry, the re-seeding of croft out-runs and common pastures, and the fencing and general improvements of the crofts are possible and will increase agricultural productivity. Until there are some radical changes, the present pattern of the most enterprising members of the community engaging in ancillary employm which takes them furth of the district, and the serious degree of permanent migration to Stornowa and the Scottish Lowlands, will be maintained and increased.

APPENDIX A

PARK IN COMPARISON WITH OTHER CROFTING DISTRICTS.

462 464 241 Table XVIII gives an analysis of the occupational structure of the male population of insurable age in four crofting districts studied by the Crofting Survey. In all four areas, a considerable proportion of the insurable population is not resident in the crofting area for more than an annual holiday period. This proportion varies in relation to two main factors - the viability of the crofts and the availability of ancillary employment within the district. South Uist and Benbecula stand out as the districts where such permanent absences are least marked: the crofts in these islands a larger and more employment is available. In Barra, there are few large agricultural units and, a in Park, the decline of the fishing industry has led to economic disaster in many townships. Fewe than half of the men in this age group are fully resident in Barra. Park is in many respects comparable to Waternish (Skye) for both districts are isolated and have experienced serious depopulation. (see Table XIX).

It is a significant fact that in none of these districts are more than 20 per cent of the male population solely engaged in full-time croft work, and this is a measure of the inability of the croft to support a family without ancillary earnings. The amount of permanent employment available varies from district to district; in South Uist and Barra there are minor service centres which are urban in character and 23.2 per cent and 13.6 per cent of the respective insurable males are engaged in non-crofting employment on these islands.

[166] [167] It is clear that the occupational structure of these four crofting areas is far from stable for ove one-third of the potential labour force is away for all or part of the year. It is also clear that basically the absence of sufficient natural resources, coupled with the varying degrees of isolation from the industrial centres of Scotland, are the root causes of the present position.

161 Table XIX summarises the population structure and trends for the four districts. It is significa
162 that the two districts without service centres, which provide a range of ancillary employment, have
166 experienced more severe depopulation since 1939. This table also underlines the fact that earnings
167 from seasonal employment are insufficient: the incidence of permanent employment furth of the
434 districts is three times as great as the incidence of seasonal employment.
464

APPENDIX B

SHIELINGS - A NOTE

John E. Wearmouth with illustrations by Beth Blowers

195 From Figure 1, compiled from the First Edition six-inch map of the Ordnance Survey (1850
233 to 1852) and from personal observations, it is clear that the shieling system was at one time an overall feature of Park for the whole peninsula has traces of this transhumant economy.

361 The rudimentary structures, some of turf, others of stones and roofed with bracken or
342 heather thatch, are all sited on well drained sites, the majority on mounds. Almost all the sites are close to lochs or streams. The majority are in loose groups of from two to nine buildings, although there are some in isolation; no site has as many as twenty-six buildings as found at Airidh na Ganithe in North Uist.

342 There appears to be two distinctive shapes of building - oval and rectangular (Fig.10). All shielings measured exhibited a remarkable similarity in dimensions, from 17½ by 9 feet to 13 by 12 feet. The oval structures are generally larger than the rectangular ones. Most of the shielings had two entrances, often, but not always, opposite each other.

195 The shieling system died out in Park about 1880 but the cattle continued to graze around the
233 shielings on the better grass, and the crofters had still to go out to milk the cattle at the shieling, although they no longer lived there. The sheep still use the mounds for shelter and grazing. These features of an obsolete economy are still easily recognisable from the luxuriant grass cover in a wilderness of peat bog and bare rock.

APPENDIX C

NORSE SETTLEMENTS NAMES IN NORTHERN PARK, LEWIS

Bridget M. Gordon, B.A., B.Litt.

103 See: Magne Oftedal, The Village Names of Lewis in the Outer Hebrides; in Norsk Tidskrift for
113 Sprogvidenskap, vol. XVII, 1954, (Oslo), pp. 363 ff.

103 Professor Oftedal points out the difficulties of these Norse-Gaelic settlement names: inaccurate spellings even in modern times, and lack of any useful evidence from older sources, make almost all the derivations a matter of conjecture. Sometimes two or more ON equivalents are possible (e.g. for Calboet), sometimes no satisfactory solution can be found (e.g. for Lemreway). Since Professor Oftedal frequently bases his explanation on pronunciations not recorded in written forms, his evidence is largely followed here.
SHIELDERNISH: the second element is N nes, 'headland'. Oftedal's explanation of the first as silda, genitive plural of N sild, 'herring', is satisfactory linguistically, but seems unlikely in meaning.

[Cromore]

The crofters sowed
241 clover with their oats in 1957; the quality of most of the natural grass could be improved considerably
311 by extending this practice. Several of the crofters have taken advantage of the facilities for obtaining
[246] lime and fertilisers, but seaweed and byre manure are widely used. Only seven crofts have
249 vegetable plots this year but that of No. 23, (partially enclosed by a dry-stone wall) has produced
324 crops of lettuce, cabbage, turnips and carrots.

221 The souming for Cromore is one cow, one heifer and eight sheep per £1 rental, but is not
231 enforced. The crofters keep the stock which they can manage to maintain throught the winter and
233 no one appeared to be dissatisfied with this arrangement. In fact the souming is exceeded by only seven crofters and the total stock for the township is only 75 per cent of the soum. Lambing takes
[236] place in April and May and often a high proportion of ewes and lambs is lost. The sheep are clipped in July and each crofter usually clips his own sheep. He either sells the fleece or has it spun in Stornoway before weaving it himself. The lambs are taken from the ewes during the second week of August and then dipped; November is the tupping period and almost every crofter had his own ram. Most crofts have a cow and a calf and the crofters like the calves to be born in March so that they are six months old in October for the Garyvard sales. The cows are served by an Aberdeen-Angus bull from Grobeg Farm. The township gates are opened in October and the cattle remain within the bounds until May. An interesting regulation enforced by the Grazings Committee is that each family can have only one dog, and that it cannot be taken on to the Common grazing without special permission, or on fank days.

178 Shielings, situated on the common grazing between Calbost and Cromore, were used until
233 the 1890's. Active land use has gradually declined; in the 1920's, much of the outrun was under
311 cultivation and from an an air photograph, it is evident that hay was being taken on the strips
[242] above Cromore in 1946. The present trend is a continuing decrease in the amount of arable land but this year ten crofters formed a group to enclose and improve a ten-acre plot on the common grazing;
[314] it is unfortunate that all crofters are not willing to take part. Peats are now being cut near the road between Caversta and Gravir, about three miles south-south-east of Cromore and one mile north of Gravir.

17 Cromore was once a prosperous fishing village but now it has no fishing boats. Two Cromore
228 fishermen work on other boats (one from Marivig and one from Stornoway) and there are a few men who would welcome the opportunity to start fishing again. There seem little prospect of this,
[504] however. The landing-stage, completed in 1957, is regarded by many as a 'white elephant' and, in fact, at low tide it is useless. So much for the hopes that it might have been used by cargo vessels bringing goods to Park.

288 In Cromore there are fourteen looms for the weaving of Harris Tweed. Tweeds are obtained by
[493] road from two mills in Stornoway and one in Airidhvruach. At present the average production is only one tweed per loom per week but the weavers could quite easily double their production. During
[286] the past two years this industry has been comparatively prosperous. Knitting is a winter pastime but only for pleasure, although one household possesses a knitting machine.

162 In common with the rest of Park, Cromore has a high proportion of old people. Many from the
166 middle age groups have sought employment on the mainland, and the teenagers, many of whom have
167 been at school in Stornoway, seek jobs there or on the mainland, returning for holidays and assisting
364 with the croft work. Some younger folk are resident to care of aged parents.

491 Cromore is only eight miles by sea from Stornoway yet all communications with the town are by
[494] road - a distance of thirty-two miles. There is a daily bus service and the sub-postmaster has a van
[493] which is occasionally hired. Some people recalled that the only route to Stornoway was once by boat to Crossbost and thence by bus. One resident owns a lorry and this is used for most of the haulage in Cromore, particularly for bringing home peats during the summer. As a result of recent
366 additions to the roads, only three crofts remain inaccessible to vehicular traffic. There are no shops in Cromore but grocery vans call on Monday, Tuesday, Wednesday, Thursday and Saturday;

[Calboat]

The present situation in Calboat is best illustrated by reference to the population statistics. There are only 17 people living there at present, seven of whom are squatters and only eight houses are occupied within the dyke. Of the resident population, there are three children under fourteen years, one man in the 15-44 age group, three between 45 and 64 years and two over 65. This clearly shows the lack of active men from 15-44 years, necessary for the continuing economic success of the community. However, even these figures are not so striking as the numbers of emigrants as no less than 39 men and 40 women have left Calboat since 1939.

A community of 120 persons has shrunk to less than 20 in only twenty years as the younger people have left to find employment in Stornoway and on the mainland. The present population structure seems to indicate a continuation of the downward trend.

GRAVIR AND GLENGRAVIR

[Gravir] [Glengravir]

Gravir, the largest Park township numerically in population and crofts, lies astride the major east-west inlet of Loch Ouirn, a glacially modified line of structural weakness. The site of the township is perhaps the most picturesque in all Park, but the steep slopes, lack of cover, the small area of good arable land, and the considerable population existing on slim resources, problems common to Park as a whole, are all epitomised in Gravir.

On the south-facing slope above the loch and the continuation of the trough in the valley to the west, the majority of the crofts have been carved from moor to sea, some before 1800, and some in the process of the abolition of run-rig which was accomplished in the years 1850 to 1852. Originally, there appears to have been thirty crofts, but four were added during the nineteenth century, two at each end of the line, and in 1934 a further fifteen were cut out of the common grazing, a mile to the west of Gravir. On the south side of the loch, the 'Clachan' of Tom an Fhuadain, established about 1800, has since developed into a further nine crofts. Thus there are forty-three legal crofts in Gravir and a further fifteen in Glengravir making fifty-eight in all.

The layout of Glengravir, a line of crofts from 3.6 to five acres, typifies the small post-1918 Department of Agriculture holdings. The arrangement of the Gravir crofts is illustrated in Figure 4, and it will be seen that not all the crofts are consolidated. There are three areas of former arable commons which have been lotted in unfenced strips and they may well be reclamations which were necessary to supplement the food producing capacity of the holdings. The method of division and allocation speaks of a period when a subsistence economy under severe pressure from over-population necessitated fair shares for all. The last of these commons was in cultivation until 1891. Although subsistence crofting has been obsolete since then, there is as yet no move towards a regularisation of the layout.

The congestion which necessitated the reclamation of the arable commons developed mainly as a result of a successful fishing industry which prospered from 1860 to 1914 and at one time there were two curing stations in Gravir. With relative prosperity from an ancillary industry, cottars were tolerated and the population rose from 197 in 1830, to 368 in 1881 reaching a peak of 468 in 1911. The collapse of the industry after 1914 began the downward trend which has certainly not yet ceased. Gravir reverted from 1918 to a township of agriculturists and a base for employment furth of Lewis, although there have been spasms of successful fishing activity since.

Stock raising is now the function of the township and the agricultural resources and conditions are hardly conducive to the development of economic holdings. The Gravir and Glengravir crofts vary between 3.5 and 26.5 acres in size: no croft has more than four acres of 'old arable'. In the days of subsistence agriculture, and indeed until the 1930's, cultivation, all in narrow lazy-beds, banked up with stones at the downward extremity on the steep slopes, was much more extensive. All the cultivable land was at one time under crop, heavily manured with seaweed cut as far away as Gromore or the coast south of Kebock Head. About one-third of the maximum lazy-bed area is now cropped and the more inaccessible areas of the crofts have reverted to pasture, some of the lazy-

[Gravir] [Glengravir]

beds are now covered by sphagnum moss and heather. Other lazy-beds are permanently in natural hay; only thirty per cent of the land classified as 'old arable' is now in oats and potatoes. If natural hay is added, one hundred and thirteen acres of crops are taken from an area greater than the so-called old arable; this suggests that the cultivated area was pushed beyond the limits of the old arable (ninety acres) after 1850-52. As in all the fishing townships the area of sown grass is infinitesimal for only four of the fifty-eight operative units actually sow grass. The wintering capacity of the crofts could be greatly increased by the general adoption of the practice of under-sowing.

There are forty-three legal crofts in Gravir but nine are sub-let, in every case to relatives. All the crofts are taken up and there is evident pressure of population on the land. In addition to the crofts, there are a further ten cottars, and squatters and feuars, besides the fifteen legal Glengravir crofts (ten operative units) which have no share in the Gravir common. The common has been encroached on by several feus for Gravir is the functional centre of Park; the Free Church of Scotland and Manse, the doctor, one of the two district nurses and two of the missionaries (assistant ministers) are all located in Gravir.

Gravir and Glengravir thus have fifty-eight legal crofts and fifty-six operative units. Less than half of the crofts with grazing rights are fully stocked and one quarter have under fifty per cent of the souma, including five without any stock. The common pasture of 2,652 acres is in general of poor grazing quality, dominated by the less nutritive species of grass and poorly drained. In 1957, a ten acre plot was fenced and re-seeded: only twelve of the operative units participated in this reclamation work, and the ages of the participants ranged between 27 and 58 years; this is significant as aged tenants are unable to carry out such work. This scheme could be extended annually; if potential improvements to the crofts are limited, pasture amelioration is virtually without limits. Re-seeding on a large scale would enable better stock to be kept rather than greater numbers; at present the sheep stock is over two hundred per cent of the sheep soum, and a ewe and lamb sell for as little as £2 10s to £3 10s, an indication of the consequence of over-stocking. The cattle stock is below the souming and this paucity of cattle is one of the notable changes in the agriculture since the 1930's for at that time as many as six cattle were kept on the larger crofts. The total stock kept in Gravir and Glengravir exceeds the souming by thirty-five per cent.

The great majority of the crofts can certainly not be considered economic units. Judging from the souming of one cow and follower and eight sheep per pound sterling of rent in a township where only seven crofts pay more than £2 rental, they were never intended to be self-supporting agricultural units. The produce of two cows and sixteen sheep, with potatoes, and in former days, barley or oats, locally milled by the three Gravir water mills, could scarcely ever have maintained a family. Fishing was the complementary economic activity, and in 1901 no fewer than nineteen boats and eighty-nine fishermen were registered at Gravir. Today, only one boat fishes commercially for lobsters.

If agriculture is singularly unrewarding, weaving occupies six of the males of insurable age and service occupations a further ten males and five females, but neither weaving nor service occupation are sufficiently available or attractive to keep the insurable population in the district. Twelve of the males between fifteen and sixty-four years take seasonal employment and forty-six are in permanent employment furth of Lewis, in all sixty per cent of the potential male resident population.

The economic problem of Gravir, in common with the other 'fishing' townships, became acute after the fishing industry collapsed after 1914; in the hey-day of the fishing most of the men fished all the year round, locally and on the west and east coast of Scotland. Earnings fluctuated but a man might make as much as £90 in a good year or as little as £5 in a poor year. Apart from the sale of young cattle, and wool surplus to home spinning requirements, the fishing earnings constituted the bulk of the croft income. Today, on the basis of the souming, the income of the largest croft including subsidies could only be approximately £150 excluding the amount to be set aside for home consumption of potatoes and milk.

[Gravir] [Glengravir] [Lemreway]

The urgent need in Gravir is a reduction in the number of holdings. A pre-requisite of such reorganisation would be the creation of employment for a non-crofting population. Weaving and fishing are the more obvious occupations; the former is subject to world trade fluctuations but the latter is now in a more favourable position since the introduction of the herring fishing guaranteed subsidy, although the raising of the initial capital for buying and equipping boats is a formidable problem. It is clear that a division of the community into a crofting and non-crofting sector is essential if the present population level is to be maintained. The most serious aspect of the present trend is that the migrating section of the community comprises the younger and more enterprising people. Unless holdings of economic size can be formed, and stable employment introduced, one can expect the younger men and women to remain in Gravir.

Until a major reorganisation of the crofts is carried out, a vigorous attempt to re-seed large areas of the common pasture and the three former arable commons, and the development of a croft-tourist industry, are interim possibilities. It is not sufficiently realised in crofting districts that there is a demand from the city dweller for simple accommodation and good plain fare in a clean atmosphere, with the possibility of hill walking and fishing on fresh and salt water. Yet, until the proposed water-scheme becomes a reality, tourism on a moderate scale can hardly be contemplated.

One can only conclude that until reorganisation takes place and transforms Gravir into a township of viable agricultural holdings, any stabilisation of the present trends is out of the question. A decline in the number of holdings is inevitable in the long run but a planned reduction over a number of years would bring about a more viable community than the disintegration which will occur without such planning. Until this is achieved, the young men and women have little incentive to remain in Gravir.

LEMREWAY

Beth Blowers, Brenda G. Turner
and John E. Wearmouth

Lemreway, the southernmost township of Park, comprises 290 acres arable and outrun divided into thirty-three crofts and 3,025 acres of common pasture. The township is situated on the northern side of Loch Shell round a bay in the shelter of Eilean Iuvard.

The township consists of three distinct areas. A flat, poorly drained area at about 100 feet, part common pasture and part reclaimed as extensions to the crofts, locally known as 'the Outend', forms the first subdivision. The second area, further west, is of a hummocky nature. To the east, a steep slope rises to an altitude of 400 feet, less than half a mile from the loch shore, forming the third. Two benches are to be seen at about 100 feet on the steeper slope and similar, though wider terraces occur at the same height to the north. It is suggested that the flat area is the bed of a moraine-dammed lake, and that the hummocky sector is partly morainic and partly ice-eroded rock exposure. A channel eroded through this sector allowed the lake to drain southwards leaving a relatively deeply incised valley through which the present stream flows to the sea.

Soils may be divided into two types - a peaty loam and the better drained gravelly loam which is found to the east and along the main stream; the latter is particularly suitable for potato cultivation.

Except on rocky outcrops, the very steep slopes and the drained areas, blanket bog predominates. Sphagnum here is rarely dominant but where the land is badly drained Deer's hair grass (scirpus caespitosus) and cotton grass (Eriophorum vaginatum and Eriophorum angustifolium) are the dominants. On slightly drier land, purple moor grass (Molinia caerulea) and mat grass (nardus stricta) are abundant. Local dominants are bog asphodel (Narthecium ossifragum) and cross-leaved heather (Erica tetralix) with other common species such as the sundews (Drosera rotundifolia and intermedia), butterwort (Pinguicula vulgaris), Juncus sp., Carex sp. and Carex panicea occurring sporadically. Where the peat has been cut and drained, 'heather moor' usually develops and Calluna

[Lemreway] [Orinsay]

The West Highland Survey Township Card describes Lemreway as "predominantly a fishing township". The remains of an old curing station are visible today and until 1947 there were twelve boats operating from Lemreway. A declining market, increasing cost of gear for obsolescent boats and the lack of a landing stage led to the decline of the industry in this township. Today there is one fishing boat which lands its catch in Stornoway: working with modern equipment, drift and ring nets, it provides a regular income for a crew of six.

An examination of the population statistics proves interesting, especially when compared with those for Orinsay. Lemreway's resident population of just over 70 males and 70 females is large considering that there are six unoccupied crofts. Eleven of the crofts have more than one house and the cottar population forms over a third of the total residents. More than two-thirds of this resident population is in the two important age groups - between 15 and 64. With over forty resident males in the working age group, Lemreway provides a striking contrast to other crofting townships in Park.

Fourteen of these men are full-time croft workers, while nine others find work in ancillary occupations such as weaving and fishing. A further eight supplement their croft work with regular employment - a postmaster and a postman, a bus driver, a lorry driver and several weavers. Just over thirty people work away from the township permanently, fourteen in the Merchant Navy and nine girls in domestic service, while a further nine engage in seasonal work.

Emigration from the township has continued steadily with forty people leaving since 1939. Nevertheless, Lemreway has a larger proportionate resident population than most townships.

Only four thatched houses are occupied and housing conditions generally are good. Every house has electricity, but, with four exceptions, water has to be carried from springs and wells. Most of the present houses were constructed in the 1930's and they are usually near to the road. Ruins of the old houses remain, some being used as byres, and these were built either along the shore or up the slope in the shelter of the hills, where the house was near the sheep, the peat and the springs. Today supplies of food, peat and even seaweed are brought by road.

Mention must be made of the possibilities of the tourist trade in Lemreway with its most attractive situation and reasonable road connections. An approach has been made to the Scottish Youth Hostels Association and while hostellers could not greatly increase the income of the residents they would stimulate interest in the area. Accommodation for summer visitors, other than relatives of the crofters, is difficult to find but it seems that at least three houses could be used.

It is possible to be optimistic about the future of Lemreway, as at the moment considerable enterprise is being shown. A Ferguson tractor, bought this year by a man returning from whaling, is an example. It is to be hired out and could be put to good use in some parts, especially on the outend. The attempt to improve the common pasture and the new extensions to neatly painted houses all reflect a combined effort to improve conditions. The old economy of crofter-fisherman is being adapted to modern times and crofter-weaver, crofter-postman and crofter-bus driver are the contemporary employment combinations.

The pessimism and apathy noticed in many crofters is to be found in Lemreway but above this is the impression of enterprise. If Lemreway can continue to adapt itself to changing conditions, it may be able to combat the 'drift to Glasgow' and continue as a successful community.

ORINSAY

Beth Blowers, Brenda Turner and John Wearmouth

Orinsay is a small crofting township clustered, in the form of a horseshoe, around the head of a sheltered bay on the northern side of Loch Shell. Most of the houses are situated within fifty yards of the shore on a narrow strip of level land, while the crofts extend from the shore on to the moor

1. The Directors of the Crofting Survey are grateful to Dr. F. Fraser Darling for granting access to the individual Township Cards, which are a storehouse of information. For detailed contents of the cards, see West Highland Survey p. 247.

231 Recent trends also point to a decline in the numbers of sheep, although more are kept now than
[288] fifteen years ago. From 1942-51 the numbers were more than doubled (263-565). A great deal of this increase must have been a result of the ewe subsidy, but part at least may be connected with the war and post-war boom in Harris tweed. By 1955, when the subsidy was suspended, numbers had already begun to decline and have since fallen steadily. This year the township has only 374 breeding ewes while the rearing of only 236 lambs would suggest a further decrease in the future.

221 All the crofters keep some sheep although individual stocks vary from 15 to 150. For most of
233 the year these sheep are grazed on the common pasture on the moor or on the eighteen acre island in the bay. In August, however, the lambs are gathered in for weaning and dipping; in November the gates are opened and all the sheep allowed to graze on the cleaner pasture within the croft boundaries. If necessary they are given fodder, but from the beginning of January they are encouraged to return to the moor, although the gates are not 'officially' closed until May.

311 The total area of the common pasture exceeds 1500 acres, but most of this consists of hummocky,
233 waterlogged peat moorland supporting only poor quality coarse grasses and sedges. Over 700 sheep now graze this area and the apparently large common pasture is in reality drastically overstocked, a process which must inevitably harm the animals as well as the land.

231 No pigs or horses are to be found in the township and each crofter keeps very few hens, normally
235 just sufficient to provide eggs for home consumption. Any surplus eggs which do remain are sold
[435] to the Co-operative van, but prices are so low that the keeping of more than a dozen hens is far from profitable.

434 It can be appreciated that crofts of this size and quality can neither provide the crofter and his
464 family with sufficient income, nor fully occupy the available labour force. As a result, people
228 in the past have turned to the sea. Indeed the West Highland Survey describes Orinsay as "primarily a fishing township". Today the herring fishing has disappeared entirely and only one crofter still does a little lobster fishing, sending his catch direct to Billingsgate.

161 There are now 45 people resident in Orinsay but an examination of their ages reveals that less
162 than half of them are between 15 and 64 years. Indeed there are only six resident males between these ages, and three of these spend at least part of their time working away from the township on the Eishken estate.

366 As there is neither a school, post office, shop nor garage in Orinsay, there is no available
368 occupation in the 'service trades'. Therefore, over half of the males between the ages of 15 and 44
166 are permanently away in the Merchant Navy, returning home only for holidays, while another third
167 are seasonally away with the whalers. Similarly almost half of the females of similar age work in
[464] domestic service in Glasgow. It must be realised that most of these people working away assist
[505] their families at home, and that a large part of the croft income are made up of money sent home,
228 together with pensions and other allowances. Emigration from Orinsay to other areas has continued
462 steadily, twenty people leaving the township since the war.
352
454

On the whole, housing conditions are good, due to relatively recent construction. There is
317 only one traditional black-house, and even this house has electricity: only one house is without it.
312 Water supply is not so certain as wells and springs are the only source. The township lacks a
[206] telephone and a shop, but is served by travelling vans. A good road, constructed within the last
[366] decade, connects Orinsay with Gravir; entering the township via the valley to the north-east, it
491 serves directly all but three of the crofts. A bus leaves daily for Stornoway, about thirty miles
494 distant.

161 Like so many other crofting townships Orinsay, above all else, gives an impression of con-
162 gestion. The self-same hills that provide shelter also restrict cultivation. The crux of the situation is that land, extremely marginalin character, is being worked by too many tenants on holdings too small to be economic. With three residents to every two acres of cultivated land, Orinsay must be seen as an 'overspill' - an unfortunate result of the cottar problem in the 'twenties'.

/p. 35/

241 An examination of the agricultural situation reveals that there are insufficient resources to
182 make the present number of crofts viable. Overstocking in sheep, an attempt to increase cash
[436] income, has resulted in a high mortality rate, and consequent losses. The tenant of a small croft
[464] is faced with a classic dilemma. If he puts all his efforts into the working of the croft, the area of potential arable land is insufficient to maintain a large stock and even if the best rules of husbandry were operated, croft income alone would be insufficient to provide a reasonable living. The fishing industry, formerly the chief means of a livelihood rather than the croft itself, has virtually disappeared, and he is forced to find ancillary employment in an area where little exists and thus migration in search of employment is the only solution. The croft becomes a base for non-agricultural activity and a means of providing produce for home consumption rather than an effective agricultural unit. On the larger crofts, it is clearly possible to make a living if sufficient additional grazing in the non-crofting area is available - the agricultural townships, especially Seaforthhead, Shieldernish, Habost and Kershader, which comprise units sufficiently large and fertile, bear out this contention. Yet better husbandry is possible, and reclamation of the common grazings for improved stock rearing has started. The agricultural townships as a whole are better favoured by situation, soils and communications, and appear fo possess a much greater degree of stability.

288 Since the decline of the fishing industry, the fishing townships have progressively declined.
434 Income from weaving has replaced earnings from fishing as a means of combining croft work and
465 ancillary employment to provide a living, but, as has been pointed out, the supply of weaving contracts is not regular and greatly depends on the state of the world market. The present centralisation of the Harris Tweed Industry in Stornoway is not favourable to the Park weavers; the suggestion by the Park Association[1] that a spinning mill be set up in Park would certainly help the local weavers.

464 If the present number of agricultural units and level of husbandry on them is to be maintained,
[166] ancillary employment on a large scale will continue to be necessary, and, as weaving and the
167 service occupations alone certainly cannot provide it in sufficient quantity, temporary and regular
162 employment furth of Park is bound to continue, and as this grades into permanent migration, the population must continue to decline and age. The capacity of the area for tourism is also limited. With the overheads which branches of parent lowland factories would have to face, the establishment of manufacturing or assembling employment is also unlikely.

228 A revival of the fishing industry holds out most hope but must take place before all the accrued skill has disappeared with the older generation of fishermen. The fishing grounds are within reach of the modern £20,000 boat: by co-operation between crews, fish could be taken to mainland markets such as Ullapool as indeed happens at present. Lobster fishing could be integrated with herring and white fishing. Such a combination of several types of fishing would ensure a more balanced economy and the Herring Subsidy would be a guaranteed element of income. It must be agreed that if mainland boats do come to the coast and sea lochs of Park, there seems little reason why local boats could not also be successful.

000 As far as the land is concerned, the survey leaves no doubt that improvements in husbandry and pastures are definitely possible. Yet, until viable agricultural units have been created, there is little incentive for large scale improvement in either sphere. It is an expert's opinion that no crofter working on a croft in Park which would bring in £300 a year would have time to engage in ancillary work and at the same time fully work his holding in accordance with the rules of good husbandry. If this opinion is accepted, and if it is also accepted that such crofts are desirable and the present successful crofts in the agricultural townships where there is a higher proportion of full-time crofters than elsewhere would bear this out, it follows that ancillary employment on such units would have to be ruled out.

[Caversta] [Cromore]

e 1914-18 war had a marked effect on the Caversta population - 16 out of 54 (29 per cent) left aft
11 and no re-population took place. Since 1939, seven people have migrated to Stornoway or the
ainland, (16 per cent of the total 1939 population), and six of these were from Torista (i.e. 50
r cent of the 1939 Torista population); only one family now remains there. The demographic
sition is becoming more acute for there are no young married couples and no youngsters growing
. The girls have left to marry and most of the men have sought temporary or permanent employ
ent elsewhere, for with better communications, education and the radio, the pull to the towns ha
come stronger. There are now only two people in the township who could be described as full-
ne crofters, earning no supplementary income by weaving tweed on commission from the Stronov
ills.

Caversta is not one of the most progressive of the South Lochs townships. Although the crofts
e fenced, the common pasture is not visibly delimited from either the Cromore or Garyvard
stures. At present, the grazing is fully stocked according to the soum, but the committee has n
yet initiated any re-seeding schemes. As the pasture is not of the best quality, some newly sow
ass would benefit every crofter. Lack of manpower may in part account for this deficiency but e
small acreage of re-seeding would be a great asset.

The future position of the township is rather doubtful: it is not the best type of land for mechan
n and is badly served by communications. The future of Torista appears to be probably one of
andonment, unless it is more easily linked with Cromore. The possibility of a good road being
ilt here is remote, as there is only one family to serve. The main part of Caversta is also open
question. Amalgamation of the crofts would not necessarily make more efficient units for the
esent units are not used to their full extent. Amalgamation with Garyvard might benefit the
wnship a great deal, as the Caversta population is rather small to flourish in isolation. The futu
Garyvard, Kershader and Habost is one of hope, but unless some change takes place soon, it is
t difficult to see Caversta, and Torista, following the same course as Calbost and in thirty to
rty years being little more than grazing land.

CROMORE

G. Mary Swindell, B.A., and Dennis F. Fancett, B.A.

Cromore is situated on a peninsula between Loch Erisort and Loch Cromore. Approaching it
om the access road, Cromore has the appearance of a nucleated settlement, but in fact each
use is situated on the owner's croft. The crofts are so arranged that each has a portion of land
the more level surface of drift deposits; houses 1 to 20 stand at the junction of the drift and the
wisian gneiss. Soils are poor and thin, and there are numerous outcrops of barren rock among
arable land. The natural vegetation is heather moorland with extensive patches of rushes and
tton grass, the pattern of most of the 'outrun' around Cromore.

The township comprises twenty-seven crofts and there are twenty-seven working units; two
ofts are subdivided while another four form double crofts. In addition there are five cottars and
Schoolhouse feu. Outside the township dyke there are two feus and four squatters. The croft
yout differs from most other townships as each croft is in four non-adjacent pieces, one piece
ound the house, another above Creag Cromore and two pieces on another area of enclosed land
the common. Two crofts on the eastern side of Loch Cromore, have most of their arable land
ound the croft-house while three crofts have only one share in the other area of enclosed land.

Until this decade all the land around the houses, and much of that above Creag Cromore, was
gularly cultivated. Some of the lazy-beds on the higher land are being cut for hay this year but
ltivation is limited to the land around the croft houses and is completely unmechanised. The only
ops at present are oats and potatoes and these are usually grown in rotation. The crofters sowed

cannot be spiritually enlightened. The individual who is asked 794 888 626
about the nature of his visitation is not judged on his ability
to raise his family in the nurture of the church. He is rather
judged on his preparation to carry on the tradition. He must
be worthy of the respect due to one of his status. While old [563]
women are numbered among the "elect," their exclusion from any
active role in the church has kept them socially inferior to
the old men.

I wish I could give some examples of the nature of this 124 576
"visitation;" however, Skye is a land where the direct question
is not used. One can ask a direct question without offending,
but the code of hospitality requires an either affirmative
answer or the answer you think your guest expects. My
circuitous promptings on this topic only succeeded in arousing
concern for my soul.

Two groups escape from the control of the elders as it 626 888 794
is exercised through acceptance of an individual into the
"elect." As mentioned earlier, the newcomers to Skye have 167
come from different backgrounds. Beyond the Highlands, the [184]
meaning of "Effectual Calling" has changed over the years. The
youth attend a young communicants' class in which they are
taught the meaning of church membership. Notestein, writing
about the national character of the Scot, maintains that
interest in "election" has disappeared.[14] Most of the members
of the Church of Scotland in Portree would no doubt agree with
him. One attempt has been made on Skye to hold a young 794 779
communicants' class. It took place, of course, in the Church 184

[14] Notestein, op. cit., p. 153.

custom is well established. Even war-time restrictions and 794 796
rationing had little effect on Communion attendance. Skye 793
exiles in the United States and Canada sent food parcels 574
to the ministers and their kinsmen to provide for their [167]
visitors. The minister takes in as many as he can. One
minister, for example, not very far from Portree has a large
manse with seventeen rooms. It is customary for him to have [264]
twenty-five or thirty people for lunch and again for high
tea (the Skyeman's evening meal) on Friday and the Sabbath.
Many of his guests spend five days with him.

Some idea of the size of the gatherings may be gained 794 796
from the need for the Free Presbyterian Church in Portree
to hold duplicate services. The church, I should think,
holds around 300. During the Communion Season, the con-
gregation takes over the drill hall, normally used by the
Territorial Army for training and by the villagers for social
affairs, in addition to the kirk. In the drill hall services
are held in English; in the kirk, they are in Gaelic.

Such large gatherings of people require a means to
establish meaningful contacts and create a feeling of belonging.
Thursday is a fast day. All work stops. The people attend
services in the morning, at noon, and again in the evening.
Their minister, assisted by two visiting clergymen conducts
them in a dynamic, highly emotional appraisal of the coming
event. All the ministers participate in the sermons, stressing [783]
the confession of sin and the need for humiliation. Many
ministers are known for their preaching ability, that is their

that the people of Skye, including many of the newcomers, 785
have not been favorably impressed by Skye Week. The consensus 795
is that it is not representative of Skye. For the Sgiathanach 541
the Highland Games are alright, but the concerts, dances and
similar festivities only cause ill feelings.

As might be expected social life is more vivid in Portree. 369
Here the members and the adherents of the Church of Scotland 795
partake of a number of recreational activities. In the winter 52
there is badminton twice a week. In the spring and summer [526]
there is a little golf and tennis. The limitations are not [526]
religious; they are climatic. Then, too, there is shinty.
We have already noted the existence of many clubs. There are [535]
regular dances. Moving pictures take place twice a week. [546]
All of these activities are run by newcomers; the Skyemen have [167]
a more or less passive role. The "elect" of the two smaller 795
sects are, to say the least, very much disturbed by these 794
frivolities. What is worse, the children attend the dances 626
and the concerts and the boys play shinty. They can find 883
enough solidarity among those of their own age grade to out- 52
weigh the threats of their elders. Apparently they find
enough security to be unaffected by the stern denunciations of
the minister from the pulpit. When they marry, however, they 794
have to recast the pattern of their behavior, for now the 884
elders are in a position to exercise control by withholding 626
baptism from their children. Some may turn to the Church of
Scotland.

Standing in marked contrast to Portree, in Glendale the 888
control by the aged is complete. There is not a single activity 883
[369] 626

at which the youth can join together as a sodality; hence, they 888
hardly ever have a chance to question the control of the "elect." 883
Only once in recent years has the control of the old people 626
been criticized. After World War II, the men who returned to 578
the neighborhood wanted to erect a village hall. This threatened 888
both family unity and the solidarity of the neighborhood. The 883
young people were divided between the time honored obligation 626
to honor their parents and their own desires for a fuller life.
The parents were torn between religious beliefs and their
affection for their children. The minister and his elders
were faced with a situation which threatened the fundamental
tenets of the faith and the continued ability of the religious
expression to sanction the existing order. How strong are age
controls? The youth did not get their village hall. Many of [167]
them left Skye for the Lowlands where social life is less
restricted.

The difficulty is that until, say, forty years ago the 178
traditional outlets were sufficient. Middle-aged people 883
remember how the youth used to drop in on the old widow for 177
a visit on an evening and then make their way off in couples 52
for a bit of courting. Two World Wars and the continuing
program of National Service, not to speak of the influence of
the schools, have given the youth a new perspective. They
have spent one or two years in an environment where recreational
activities are considered not only innocent but also wholesome.
The radio and magazines have contributed to the demands of the
youth for amusements. As if this were not enough, there are

ufficiently to make age controls an irresistible force, the
restige status of the small number of the "elect," those
ho had experienced a saving change, and, in particular, the
lders gave them complete control over all social and religious
ctivity. In a later chapter I shall have more to say about
hese facts. The important fact which I want to emphasize now
s that the religious patterns provided a framework in which
he culture could find continuity and through which the society
ould achieve a reintegration. The abhorrence of pagan-like
ustoms resulted in a change of content, but there were
ositive results as well. Above all, there was a change in
ocus for the culture and society. The decadent belief in
lan brotherhood was replaced by a sense of belonging to a
nown religious brotherhood.

ummary. The third period of the modern phase of Skye's
ulture history saw the culmination of the process of
ommercialization of the land. All the influences necessary
or the conversion of the subsistence economy, albeit a much
eteriorated economy, had begun to function. Sheep farming,
n a commercial scale, formed the basis for the new economy.
ewcomers with the incentive and ability to introduce improved
ethods of land utilization were replacing the conservative
nd impoverished crofters and cottars. As the commercial
armers consolidated their holdings, the communal townships
ere being obliterated. The concept of individual possession
f the land was replacing the customary rights of the small
enants, and a clearly defined social hierarchy, based on

*175 wealth, rose above the indigent crofters and cottars.
*178
427 These changes had a pronounced effect on the culture and
423 the population. Economic hardship and evictions prompted
558 emigration, forced many men and women to seek seasonal work
167 away from home, and led to a reduction in the marriage rate.
464 Crofting which had already become part-time agriculture now
585 was a spare-time pursuit. The Sgiathanach was dependent on
241 money, on the wider economy, for the satisfaction of most
511 of his needs. The croft was providing no more than a few
241 potatoes for the table and some oats for the cattle, the
562 crofter's only export. Still, no landless working force
231 appeared. Portree had grown and there was a woolen mill,
464 but there does not seem to have been any marked movement into
166 the village by the crofters.

While much of what was meaningful to the people was being
*175 lost, the religious Revival continued. The conservatism of the
*178 "Men" became an official policy of a new church. The emotional
182 approach of the ministers and the "Men," who were now elders
186 in the church, and the emotionalism of the large outdoor
785 meetings functioned to restore the social disequilibrium.
781 Although the extended family, township, and nuclear family
771 suffered from instability, the people found intelligible roles
793 within the religious sphere of activity. Their religion was
reinforcing their way of life. The abhorrence of much of the
old culture was accompanied by a strengthening of many traits
which reaffirmed the desirable status values. The culture
found a new focus in congregational religion and was able to
maintain a continuity while the content changed.

*178 culture which can hardly be distinguished from that of the
181 Lowland rural areas, but it has by no means disappeared.

*178 Socially, these changes, particularly the introduction
186 of national laws of land tenure, involved a leveling of the
585 social hierarchy. The old polarity of the land lord and tenant
with an intermediate group of doctors, ministers, and tradesmen
was restored. The place of the tacksman, of course, has been
filled by the government. The bulk of the population was
423 once again undifferentiated socially or economically. Land
lost much of its commercial value for the proprietors. It
once again had more of an intrinsic value, almost as in the
days of the clan. The status of the proprietors, locally and
as a horizontal segment of the total British population,
depended on land ownership. The graziers and the proprietors
who had appeared during the "Clearances" withdrew, selling
out to the national government.

These changes did not work to halt the continuous outward
*178 flow of the Sgiathanach. To the contrary, increasing integratio
167 with the national culture created new needs, such as a demand
184 for a higher standard of living and an opportunity to achieve
status, and provided the training necessary for the youth to
find roles more suitable to their talents elsewhere in the
165 world. The young men and women of Skye journeyed to the
Lowlands to join the national labor force, to enter the profess
or to seek other permanent employment. Thus, emigration change
*178 from a movement by families to a movement by individuals. At
167 the same time, the benefits of the crofters' legislation and
162 the program of government assistance made it possible for the

person who left in his youth to return in his old age. The new pattern of emigration not only resulted in a continuation of the persistent depopulation of the island but also, with the return flow which countered emigration of the youth with immigration of the older people, led to striking changes in the age structure of the population. If the population pyramids for the years 1861, 1901, 1931, and 1951 are compared, the significance of the new pattern becomes apparent (see figure 4). The 1861 pyramid has a strong base, despite evictions and death. By 1901 the aging of the population was already marked. There were fewer people in all age groups, but a disproportionate increase in those over sixty-five. Females had joined the exodus. Partly as a result of the emigration of young adults, and partly as a consequence of a declining marriage rate and delayed marriage, the structure was growing top-heavy.

The pyramids for 1931 and 1951 are far from ideal. The differing movements of the population has resulted in a situation in which the society can no longer reproduce itself. Natural increase became a negative factor in the decade 1921-1930. Since then births have exceeded deaths in only one year, 1949. If the population is being maintained in part by the return of exiles, one must not only ask who leaves and why but also who returns and why.

An additional change within this period was the growth of Portree as a trade center and as an administrative "capital." The cycle of population, however, was erratic. In 1891 there were 1,003 people in the village, but in 1921 there were only 793.

Fig. 4. Population Pyramids for Skye: 1861, 1901, 1931, and 1951.

than the bare essentials, these people just get along. Even so, they would be unable to get by were it not for some form of supplementary income. This essential prerequisite for the individual or family who upholds the crofting tradition may take the form of seasonal employment on the island or away from home; contributions from a child or, less frequently, a brother or sister; or payments from the government in the form of unemployment compensation, relief, or a pension.

Many a Sgiathanach thinks of his croft as a home more than anything else. There are men who have found full time employment. Some in this catagory work the croft in the evening. Others expect their wives to care for the crops and stock, or they leave the land untouched. Then, there are the old men and women who have returned to their ancestral homes to spend the twilight of their lives. These exiles come back from cities as near as Inverness and from places as far away as the sheep ranches of Montana or the cities of Australia. Perhaps, the most significant point is that for all Skyemen the croft cannot be evaluated merely in terms of acreage and income. As we shall see, it is a way of life in which an attachment to the land, as an embodiment of kinship, plays a very important part.

The incomes of three representative crofts clearly reveal the financial difficulties under which the crofting family labors. Although I have somewhat arbitrarily divided the holdings into small, medium and large on the basis of acres of arable land, it should be remembered that this

mainland for the summer. For many of these people, unemployment is a misnomer. It means they are receiving a weekly allowance from the government while they wait for the next seasonal opportunity to turn from crofting to wage labor. Moreover, providing work and paying unemployment compensation is by no means all the government does for the Island's economy. Through the National Assistance Program many more are aided financially. In 1954, for example, there were no fewer than 726 individuals receiving some form of national assistance.[33] Most of this number were recipients of a non-contributory old age pension. The next largest category were young women required at home to care for aged and infirm parents. Of the total number, only thirty were Portree residents. Then, too, there are the previously mentioned subsidies and grants for agricultural improvement and fuller exploitation of the land.

We may conclude, then, that cultural continuity is an expensive proposition with a double-edged penalty. On the one hand, there is the sentimental distress which depopulation involves. Both the man who leaves Skye and those he leaves behind feel the loss of their loved ones. On the other hand, there is the expense to the government, which must be staggering and out of all proportion to the amount contributed by the people in taxes. It is not that the islands receive any special grants, but, as one newcomer said, "They just happen to qualify for all the grants, doles, and subsidies there are." He, of course, was exaggerating. As we shall see in the next chapter,

[33] Information extracted from the files of the National Assistance Board in Scotland, Edinburgh.

We have already seen where some of the crofters sons and daughters have gone - all over the world. It may be of interest to indicate the fields which are attracting the present generation. In Scotland children graduate from school at fifteen or, if they have qualified for the university training course, at eighteen. Let us see what happens to those who leave school at fifteen. A reasonable number of the boys go back to the croft, but the school teachers usually try to guide the best students into other fields. Since there is a very limited choice of skilled or semi-skilled jobs on the island, this means they will go to a city in southern Scotland and find an apprenticeship, either on their own initiative or under the Ministry of Labor training program. The favorite trades are mechanics, electricians, and carpenters. A few go to sea, especially as stewards and wireless operators. Every now and then a boy will become a male nurse, a police cadet, or an office worker. Hotel service, laboring, and especially, truck driving, at home or away, attracts many. Girls leaving school at fifteen often go back to the croft for a year or two and then move away. The best girl students either go into office work or take advantage of the Ministry of Labor apprenticeship program, especially in dressmaking, hairdressing, and domestic science. Some go to pre-nursing schools. Others find employment in stores or hotels on Skye or in Lowland Scotland.

At eighteen it is very difficult to keep a boy at home. Those who have remained and have not taken a university course

167 will be called into National Service. It has become very
702 hard to obtain a deferment. One reason is that the government believes too many have been dodging their obligation. There was a man, for example, who applied for a deferment for his son on the ground that he was needed on the croft. Ordinarily the boy might have been deferred, but not when the officer found his father was collecting unemployment compen-
167 sation. The most popular field for girls at eighteen is
464 nursing. One family has sent three girls through nursing school. Another popular profession, for both boys and girls, is teaching. The boys who go to university take their degrees in pure science, medicine, and agriculture.

873 There is an interesting contrast here between the Highlands and the rest of Great Britain, especially England. In England few working men consider sending their children on to college. On Skye, the majority of those who go to the university from
[565] the local schools are from poor homes. The landed gentry send their children to preparatory schools in England, and most of the doctors send their sons to private schools. Somehow the
702 boys and girls from the crofts scrape through. An additional fact I might mention is that despite the government's interest in maintaining the Highland population because, among other reasons, it is a reservoir for the armed forces, very few boys and even fewer girls voluntarily select a military career. Indeed, few men have seen service with the Army or Navy. The previously mentioned sample of the marital status of males also revealed that only 57 of the 270 men have seen active service in units other than the Territorial Army or Home Guard. This

525 (a Gaelic group), the Masonic Order, the Eastern Star, and a post of the British Legion, which have representatives
524 from all walks of life. But by far the most interesting
525 group is the village bridge club. If bridge clubs in America are status conscious, those in Britain are especially aware of "social" and "cultural" distinctions. In Portree such
524 differences matter very little. Like all of the above
575 mentioned organizations, the membership of the bridge club
167 is predominantly newcomers. It includes members of the gentry, teachers, shop keepers and shop assistants, office workers, and a mechanic. Once a week they come together for an evening of cards and a few drinks. In all formal organizations the roles of leadership are left to newcomers or the gentry. One young man, to give an extreme example, wondered one day why he spent so much time attending committee meetings. On reflection, he found that he was an officer in no less than eleven clubs. It is to the gentry, however, that we must turn to see the real expression of leadership.

The County Families

565 The landed gentry have been considered separately be-
184 cause they belong to the neighborhood in which they reside; to the trade-center village, where they spend much of their time either visiting each other or performing some social service; and to the community as a whole. Even more than belonging to Skye, they form a part of the national class system of Britain. They are the "county families." Next

contrast the friendly and homely atmosphere of the English "pub" with the austerity of the public bar on Skye. The same man who went into the "Coach and Four" to play a game of darts and sing a few songs over his pint of beer goes down to the local hotel bar on Skye to toss off his dram, follow it with a pint of beer, and chaff his neighbors. "There is nothing else to do." Skye exiles in Glasgow, and not only the youngest of them, often complain about the lack of opportunity for social intercourse at home. What they really mean is that "there is nothing else to do" unless they do not care about the reaction of their "people and friends." Moreover, they may want to return some day to stay, and, then, they will have to face the judgment of the old men in their neighborhood.

Another contrast of the Welsh and the Sgiathanach can be found in their respective attitudes towards gambling. Traditionally, both enjoyed forms of recreation in which competition plays a major part, but the Welshman today does little gambling, implicitly because of his religious outlook.[27] The Sgiathanach, too, is not an open gambler, but the football pools find many interested individuals on the Misty Isle. There was, for example, the deacon in one church who forgot he had a meeting to attend. Much to his dismay, when another member of the kirk stopped by to see why he was late, he was busy filling out his football coupon. Dissimilarities, of course, are not particularly significant. In both regions

[27] Ibid.

The growth of the population ended with a prolonged famine. The proprietors, finding that the people's only justification for crowding the estates and looking to their landlords for help were some nebulous customary usages, facilitated the decline by disregarding custom and throwing as much land into sheep farming as was possible. While evictions were not new, only after the famine did they result in an absolute reduction in numbers. The Sgiathanach, fettered by a lack of capital and an inability to break with the past, could not make the final adjustment required by the process of commercialization, specialization. In addition to emigration, the Clearances and general economic hardship forced a postponement of marriage. There was neither land nor regular employment to provide a livelihood.

Later in the nineteenth century new influences began to play a role in the continuing decline of the population. Following the passage of the Crofters' Act, the nature of emigration changed. Seasonal migration became negligible. The provisions of the Act, and ensuing legislation, made it possible for a man to remain away during his active years and return to the parental croft to spend his old age. The extention of education not only equipped the youth for life in the larger society but also created demands for objectives which could not be attained at home under the existing order. Thus, as in the period of population growth, the persistence of many features of the old traditional culture, and the renewed importance of others, were factors of no little consequence.

On the one hand, they stimulated emigration, because
means of achieving upward mobility was through outwa
On the other hand they deterred a complete abandonme
way of life which offered so few material rewards.
us face to face with the problem of cultural contin

Cultural Continuity on the Isle of Skye
A Restatement of Theoretical Considerations

In the opening chapter, I presented a series o
retical assumptions on which I have based my analysi
evidence for cultural continuity on the Isle of Sky
of my presuppositions and my approach to the proble
dite my final quest for proof that marked populatio
not a criterion of cultural discontinuity.

If society and culture are separate though co
concepts, cultural and social integration must be i
variables. They tend to find mutual expression, bu
not necessarily found together. Nor can they be me
the same criteria. Cultures are considered integra
the extent that their traits, complexes, patterns,
are meaningful to the people. The content of all c
continually modified by the disappearance of once c
istic trait complexes and the addition of new ones.
of doing things lose meaning and are disregarded; i
find acceptance and are given meaning within the co
of the culture. The form of the culture, its essen
distinctiveness, persists. The carriers of a cultu

barley have been replaced by grass and hay. Conceivably, this is a more complete adjustment to the environment, which has been made possible by integration with a commercial economy, than an adjustment to the demands of the outside world. Whereas the objective of the local economy once was the export of cattle, today the purpose is the breeding of cattle and sheep for the national markets. We have seen that there are a host of limitations and difficulties in the economic aspect of the culture. Many of these are due to the persistence of conservative practices. Each crofter must keep pace with his tradition-practicing neighbors, with the old men of the township. Others are the result of an inhospitable environment. The economy does not run smoothly, but this is not conclusive evidence for disorganization. Integration does not mean smooth functioning. In the spring and autumn the crofter is confronted with a variety and succession of tasks which would fill a specialist with dismay. Very often, these pastoral and agricultural chores have to be carried on in conjunction with outside employment. In return for his labor, the crofter receives a meager income, frequently supplemented by contributions from his children or the government. As a further result of the partial adjustment to the wider society and culture, the people leave the island to seek employment and to achieve an upward mobility impossible on Skye. Economically, Skye, along with most of the Highlands, may be viewed as presenting a picture of the Lowlands of Scotland 200 years ago. That is the extent of the economic adaptation of the Sgiathanach to the national culture.

Both have remained devoted to the old tradition which is epitomized by their religion. Further, they are each bound together by a common language and vocation and by strong ties of consanguinity and affinity. Moreover, the Sgiathanach and the Amish have similarly rejected the deviant. On Skye emigration has affected all levels of social organization, the conjugal family, the extended family, the township, the neighborhood and village, and the community. Still the Amish and the Skyemen have maintained social and cultural integration. Standing in a contrasting position is the town of Landaff, New Hampshire.[4] Although Skye and Landaff have experienced similar trends, including an original ecological adaptation, disturbance resulting from population pressure, an unsuccessful attempt to meet the crisis through commercialization, and a chronic high rate of emigration, especially by the youth, Landaff has been described as an example of social instability and cultural disintegration.[5] The farmer of Landaff remained only as long as his interests were compatible with those of his neighbors, and local opportunities existed to satisfy his ambitions. He had no attachment for the land to offset the inadequacies of persistent economic limitations. He abandoned the associations which had supported the community by giving the group a sense of security.

Like European peasants in general the Skye crofter has lost his former self-sufficiency and political autonomy, but he has retained a strong attachment for the land and its

[5] Ibid., pp. 113-117

maintain their position by intermarriage, by educating their children in England, and by interacting with people of similar status within the community and beyond. 182 571 554 565

The crofters continue to stand at the opposite pole. They seldom achieve status within their neighborhood. Upward mobility is possible only through outward mobility. Leadership fails to find expression among them in the township or the neighborhood. The rare exception is the crofter's son who becomes a minister and returns to lead his people spiritually. When the crofters must select a leader, from their own number, the status is accorded to an elder of the church. The elder already has high status because of his advanced age and his position in the kirk. As I have said, the continued operation of primitive democracy means a minimum of authority and a maximum of equality. [795] [794] [794]

The intermediate group in the social hierarchy cannot be profitably used in this discussion. They are primarily newcomers, people from the Lowlands or England, who have joined with the relatively few Skyemen who have left the croft. Sufficient time has not elapsed for a class oriented structure to emerge. Then, too, they are not a numerous group. Still, status is important in the village. As in the crofting neighborhood, ministers, doctors, and teachers achieve high status through their occupation. For the remainder of the population of Portree, status depends more on personal qualities and outside activities, especially in the kirk, than on the way one may make his living. 182 554 56 167

While we are on the topic of status and ranking, let us 121 554

see what Linton, the most explicit exponent of the concept of status and role, has to say about societies which are faced with changing conditions and disorganization.[15] Linton believes that such societies attempt to develop new social patterns by allowing individual initiative, thought, and competition free rein. They are characterized by a wealth of achievable statuses. With adjustment, ascribed statuses again become common. The conclusion seems inescapable that Skye has adjusted. Perhaps a few additional illustrations will make my point clearer. The crofter who assumes a role of leadership is regarded as an eccentric, someone to poke fun at no less than the village idiot. The crofters' children who find their status too confining must leave the island to achieve status. Some succeed, to a limited degree, by moving to Portree, but they are never free of suspicion. Since the majority of achieved statuses on Skye are left to newcomers, it might be said that the Sgiathanach has selected place of birth as a means to ascribe status. Not infrequently the newcomer's acceptance is followed by his being placed in roles of responsibility in both formal organizations and informal groups. The reader may remember the case of the young man from the East Coast who found himself on no less than eleven committees. In Kilmuir the people are represented on the County Council by a minister and the Crofters' Club is run by the school teacher.

I believe that the most important feature of the concept of anomie is the loss of social control which is said to follow

[15] Linton, The Study of Man, pp. 113-131.

ISLAND, WORK AND PEOPLE *PT. I*

Emigration set in, both individually and by help of schemes for group settlement in Canada, and in 1931 rural Lewis returned only 21,200 and Harris 4500. The curve of average yields increases illustrates the fairly steadily numerical increase to the close of the last century, then the lessening increase, and after 1921 a fall, recorded in 1931:

The census of April 1931, which recorded the population of Stornoway burgh as nearly gone (a net increase of 16 per cent since April 1931), recorded little or no change in the population of rural Stornoway parish but losses of 11 to 19 per cent in the Islands' four outlying parishes. The average net rural loss approached 9 per cent. But—as indicated in the curves drawn for Fig. 12 which are based upon statistical estimates that corroborate observation—the loss did not take place smoothly over the twenty-year period to 1931. Much of the loss occurred in the two decade years, 1921 to 1931. Although it was due to a long term trend, this loss was greatly caused by crisis.

2. Present Population Trends and the Outlook

After 1921, as a result of the trade depression in the Empire and the United States, many emigrants returned, frequently putting what was left of their savings into the purchase of a loom, getting some months to the building of a new house with the help of Government loans, and setting about the improvement of their parents' holding for the reduction of a new allotment. Soon after 1931—at a time when the Press read the census results as a portent of steady and drastic Island depopulation—Islanders remarked that unless unexpected attraction came from outside the Island, accompanied by lessened prosperity in

weaving and fishing, the fall in population would probably be small, if any, in 1941. This fall in the total figure was due to a net decrease in the number of family units, not to the number per family. The Island was only then following the restriction of population that began half a century before in the rest of Protestant Britain, though the causes, social and economic, are very dissimilar. Actually, little did occur to change either the rural situation or that of Stornoway, until the outbreak of war in 1939.

Since 1931 there had been no real decrease: Lewis is land of South Uist's population, by net of ruin and abandonment; of increase of holdings, not diminution, and even of agricultural improvement. No doubt 'artificial' causes were at work: first, loans, grants and unemployment insurance and assistance—once known as 'the dole'—and, secondly, the money sent to elderly parents and children, home and abroad, by young folk in Glasgow or abroad, or savings brought back by the young people themselves. Yet there is some fishing and agriculture still. Above all, 'hand-weaving' has grown, even if this be partly 'artificial'. Recently it was done only by the elders who had returned to the island, but men and women in the prime of life, so that the question of resources, livelihood and population in Lewis needs to be re-examined afresh.

The emigration which took place from 1949 to 1951 followed directly upon the losses and the unemployment in the Island's Harris tweed industry. This crisis resulted from the imposition in 1949 of a Purchase Tax on handwoven Harris tweed of 666 per cent. If the tax had been maintained and no adequate adjustment made, the effects on population would have been far-reaching.

COMMUNITY FROM PAST TO PRESENT *PT. II*

was to share; the children needed milk and the women wool to work, while the men fished. As the Crofters' Commission put it at the time, "Necessity has no law and it is scarcely possible to carry out . . . the Grazings Acts in this island ". The position remains little changed. Still, in spite of sixty years' delay, and the law's failure to restore an executive, the Crofters, to perform specified duties as a member of the community, the Grazings Committees do perform useful functions with credit. They form media with which progressive Government or co-operative agency actually deal, and the voluntary Clerk may shoulder considerable responsibility.

With regard to small occupiers paying less than £6 rent per annum and holding less than 10 acres and 250 acres of grazing (or share of pasture), the Napier Commission declined to recommend the bestowal of rights or immunities tending "to set them in a condition from which they ought to be relentlessly though gently withdrawn". The Act, however, did grant small occupiers immunity from eviction, and made it hard for other landlord, State or fellow-crofters even to refuse house sites or fresh holdings, particularly in the crowded Lewis. The squatter continuum; indeed is hard to control, by escaping the payment of rent and rates though he shares in benefits. The ratepayers are proportionately and unjustly handicapped. But as isolation has diminished, landless squatters have been allowed to 'resume' portions of the common grazing for new holdings, as by common consent at Ness and in Locha, after Lord Leverhulme's death.

A further recommendation of the Napier Commission was to aid emigration. Only Sir James Matheson's aid in 1863 proved successful, but his later efforts met with no response. There were then, and still may be, in the Island

some whose feelings and interests opposed emigration. Free Church ministers foresaw that the beliefs they had introduced would be shaken by travel; and their income, like that of Presbyterian ministers in Scotland, was in part a result of depopulation. The Congested Districts Board, however, sponsored two schemes of colonisation in 1888–89. In the first scheme thirty families, and in the second, fifty families were taken to Canada, mostly from the Island.[1] The first and smaller group prospered and their loans and received their lands; but the second failed to do so, and the State was only reimbursed by sale of the land.

The only of the many measures to promote the material and social welfare of the community "The material provisions of the Deed allow for the promotion of industry—including fishing, of course—of agriculture and afforestation, and of means of housing (or share of pasture), the land and sea. Medical service is not forgotten. The encouragements of social life and education is considerable, and provision is made to enable deserving scholars to proceed to secondary schools and universities.

It is felt by the trustees that some of the things done should be properly co-ordinated. Development of resources and social life, they feel, could be combined with education and training of young people, so that young people would return to the Island and use their capacities to serve their own community. Thus among the development schemes which have been mooted are the reclamation of peat, the reclamation of the sandy inlet just north of Stornoway, and local afforestation. All these technical jobs require training, at the levels of engineer and skilled foreman or working hand. Bursaries might take the form of education for such rural tasks. The 'export' of talent may be necessary when no outlet is possible at home; but in the end it can drain away the community's youth. Hence a policy for the return of talent is required. For fishing, for industry and for crafts, for the weaving arts, training is required in preparation for gainful careers at home. Lastly

APPENDIX III

for planning preceded by adequate survey became publicly recognised, this crisis seems to have caused a change to comprehensive planning and the creation of the Trust. It led to the election of a new member of the Trust on a planning platform, and to a change of attitude to planning and land in the community.

Meanwhile the movement for town planning which had spread from the bombed cities to the rest of the country, led to a closer co-ordination of planning aims between the Trust and the Town Council, and there is now hope of progress in collaboration with the County Council as the statutory planning authority.

In brief, the opportunity arose for the Trust to frame a comprehensive policy, one binding together the objects separately listed in the Deed, which were "to promote the material and social welfare of the community". The 'material'—provisions in the Deed allow for the promotion of industry—including fishing, of course—of agriculture and afforestation, and of means of housing (or share of pasture), the land and sea. Medical service is not forgotten. The encouragements of social life and education is considerable, and provision is made to enable deserving scholars to proceed to secondary schools and universities.

In the Barvas district, by the 1870's, only Timson, Ness and Branahlee (on the Stornoway road) and Borve and Gravirig (on the Barvas road) were left of the Lower Barvas. Moreover their traditional manpower grazings, which had been the mainstay of the Lower Barvas crofters, had been taken away in the years about 1890. Apparently their use of the old arable was also lost. Thus, in the Lower Barvas, the crofters had lost both the north of the present road and which they have since made into a fertile area, and the grazings which they had had for generations. In the Upper Barvas, by which they by many years had been ousted, the crofters had lost the arable land, which they had been forced to take up in the 1880's, and the grazings which they had had for generations. In the Upper Barvas, the crofters had lost the beach, now empty, was for long occupied by squatters and the only beach around it still bears part of a large modern building.

It is noteworthy that almost all the conservator areas in the Barvas and South Dip districts and Ness (in Ness the population changed between 1841 and 1891, shown in table 1)

The planned areas included extensive hill and common grazings and some of the best arable available for including and the machines except Vatten and Breaig. The East Loch Roag and Carloway districts were less attractive to the new farmers: as to be commonly the case in Lewis, these crofts grazings by the sea and the arable land was in the hands of the crofters. In the Carloway district, the crofters were left on a 19th Century estate and were not evicted to crofter-occupiers. In many cases they had been wholly cleared of crofters. Consequently, the Barvas, Ness and Carloway districts were left with the crofters. In the Barvas

landlords by landlords to
[423] lattiate agricultural reform and develop capitalist
[424] Farmers led to a destruction of the differentiated
semantry on the joint farms (cf. Gray 1952: 51-55).
and a proliferation of very small units, none of which
was adequate to provide a reasonable subsistence.
These small units became fixed as individual holdings
by the 1886 Crofters Act, and the only important
distinction thereafter was between smallholders with
security of tenure (crofters), and non-crofters who
built homes on the common grazing land but had no
specified rights. Although various agencies were
established after 1886 to enable holdings to be
enlarged, only in the last fifteen years have such
possibilities between officially developed on the form
of official subletting and individual apportionments.
[017] By the second half of the 19th century, a trend
[423] against laissez-faire was manifest in the writings of
European scholars. As landslim broke down, small-
holders throughout Europe were being dispossessed of
their land, which was then consolidated and enclosed.
[17] In Denmark, legislation was passed as early as 1682
to prevent landlords from taking steps to increase the
efficiency of their farm production by replacing the

[illegible]

[illegible]

[illegible]

171 three-field system with improved rotation methods
involving consolidation of land. The Danish govern-
ment feared that consolidation of land would have
meant a reduction in taxes and fighting men.
175 The British government was faced with the same threat
423 in the migration from the Highlands, as the Highlands
[166] had long been a source of good fighting men.

A reaction against the materialism of the
industrial revolution developed in England as small-
holders sold their land to large landholders to become
laborers. The Taylor Report (1954: 9) reflects the
[181] value which is still placed on country life by maintaining
that crofting communities "embody a free and independent
way of life which in a civilisation predominantly urban
and industrial in character is worth preserving for its
own intrinsic quality."

175 The various acts protecting smallholdings were also
241 attempts to keep labor dispersed: to diversify and
423 improve the use of land, and thus to increase Britain's
[54] self-sufficiency in food production. Various marketing
agencies and subsidies were introduced around World War II
to achieve such aims. Among the many agriculturalists
affected by these encouragements emanating from the
central government were crofters.

175 On one of the crofts along the strand are the
228 ruins of two curing houses, where the fish were salted
[348] and dried. Ling, cod, skate and halibut were cured
[439] and sold to local merchants for export. "The same as
[171] they do in Iceland this very day. That was the main
175 industry. Then the English came with their steam
648 trawlers; they ruined the fishing here, and then went
228 west to Iceland and the Faroes. In Iceland they get
fined for poaching, but here the trawlers often ignore
[433] the three-mile limit. But the fishing was the mainstay
here, before the Harris Tweed came along."

175 One man returned from sailing in 1932 and bought a
228 boat for L24. He had 32 lobster pots, and made L7 one
435 June by selling the lobsters at a shilling apiece.
501 Another man, who returned from the United States in 1934
[454] because of the depression, bought a share in a 14-foot
[491] boat. It was made in Ness, at the northern tip of Lewis,
[434] and cost about L14. He and his partners went out every
night possible; the fish provided an important part of
their income. The boat was sold in the 50's. "It wasn't
175 being kept up anyway." Around World War II there were as
228 many as twenty boats; men fished at night, after a day's
501 work. Today there are four 12-foot boats in Shawbost,
178 each shared by four or five men. The boats are used
501 intensively for fishing during certain times of the year,
228

173 "Then the tweeds got
243 going and the barley took too much trouble; so they had
252 no use for the mill."
829

173 A 60-year-old woman remembers, "They depended on th
262 potato and fished a lot. I was raised on oatcakes, bar
bannocks, and salt herring. There were no vans and no
school canteens when I was young; you had to carry your
[264] own 'piece' to school. We had porridge with fresh milk
for breakfast, oatcakes and butter for lunch. Dinner w
at 4:00, of potatoes and fish and milk. We had meat ma
once a week. My father poached a lot. We ate the head
[251] and the roe of the salmon fresh, and salted the rest."
Once among the cleanest, Hebridean teeth now vie with
164 British cities in extent of decay. It is not uncommon
759 a child in his first year of school to have six teeth
pulled by the travelling dentist.

261 Various customs associated with food which exist t
272 reflect the days when fare was meager. Tea-drinking is
[171] omnipresent in Britain, but in the islands it has
272 special significance. The taking of tea constitutes
574 the denouement of a visit, and almost always occurs whe
someone steps over someone else's threshold. To refuse
[576] tea has some of the connotations of an insult; and to
take only tea, without food, is to have a copan falamh
(empty cup).

which official records are kept by the mills. If you say jokingly to a fisherman who has brought in a large catch that he should put some money aside for the income tax man, he is likely to reply, "He'll have to catch me first." A tradesman may be earning large sums of money doing local work as a skilled specialist at the same time that he is collecting social security. A man may move in and out of a number of different jobs, and never report his income. "Occupational pluralism" (cf. Brox 1968) rather than economic specialization has developed as a strategy in various countries along the North Atlantic fringe, such as Iceland, the Faroes, northern Norway and Newfoundland, as well as the west coast and islands of Scotland. In these marginal areas, income from specialized occupations is, in the long run, unpredictable and inconsistent.

In times of national economic depression, strikes, shifts between socialist and conservative governments, and other crises, crofting provides an alternative strategy. During the last war, many islanders who had left the island (including some who had been quite prosperous in the cities) returned to spend the duration of the war in the village, glad of the relative security provided by the relative abundance of food and less strict rationing. During a huge snow-fall that occurred on

PREFACE

It was after the end of the First World War and the home-coming of the men—all too few in number after heavy losses—that I first came to know Lewis-and-Harris. Later, in the years between the two World Wars and during the Second World War, I returned to study the people's heritage and survey the Island problems and, if it might be, find solutions. Work on a West Highland farm had already made me aware of the hardships and potentialities of land and sea; of the meaning of life in field and home for farm-team and family; of the reality of the Gaelic heritage—communal, bardic and religious. Wider surveys made me aware of common elements throughout Scotland and the North and West of the British Isles, despite the historic contrasts from the Hebrides to the Lowlands, and beyond. In the Hebrides are found an elemental simplicity of environment; an early crystallisation of culture and religion, with continuity; a recent and contemporary coming of revolutionary change. These form an interpretative chain of evidence—geographical, traditional and historical—unique in the British Isles. Hence throughout this book, from the basic maps and explanatory text to the later chapters, an interpretation of the Island and its community is linked to that of the Highlands, Scotland and the British Isles as a whole.

As many a Scot of crofting stock has found, when he shares in the work of a glen by day—on the low ground and the hill, alone or with others of a team—and joins in the fireside talk and Gaelic song when night has fallen, he

181 some by characteristics which may seem unique. But it
171 will interest others by features of underlying universality.
133 These might be compared to the Archaean rock, overlain toward the south-east by a succession of younger strata, but forming their foundation.

181 In this rocky land, the roots of Island life are laid
182 bare; the rhythm of work responds to the day's weather and the cycle of the year. Yet the flowering of communal life in song and spiritual tradition may offer a fresh vision of regional, even of national, being. Indeed it is in characteristics latent in the evolution of the whole 'North and West' of the British Isles that Island life is most revealing.

131 Rising in imagination to a point above the summits of
133 the Harris hills, and viewing the British Isles from the 'far' north-west, we gain a new perspective (Fig. 1). The Island below us is now the nearest; the 'Outer' Isles,
129 the innermost. To us now, as to the Islesmen, their Island home is no mere fringe, but a heart of Britain.

01 Thence, looking to the lands across the Minch, each
33 further from the Isles of home, there appear, in turn, three regions: (1) the rest of the Highlands and Isles; (2) the Lowlands and Uplands of Scotland; and (3) Ireland, Wales and Cornwall, and Northern England—all sculptured in rocks older than those of the Lowland or 'Plain' of England beyond. These three roughly concentric regions, from Harris to the edge of the 'Plain', may be grouped together with the intervening estuarine lowlands—not only Clydeside and the Solway but the 'firth-land' of Mersey-and-Deeside, and that of the Bristol Channel. To these, one might add the shores of an outer Minch, the *Manche* or 'English' Channel, which once linked Devon and Cornwall to Armorica. Beyond

24 with its tied cottages and frequently a 'bothy' for the un-
36 married. Next to this comes the full-time small-holding,
(184) important in the North-east and the Southern Highlands of Scotland. Great as are the differences between these types of unit today, they go back, to a considerable extent,
(174) to common origins. The sites of the farms are ancient. And their people, though since divided into masters and men, are the successors to those who were once the 'kindly co-operators' of older 'farm groups', of Lowland *ferm-toun* and
(184) Gaelic *baile* (pronounced like 'ballie'). The island counterpart of these, and their life, will be described in Part Two. Hence, before we turn to further analysis of the Highlands and Isles, a word more should be said of Lowland types.

An important social index in the Lowlands of Scotland
24 is the number composing the farm labour-team, averaged
36 for each county. Villages and even hamlets are few,
46 largely because farmers and farm servants live on the farms. Compared to those of most of England, Scots labour-
• (171) teams are small. Yet, as the map indicates, there is a
(184) wide range from the 'large' teams of South-east Scotland, through the 'medium' teams of adjacent areas, to the 'small' teams of the West and North-east. Not only do the contacts of employer with employees partly depend upon the number in the team, but so do the farm servants' relations to one another. On the whole, the larger the team, the more formal its organisation; and the smaller
(554) the team, the greater a worker's own responsibility. The
(178) 'family farmer' of the West and North-east is often an ex-farm servant. From Burns's time, his character and enterprise have been recognised in Scotland, and in the last forty years have become well known in South-east England. But the isolation of these little farms brought its problems and its hardships.

i (see map p. 16 .. analysis)[20]

175 reclamation, which Dean Monro has described as he saw it.
311 Technique and economic return must be balanced against
185 the factors of nature. Although natural conditions are
(182) difficult, they may not form a complete explanation of the relative arrest of reclamation in the nineteenth century; for here separation from the agricultural advances of the Lowlands by barriers of mountain and sea caused the retention of unprogressive methods until the wave of agricultural improvement had spent itself by the middle of
(178) last century. To this cause must be added other influences
• (171) contrasted to those leading to peasant advance in the rest of Western Europe: the political history of the Gaeldom after 1745, the revolution in land tenure and in the social life of the upper classes, the commercial, industrial and imperial development of Great Britain. All these factors help to explain the contrast offered to the Lews by western Denmark and western Norway, lands in which the soil and climate are comparable to those of the Island. Yet reclamation is proceeding, as on skinned land at Ness, where plots of ground have been steadily broken in by pick and by spade or plough.

226 Settlement and agricultural land are placed around
(361) the coasts with their fishing grounds. In spite of what was often said—that the Lewisman is and has always been
(311) primarily a fisherman—fishing alone is not enough to account for this distribution, for the agricultural conditions
(241) on the whole are also best along the coasts, or were so for early settlers. As Stevens remarked, the light sandy 'machar' lands are there, and the fringe of partially improved soil close by; drainage is, on the whole, better, while shell-sand and sea-ware are to be had for manure.
241 The sea-ware also serves still as fodder, while one or two
824 sorts are sometimes cooked for human food; carragheen

233 away, and for a shorter period. The sheep wander over
311 the moors all the year round, though they hang about the crofts when the winter is severe.

221 A comparison with mountainous Norway or the Alps
132 and their high summer pastures suggests itself; but in Lewis altitude is almost negligible, and the shielings may
• 171 lie only two to five hundred feet above that of the crofts
(133) beside the shore. The difference between winter and
(311) summer is in any case less, snow being rare and the conditions being such that even in summer the shieling pasture remains poor. Hence it is that while modern Norse and Alpine economy still maintain the summer pasture, the shielings have died out in the Highlands and are slowly decaying in Lewis. Seasonally, stock are transported over longer distances, from Highland to Lowland pastures.

181 Reasons for the continuance of these and other crofting
(178) ways, or for their abandonment, are not of an economic
(461) order alone: not only the remuneration received for labour, but the feeling for the work counts enormously. Visiting a couple of distant shielings in the summer of 1919, I found that two lads newly home from the Navy had come up from their village 'for a holiday', bringing rods for trout-fishing and high spirits for play. By day they fished or flirted. By night they slept in one of the two shielings, while the two laughing lasses they had come to visit shared the none too wide couch of the other shieling with the two older women there. One of these was a matron with a motherly twinkle in her eye, the other was a spinster in whose eyes there shone a memorably vivid light; she was the sister (as I found later) of a noted minister on the mainland. The bare simplicity of shieling life is traditionally softened by fellowship and a gaiety that is not beyond
(538) control. A Lowland poet once coined a famous phrase,

342 yard and occasionally a barley-kiln in which to dry grain
343 before malting it for home-brewed beer. A 'black mill',
351 with its primitive horizontal water-wheel, stands apart by
(251) some burnside.
(273) Round the circular hearth, a large company can assemble in very social fashion for talk, story and song, the meeting
354 *together* (*ceilidh*). By the transfer of the hearth from the
571 centre and the substitution of a gable fireplace and regular
538 chimney, the social circle is halved, while meantime the
(178) tales of the *ceilidh* are forbidden or forgotten. Happily the bench still stands against the wall, near to the open
(353) door, through which neighbours slip in with a word of greeting to find a customary welcome.

342 The dwellings on the summer pastures out on the
361 moors show great variety, illustrated in Fig. 10(B). A simple type in use is built of turf and stones, lightly roofed with
(178) turf placed on spars. A more primitive 'beehive' type
• (171) (which fell out of use before 1900) was stone-built and corbelled, probably for lack of timber. And whereas the lighter type always stands by itself, the corbelled type was added to until a dozen cells formed a single mass, suggestive of ancient 'neolithic' hamlets as at Skara Brae in Orkney, described by Childe, and of the domed, corbelled huts of the ancient East.

(343) A further type was the 'spring house' of Tolsta, NE. Lewis, in which both cattle and folk sheltered in spring a little way from the village, before going out to the more
(174) distant moor. Mr. Donald Macdonald, F.R.S.G.S., a
(178) native of Tolsta, informs me that the spring house was in use until 1936. He remembers vividly how life in the shieling restored health and colour after the winter.

16 manent absence from the Island are chiefly the Merchant Service and hydro-electric contracts, and for the women hotel and domestic service, nursing and fish-curing. The ultimate return of many men after prolonged absence contributes to the higher proportion of men of retired and pensionable age (16 per cent in rural Lewis, 11 in Stornoway and 10 in Scotland). What could not be shown on either pyramid for Lewis is the high ratio of unmarried women, owing to the losses of the war, to migration, and to the need for a daughter to devote herself to ageing parents on the croft. The ratio of widows, with or without children, is also considerable, for all three reasons, as well as a fourth, the desirability for an island home, rather than a city, as a place in which to bring up fatherless children.

Turning now to Scotland (b) (d), the same tendencies
(171) are seen as in Lewis, though in less extreme form. The difference is of quantity rather than of kind: somewhat as Lewis had lost her men to Scotland mainly, so Scotland
(171) had lost to England and beyond. On an average, mothers in Lewis have more children than mothers in Scotland, and still more so than in England. Thus the facts of population in the Island do not suggest a voluntary extinction of its community, but rather the will to live.

CHAPTER V

FAMILY, FARM GROUP AND TOWNSHIP: THE CONTINUING COMMUNITY AND ITS SOCIAL ECONOMY TO 1815

INTRODUCTION (TO CHAPTERS V AND VI)

121 THE family, the 'conjoint' or 'farm group' of
593 four or five families, and the larger group clustered
476 in a glen or along a shoreland, are, in ascending
632 order, the three concentric units whose mutual relation-
621 ships we must visualise to understand the past. Enduring elements of life in family and neighbourhood today, with their own special qualities and limitations, can only be understood in terms of past needs and the relationships they evoked.

121 Having seen their relationships in family, team and
613 township, we can next turn to the reciprocal relations of
62 the people to their chief or lord, whose position dominates
(171) European, indeed world, history and prehistory. Here our concern must be the meaning of 'clanship' to the chiefs, the joint farm-groups (or 'small tenantry') and, latterly, the tacksmen placed above them.

121 We may find, throughout this study, that features and
194 functions which at first sight seem peculiar to the Island
198 are really local variants, more perfectly crystallised, of
(184) forms which we know existed at earlier periods in Scotland and in much of northern and western Britain. In the Isles,

175 natural zone, could not be extended. In any case, the re-
433 clamation of clay land tended to slacken as efforts turned
434 to fishing and kelp-making. The introduction or increased growing of potatoes added to the human, but hardly to the
(182) animal, food supply. Finally, while the beginnings of
(311) medical knowledge and vaccination had aided the growth of population after 1750, veterinary science had made no
232 progress, nor did it advance in the Island for many years to come. We may conclude that an average stock per Island
(422) family about 1720 was rather more than that of 1790, and the acreage relatively larger, while both were greater than the average of today, particularly in the Lews.

175 What, then, could a family have to eat, from such crops
262 and stock? While in winter even now there is almost no
244 milk to be had on a croft, and there would be little then, there was salt meat, dried or salted cod (or herring) and fish oil; oat and barley meal and some rye meal; cabbages; and, increasingly in the eighteenth century, potatoes. Martin included potatoes among the crops grown even on far St. Kilda in 1697. A century later it was written that the people of Uig, for instance, had, though 'unwilling', been induced to grow and eat them 'forty years before'; and the years tend to be under-estimated where changes are slow and memories long! But it was written of Harris that by June the meal and potatoes had mostly been consumed, "and such as cannot afford to purchase imported meal subsist chiefly on the milk of their cows and sheep, with what fish they may chance to catch, till their wants are relieved by the first fruits of their potato crops early in Harvest".

175 We conclude that with even less money but a little
511 more grain the population in the Island had fluctuated
762 about a mean for some centuries before, as it had in so
171

175 much of Britain and Europe until about 1700. A modern
511 parallel may be found in Asiatic lands with the frequency
162 of famines alternating with periods of recovery or, in others,
171 the long-drawn misery of chronic under-nutrition and endemic disease. In modern Europe, only international
(731) or civil war can now bring such extreme widespread misery. And as peace brings partial healing, so in the Island past, when good seasons returned after famines, the life of the family renewed itself.[1]

175 The narrow margin of survival even in good seasons,
593 the risks of the bread-winner's death and of his family's destitution, and the need of co-operation in so many tasks made the family too small, weak and precarious a unit to stand alone. Even with relatively little division (or specialisation) of labour, and in spite of its apparent self-sufficiency, the family had perforce to link itself with wider circles of community life.

(B) JOINT LABOUR BY SMALL TEAMS: THE EVIDENCE OF TENURE IN 1715–26

175 Romance is hidden among the rent-rolls of the Seaforth
241 estates, all of which were forfeited when the Earl rose for
429 'King James VIII' in 1715. For of the rents withheld from the government until 1720, on the mainland at least
(642) the loyal clansmen paid a considerable portion to their
(613) exiled chief, styled 'Marquis' by 'King James'. But the

[1] 'The ' ups and downs ' of a peasantry living on the margin of subsistence and subject to severe disease can be studied in India, 1871–1941, where the ' net ' or mean change has to be correlated with the ' variability '. This wide problem was reviewed in a series of papers to 1948; "The Social and Psychological Significance of Variability in Regional Changes of Population", with examples taken from Indian villages. (A. Geddes, *Human Relations*, Vol. 1, 2, 1947–48; cf. *Geog. Rev.* 1942 and 1948; and *Geog. Journal*, 3, vol. 98, 1941).

CHAPTER VI

CLANSHIP: PEOPLE, CHIEF AND TACKSMEN

(A) COMMUNAL EQUALITY AND LORDLY PRIVILEGE

175 THE equalitarian customs of hamlet and township
632 astonish many to whom the crofting villages are
647 unknown and whose picture of the Gaelic past is
631 derived from tales of the 'Forty-five. The widespread historic fact of lordship over a subject peasantry has obscured that of peasant-neighbourhood, more ancient, it would seem, and, in the Isles, still more enduring. The very existence of 'rural democracies' such as those just described has been doubted by certain scholars on the theoretic ground that they would be humanly unwork-
(614) able! Yet it is none the less true that the peasants as clansfolk gave loyalty to their chief. The fervent loyalty given to the exiled kinsmen-kings, the Stewarts, was a scarlet thread interwoven—or entangled—in the homespun
(533) web of community, of clanship. Wherever the Gaelic is spoken, the Jacobite songs are sung with passion, and their echo has gone round the world.

171 So in the life of the Gael, without doubt—and in varying degree throughout Britain and the rest of Europe—we have to envisage a composite, perhaps a contradictory, state of things, in which communal equality is overlaid by

CONTINUED
FROM
PRECEDING
FICHE

175 It is ironic that the attempts by landlords to
423 initiate agricultural reform and develop capitalist
429 farmers led to a destruction of the differentiated
178 tenantry on the joint farms (cf. Gray 1952: 51-56), and a proliferation of very small units, none of which was adequate to provide a reasonable subsistence. These small units became fixed as individual holdings by the 1886 Crofters Act, and the only important distinction thereafter was between smallholders with security of tenure (crofters), and non-crofters who built homes on the common grazing land but had no specified rights. Although various agencies were established after 1886 to enable holdings to be enlarged, only in the last fifteen years have such possibilities between officially developed in the form of official subletting and individual apportionments.

17 By the second half of the 19th century, a trend
123 against laissez-faire was manifest in the writings of European scholars. As feudalism broke down, smallholders throughout Europe were being dispossessed of their land, which was then consolidated and enclosed.
171 In Denmark, legislation was passed as early as 1682 to prevent landlords from taking steps to increase the efficiency of their farm production by replacing the

175 631 632 642 [171] [621]

lordly rank: a working, equalitarian democracy dominated by an aristocracy proudly refusing to work. The fascination of Gaelic community is, first, that its elements stand out so clearly, and, secondly, that links were forged in clanship which made its living chain, though heavy, a thing that shone with pride, and beauty too.

(B) CLANSHIP, COMMON DESCENT AND CLAN-HELP ('CUIDEACHY')

621 172 621 177 173 621 631 [177]

To what extent is it now possible to disentangle the two contrasted elements of the lord or chief and the farm-teams and townships? Prehistory is hard to unravel; but the successive waves of conquest flung upon the Island shores have left their jetsam, unmistakably. The circle of huts found near a broch or commanding *dùn* recalls the tenants' village grouped close to the castle of a chief, from early history down to the 'Forty-five, and suggests a primitive form of feudalism or of clanship. Traditions add their part. In Uist one may still hear the ancient heroic lays traditionally ascribed to Ossian, Oisean, son of Fionn or Fingal—lays of which Macpherson's sonorous prose gave free rendering. The Fingalian tales differ from the lays, being frankly fantastic. Lewis had its own cycle of Fingalian tales; examples are given by W. C. Mackenzie (1919). Both lays and legends tell of an aristocracy or warrior class, the Fenians, of their enjoyment of the chase, and of their relative comfort, with wealth in gold and silver, in banners and flowing mantles. The chase combined with riches implies the existence of a community to feed and clothe the huntsmen. The traditions of the Cuchulainn cycle, with closer approximation to historical and archaeological truth, tell the same tale. Historically, in-

from the old chiefs' families, as in the genealogies of MacDonald of the Isles and the MacLeods. A special feature contrasting with English history is that claims to differences of descent, instead of being maintained—as between the Saxon and the conqueror of Norman blood—were fused. Even when the ancestor of the chief was alien to the locality, the people and the chiefs ultimately claimed to be of one and the same descent. Neighbourhood softened the impositions of the hunting herdsman upon his human herd, and the feeling of kinship brought reconciliation.

How far, then, can the family name, which proclaims every 'son' and 'daughter' of Leod to be of the *clann*, the 'children'[1] of the first Leod, really betoken a blood tie? Both the differences of race to be found in clanship and the ties it formed are well brought out in a tale of Highland pride, still told with Highland laughter across the Minch in Kintail. A French skipper (an importer of claret) touching at Kintail three hundred years ago, met a short, dark man and asked him of whose clan he was. "The Clan Rae," was the reply, "but we are of two kinds, the tall, fair MacRaes and" (a little pityingly) "the short, dark MacRaes." "And which are you?" "I," said the wee, black fellow, drawing himself up, "am one of the tall, fair MacRaes!" "Then God help the short, dark MacRaes!" said the skipper. Even one link with the blood of the chief—and that not necessarily legitimate—was enough for a man to found a claim to kinship, not merely as a MacRae, but with the tall, fair chief through

[1] In Gaelic, as a man is called MacLeoid (son of Leod), so a woman is NicLeoid (daughter), and the clan, *Clann Leoid*. The absurd addition of 'son' to a woman's name (as in English surnames such as 'Johnson') is unthinkable in Gaelic, in which a woman would be named 'John's daughter', *NicIain*.

CH. VII SPIRITUAL LIFE OF COMMUNITY

The care of cattle was accompanied by prayer. As an Erskine Highlander said to me, 'Our cattle would have hair now tethered without a mumbled, "Saint Columba be herding you" (*Buachaille o'Chalaim-cille ort*). The curing of animal sickness, and its prevention, was accompanied by prayers. And prayer was used to avert the evil eye, symbol of suspicions born of unremaining fear which, psychologists tell us, beset the modern but little less than the ancient! The thought or act of prayer which links a man to his fellow-men links him to the church beast. "The man who is merciful to a soul will not be merciless to a beast." (*Fa fear a bhithas trucatach ri anam, cha bhith e mithcasach ri bheist*).

Throughout Christendom back task of the annual rhythm was marked, at its start and close, by a day of seasonal festival (*La Fèill*). These Christian festivals replaced earlier celebrations of seasonal events of their features, often in play. Yet concerted seasonal activities could not be related to the supreme festival of the Christian Church, Easter, owing to its movable date. This is one reason for the great importance of other, fixed Festivals to rural community life. This point, not always appreciated by latter-day individualism, is made clear by M. M. Banks in describing *British Calendar Customs*, vol. i, *Scotland* (1937). Remembering that the Old Style Calendar dates were ten days later than the New Style (when officially adopted in Scotland in 1752), they may be compared with the annual rhythm of climate and labour (Fig. 9). Until 1600, the New Year began in spring on 25th March. After the Reformation and the abolition of Christmas or *Noel*, *Nollaig*, New Year's Day on 1st January took its place as the day which, as the Protestant Highlands and Lowlands, remarkably humble but spiritually rich, as the rest of a clan-community.

COMMUNITY FROM PAST TO PRESENT PT. II

of the Old Testament made itself felt, as in Lewis-and-Harris in the nineteenth century, this narrower patriarchal concept became partly effaced thought.' Rooted in a wider form of family than a patriarchate, and reverencing a Holy Family and all fellowship, Gaelic society honoured age and parenthood for their inheritance, and childhood and youth for their promise.

Such bands of human relationship led to the veneration of the Saints of the Gospels and of later history, and also of those of legend, especially Bride. Dedications to Bride or "Brighde" are widespread from Wales to the Lewis; yet her memory has been all but lost in Britain, except in the Lowlands. Carmichael records that "Bride and her services" are dear to the hearts of the people. She is called "Bride of the white feet . . . of calmness . . . of the kine; mantling-mother . . . and shielding-mother . . ." "I am in the keeping of my Saint Mary: My companion believed in Bride." Carmichael, p. 103, adds that in joy, mindfulness and attainment are generally linked to one notable stage in the life of each 'holy companion', the example of and fellowship of each saint in turn was especially sought, at a corresponding stage or crisis of one's life.

The Gaeli's veneration for saintly men and women was shared by Catholic peasantry throughout Christendom; in Ireland, Brittany, and Wales, it was the closeness of

CH. VII SPIRITUAL LIFE OF COMMUNITY

fellowship. "The Irish Church", a Roman is said to have exclaimed to a Gaelic Catholic in scorn, "has von no martyr's crown!" "Ireland was named the Isle of Saints not by Roman but by Gaelic Christians of the elect", was the reply. The Celtic Church linked the lands across St. Patrick's Channel; and what was true of Brehon Jurisprudence and canons is have been as true of Celtic Britain, the land of his birth. Kilpatrick on the Roman Wall of Clyde has been claimed as the birthplace of one who was certainly a Cymric Celt by birth and baptism, a Gaul by training, and an Irishman by mission.

The Gaelic Christian was nurtured from personal to divine relationships in walking or rest, with an intimacy of fellowship, and of invasion, of which we can begin, "I shall lie down with God, and God lie down with me. . . ." A simple and universal gesture of love, in which parent, child or lover joined, was the kiss of peace. This, and the dedicatory prayer at rest, "the arm of the Father", or "the arm of the Spirit", under my head." This prayer was the inspiration of one of the loveliest of Christian tombs, preserved by clan loyalty, respect for the dead, dirance and later fossilization on the Island of Grimshiva, where the Highlands meet the Lowlands at the Lake of Menteith. As an example of medieval monuments, height and lady are sculptured side by side. But here the two lie each with "an arm under the other's head", the free array of the knight reaching over to clasp hands

COMMUNITY FROM PAST TO PRESENT PT. II

with his spouse. The knight, the first Stewart Earl of Menteith, had died four years after his wife, in 1309. Medieval sculpture was then attaining its height, as this monument, in spite of the ravages of time, bears witness. The following year, he had fought at the commencement of "the three hundred years war" with its repeated destruction of Scottish arts and traditions of peace. Under King Alexander III, "that Scotland led in love and law", peace within the kingdom of Scots allowed a union embracing Celtic Christian traditions and Norman arts. After this death this became all but impossible. So far as scholars can tell, one, this almost unnoticed monument, represents the "Celtic Renaissance" in the world.' The arts of Scotland, hitherto in touch with European achievement, were absorbed by invasion, and Gaelic traditions were only to be maintained by the very poor, whose debtors, for all time, we have become.

At the age of twelve God's Mercy and peace were sought. Latterly Roman Catholic prayers stressed the "Mercy of God", under my head." This prayer was the inspiration of one of the loveliest of Christian tombs, preserved by clan loyalty, respect for the dead, dirance and later fossilization on the Island of Grimshiva, where the Highlands meet the Lowlands at the Lake of Menteith. As an example of medieval monuments, height and lady are sculptured side by side. But here the two lie each with "an arm under the other's head", the free array of the knight reaching over to clasp hands

CH. 12

CONCLUSION

The importance of the 'regional' movement is inter-regional and inland international. In the case of the Highland, international order is required for its fisheries to recover, and for its weaving to find purchasers abroad as well as at home. The Highland crofter, who small-holding to find an inland market is its little bough, Stornoway. Without this triple basis of fishing, weaving and crofting for its economy, inland society will be hard up and its culture remain, not evolve. It is no less true that only by the development of each regional economy and regional society as we find them, will problems be held in check at home, and prevent the exploitation of one region the sweat of others.

A pioneer American Report acknowledges the debt of regional survey for the New Deal not only to France and Germany, but to a great English tradition, to the geographers, biologists and sociologists in Britain.[1] If anybody we can be proud of Scots and British initiative in planning, we must own, with Geddes, to humiliating slowness in its execution, and in the mobilisation of regional resources for social ends. The chief of our planning must be the re-making of society. In Britain it is not always realised that in the great developments of the New Deal the execution of concrete schemes which include civil engineering, industrial expansion and agricultural conservation, is accompanied by a social experiment, both urban and rural. Not only are geographers and economists, technicians, industrialists and officials called to survey and plan the Tennessee Valley, but sociologists and educationists are required to complete the work. Not only are the Highland Line, the Scots-Welsh Border, the edge of the other rocks of Britain and, only the place but the people are to be studied, represented and helped.

The planning movement is gathering impetus in Britain, as it spreads outwards from bombed towns to countrysides, embracing regions as a whole. It is certainly destruction, in war that has clubbed the nation into a spirit 'broad scale', awake to features of economic and social disintegration that preceded actual war-damage. It is certain that defeat of the common enemy called for common effort round the nation to face the economic and social consolidation at home. Yet the seeds of the planning movement were sown in peace, and only in peace can they germinate to fruition. Planning, prepared for by the survey of each region as a whole, must lead towards the freeing of its people not only from physical want but from economic insecurity. Based on the provision of work and a livelihood for individuals, planning should envisage a social and economic strength to realise the deepest cravings of each community and serve their highest ideals. It is a means to the end of the fullest realisation of the unity of life.

This book begins by viewing the 'Outer' Isles as a heart of 'the North and West' of the British Isles, the innermost of a series of regions extending from the North-east Isles to the backland margin of the English 'Plain'. Differences in landscape and community, in history and culture, in the ways of life and the work engrossing unique in itself, yet—it was suggested—all possess certain features of landscape and community, which marked them off from the 'Plain' of the South-east. Some fear physical and cultural disintegration or fundamentalism divide these regions. South-eastward from the Minch four were selected: the Highland Line, the Scots-Welsh Border, the edge of the other rocks of Britain and, only the place but the people are to be studied, represented and helped.

The planning movement is gathering impetus in Britain, as it spreads outwards from bombed towns to countrysides, embracing regions as a whole. It is certainly destruction, in war that has clubbed the nation into a spirit 'broad scale', awake to features of economic and social disintegration that preceded actual war-damage. It is certain that defeat of the common enemy called for common effort round the nation to face the economic and social consolidation at home. Yet the seeds of the planning movement were sown in peace, and only in peace can they germinate to fruition. Planning, prepared for by the survey of each region as a whole, must lead towards the freeing of its people not only from physical want but from economic insecurity. Based on the provision of work and a livelihood for individuals, planning should envisage a social and economic strength to realise the deepest cravings of each community and serve their highest ideals. It is a means to the end of the fullest realisation of the unity of life.

COMMUNITY FROM PAST TO PRESENT

APPENDIX I

only recognised relation of culture and environment.[1]

The economic foundation for the present day culture is commonly referred to as "the crofting system," a system of "peculiarly tenure of individually held small pieces of cultivated land combined with communal use of grazing land. On his small plot, typically under five and seldom over ten acres, the crofter grows a little oats and bar for his stock, a few potatoes for his family and dairy cattle, and, in some cases, a few garden vegetables. Anyone who is acquainted with the British small holdings will recognise the crofting relationship of the two systems." The connected element in the crofting system on Skye, however, is a distinguishing feature. In addition to the individual, the township has a common, communal right to a share in a specified area of land. Shares average for all British workers in employment are taken for October of both years. Then, taking the 1938 figure, 1 cwt. of oats, 1 lb. of tea, 1 lb. of sugar were 1d. or 16% per cent of the first, a figure to be related to the cost of living index, which had only risen from 100 to 101 per cent. The total wage-bill gave a still higher increase for Britain, from 100 to 104 per cent. Yet, as Sir Arthur Salter, the Economic Adviser to the Government, has pointed out, "the crofter's income from food does not greatly relieve them. The loss of employment following the loss of the cattle trade in 1930 and the rise in rents employment beyond the island.

Summing up the facts of this Appendix, it may be said that the Island Families (1) means for partial subsistence for the family, (2) means for a supplementary income; and (3) a home from which many go forth to earn a living, for themselves (and their families) northern—country contributing to national and local income there. Of these, many return later, either to found a home, if they have made a fortune during periods of ill-health or unemployment, or to retire upon the Island.

CHAPTER V

THE INLANDER'S HOUSEWIFE

The basis of the local economy, in terms of the contribution of the Inlanders[1] to the national economy and the number who depend on the land for all or part of their livelihood, is the crofting system. So much, therefore, explore the economic aspects of this cultural pattern in detail. As the system of land use and tenancy, crofting is an anachronistic survival in Western Europe. In Scandinavia, the medieval agrarian systems have been regretterred along four principal lines.[2] In central and some parts of northern Europe peasant proprietorship became the characteristic feature. In southern Europe the *mezzaro*, a peasant who paid a rent plus a share of his crop, appeared. Northern Europe became an area of large farms. In England and Scotland tenant farmers received most of the land. There is only one survival of the feudal open field village farm in England.[3] Despite individual efforts of Highland landlords to bring about at least a partial rationalisation of the inherited peasant economic patterns with those of rural British, crofting has been preserved. Certainly, the legal system of land tenure, which was

While
the Irish and Scottish Highland systems of land use, [illegible]
[illegible] and agricultural, they are distinguished by their respective systems of land tenure. The Irish small farmers of Ireland [illegible] tenure, in its 19 to seven clauses,[1] human groups for the end to attempt to maintain their accustomed habits and attitudes while the profit endeavour to free association for our ideas." For it is unique for the younger members of the society to resent the restraints imposed by the older people to punish deviation from traditional behaviour. Of Tairbert phases, a family, an activities the temps of interaction at smallton or tea time by saying grace and returning the chanks. This is part of the hospitality [illegible] of Kirkhamlands. The visitor is always asked to say grace.

What is true of the township on Skye, is also partly [illegible] true of the wider community. The Inlanders[illegible] the same church go out to know one another better because of a common faith, or their particular interpretation of a faith common to all. Some of the Inlanders belong to the Free Church, the minister, for 13 years there was no Free Church congregation. Our three Fieldfare attended the Free Presbyterian Church, and the minister at one Sabbath service held forth on the shortcomings of the Free Church. They left and began holding services in the Court House. In time the congregation grew, a church was built and there was a minister. More recently, a minister of the Free Presbyterian Church, who was noted for a certain amount of leniency, was so

chapel and its group.[1] In Skye the people can be as much attached to the sect or their minister as the group. The reason for this difference between Skye and Ruhra may be the control of the supernatural by several churches on Skye. As presently constituted, all the churches were formed at the turn of the century or later. The first Free Presbyterian congregation was formed in 1893. The present Free Church, one called the Free Church (continued), dates from 1900. The Church of Scotland is the result of unions with the Free Church in 1900 and with the United Church in 1929.

By assertion that attachment is sect and minister [illegible] can be substantiated by two events, one in Portree and the other in Dunvegan. In Dunvegan the Church of Scotland gave the Free Church and the United Presbyterian Church unites, the Free Church minister in Portree lost his congregation over to the United Presbyterian Church. In both these policemen. Moreover, it means the outside, the socially transmitted attitudes, behavior patterns, and techniques which are distinctiveness among the members of the community

gious groups." As a result of urbanization almost all 171
l areas have experienced the pangs of social mobility and 182
have escaped unscathed from a clash with the economic 771
es which impinge from the outside. This predisposes the 786
le to the appeal of an emotional religion, revivalism. 781
uently, the sect becomes uncompromising and rejects the
ide world in an attempt to bolster group security. The
ence of events on Skye enables me to add that the sect
also reject a great deal of the former content of the
ure. Be that as it may, the authors show how emotional [571]
gious movements restore or replace meaningful patterns
nteraction among groups whose social systems have deteri-
ed. Revivalism is a counter agent for anomie.

The first period of social and cultural disequilibrium 175
h the Sgiathsgrach experienced may be placed in the first 178
of the nineteenth century, with a climax around 1840. 771
paraphrase Loomis and Beegle, it was no mere coincidence 786
an emotional religious movement should have appeared and 182
d so many converts. The closing years of the eighteenth
ury had witnessed numerous changes in the content of the
ure and the collapse of the old social heirarchy. While
e events doubtlessly had an influence on all levels of
society, it was not until the turn of the century that
broke forth upon the masses. Within a decade a revival
reached effective proportions. This was a time of estate
ganization. The tacksmen, the traditional leaders, were
kly disappearing. The runrig farm was being abolished.
p were beginning to replace men in one parish (Eracadale).

172

172 ARCHEOLOGY--prehistoric culture sequences and chronology (e.g., as determined by geological and paleontological evidence, stratigraphy, typology, tree-ring dating); archeological supplementation of the historical record; evidence from epigraphy; historical inferences from archeological data; description of archeological sites or artifacts; etc. See also:
Archeology as a discipline. 814

131 Lewis is about 40 miles long. The distance from Stornoway to the west side of the island is about 15 miles. Along a tar-macadam road through Barvas parish 361 491 from its northeast tip toward the southwest, about 18 villages are clustered along a relatively flat coast for as many miles until the land becomes hilly. The road then narrows and takes hairpin twists around blind, 361 stony corners. Villages become fewer, and nestle in protected coves or string haphazardly across the face of the hills.

Shawbost (from the Norse sja or sjo meaning "sea" [632] and bost or bolstadhr meaning "dwelling" or "homestead") a village in the parish of Barvas, lies on three low hills on the west coast. Shawbost is 18 miles from Stornoway on a circular route in which Stornoway and Shawbost are antipodes.

172 On the south side of Shawbost bay, huddled beside the sea strand, is a cluster of ruins called Sean Bhaile (the old village), believed to have been occupied over 200 years ago when fishing was important in the local [348] economy. Banks of the streams are dotted with the ruins of old grinding mills and ovens for drying grain. [312] Fresh-water springs are still kept clear of rushes, although water is now piped to most houses from a nearby loch. Hundreds of place names are known to the villager

ing thieves, patches of heather, deer-grasses or moorland plants live as they can on thin layers of peaty soil. To relieve the hard scenery there are, on sunny days, glintings of water, lochs or rivers flowing uneasily over beds of primordial rock.

Area (in acres)

	Land	Inland water	Saltmarsh	Foreshore	Tidal water	TOTAL
Harris	123,752	3,110	—	6212	105	133,178
Lewis	404,184	24,863	230	7775	150	437,200
						570,378

PEAT AND RIVERS

The peat overlays of the island are reckoned to be not much more than 7,000 years old. To strengthen this figure, when the megalithic circle of Callernish, on the west of Lewis, was excavated by Sir James Matheson in 1857-8, a depth of 5 ft of peat was removed to expose the giant stones. Only the tops of these stones were showing before excavation was begun; the resultant calculation confirmed the age of this infertile blanket. Peat is decomposed organic matter without the sweetening of lime. The resulting material is sour, and highly acid in character, which checks the bacterial action necessary for good soil to be made. With compaction and age, peat becomes colloidal in texture, with a water content of about 92 per cent. Peat is still being formed in Lewis, though its progress is imperceptibly slow.

Frequent diggings have uncovered evidence that the island was once densely wooded. The remains of trees, and the bones of certain animals and birds associated with savannah and woodland, add point to this. Under the blanket of peat lies what is called boulder clay, glacially deposited on the gneiss rock; many acres of this clay have been exposed through centuries of digging up peat for fuel. Such skinned ground is called *gearraidh*, and it forms the basis of a soil which, when worked together with shell sand and seaweed, becomes quite fertile. Of natural soil, so much taken for granted in richer places in Britain, there are a few patches in Lewis, at Garrabost and Ness; the valley of Strond, near Rodel in Harris, has much strong red loam.

Lewis and Harris

3 HISTORY

FOR all that Harris and Lewis are remote and relatively inaccessible, their history has not been particularly insular. Out of all proportion to its size, the island has made a significant contribution to each developing phase of Scottish, British and Commonwealth history. Even European and American history have Hebridean touches. In a local context, each district in the island has a parti-coloured backcloth of history, of tradition, and of story against which life and events were enacted by each succeeding generation.

Before the era of charters, Harris was a political part of Lewis. The name is derived from 'heradh', meaning a district (equivalent to the modern parish). The word 'Lewis' has been tackled by etymologists who have extracted such meanings as 'light', 'Liot's dwelling', 'wharf' and the romantic 'songhouse'. But nearer the mark is 'a place abounding in pools', which it is. In its earliest form 'Lewis' appears in an Irish MS, the original of which is ascribed to a contemporary of the Irish king Brian Boroimhe (Brian Boru of the pipes fame).

The MS describes the Battle of Clontarf in 1014, at which Norsemen from Lewis fought against the Irish. It has been suggested that even before this time there was another name for Lewis. Pliny, Ptolemy and Solinus all place on their maps a variation of 'Hebrides': Hebudes, Ebudae. According to a Gaulish glossary, 'ebudae' means *terrains incultes*; and 'ebeid' is a British word meaning cornless. Solinus, writing in the third century BC, states that the inhabitants of the Hebrides did not know the use of corn, and lived entirely on fish and milk.

PREHISTORIC REMAINS

Where does history begin? That there was a pre-history is evidenced mainly by the multilithic and monolithic erections to be found in various parts of the island. The abundance and character

HISTORY

172 of these prehistoric remains indicates that before the Christian
era began the island supported a considerable population. Gener-
ally speaking, the remains left by unrecorded history indicate three
phases of cultural and economic development: the Stone Age, the
Bronze Age, and the Iron Age. The dates usually associated with
these 'ages' are approximate where the island is concerned. Be-
cause of their remoteness and isolation, the inhabitants may well
have reached, say, the Bronze Age state of civilisation at a much
later date than did people living in more direct contact with civili-
sing influences. It has been conjectured that, where Lewis is con-
33 cerned, peat several feet thick may have covered much of the
34 ground which, in another time, was cultivated and lived on;
and that the peat blanket hides the remains of very old construc-
tions. Chambered cairns, duns or forts (round towers) built in
lochs, by the seashore and on promontories, galleried duns, earth
houses, standing stones, stone circles and ecclesiastical ruins are
all to be found.

The duns, or brochs, are believed to have had a defensive
112 function, acting as lookout towers. Primitive dwellings would have
been scattered nearby, with generally free-ranging livestock. If
attack threatened, inhabitants and cattle together entered the
tower, whose double walls held rough but welcome compartments
for temporary living during the siege. Sometimes a dun was built
on an islet in a freshwater loch, such as Dun Cromore in the Lochs
district of Lewis; there is a similar example in Loch Bharabhat
in Uig. A stone causeway connects each with the nearest point
on the loch shore. Many of these causeways had a rocking-stone,
a stepping stone so placed that the weight of a foot on it rocked
it enough to warn the inmates of the dun that someone was
approaching.

The most famous of the round towers is at Carloway, perched
on the crest of a rocky slope on the west coast of Lewis near the
crofting township of that name and overlooking much of Loch
Roag. Its average external diameter is 47 ft, the walls varying in
thickness from 10 to 12 ft. Though in a ruinous state, one side of
its wall is still some 30 ft high. Dun Carloway is, after the broch
on the Shetland isle of Mousa, the finest example of its kind in the
country. About eight miles from Carloway, at Bragar, is Dun

PREHISTORIC REMAINS

Loch an Duna, now just a ruin. However, when Martin Martin 172
saw it in 1695 (he seems to have ignored Dun Carloway), he
described it as 'of a round form, made taperwise towards the top,
and is three stories high: the wall is double, and hath several
doors and stairs, so that one may go round within the wall.'

Most people have heard of the Callernish stones, and rightly
so. For of all the world's megalithic monuments, only Callernish
in Lewis is known to be arranged in the form of the Christian

The ruined broch or dun at Dun Carloway, on the west of Lewis. It was inhabited until the early eighteenth century, and ranks with the broch at Mousa, Shetlands, as a fine example of this type of structure. The purpose of these buildings is still debated

cross: a stone circle and four avenues of stones leading from it.
It is reckoned that this stone circle was a great religious centre on
a par with Stonehenge, Avebury and Carnac. There are a number
of standing stones elsewhere in the island, both in Harris and
Lewis; these stand singly or in small groups. Within four miles of
Callernish are no less than seven smaller stone circles, and of these,
including Callernish, three surround burial cairns. The Callernish
circle is placed on a small rocky promontory of Loch Roag, easy
to reach from both north and south parts of the island, with good

HISTORY

• 172 anchorage in the Loch. The circle enclosing the cairn consists of
thirteen stones and has a diameter of some 37 ft. The avenue,
which approaches from the north, contains nineteen stones. It is
27 ft wide and 270 ft long; it forms the long limb of the cross plan
of the design. Southward was another shorter avenue of twelve
stones; and eastwards and westwards two lines of four stones each,
thus completing the cross design. The stones range in height from
3½ to 15½ ft. Each is packed in at its base with small stones to
keep it firmly in position. There are signs that Callernish, like
Stonehenge, was built in stages. The material, unlike that used for
Stonehenge, was from local sources (often Lewisian gneiss).

In the Sound of Harris, on the small island of Berneray, there
are two stone circles of some interest. Scattered through Harris
and Lewis there are also many solitary stones to be seen: at Borve-
more, in Harris, which appears to have been one of a circle, and
at Nisabost, also in Harris, where stands Clach Mhic-Leoid (Mac-
Leod's Stone). Another standing stone is on the edge of the rocks
by the shore, just below the church, on Boreray, one of the now-
uninhabited islands in the Harris Sound. In Lewis, the menhir
which figures most in story and legend is the Clach an Truiseil,
on the gentle slope of a hillside near to Balanraisal, on the west
coast. Nineteen feet of this stone are above ground. It is about 6 ft
in width; nearly 4 ft at its maximum thickness. The tradition in
Lewis is that the stone was erected to commemorate a victory by
the Morisons of Ness over their long-standing enemies the Mac-
Aulays of Uig; of course the stone is older than any of the Lewis
clans.

[113] For a full inventory of the ancient and historical monuments,
one is referred to the 1928 Report of the Royal Commission
which was set up to record such conductions in the Outer
172 Hebrides. Apart from those items of pre-Christian years, there are
346 a number of other structures with an ecclesiological reference:
Teampull Eoin, at Bragar; Teampull Pheadair, at Shader; Tem-
pull Bhrighid, at Mid-Borve; Teampull na Cille, at Ceann a' Mhais-
ton; Teampull Ronaidh, at Europie, and others. These latter, to-
gether with the Tigh nan Cailleachan Dubh (house of the black old
women), indicate a reasonable degree of saturation by some form
of religious recognition; the names suggest a period about halfway

[TEXT CONTINUED ON PAGE 37]

PREHISTORIC REMAINS

to AD 1000. The base of the missionary work was most probably 172 •
Iona. The old Celtic Church, with its monastic basis, sent out 346
many who sought the hardship and solitude of life in the islands [197]
of the Hebrides as a means of example to the inhabitants. Today,
the ancient cell sites, churches, burial-places, are in ruins, no more
than a heap of grass-covered stones meriting scarcely a glance.
Even on the outlier islands, such as the Shiants in the Minch and
the Flannans in the Atlantic, are found these relics of ancient sites
where the religious elements were overriding enough to be
carried to the present day in traditional form.

From time to time archaeological finds are made in various 172
parts of the island. Perhaps the most famous was the discovery of
the Uig Chessmen, to be seen today in the Museum of Antiquities
in Edinburgh and in the Ivory Room of the British Museum. In
the spring of 1831 an exceptionally high tide, with a gale wind,
undermined and carried away a considerable portion of a sand-
bank at Ardroil, in Uig. A small stone building, like an oven, was
exposed at some depth below the surrounding ground level. A
crofter who happened to be working nearby saw this and, excited
by curiosity, broke into the structure. On seeing what he thought
to be an assembly of elves and gnomes, he fled home in great dis-
tress. His wife, of a bolder nature, went to see for herself and
recovered ninety-two pieces of ivory figures: fourteen draughts-
men, eight kings, eight queens, thirteen bishops, fifteen knights,
and twelve footmen or pawns. These chess pieces, carved out of
walrus ivory, date from about 1140 to 1160; they are of Norse
origin, though probably carved by monastics who knew in detail
the dress of the dignitaries which make up the set.

Some details of how the people of the Western Isles lived 3,800
years ago were revealed in an archaeological excavation in North-
ton in 1966. This site showed evidence of more or less continuous
habitation from the late Stone Age onwards; as each succeeding
layer of sand was taken away (it was excavated to a depth of some
14 ft), centuries-old stages of habitation were revealed. The higher
levels of the site belong to the Iron Age; the earliest level dates
back to the late Neolithic/early Bronze Age (about 1800 BC). Such
sites as this are extremely rare in Europe, and Northton is the only
one of its date in Scotland. Many fragments of the pottery known

HISTORY

• 172

Artist's impression of some of the twelfth-century walrus-ivory chess pieces found at Uig in 1831

as beaker ware, from its distinctive shape, were recovered. The
diet of these early Harris folk appears to have been largely shell-
fish, particularly limpets. The house of the latest period is ruined;
three courses of walling were revealed.

103 Placenames have often been a mirror of history. The biggest
648 event in Harris and Lewis's history was the Norse invasion, com-
memorated in the names of many townships that still exist:
Ness (nes, headland), Arnish (Ari's nes), Erisort (Eri's firth), Car-
loway (Karli's bay). But the Gaelic is there too: Loch Shell (Sealg,
chase or hunt, thus endorsing Dean Monro's statement that this
lock bordered a deer-forest), and similar topographical features.
While the Norse names are to be found on the island coasts (the
bosts and stads), the Gaelic names are largely found in the interior
(eg, Airidhs—shielings).

ISLAND, WORK AND PEOPLE PT. 1

184 Comparisons at the present day are most illuminating.
[191] In the Hebrides one may pass from Calvinist Lewis-and-
Harris to Catholic Barra, through South Uist, where
Presbyterian and Roman Catholic dwell, side by side, in
mutual respect. Although their home life, economy and
language are the same, the influence of a comparatively
[121] recent divergence in religion is marked. Such Island
evidence, present and past, forces one to re-examine con-
clusions upon life in the Lowlands accepted until recently,
and to seek for the truth upon earlier forms of life in
common and for their meaning today throughout 'the
North and West'.

175 Ancient elements of unity, and later ways in which
172 these were broken, adapted or remade, region by region,
are being unravelled. The Old Estate Plans, made at the
427 outset of the agricultural revolution, show these immedi-
(21 ately before the re-planning of fields and farms (*circa*
196 1750–90). These plans also reveal the existence of still
[184] earlier types, not otherwise recognisable even on the spot.
With their rentals (when available) they reveal the ways
in which old joint farms were placed under a single tenant,
as in Lathain, or were split up among several tenants, as
in Ayrshire.[1] From such geographical data, both the
economic and the deeper social aspects of rural life emerge
with new clarity. Such data may be linked to Planning
Surveys of land and rural life for tomorrow.

621 Now, although so fundamentally equalitarian within
• 427 themselves, these hamlet communities of the Gael were
subjected to the overlordship of a chief or laird, either
directly or through an intermediate gentleman-tenant, a
[174] tacksman'. History, with archaeology read in history's
[192] [1] For Lothian, see Arthur Geddes (1938 and 1951); for Ayrshire, see
[113] J. H. G. Lebon, *Stat. Geog. Mag.*, Vols. 62, 1943 (pp. 7-13); 63, 1946
(pp. 100-110). Further references in Bibliography.

CH. I ENVIRONMENT AND LANDSCAPE

621 light, suggests that such lordship goes back to early con-
427 quests of self-supporting agricultural and pastoral com-
174 munities by well-armed raiders of many races, including
• (172 the Celtic-speaking swordamen of the Iron Age. The last
and most notable of these conquering raiders were the
Norsemen. Their influence was profound, whether, sailing
direct from the Scandinavian forest settlements and fjords,
they raided and settled as heathen Viking crews, or, at a
later stage, they invaded England from Normandy—that
fertile province which they had made theirs in fact and
name—under the panoply of civilisation and with Papal
benediction. A generation after the Conquest they com-
menced the penetration of Scotland.

183 The paradox of loyalty to one's fellows with loyalty
181 to a lord, of stoutly equalitarian thinking bound up with
fervid admiration for an aristocracy, is nowhere more
[614] marked than among the Gael. They sought to reconcile
these conflicting loyalties by claiming common ancestry for
chief and people, as the children (*clann*) of a hero of
history or myth. The years 1945–47, which marked a
centenary of the last of the desperate Jacobite Risings,
stood at the close of the latest of many wars in which fame
has been won for the symbol of clanship—the tartan, long
proscribed (by the Act of 1747) 'to every man and boy
in the Highlands'. At such a time, the Gaels' loyalty to
the death cannot be forgotten although old kings, old
[121] chiefs have gone. But its paradox must not only be re-
[182] membered but understood, from its roots in communal
[184] life and environment through history. Not until this is
done can important phases of our own time be under-
stood, such as the failure of Lord Leverhulme's seven
years' endeavour in Lewis; nor can the present oppor-
tunity of Highland renewal be grasped by the help of

133 most northerly outlier, yet, in the main, one is struck
not by the variety of rocks (except for the 'Stornoway
Beds') but by their homogeneity. It is structure, causing
the uplift of certain masses relatively to others, more than
differences in rock-type, which has guided the work of
erosion, in sculpturing both the Island's plan and the
details of its forms. Submergence of the land has fretted
the coastline into a zigzag line of ridge-capes alternating
with valley-mouths flooded or 'drowned' by the sea, as
inlet and loch.

316 Historically the gneisses were of little value. The fact
(174) that they tend to split still helps the Islander in building,
as it helped his ancestors when they raised the great stone
• (172) circles at Callanish on East Loch Roag. Except where
they are very basic (non-acid) in composition, they make
(135) poor road metal. Yet the gneisses are not quite devoid
of economic minerals, which include masses of pegmatite,
and the only large body of anorthosite or lime-feldspar
rock in Britain, conceivably a source of alumina for glass
(139) manufacture.[1] Two feldspar quarries opened at Linga, bay
and Northton in South Harris in 1941 employed sixty men
during the war, the mineral being despatched from Lever-
burgh for use in the Staffordshire Potteries in the manu-
(178) facture of porcelain insulators. The higher grade mineral
in Scandinavia and the better transport facilities there led
to closing the quarries, with little hope of their reopening.[2]

4. *Land-forms and Sea Floor*

133 To the faulted structure is due not only the Island
plan, but the highland in middle and south, uplifted rela-
(113) tively from the sea to be supernatural. The fishing, too, is

[1] C. F. Davidson, "The Archean Rocks of the Rodel District", *Trans. Roy. Soc. Edin.*, vol. 61, 1943, pp. 71-112.
[2] J. B. Caird, "The Isle of Harris", *Scot. Geog. Mag.*, vol. 67, 2, 1951, p. 92.

511 coat, was thought to be supernatural. The fishing, too, is
236 of good standard: a typical annual catch including 1700
511 salmon, 5000 sea-trout and 1800 brown trout; and it was
for this, as well as for the shootings, that the moors per-
taining to the different shooting or fishing lodges and hotels
137 were bought at Lord Leverhulme's sale. The absence of
233 foxes was important to sheep-rearing before the introduc-
tion of guns, and is still a favourable factor.

5. *Sea-fishing*

226 Fish have always contributed to the diet of the Islesfolk,
198 whether they fished from coracles or boats, or with 'lang
(262) wands' from the shore as they still do, and as they did in
the days of Dean Monro and, no doubt, right back to
(135) neolithic times. The relative importance of fishing and
(241) agriculture, however, has always varied according to place
and time.

182 Fishing in modern and historic, and also in prehistoric,
226 times—to judge from the kitchen middens of Uig—has
241 always flourished more where there were deep sea-lochs;
(178) and settlement resulted, even though rocky hillsides made
ploughing difficult or impossible. Conversely, agriculture
• (172) has offered better opportunity on smooth coasts with a
variety of soils, though fishing was poorer there. Thus
the men of Stornoway Bay and Eye, of eastern lochs and
of the Harris bays, like those of Loch Roag on the west,
have long been partly fishermen. In the extreme north,
too, men of Ness—with the chance of choosing their fishing
grounds on the north, west or east of the island and with
their little rocky port giving shelter, of a sort, from south-
(467) west gales—were good fishermen; they are good seamen
(829) still. "The fishing of the Barvas folk" is an old gibe,

361 luck in land, but a disadvantage where control of a single
(423) area is desired by one man. Regularisation of roads,
(182) houses and holdings is relatively modern, for crofts and
dwellings were once grouped in hamlets usually close to
the seashore. The early hamlets can still be made out
• (172) from their ruins among the rocks, sometimes sketched in
the 'six inch to mile' Ordnance Survey plans. They were
without formal order or arrangement, each homestead
within its boundary wall. Where ploughing was and is too
difficult, the soil is heaped up in ridges, 'lazy-beds', and dug.

361 Shawbost, on a rocky part of the west coast (six miles
491 south of Barvas) consists of three main sections: a scatter
of houses and ruins by the enclosed loch, two main streets
linking the loch to the main coastal road, and inland another
short street. The three can be made out on a 'quarter-
(175) inch' map. The two main streets were laid out by the
311 Estate Officers following removals in the mid-nineteenth
century from another part of the island, Uig, and the third
running inland was laid out still later, when population was
growing and land was needed. When the third street was
laid out, the landlord, Matheson, lent good plough-horses
for preliminary reclamation. The irregularly placed black
houses near the sea are tending to be rebuilt close to the
main road.

361 In addition to this type of movement, farms 'broken
178 up' once more into crofts have been laid out on a regular
grid plan, each house placed on a corner of its five, ten,
311 or twenty-acre plot (*e.g.* Galson, Dalebeg, etc.). 'Skinned'
(254) land may also be reclaimed for crofts by squatters tolerated
by the community, or on a regular grid by agreement of the
assembled crofters, guided by the Department of Agri-
(191) culture. Thus two distinct tendencies are seen: the grid
plan in new settlements, road alinement in existing ones.

175 the eighteenth century these 'black houses' would be
342 replaced by houses of stone and lime, and a few of those
361 survive.

Of the fort built by Cromwell on the Point, no signs
• 172 remain. For tactical reasons, the best site would seem
194 to be the neck of the Point, from which the guns of the
fort could defend the houses, stores and quays. The
712 irregular building line near the point marked T, a
Town House at a later period, may correspond to the
175 northern angle of the fort. The fort appears to have been
standing when the original drawing was made for the
712 engraving in the Old (or First) Statistical Account of
Stornoway, *c.* 1793.

By the time Wood drew his plan in 1820, houses on
175 the Point no longer looked exclusively on to the axial
361 street. The main alinement of interest came to be the
shore, marked by a properly built quay. Today, the Point
Street houses have fallen into decay but many older houses
still stand in fair repair along the 'Beach' or Quay.

175 Thirdly, from the nineteenth century, until 1914, two-
361 storey, flatted tenements, hotels and houses of middle-class
34 people were built upon a grid that followed upon the old
field plans. In an alternative plan, proposed about 1820
but not adopted, a diagonal vista opened out to the Estab-
lished Church, built in 1794 on rising ground. The
modest Seaforth Lodge which had stood across the harbour
was replaced in 1850 by Stornoway (or Lews) Castle, its
pseudo-Tudor style designed to please the new improving
landlord, Sir James Matheson, who had purchased Lewis
in 1844. Presented to the people on the break-up of the
Leverhulme Estates in 1925, a new technical school has
175 taken it over. A few villas also grew up on outlying roads.
361 Thus, a mere village in 1801, and among the smaller burghs
662
226

174 of the Norsemen, lay a succession of earlier periods. A
23 phase of primitive settlements is traceable in archaeo-
• 172 logical remains and in recent and contemporary survivals.
174 It is shown in the physical race-traits distinguishing
those in one part of the Island from those in another.
Fragments of tradition telling of the first Christian
missionaries survived the Norse invasions and settlements,
dated from A.D. 800 or before, down to Haco's defeat on
the Clyde at Largs in 1263. These fragments can be
linked to chronicles and to later tradition, on which they
throw fresh light.

(140) A survey of the archaeology has been published,[1] but
comparatively little, as yet, on race. Yet different com-
munities are distinguished by marked racial types or strains.
Although many, indeed most, of the race-strains of the
Island must have entered it in prehistoric times, some are
linked to tradition, and history accounts for the more
(141) recent immigrants. The striking element of race in the
Outer Hebrides is a broad-headed type prevailing from
Barra to the Lews, accompanied by medium stature and
dark hair; it is also found across the Northern Minch.
But within the Island are notable differences.

829 Variety of race being accentuated by difference in ways,
the communities still comment pointedly upon one
another! For instance, an old saying is not forgotten:
(538) "The folk of Cladach, but the gentlemen of Uig!"
(*Muinntir a'm Chladaich, ach daoin' uasaile Uig*).
(143) 'Cladach,' being the western 'Beach' district possessing
(232) ploughland but poor fishing, which covers the modern
(133) parish of Barvas (excluding the north-west cliff-promontory

[1] Royal Commission on Ancient Monuments, *Outer Hebrides, Skye etc.*; 1928. V. G. Childe, *The Prehistory of Scotland*, 1935; *Scotland Before the Scots*, 1946.

829 of Ness), while Uig is the most westerly promontory with
(433) its natural fishing harbours. The authorship of the pro-
(637) verb may be ascribed to the ladies and gentlemen of Uig;
(133) yet the personal appearance of the victims, who are more
broad-headed, gives the proverb a physical foundation.
174 Again, the tall men of Ness, dark or fair, and rather longer-
• 172 headed, still form a group apart from those of Cladach,
141 each having taken root in prehistory, *i.e.* earlier than
surviving record.
144 Such facts correct several current misconceptions as to
race and heredity in their relation to Gaelic society, past
and possible. First, it is still common to contrast a
'Celtic' with a 'Norse race'. Now, Norse immigrants
belonged to several races, and when they arrived, several
race-streams were already mixing and eddying in the
Isles. After the immigration of Norsemen, the next re-
corded was in 1611, consisting of gentlemen-tacksmen from
Kintail and burghal settlers to Stornoway, who were com-
posed of Gaelic-speaking families from Easter Ross, where
the people of today resemble some Scandinavian types
rather than typical broad-headed Lewismen.

Second, it follows that no sweeping generalisations can
yet be made as to the ways and habits of particular races.
The "Celtic race", one reads, have "never taken to the
sea" as have the Norsemen.[1] The facts in the Island are
that though the men of Ness, with a possible Norse ad-
mixture, were considered better fishermen than those of
Cladach, and the present generation includes a great
number of seamen, their opportunities have been greater
—their cape commanding wider fishing grounds and their
little port providing relative safety in storm. And the men
of Lochs and of the 'Bays' of Harris, though they show

[1] For example, in the Brand Report on Lewis (1902).

141 little sign of Norse blood, can hold their own as fishers wit
• 172 the men of Ness.
174 Third, it is still commonly stated not only that th
"great majority" under the clan system were "witho
174 any legal status", but that their tenure "depended on th
(613) good will of the chief or tacksman".[1]

As the last lawbooks of the Gael were taken from Lew
174 by its first mainland lord in 1611—never to be heard
again—it may well be that, as recognised in the Northe
675 Isles, so in the Western Isles, peasant tenure was perm
(175) nent according to regional law. In practice, mere 'goo
will' is so uncertain a quantity that if this statement ha
been true, it is hardly credible that communities cou
have remained so stably rooted as their race-types sho
them to be. Evictions of groups or individuals at th
whim of chief or tacksman would have broken down the
(178) homogeneity of race. In the Lowlands, where evictio
(189) had become so frequent by 1500 and insecurity for th
mass of the country people has prevailed ever since, suc
localisations of race would be unthinkable and do not exi
except in certain fishing communities who possess a prid
almost a caste-code, of their own: the Newhaven fishe
within Edinburgh remain apart, with a dialect and a dre
of their own. Great stability of tenure—in fact as
customary claim—is shown by the racial homogeneity
Gaelic communities.

174 Lastly, it is common to state that the nobility an
gentry of a countryside constitute its 'old' or 'origina
families. It is true that some land-owning families see
'old' compared to recent purchasers—successively th
merchants and lawyers, venturers and planters of th
(113) [1] From a representative report on the Highlands and Islands, that of t
Scottish Economic Committee, 1938 (Historical Preface, p. 9).

171 ●
182

than on business. The fraternal orders were gone. ch attendance had become sparse and irregular. These ges led to a decline in the strength of interpersonal ments and a feeling of indifference toward one another. third conclusion is that these changes were followed by ecline in the extent to which norms are common and clear." class membership is defined on the basis of interaction, activities are much alike, and the interests of class ers coincide. Ranking is based upon norms, in particular status and role of leadership in community affairs. A ase in community activity had resulted in a weakening oth norms and ranking. His last conclusion is that the ges in the intensity of everyday relationships have led loss of social control by the group over its members. tions were not punished by avoidance. All action was left e state. Here, then, is anomie. Let us compare the porary behavior patterns of the Sgiathanach with the owners.

178
182

There is evidence that the Sgiathanach no longer collabo- in group activities as much as he once did. There has a decline in the amount of cooperation in the work of ting. In many activities, of course, the need has disap- d. The individual family can easily perform many of the , such as the ploughing of a few acres of land. In some ships it has become the practice to pay the sheep club shareholders to insure the presence of enough men and to handle the dippings and shearings. In others,

else the spouse is likely to lose status.

The most powerful of all agents for social control are the old men of the neighborhood. Through their position in the church, a religious sanction for their prestige status, they enforce conformity to the norms of behavior which religion has sanctioned either positively or negatively. No one, nor any group, has been successful in questioning the right of these venerable men to maintain their habits and statuses which have been preserved over the generations. The baptism of a man's children and his own salvation depends on acceptance of the authority of the elders, for they will be his judges.

As far as the contemporary scene is concerned, there is no anomie. The content of the culture has been greatly modified, but the form, the underlying distinctive pattern, has been preserved. We are dealing with a single tradition in which the norms of behavior and the sanctions for them have remained common and clear. This is all the more striking because there have been periods in which cultural and social disintegration threatened to overwhelm the Sgiathanach. This brings us back to the role of religion in preserving cultural continuity.

Loomis and Beegle have employed Durkheim's theory to analyze the growth and spread of fundamentalist religious sects in contemporary United States.[16] They conclude: "It is no mere coincidence that various types of emotional religious sects are now among the most rapidly expanding

---

[16] Loomis and Beegle, Rural Social Systems, pp. 401-407.

lordly rank: a working, equalitarian democracy dominated by an aristocracy proudly refusing to work. The fascination of Gaelic poetry, romantic, full of the elements stand out so clearly, and, secondly, that links were forged in clanship which made its living stable, though heavy, a thing that alone with pride, and beauty too.

06 CLANSHIP, COMMUN. DESCENT AND CLAN-HELP ('CUIDEACHT')

To what extent is it now possible to disentangle the two contrasted elements of the old clan, the tribal and the farm-estate and township? Prehistory is hard to unravel; but the successive waves of conquest flung upon the Island shores have left their jetsam, unmistakably. The circle of hors [illegible] near a bench or commanding site recalls the tenants' village grouped close to the castle of the chief, from early history down to the Forty-five, and suggests a primitive form of feudalism or of Celtic clan-organisation add their part. In Uist one may still hear the ancient heroic lays traditionally ascribed to Cuchan, Cuanna, son of Finn or Fingal—lays of which Macpherson's sonorous prose gave the reinforcing. The Fingalian tales differ from the lays, being frankly fantastic. Levis had its own cycle of Fingalian tales; examples are given by W. C. Mackenzie (1919). Both lays and legends tell of an aristocracy or warrior class, the Fenians, of their enjoyment of the chase, and of their relative comfort, with wealth of gold and silver in banners and flowing mantles. The chase combined with riches implies the existence of the necessary means to feed and clothe the huntsmen. The traditions of the Cuchulainn cycle, with clear approximation to historical and archaeological truth, tell the same tale. Historically, in-

coming Viking chiefs, who often intermarried with women of the older aristocracy, seem to have retained some elements of a pre-existing order, as did their successors, the Scots-Norman lords.

So, from history back to 'proto-history', there is increasingly discerned the stages of superimposition, in the Isles as elsewhere. In Central Europe archaeology has recapitulated the stages by which peasant-villagers were raided, then conquered by a warrior horseman, on horseback or battering better arms, who had ridden in from the drying grasslands further east. In the Isles the later conquerors were the fierce raiders from the sea, sailing in from the fjords of the North. An unbroken chain of tradition from Viking to Scot, from a vividly conveyed in the stirring saga of the Galley or Britian of Cleasamal, composed only a year or two before the Battle of Largs, Forty-five (epitomised in Chapter VI (ii).

When the conqueror had won the submission of the conquered and secured his livelihood, comfort and leisure by their work, he came in time to bring their interests nearer to his own. Yet whenever the Clansfolk of Finn or Fingal—lays of which Macpherson's sonorous prose gave the reinforcing. The Fingalian tales differ from the lays, being frankly fantastic. Levis had its own cycle of Fingalian tales; examples are given by W. C. Mackenzie (1919). Both lays and legends tell of an aristocracy or warrior class, the Fenians, of their enjoyment of the chase, and of their relative comfort, with wealth of gold and silver in banners and flowing mantles. The chase combined with riches implies the existence of the necessary means to feed and clothe the huntsmen. The traditions of the Cuchulainn cycle, with clear approximation to historical and archaeological truth, tell the same tale. Historically, in-

warfare—disarmed its intimates do with the home, with peace. The web the women had spun, woven and bleached together—the sheets to be a sarament when the tartan was prescribed to men—the tartan worn as a uniform with "England's cruel red."

The frames of this law, which stood on the statute book for over forty years, took full cognisance of what they [illegible] Appended to the Act of 1747 was an oath which reverend every benediction said by the women at their work: "I do swear, as I shall answer to God at the great day of judgment, I have not, nor shall have, any gun, sword, pistol or any other weapon, and never use targe, plaid or any part of the Highland garb; and if I do, may I be cursed in my undertaking, family and property—may I never see my wife and children, father, mother, relations—may I be killed in battle as a coward and be without Christian burial in a strange land, far from the graves of my forebears and kindred; may this come across me if I break my oath." This Act, as law and symbol, struck full at the community life of the Highland clan, and clan community, in which labour and prayer had been indissolubly bound.

07 WORSHIP, CONGREGATION AND PERSONAL: THE BOOK AND THE WORD

Little remains of the tradition of worship in the two centuries subsequent to 1746 ; temples' whose ruins stud the shores

of the Isles, and in which the people met, though far from any thing. On the sandy machrins, amongst bent, orchids and shrines and chapels seems to have been lost, as small are the remains of the cells and oratories worn as a uniform with the shrines and chapels where the services conducted by the women, who organised and sustained the work, whose written accounts have come down chiefly from those who were out of touch with rural needs or ignorant of the language spoken in intimate, and whose other training had removed them from sympathy." As for those whose private memoirs, stripped or subservient to system bound them to prelate, lord or king, they roundly condemned free congregations.

Nevertheless, fragmentary records have come down, such as those of Martin and Pennant, related in Chap. xiv and described the little church where the people still kept a [illegible] Sabbath, assembling together, without the presence of a clergyman. Napier's Memoirs of Macdonald by St. Kilda's fabulous isolation led Martin to describe the inhabitants as worshipping God in a way that can be mentions similar worship elsewhere. Thus in lonely North Rona, isolated for the last five hundred years

[illegible]

[illegible]

[illegible]

time, as we saw in the preceding chapter, archaeology reveals the significant facts, textual not least and a cultural aspect of cultural economy are of great antiquity.

It is generally believed that the Scots arrived in the Hebrides from Ireland in the ninth century. Even though tradition belief rests on broad and some obvious early chronicles, the specific mention of Skye in the Annals of Ulster between 581, when the people are said to be paying tribute to the King of Erin and Alban, and 794, when the Norse pillaged Skye, indicates some affiliation. During this early period Skye may have been inhabited by a Dalriadic (tribal), a member of which formed a Gaelic (literally a great tribe) or province. In that as it may, the Norse who had some of Ireland, an ambition that was stimulated by a conflict of pagan and Catholic religious ideals, in the eighth century, began to settle in the Isles in the ninth. Since they had been driven out by Harald Fairhair, the first king to establish political unity in Norway, the entire earth proceeded to harass Harald's territories until an expedition reduced them and annexed the Hebrides to Norway.

Clansmen genealogy	37	

Hundreds of place names are known to the villagers which are not marked on any map. These place names constitute part of the oral tradition of a population which has lived in a confined geographical area for generations.

In most of Lewis, village and township coincide. The village of Shawbost is composed of two townships, South Shawbost in which the crofts spread outward like a fan from one side which curve over an uneven landscape, and North Shawbost which is composed of linear strands (see Map C), in which the crofts are perpendicular. Each township has its own common grazing land, and its own grazing committee. All of South Shawbost and part of North Shawbost belong to one private estate (which includes other townships to the southward), and most of North Shawbost belongs to an estate which extends to Barvas. Beyond the fact that non-crofters in South Shawbost have found it difficult to obtain grazing status, little difference between the two townships appears to be due to their belonging to different estates. As elsewhere in crofting regions, the landlords of the two estates are concerned mainly with the sporting potential of their land.

The two townships are themselves divided into named neighbourhoods (cf. Valles 1955 for a discussion of "natural neighbourhoods" in crofting areas).

In the last half of the 19th century, many families were "cleared" from the district of Big and resettled in Shawbost. According to a local version of village history, the Crofters Commission gave some North Shawbost and resettled them in New Shawbost. "The people from Big were fishermen, so they needed to be by the sea. They wouldn't take a croft in New Shawbost at all." According to another version, the crofts once extended all the way across from Carnan to the loch; when the Big people came, the crofts were chopped in half, and the street called Sráid Dúigh was created.

Map error effect the Constables had on land use and animal husbandry, they are now referred to as "tyrants," who went mad or committed suicide after the Crofters Act of 1886.

Carts and horses were tethered or hooted within easy walking distance from the township; sheep could be left on the moor without much surveillance. At a much earlier time another dike existed out beyond the township dike. The dikes were used according to principles that are grating schemes today: the sheep were kept far out on the moor, beyond the second dike, until midsummer when they were moved in closer to the village. At this point they were still out of the arable land of the

For example,
a Widow Catherine lost "one red
cow and the Cnal (£10), one dun cow (£3/10), and one
grey mare (£1/10)." The family is said to have paid rent
by being fiddlers for "the castle" (the home of Sir
James Matheson), thus earning the patronymic, "Fiddler."
Their income stopped abruptly when the Fiddler at the
time, a great-great-grandfather of Gerecmaine now living,
converted to the Free Church and emanded his instrument.

In 1899 and in 1905 it was noted in the rent ledger
that two crofters wanted "first choice of a vacant croft
in the township." In the first quarter of the century,
a conflict ensued between Shawbost and a neighbouring
township over the extension of a cemetery; land was too
precious to take out of cultivation and give to the dead
of another village.

A 65-year-old man recalls, "Men got their living
from the land and sea. They kept more cattle when I was
young. They used the dung of the cattle to fertilize the
soil. The entire croft was used. My father's croft was
only 3½ acres, but he worked it well and harvested eight
stacks of barley to see us through the year." There was
a number of kilns to dry grain, and mills along the streams
to grind the barley. The "old horse mill" which was
recently rebuilt by the school children as a school project
was in operation from 1920-1934. "Then the tweeds got

"Then the tweeds got
going and the barley took too much trouble; so they had
no use for the mill."

A 60-year-old woman remembers, "They depended on the
potato and fished a lot. I was raised on oatcakes, barley
bannocks, and salt herring. There were no vans and no
stretched over wood with holes burned into it, to separate
chaff and grain; rope nets of plaited heather and straw.
Each spring the byre was cleaned and its accumulated dung
was carted out and then turned into the ground along
with seaweed. Such tools and techniques remain among
the older villagers as a "memory culture" which may be
mobilized under changed conditions, as when alternatives
to crofting are no longer available or desirable.

However, the longer crofting is neglected, the more it
will provide an alternative strategy. "The artificial
fertilizers are ruining the land; that's why the
turnips are full of maggots and the potatoes turn to
water." As the rushes grow and clog the drains and
streams—rushes that used to be eaten by the horses and
cattle and which are now left untouched by the sheep—
the land becomes unfit even for grazing. "I'd rather
plant the land than let it lie idle, but we can't plant the
potatoes, turnips and cabbage last year, and lost them
all to the maggots. You lose heart after that."

The only occasions on which it is considered fun to feed
someone an entire meal is at a work party, such as peat-
cutting. In such occasions the preparation of meals is
done in an atmosphere of competition and mutual scrutiny,
and the meals are often elaborate. At other times, the
requirements of etiquette can be minimally fulfilled by
giving foods which are still relatively abundant, but
which were much more abundant when the land was cultivated
and cows kept. Such foods are barley bread, oatcakes,
clotted sour milk, cream and fresh butter. These foods
are highly offered as the hospitality ritual ends, and in the
past this custom served to minimize the economic disparities
between villagers, to spread scarce resources. A similar
function was served by the practice of giving part of
each catch of fish to old citizens and other villagers in
need of aid. Even though food is more abundant and diverse
today, the taking of tea, and especially food, during a
visit is still very important.

A 30-year-old man "married into" a croft recalls,
"I came from a family of two children. Everyone had to
leave, or marry a girl with a croft. Only the eldest son
could inherit the croft." There was little room for
competition in the fight for scarce land among the sons
of large crofters and non-crofter families. "The most

costly, that the Common Market will soon drive up milk
and beef prices, and that income from the weaving has become too
uncertain.

Many tools and techniques associated with crofting
have disappeared: the flail for threshing oats (see
pieces of straw plaited with heather); the sheepskin
stretched over wood with holes burned into it, to separate
chaff and grain; rope nets of plaited heather and straw.
Each spring the byre was cleaned and its accumulated dung
was carted out and then turned into the ground along
with seaweed. Such tools and techniques remain among
the older villagers as a "memory culture" which may be
mobilized under changed conditions, as when alternatives
to crofting are no longer available or desirable.

However, the longer crofting is neglected, the more
it will provide an alternative strategy. "The artificial
fertilizers are ruining the land; that's why the
turnips are full of maggots and the potatoes turn to
water." As the rushes grow and clog the drains and
streams—rushes that used to be eaten by the horses and
cattle and which are now left untouched by the sheep—
the land becomes unfit even for grazing. "I'd rather
plant the land than let it lie idle, but we can't plant the
potatoes, turnips and cabbage last year, and lost them
all to the maggots. You lose heart after that."

collected, and an annual report on morals, which usually
mentioned drinking and "the decline in moral standards."
Ministers are trained in a college in Edinburgh. Many
are Gaelic speakers, although the number is said to be
declining.

When a congregation loses a minister because of death
or other reasons, it issues a "call" to some other minister.
The congregation is familiar with the names and preaching
styles of a number of ministers, who have in the past
visited the community as guest speakers. The congregation
votes for a minister from a list made by the lay officers
of the church. The minister may or may not accept the call.

The Free Church and the Free Presbyterian Church, two
fundamentalist Protestant sects which have survived the
unchanged in their traditional form since the early 19th
century, are strongest in the Highlands and Islands.
Shawbost contains a few people who belong to the Church of
Scotland, but most villagers belong to the Free Church.
The only church (in the sense of a building in which sermons
are preached) is a Free Church which was built in 1893,
supposedly after sen from Shawbost helping to repair the
fences at the minister's manse in Carloway, where they then
attended church, were refused boiling water for their oatmeal
"broos" by the minister's wife. A building in which
members of the Church of Scotland worshipped was built

Oxford University, with an estimated date of 1653,
the year in which the English gardener was placed in Lewis. Nothing now remains of that fort built by Crispe's soldiers, though the whole area on the south side of the loch, present-day Point Street, is redolent of historical atmosphere, despite new buildings.

Ecclesiology is a home of many different colours in the island. Traditionally the right hand side belongs to the early strongs of Christianity in Scotland. Indeed, one of the most important religious sites on the island is St Columba's at Eye, near Aignish, some seven miles from Stornoway. Though the name might suggest it, there is no proof that the Gaelic abbot visited Lewis. But it is more than likely that a follower of his did so in his name. Part of the church at Eye is Norman, which gives an approximate date of origin; though it is necessary to take some account of the long interval between a development phase in one country and its adoption in another country and the Norman Conquest of Lewis in the Hebrides lies in medieval times. According to tradition, the church was built on the site of a Celtic monastery founded by Celtic Saint, who is believed to have lived in the sixth or seventh century. Possibly this is the same Saint Columba to whom a shrine is dedicated at Meshaven in Uig, close by which the remains of a nunnery have been found, called by a Gaelic name meaning "the house of the old black woman".

St Columba's is mentioned in records from 1556, when it is described as a 'rectory'. At present, though in a ruined state, it still shows its former strength of character, both as a building, a place of sanctuary, and a place of worship. It is also been called the Valhalla of Lewis, for tradition says that some nineteen Chiefs of the Clan Mac Leod of Lewis, are buried in its grounds. William, the fifth Earl of Seaforth, also found there an unmarked bed beside the enormous of his ancestors, who wrested Lewis from the MacLeods.

Another significant church is St Olaf's, or St Molua's at Ecreepie, at the Butt of Lewis. Recorded evidence first indicates the existence of the church in 1630, where it occurs in a report

RELIGIOUS HISTORY

by Captain Dymes. The island subsequently became known as the Hebrides; [175] it was also called in the north of Scotland and was buried at Rosemarkie; [176] in the Scottish mainland. Tradition ascribes the building of Iona (175) church to the tenth century by King Chief of Norway; though [177] a more reliable date for its foundation is the sixth century. That it occupies, as so many other small churches do, the site of a Roman cell is quite acceptable. The church has always been called a 'sanctum sanctorum', so holy in fact that no women were allowed to enter it.

In Harris, the outstanding religious building is St Clement's, at Rodel, described by Charles Thomas as 'a cruciform church of a measured lugsaw, small ruins of chapels, cells, oratories and wells'; but only tradition has clothed these buildings with the mantle of the once-living. A map of the island will show up these sites, which are well worth a visit if only to see the beauty of the island, too under the island dry beach ancient scenes.

Other old ruins are to be found on the island of Calum Cille (Columba) in Loch Eriseart. It is on record that the monks who came from Iona to convert the island found the pagan ways hard of religion to Christianity landed on the island about the middle of the 16th century. They founded a chapel, which is still in ruins, which they dedicated to their master, hence the Gaelic name: Eaglais Cille, agus Eilean Chaluim Cille. Tradition has mentioned a tall, McLennan-as-master, but there is not one stone left on another to indicate its exact site. Tradition has handed down the parish of Locke for many generations until about a century ago. The people of the island were by tradition and inclination more profoundly religious; this reverence was more often than not carried over into the half-world of fairies.

Though the tangible remains of religion's progress are to be [178] seen, the monetary influence of religion, with its ups and downs, [179] developments, is scant. One can only assume that it was the Columbian Church which first introduced the Gaelic language to the Lewis folk. The earlier religion was the stock on to which the new was grafted. The result was a compromise, and there is nothing it not strange to those many visitors who came to compost on the island scene; for it was neither Christian nor pagan. The result, a strong thread of veneration ran through the product

A HARRIS VIGNETTE

LIKE a Siamese twin, Harris is joined to Lewis in eternal geographical union. The junction is at the body, however, the head of each island is quite separate. The island been due to develop its own characteristic. Thus, Harris has a quite separate personality which has even been the common feature it has with Lewis. Both have the same historical origin: the Clan Leod. The clan comprised two branches, namely, the Siol Tormoil (MacLeods of Lewis) and the Siol Tormod (MacLeods of Harris). Tradition has accorded to them a common ancestor, but there is though by the time history in the Western Isles was old enough the old-general feeling was that the Lewis branch was distinct and independent of each other. Malcolm, son of Tormod MacLeod, head of Siol Tormod, was given the island of Harris by the Bishop of Glasgow, on the Scotish mainland, which he and his successors held from the Crown. Both the Lewis and the Harris branches were Harris, which came to his family after the forfeiture of the Lords of the Isles in 1493. Lewis was held from the Crown, rather strangely, their clan seat at Dunvegan on Skye, and are more commonly known as the MacLeods of Dunvegan on Skye, though 'of Harris' is their correct title.

The MacLeods were, by and large, good proprietors. They held much fertile land and the clan was reasonably wealthy. Tenants' rents were paid mostly in kind, and, to a lesser extent, in such farm produce as oats, barley, cheese, butter, wool. Cow and sheep skins in delicate service. Many tenants were hard for the tenants their rents were often 'eased' by the chief in the hope that some tenants would pay the rent, and that the chief's cousin rents would be paid in time. In 1705, a bad year, MacLeod actually conceded 'seeing that the Hope Harvest was so greatly to them. In 1712, when some sheaves had visited the St Kilders (the islands belonged to MacLeod), the chief granted them with a new boat and the islanders were allowed a two-year delay in payment of their rents to help the recovery of the community.

THE OTHER ISLANDS

Elsewhere, there was one family there, that of the person employed by the owner to look after the livestock. The rent was a 'boxe' Bachelaman who paid £4 sterling rent per annum. The island prosperous was corn, butter, cheese, a few cattle, a few sheep, a few goats and some wild fowl and feathers.

In 1844 Rona was uninhabited, in fact inhabitant being, in the seventh year of Queen Victoria's reign, the 'King of Rona', Donald MacLeod, who lived in about the most primitive conditions. Rona was without inhabitants until 1884, when a last attempt was made to settle people from Rona from Ness. This was a self-supported exile, after a different of opinion with the minister of their parish; in spite of this, they had lived in Ness. In 1881 a relief boat called and found both men dead, one from natural causes, the other from suicide, or typically, from shot mind, and (on the pronunciation) a shortage of pasture, it is thought by the family of the survivor, they had been distinct and independent of each other. Malcolm, son of Tormod MacLeod, head of Siol Tormod, was given the island of Harris by the bishop of Glasgow, on the Scotish mainland, which he and his successors held from the Crown. Both the Lewis and the Harris branches were Harris, which came to his family after the forfeiture of the Lords of the Isles in 1493. Lewis was held from the Crown, rather strangely, their clan seat at Dunvegan on Skye, and are more commonly known as the MacLeods of Dunvegan on Skye, though 'of Harris' is their correct title.

Eaglais [illegible]

[illegible] is twelve miles west of North Rona, a lonely rock in blue Atlantic, bleak and grassless, and tenantled by cows and goats. The only life it has, more correctly speaking, is the sea. Yet one of the old buildings is said to be a chapel and is called 'Teghnaomhaidh' (Church of Saint Kenneth). According to Nan tradition, Solangaig was once used as a prison for sheep-stealers, and it is also said that Benedict, sister to St Kenneth, lived on the island to perish. Yet another tradition claims that it was at this rock that Prince Charlie Edward made his last contact with his Scots chieftains, when the ship that carried him to Scotland was spoken to by a Nun boat making for North Rona.

THE SEASONS

[Chondrus], for example, is used as a thickener of milk to make a cheese-like mould. Dulse is also plucked.[1]

The chief crops of cereal farm and vegetation above the relative importance of crofting and fishing—and the balance of the relative importance of crofting and fishing—and the balance of the relative importance of crofting and fishing—and the balance of

tion, as we saw in the preceding chapter, archaeology reveals the two significant facts, coastal set-tlement and a cultural arrival contingent economy are of great antiquity.

It is generally believed that the Scots arrived in the Hebrides from Ireland in the ninth century. Even though this belief rests on learned and some modern early chronicles, the accredit mention of Skye in the Annals of Ulster for 853, when the people are said to be paying tribute to the king of Dria and Alban, and 798, when the Norse pillaged Skye, indicates some civilization. During this early period Skye may have been inhabited by a tuath (tribe), a number of which formed a mortuath (literally a great tribe) or province. In that as it may, the Norse who had come to plunder, as contrast that was eliminated by a combination of local and Gaelic religious ideals, in the eighth century, began to settle in the Isles in the ninth. Since they had been driven out by Harald Fairhair, the first king to establish political unity in Norway, the early exile proscribed to Norse Hebride territories until an expedition redrove them and annexed the Hebrides to Norway.

Geddes (1965: 56) gives evidence that joint farms were abolished in Lewis early in the 19th century. Gray (1957: 50) says that by 1819 there was little run-rig left in Lewis. The factor's notebook for Bruacleitar, on the west side of the island, shows the elimination of clachans around 1830, and their replacement by linear townships.

In the Napier Commission's "Evidence" (1884) for the parish of Barvas, it was mentioned that the rent had been increased because of improvements made by the landlord, Sir James Matheson, between 1840 and 1880. Land had been drained and new townships created; and both old and new townships were lotted and rented in 1850 and 1851 (Napier 1884: 999). The Ordnance Survey of 1851 shows the new townships, and interesting features of Shawbost: "New Shawbost" has recently been laid out; and in an area now incorporated by only a few separate crofts on "Carnan," a cluster of houses appears, perhaps the clachan in which joint tenants lived, and from which they went out to farm their various strips of land, before Matheson reorganized the land in linear strips with dispersed housing. The peat banks on Carnan area are already established, indicating a long period of settlement in this area.

CHAPTER I

ENVIRONMENT AND LANDSCAPE

(a) THE GEOGRAPHIC SETTING: THE BRITISH ISLES, SCOTLAND AND THE HIGHLANDS AND ISLES

1. A "Heart" of the North and West" of Britain

n the 'Outer' Hebrides, commonly regarded as the most 'outlying' inhabited island of the British Isles, are revealed not only the most ancient of British rocks, the Archaean, but probably the oldest form of continental life in Britain. This life, in present and past, of continental

Fig. 1.—Global view of the 'Outer' Hebrides, seen as the heart of the "North and West" of Britain.

CH. I ENVIRONMENT AND LANDSCAPE

from prehistory to the present day, these geographic ways have played their parts as factors in evolution, although the border-lines have changed at different historic epochs, and have been modified by economic and social change. At times the Hebrides have been more closely linked to Ulster or to Norway than to Central Scotland. By viewing these zones, we shall not find simultaneity in historic events, but comparability in stage and transition, even at differing periods. From the evolutionary point of view, the social character of Island life has not only in static survivals, in what Sir Arthur Mitchell found in the Islands and vividly described as "the Past in the Present", Island life is characterised still more by the dynamic strength of its continuity—notably of early or prehistoric Celtic—and also by the late occurrence of changes when, at last, they came.

The social consequences of those regional differences in evolution are profound. In the 'Plain', to the southeast of the Seven-Tree line, large village communities with common fields prevailed; forming the later manor villages. To the north and west, the more varied, hillier lands encouraged the continuance of the clachan: these hamlets housed close-knit groups of families, often of no more than four or five to a dozen relations or 'friends'—in Scots even today (much as in Gaelic) the word 'friend' frequently implies kinship. Each small group farmed its own. Together the men ploughed the rig-and-furrow ridges (or ridges) and herded their stock in common, and the crops they raised their boat as its crew. The women, too, did much together, as when they spun their yarns, and folled or 'washed' the cloth that one of them had woven, helping by turn in clachan after clachan.—Usually several of these teams were linked in a larger

ISLAND, WORK AND PEOPLE PT. I

pastoral group, the germ (in the Hebrides) of the present township with its common grazing. Hamlets and township alike formed units of clachans and religious life in common. These 'sociable hamlets', or 'little commonwealths', as they were called by outstanding writers on the Highlands, lived on in the Hebrides almost until a century ago. In viewing these zones, we shall not find simultaneity in historic events, but comparability in stage and transition, even at differing periods. From the evolutionary point of view, the social character of Island life has not only in static survivals, in what Sir Arthur Mitchell found in the Islands and vividly described as "the Past in the Present", Island life is characterised still more by the dynamic strength of its continuity—notably of early or prehistoric Celtic—and also by the late occurrence of changes when, at last, they came.

CH. I ENVIRONMENT AND LANDSCAPE

to notice the absorption or suppression of rights held in common in 'the North and West', together with the abolition of the duties of fellow-workers to one another. Too frequently they have not troubled to enquire into the nature and existence of common rights and fellowship duties, the observances of which have so much to teach. Yet to judge from the complexness of the Hebridean evidence, and from wider evidence to be touched upon with reference to Norse and Lowland conditions, suppression caused the profound social and moral revolution.

Indeed, the profound character of that revolution makes it hard to recognise the common origin of features which may differ greatly today. To choose four examples, the long succession from father to son, found from end to end in the hamlet and township, contrasts with a serious movement of farm servants, and even tenant-farmers, all too common until 1939 in Lowland Scotland and parts of Northern England. The ideals held by fellow-workers in a clachan tradition, of kindly and courteous co-operation, contrast with the ideals of competition, sometimes made on every farm even of the southern Highlands today, and certainly of the Lowlands and Northern England. Languages have changed as English has advanced during 150 years: the Lewis crofters' children still speak Gaelic, but children in Stornoway cease to do so forty or fifty years ago. And in the recorded religious life of Gaelic hamlets far wider ranges of relationship, of the part of revered men and women is very different from the part played in Calvinism by the Minister and the male Elders of the Kirk. All these four contrasts are due to revolutionary changes in home, work, language and religion. Such changes, of which all trace may be lost elsewhere, are traceable from the fullest evidence among the Gaels.

ISLAND, WORK AND PEOPLE PT. I

Comparisons at the present day are most illuminating in the Hebrides one may pass from Calvinist Lewis-and-Harris to Catholic Barra, through South Uist, where Presbyterian and Roman Catholic dwell, side by side, in mutual respect. Although their home life, economy and language are the same, the influence of a comparatively recent divergence in religion is marked. Such Island evidence, present and past, may serve to re-examine conclusions upon life in the Lowlands accepted too readily, and to seek for the truth upon earlier forms of life in prehistoric times. Of such work much remains to be done in fact and name—under the panoply of civilisation and with Papal benediction. A generation after the Conquest they commenced the penetration of Scotland.

The paradox of loyalty to one's fellows with loyalty to a lord, of stoutly equalitarian thinking bound up with fervid admiration for an aristocracy, is nowhere more marked than among the Gael. They sought to reconcile all three conflicting loyalties by claiming common ancestry for chief and people, as the children (clann) of a hero of history or myth. The years 1945-47, which marked a centenary of the last of the desperate Jacobite Rising, stood at the close of a long period of change in which Lowlands have been won for the symbol of clanship—the tartan, long proscribed (by the Act of 1747) 'to every man and boy in the Highlands'. At such a time, the Gaels' loyalty to the death cannot be forgotten although old kings, old chiefs have gone. But its paradox must not only be remembered but understood, from its roots in communal life and environment through history. Not until this is done can important phases of our own time be understood, such as the failure of Lord Leverhulme's seven years' endeavour in Lewis; nor can the present opportunity of Highland renewal be grasped by the help of

CH. I ENVIRONMENT AND LANDSCAPE

lights, suggests that such lochkipp goes back to early contents of self-supporting agricultural and pastoral communities, by well-armed raiders of many races, including the Celtic-speaking swordsmen of the Iron Age. The last and most notable of these conquering raiders were the Norsemen. Their influence was profound, whether, sailing direct from the Scandinavian forest settlements and fjords, they raided and settled as bonthan Viking crews, or at a later stage, they invaded England from Normandy—that fertile province which they had made theirs in fact and name—under the panoply of civilisation and with Papal benediction. A generation after the Conquest they commenced the penetration of Scotland.

The paradox of loyalty to one's fellows with loyalty to a lord, of stoutly equalitarian thinking bound up with fervid admiration for an aristocracy, is nowhere more marked than among the Gael. They sought to reconcile all three conflicting loyalties by claiming common ancestry for chief and people, as the children (clann) of a hero of history or myth. CH. I ENVIRONMENT AND LANDSCAPE

democratic reorganisation, with loyalty to one's fellows and to a leader.

Here again, Lewis-and-Harris may have something to teach, as one of the last communities in Britain in which the tooth of anarchy has gnawed right over land and sea, but upheld. Trust ownership of Stornoway estate has strengthened the possibilities of rural planning there, while the fisheries are a public resource which are partially protected for local fishermen inshore and further out are closed to others. The Gaelic Lewis Association has published models of local survey for social and economic planning. At a time when democracy is struggling to see its way towards reorganisation, the Gaelic communal institutions have more than local significance.

This sketch of environments and questions in rural life raised by Hebridean evidence, through a wide and varied region of the British Isles, must serve to indicate the geographic setting in the Hebrides and relate the historic and contemporary problems of its own community to wider fields. That both the environment and the social, economic and industrial problems of the fifth-sixth and 'included plains' within the varied land of 'the North and West' of Britain, deeply though they affect the hard-hit fishermen of the Isles and the Island migrants—seamen or labourers, tradesmen or factory workers, nurses, teachers or clerks. Even for the migrants' sake, it is vital to maintain the economic balance, and restore the cultural and spiritual life within each industrial region, in order to maintain that of Britain as a whole. It was not enough to schedule 'the southern uplands' of Scotland, Wales, Lancashire or Clydeside as 'Distressed', 'Special Areas' or 'Development Areas'. The balance of Britain as a whole must be restored.

ISLAND, WORK AND PEOPLE PT. I

(b) THE ENVIRONMENT

1. Ancient Rocks and Modern Life

The Hebrides, commonly regarded as the most 'outlying' inhabited island of the British Isles, are revealed not only the most ancient of British rocks, the Archaean, but probably the oldest form of continental life in Britain. This life, in present and past, of continental

175 the eighteenth century these 'black houses' would be
342 replaced by houses of stone and lime, and a few of those
361 survive.

Of the fort built by Cromwell on the Point, no signs
192 remain. For tactical reasons, the best site would seem
• 194 to be the neck of the Point, from which the guns of the
712 fort could defend the houses, stores and quays. The irregular building line near the point marked T, a Town House at a later period, may correspond to the
175 northern angle of the fort. The fort appears to have been standing when the original drawing was made for the
712 engraving in the Old (or First) Statistical Account of Stornoway, *c.* 1793.

By the time Wood drew his plan in 1820, houses on
175 the Point no longer looked exclusively on to the axial
361 street. The main alinement of interest came to be the shore, marked by a properly built quay. Today, the Point Street houses have fallen into decay but many older houses still stand in fair repair along the 'Beach' or Quay.

Thirdly, from the nineteenth century, until 1914, two-
175 storey, flatted tenements, hotels and houses of middle-class
361 people were built upon a grid that followed upon the old
34 field plans. In an alternative plan, proposed about 1820 but not adopted, a diagonal vista opened out to the Established Church, built in 1794 on rising ground. The modest Seaforth Lodge which had stood across the harbour was replaced in 1850 by Stornoway (or Lews) Castle, its pseudo-Tudor style designed to please the new improving landlord, Sir James Matheson, who had purchased Lewis in 1844. Presented to the people on the break-up of the Leverhulme Estates in 1925, a new technical school has
175 taken it over. A few villas also grew up on outlying roads.
361 Thus, a mere village in 1801, and among the smaller burghs
162

CHAPTER IV

THE EVOLUTION OF ECONOMY AND SOCIETY IN THE ISLAND ENVIRONMENT

829 FROM the first approach we saw that while the 'Outer' Hebrides may seem to strangers a distant *Ultima Thule*, the Islesmen may regard their home as lying at the core of our country and its life: of ancient ways, be they foolish or wise; and of deeply rooted faiths, be they superstition or truth. The purpose in this Part is to view the essential phases in the occupation of the land and coasts, and in the development of the people's means of subsistence, 'work ways', society and spiritual life. We shall find enduring traits, important at the present time, and which affect the future. Distance over sea and moor is still significant, as every Islesman knows; and position affected the peopling of the Island, its races and their long-continued customs. It must be asked whether sites first chosen upon the Island are still significant with regard to land-use and to sea-fishing. Did the types of class and community, the bonds of co-operation and kinship formed, correspond to needs we can still understand? Can we enter into the life of our forebears in black house and township, the thought-world of mingled fact, myth and religion, in which they carried on their work on land and sea?

• 174 Before what may be called the age of clanship, which
[613] dawned as Gaelic culture reasserted itself after the defeat

• 174 of the Norsemen, lay a succession of earlier periods. A
613 phase of primitive settlements is traceable in archaeo-
192 logical remains and in recent and contemporary survivals.
194 It is shown in the physical race-traits distinguishing those in one part of the Island from those in another. Fragments of tradition telling of the first Christian missionaries survived the Norse invasions and settlements, dated from A.D. 800 or before, down to Haco's defeat on the Clyde at Largs in 1256. These fragments can be linked to chronicles and to later tradition, on which they throw fresh light.

[144] A survey of the archaeology has been published,[1] but comparatively little, as yet, on race. Yet different communities are distinguished by marked racial types or strains. Although many, indeed most, of the race-strains of the Island must have entered it in prehistoric times, some are linked to tradition, and history accounts for the more
[141] recent immigrants. The striking element of race in the Outer Hebrides is a broad-headed type prevailing from Barra to the Lews, accompanied by medium stature and dark hair; it is also found across the Northern Minch. But within the Island are notable differences.

829 Variety of race being accentuated by difference in ways, the communities still comment pointedly upon one
[538] another! For instance, an old saying is not forgotten: "The folk of Cladach, but the gentlemen of Uig!" (*Muinntir a' Chladaich, ach daoin' uasaile Uig*),
433 'Cladach' being the western 'Beach' district possessing
632 ploughland but poor fishing, which covers the modern
133 parish of Barvas (excluding the north-west cliff-promontory

113 [1] Royal Commission on Ancient Monuments, *Outer Hebrides, Skye* etc.); 1928. V. G. Childe, *The Prehistory of Scotland*, 1935; *Scotland Before the Scots*, 1946.

829 of Ness), while Uig is the most westerly promontory with
433 its natural fishing harbours. The authorship of the pro-
632 verb may be ascribed to the ladies and gentlemen of Uig;
133 yet the personal appearance of the victims, who are more broad-headed, gives the proverb a physical foundation.
• 194 Again, the tall men of Ness, dark or fair, and rather longer-
192 headed, still form a group apart from those of Cladach,
141 each having taken root in prehistory, *i.e.* earlier than
144 surviving record.

Such facts correct several current misconceptions as to race and heredity in their relation to Gaelic society, past and possible. First, it is still common to contrast a 'Celtic' with a 'Norse race'. Now, Norse immigrants belonged to several races, and when they arrived, several race-streams were already mixing and eddying in the Isles. After the immigration of Norsemen, the next recorded was in 1611, consisting of gentlemen-tacksmen from Kintail and burghal settlers to Stornoway, who were composed of Gaelic-speaking families from Easter Ross, where the people of today resemble some Scandinavian types rather than typical broad-headed Lewismen.

Second, it follows that no sweeping generalisations can yet be made as to the ways and habits of particular races. The "Celtic race", one reads, have "never taken to the sea" as have the Norsemen.[1] The facts in the Island are that though the men of Ness, with a possible Norse admixture, were considered better fishermen than those of Cladach, and the present generation includes a great number of seamen, their opportunities have been greater —their cape commanding wider fishing grounds and their little port providing relative safety in storm. And the men of Lochs and of the 'Bays' of Harris, though they show

[1] For example, in the Brand Report on Lewis (1902).

141 144 172 174 174 174 [613] 174 675 [175] [178] [184] 174 114 174 [113]

little sign of Norse blood, can hold their own as fishers with the men of Ness.

Third, it is still commonly stated not only that the "great majority" under the clan system were "without any legal status", but that their tenure "depended on the good will of the chief or tacksman".[1]

As the last lawbooks of the Gael were taken from Lewis by its first mainland lord in 1611—never to be heard of again—it may well be that, as recognised in the Northern Isles, so in the Western Isles, peasant tenure was permanent according to regional law. In practice, mere 'goodwill' is so uncertain a quantity that if this statement had been true, it is hardly credible that communities could have remained so stably rooted as their race-types show them to be. Evictions of groups or individuals at the whim of chief or tacksman would have broken down their homogeneity of race. In the Lowlands, where eviction had become so frequent by 1500 and insecurity for the mass of the country people has prevailed ever since, such localisations of race would be unthinkable and do not exist except in certain fishing communities who possess a pride, almost a caste-code, of their own: the Newhaven fishers within Edinburgh remain apart, with a dialect and a dress of their own. Great stability of tenure—in fact as in customary claim—is shown by the racial homogeneity of Gaelic communities.

Lastly, it is common to state that the nobility and gentry of a countryside constitute its 'old' or 'original' families. It is true that some land-owning families seem 'old' compared to recent purchasers—successively the merchants and lawyers, venturers and planters of the

[1] From a representative report on the Highlands and Islands, that of the Scottish Economic Committee, 1938 (Historical Preface, p. 9).

174 174 114 174 [113]

Commercial Revolution, and the manufacturers and financiers of the later Industrial Revolution. Along one or more lines, the chiefs may record a thread of ancestry continuing for twenty-five generations or more; but almost invariably it is intertwined with others spun by fortune and added at each generation from outside the region. This is true even in the Highlands, where the gentry of one or two particular clans used to meet regularly until the nineteenth century to court and wed, so that inter-marriage established physical traits still recognisable in their descendants. But as for the nobility or leading chiefs, their principal claims go back, almost invariably, to conquerors, Norse or Norman, and later, alien commanders sent by the Crown, although certain chiefs traditionally claim descent—at least through the maternal line—from legendary heroes and early Gaelic kings, a claim which may symbolise a real link with native strains. As for the people, in the Scottish Lowlands few original communities survive. But particularly in the Long Island, the long pedigrees of the crofter families show them to be pure in every thread for generations past; while the racial homogeneity of communities, isle by isle and township by township, marks them as truly 'original'.

These facts have been recognised by anthropology, but too often the full, cultural significance is missed. Sixty years ago Sir G. L. Gomme included evidence from Harris in 1790, and from Carmichael's memoranda to the Crofters' Commission of 1884, in his pioneer study, *The Village Community, with special reference to the Origin and Form of its Survivals in Britain* (1890). Gomme fully appreciated the ancient origins of custom and races. Indeed he shows analogies of primitive communal customs in the Hebrides and Britain with others of 'backward' pre-Aryan

114 174 174 613 [14] [175] [113]

aborigines in India—lovable people when unspoiled by tyranny, caste or industrial exploitation, as I can testify.[1] Yet Gomme, like many since, leaves the reader with an impression which must be re-examined: that the Islesfolk are the representatives of a backward race who have clung to predominantly superstitious, pre-Christian customs and beliefs. As a people, the Gael received and welcomed Christianity in one of its earliest historic forms, and maintained its spirit through poverty and famine. To this inheritance we shall turn in Chapter VII, when the rhythm of life and its changes have been followed out in the following chapters.

To begin with, the briefest outline of historic sequence is all that can be recapitulated, the Island annals having been recorded in the excellent Brand Report (1902), and by W. C. Mackenzie (1903 to 1937). Politically and strategically, the age of clanship may be thought of as a period of struggle between the Islands and the Mainland to the south or east. The long-drawn conflict of Clan Campbell of Argyll with Clan Donald—whose Chief was the Lord of the Isles of which Islay and Skye were the two dominant, western keys, and Lewis and Harris the northern outposts—offers a parallel to the conflict of MacKenzie of Kintail with the last MacLeods of Lewis. Obscurity veils the early origins of the Island clans, with their mingled Norse and Gaelic lineage, but chronicles are more reliable by the time of forfeiture of the lordship of the Isles to the Crown in 1493. The MacLeods of Dunvegan, chiefs in north-west Skye, continued to hold Harris until late in the eighteenth century, and they maintained an indirect connection until the nineteenth.

[1] A. Geddes, *Au pays de Tagore: la civilisation rurale du Bengale Occidental*, Paris, 1927.

174 613 [175] [178]

But the last MacLeods of Lewis, torn by family dissensions, fell fighting before the power of King James VI (and I), who backed the 'capitalist' fishery enterprise of 'the Fife Adventurers'. Although these were routed by the Islanders, a Highland lord and chief, MacKenzie of Kintail, received Lewis from the Crown in 1611, taking his title from Loch Seaforth, near which he had built his Lewis hunting-lodge. Except for a period of forfeiture after 1715, the Seaforth family held the Island until its purchase by a wealthy and beneficent tea merchant, Matheson, in 1844. From Seaforth's tenure and the Papers of the Forfeited Estates are left records of ancient life and of the introduction of changes, temporal and spiritual. These are reviewed in the next five chapters. Chapter X brings the Island story to the year 1953, and its prospects.

CHAPTER V

FAMILY, FARM GROUP AND TOWNSHIP THE CONTINUING COMMUNITY AND ITS SOCIAL ECONOMY TO 1815

INTRODUCTION (TO CHAPTERS V AND VI)

121 593 476 632 621 121 613 621 [171] 121 174 178 [184]

THE family, the 'conjoint' or 'farm group' of four or five families, and the larger group clustered in a glen or along a shoreland, are, in ascending order, the three concentric units whose mutual relationships we must visualise to understand the past. Enduring elements of life in family and neighbourhood today, with their own special qualities and limitations, can only be understood in terms of past needs and the relationships they evoked.

Having seen their relationships in family, team and township, we can next turn to the reciprocal relations of the people to their chief or lord, whose position dominates European, indeed world, history and prehistory. Here our concern must be the meaning of 'clanship' to the chiefs, the joint farm-groups (or 'small tenantry') and, latterly, the tacksmen placed above them.

We may find, throughout this study, that features and functions which at first sight seem peculiar to the Island are really local variants, more perfectly crystallised, of forms which we know existed at earlier periods in Scotland and in much of northern and western Britain. In the Isles,

174 The historical aspect of these regional facts is extremely
184 significant to the evolution of Scots social life, and to
179 developments of Presbyterian worship led by Elders in
55 ferm-toun and Kirk; although suggested by comparisons
178 throughout this book, they have still to be seriously followed out. As to the future, regrouping of our somewhat
121 scattered agricultural population has been strongly urged in planning for post-war housing and community life.
185 But sound planning must be based on survey, long overdue; though elementary, this key map appears to be the first of its kind for Scotland (Fig. 2). It is from these units of farm-team and township that Scots rural society must be rebuilt, region by region.

184 One further contrast between the farming and the
241 crofting communities demands attention: it lies in the
36 types of migration—one is tempted to say, of semi-
166 nomadism. Crofters, though they move to and from their croft and township—to the city, the sea, or the New World —return home to their native township when they can, and to no other. Many farm servants, on the other hand, though they usually spend their lives in the county or region of their birth, have been on the move from farm to farm, year after year. What is true of Lowland Scotland seems rather true of North-east England, but not of 'the
[464] English Plain'. Unmarried Scots farm servants were hired for the half-year, and frequently moved after each new hiring, the married once a year. Families were annually uprooted—if indeed they could be said to strike root at all!
[722] The war-time 'Standstill' Order for Scotland began to
[178] check this migratory life; but its effects remain. Hence many men have few ties, their wives still fewer. The children could not grow up with their schoolmates: they could look back to no "Auld Lang Syne", of which the

i [see p. 16 -- analyst]

178 follows that as the descendants of the crofters of the South-west and East Highlands could and did change their ways within the space of a lifetime, so those of the North-west
114 Highlands and the Isles can change too. Given the co-
178 operative leadership which is arising in the twentieth century and was totally lacking in the ideals and training
185 typical of the nineteenth, that change may be not only for the better in the development of 'individual' qualities, such as the power to do hard work for 'success'; change may also maintain and develop what still remains of the old characteristics which gave the community life of the Gael, with all its faults, elements of beauty and sanctity.

In an article on "The Human Geography of Lewis", A. Stevens (1925) described the Island and people. His comparison of the cold, wet 'desert' of Lewis and its corn-patch 'oases' with the desert of heat and drought
[182] and its oases of palms, is ingenious and suggestive. One
[241] might follow up the analogy and compare irrigation to the drainage of moorland and its fertilisation, which form the means of reclamation at home, and draw parallels between their immediate results on the land and the ultimate effects on work and social life.

174 Until the agricultural revolution, the unwritten story
241 of Scotland was in great part that of a long, uneven struggle
134 to make sour soils fit for cultivation and productive of a livelihood. Most of all is this true for North-west Scot-
178 land; moreover, there, for eighty years past, the struggle has been a losing one, in the sense that arable land has been
241 decreasing and rough pasture deteriorating. In spite of
134 subsidies, the 'marginal farms' of Scotland have a tough fight. Yet lands from Scandinavia to Finland and North
178 Germany are giving a lead in peat-reclamation, where

[654]

131 Before the making of
174 roads, it was ease of sailing which united island peoples
and their territories. One can wade or drive, at low tide,
491 over the fords that unite the Isle of Benbecula with the
two Uists, North and South: in fact, a bridge now connects
505 Benbecula with South Uist. But only the roughest of
491 hill tracks led through the hills of North Harris from the
'Tarbert' or Isthmus of Harris to the nearest habitation
at the head of Loch Seaforth or Loch Erisort, in the Lews.
This is a distance of some twenty miles, or a fair day's
tramp for an unloaded man, and far too much for a return
823 journey in one day. Hence separation of territory and
131 name was natural. This separation no longer exists as
there is now a good 'bus service from Rodel via Tarbert
178 to Stornoway which links Harris with the daily Kyle to
823 Stornoway steamer. In this book, the Island, or the
494 Islanders, refers to Lewis-and-Harris with its people,
as one.

101 Lewis is included in Ross-shire (of which the county
town is Dingwall, north of Inverness) and Harris in
131 Inverness-shire, together with the rest of the 'Long
634 Island'. The county boundary cuts across the six-mile
isthmus north of the hills of North Harris, from the
in-reaching Loch Seaforth WNW. to Loch Resort
(Fig. 8). All the Outer Hebrides are now included in the
Parliamentary constituency of the Western Isles. Pro-
posals to unite the Island under one District Council, or
the Outer Hebrides under one County Council, are more
favourably viewed in Stornoway than in Harris or the
632 Southern Isles. Harris forms one civil parish, while Lewis
is divided into four: Stornoway, Barvas, Uig and Lochs.
133 The Lewis parish boundaries traversing the moors are inset
131 in Fig. 8 so that their trends can be readily grasped, and
the inhabited portions of the parishes quickly located (p. 50).

133 most northerly outlier, yet, in the main, one is struck
not by the variety of rocks (except for the 'Stornoway
Beds') but by their homogeneity. It is structure, causing
the uplift of certain masses relatively to others, more than
differences in rock-type, which has guided the work of
erosion, in sculpturing both the Island's plan and the
details of its forms. Submergence of the land has fretted
the coastline into a zigzag line of ridge-capes alternating
with valley-mouths flooded or 'drowned' by the sea, as
inlet and loch.

316 Historically the gneisses were of little value. The fact
174 that they tend to split still helps the Islander in building,
as it helped his ancestors when they raised the great stone
172 circles at Callanish on East Loch Roag. Except where
they are very basic (non-acid) in composition, they make
135 poor road metal. Yet the gneisses are not quite devoid
of economic minerals, which include masses of pegmatite,
and the only large body of anorthosite or lime-feldspar
rock in Britain, conceivably a source of alumina for glass
439 manufacture.[1] Two feldspar quarries opened at Lingarbay
and Northton in South Harris in 1941 employed sixty men
during the war, the mineral being despatched from Lever-
burgh for use in the Staffordshire Potteries in the manu-
178 facture of porcelain insulators. The higher grade mineral
in Scandinavia and the better transport facilities there led
to closing the quarries, with little hope of their reopening.[2]

4. *Land-forms and Sea Floor*

133 To the faulted structure is due not only the Island
plan, but the highland in middle and south, uplifted rela-

113 [1] C. F. Davidson, "The Archaean Rocks of the Rodel District", *Trans. Roy. Soc. Edin.*, vol. 61, 1943, pp. 71-112.
[2] J. B. Caird, "The Isle of Harris", *Scot. Geog. Mag.*, vol. 67, 2, 1951, p. 92.

182 Let us begin with the economic and the social signi-
184 ficance of the Highlands and Isles with which we are
311 concerned. Economically the crofters' 'living space' is
the narrow interrupted belt of improved land (shown black)
[241] which is generally fronted by the sea and its inshore waters,
and is backed by the Crofters' Grazings (enclosed by line
[427] C on the map). Some 700 crofting townships or com-
[361] munities are found in Zetland, the North-west mainland
and the Western Isles, each with its Common Grazing;
the line C also encloses a small area devoted to other
grazings. Deer forests predominate on the eastern, main-
land, side of the line. On the remainder of the hill country
are to be found the hill-sheep farms, with other small farms
and small-holdings.

174 In the past the fishing crew at sea and the joint labour-
621 team on land formed the communal units contained within

24 with its tied cottages and frequently a 'bothy' for the un-
36 married. Next to this comes the full-time small-holding,
[184] important in the North-east and the Southern Highlands
of Scotland. Great as are the differences between these
types of unit today, they go back, to a considerable extent,
• [174] to common origins. The sites of the farms are ancient.
And their people, though since divided into masters and men,
are the successors to those who were once the 'kindly co-
operators' of older 'farm groups', of Lowland *ferm-toun* and
[184] Gaelic *baile* (pronounced like 'ballie'). The island counter-
part of these, and their life, will be described in Part Two.
Hence, before we turn to further analysis of the Highlands
and Isles, a word more should be said of Lowland types.

24 An important social index in the Lowlands of Scotland
36 is the number composing the farm labour-team, averaged
464 for each county. Villages and even hamlets are few,
largely because farmers and farm servants live on the farms.
[171] Compared to those of most of England, Scots labour-
teams are small. Yet, as the map indicates, there is a
[184] wide range from the 'large' teams of South-east Scotland,
through the 'medium' teams of adjacent areas, to the
'small' teams of the West and North-east. Not only do
the contacts of employer with employees partly depend
upon the number in the team, but so do the farm servants'
relations to one another. On the whole, the larger the
team, the more formal its organisation; and the smaller
[554] the team, the greater a worker's own responsibility. The
[178] 'family farmer' of the West and North-east is often an
ex-farm servant. From Burns's time, his character and
enterprise have been recognised in Scotland, and in the
last forty years have become well known in South-east
England. But the isolation of these little farms brought
its problems and its hardships.

361 in solid black, and the third in hatching (Fig. 11). First,
174 upon the little peninsula or 'Point' which protects the
361 inner fishing harbour of the river there grew the nucleus
226 of the town, with its Castle upon the rocky islet now con-
504 cealed by the steamer pier. Sheltered from the waves by
the peninsula and from enemies by the Castle, MacLeod's
galleys and the early fishing fleet must have congregated
in the inner harbour. Protection from storm was specially
needed until, in the nineteenth century, a quay was built,
with space for marketing and handling the herring.

174 Inland from the Castle was the little church of the burgh,
361 dedicated to Saint Lennan (L). The little town can be
imagined stretching inland from the church, its dwellings
[346] built along the 'Point Street' axis, until it met the track,
road or street crossing the neck of the Point. The largest
church of Lewis proper, now in ruins, stood apart from
the burgh, at the south-west extremity of Eye Peninsula.
Until trade developed, the backs of the houses would have
been turned to the shore. To north, on the landward
side from which cattle would come, the market developed.

175 Secondly, in the seventeenth century, thatched houses
361 were strung out along Point Street and the shore for the
342 Gaelic settlers, the fisher- and craftsman-crofters brought
here to found a burgh and commercialise fishing. During

(Based on a British Admiralty chart with the permission of the Controller o, H.M. Stationery Office and of the Hydrographer of the Navy.)

In Lochs it occupies only one-quarter of arable and grass. Barley, mostly four-row, or bere, is less important as a food today than formerly, and now occupies only 6 per cent, and, though it reaches 13 per cent in Barvas, with its machar, hardly any is grown in Lochs. Rye (*seagal*), still found in the machars of the Uists, is little grown in the Lews. Potatoes grow well everywhere, occupying about 15 per cent of the area, though townships with plentiful machar land grow most. Turnips are being gradually introduced, and though their liability to disease has somewhat discouraged the crofters, the proportion is now about 2·3 per cent. Cabbages occupy a small area (1 per cent), latterly along with lettuces, carrots and the like.

Rotation hay and turnips being almost unused up to 1919, oats was grown repeatedly before rotation with barley or potatoes, and with no bare fallow. While heavy manuring maintained the fertility, the crop by July was ablaze with corn marigold (and other weeds) through which the thin oats struggled to rear its head. Thickly sown, the return was exceedingly small. Except for the machar (if any) there was no 'out-field' as elsewhere in old Scotland.

The smallness of the crofts and the poorness of the crops explain the very small total return. Hence little oats is now ground for meal and the potatoes do not last through the year, though few are sold. The low out-turn also explains why even fodder is scarce, though much more of the crop is secured for wintering than formerly. Summing up, a croft of 6 acres—though a little too large to be quite typical—includes a couple of acres of grass and hay, almost as much of oats, and the remainder bears potatoes and barley, with turnips, cabbages and garden produce.

In the past, the cropped land was unfenced and unwalled. At present, the rule is to encourage the con-

rents, and its end is in sight when these cease to provide for the lord's desires.

(10) STORM AND GALLEY; BATTLEFIELD AND REGIMENT

The peaceful round of daily life formed the most enduring test of the mutual loyalty uniting the commoners of the clan, and linking chief to people. Yet the tensest ordeals came in hours of danger faced together, whether at sea in a small fishing boat or a many-oared galley, or in war in a clan company. The Gaels' own records must speak for them. Many a song of the Isles conveys the team-spirit of the crew though without describing its men. And although Mary MacLeod's song of MacLeod's Galley be irretrievably lost, there survives one epic poem portraying the ship, the storm and, man by man, the crew who warred against the waves and won. Alexander MacDonald's *Birlinn of Clanranald* is unmatched in Gaelic, and probably in English, verse for the intimacy of the crew in action, from steersman to 'look-out'. The flowing metrical translation by Pattison with Hugh MacDiarmid's vivid prose helps to give the English reader some vision of a crew of Gaelic freemen at their best.[1]

The poem opens in slow traditional rhythm with "the Blessing of the Ship", the prayers and the chant. Then the bard, speaking for the stately skipper, "incites the sixteen oarsmen to row" out of the bay, and they row to a roaring shanty, a *Iorram*. Next, in readiness for the voyage and

MacLean (Ed.), *Sun Gleam: Three Gaelic Poems*, Glasgow, 1933. The different themes of its sections, each in its own metre, have been published separately, as *The Songs of the Hebrides*, and elsewhere.

with words of heartening but well-weighed praise, each point with its duties is apportioned to the man best fitted for it by his temper, strength and skill—or even by some special weakness! First the steersman:

"Let this broad heavy hero sit at the helm, powerful and limber . . .
Light handed on a helm, watchful and wary, cautious yet quick . . ."

Then others "Put this great-fisted and shrewd man to grapple with the rigging. . . . Windwise, he'll work with him that holds the shrouds . . . a thick-set, broad and crogey champion . . . and with him that grips the sheet, a neat and handy fellow. Set at the prow our pilot, keen-eyed for the airts, and with a sure sight for each landmark like a guiding star. And at the halyard his self-reliant seaman, tried and clear-headed, grimly alert. . . ." They put to sea, and as the sea roughens, the steersman cries, "Quick at my ear a man to watch for the rain-squalls! Choose me a fellow who's half-genteel, yet not a real coward . . . for he must be quick to shout when he sights a big sea bearing down on us. But let no other but himself be by me, lest there be babble and hubbub to bewilder us." Then, as the seas break over the open vessel:

"To bale her let this strong man rise, active and brave,
Who will not blanch or yield or tremble for the shouting wave. . . ."

Next, "Let two stout fellows, these thick-boned, rough and hairy chaps, haul on the ropes behind the sails, to raise or lower them as we're forced or uplifted by the surging seas. . . ." And last, for fear one fail or be dashed overboard by a wave, six nimble men are picked to stand by,

ready to leap fore or aft: "Quick to move as the mountain hare . . . or the hounds after him; quick to climb as a squirrel in the spring-time". Then comes the stirring evocation of the storm, testing each man's mettle and the discipline of all, until at last, their ship battered and themselves bruised and weary but undaunted, the crew reach Islay and round the sheltering point of Carrickfergus. There, with thanks to the High King, they drop anchor, the *birlinn* rides in peace, and all find meat and drink and rest.

As at sea, so in war, loyalty could rise to heroism in individuals and corps. Young men were attached to their chiefs by chivalrous leadership in warfare, both before 1745 and later. The Highlanders' high character contrasted with that of most Regiments of the Line, too often disciplined with the lash while demoralised by debauchery. From Lewis the Islesmen went out to the Seaforth or the Ross-shire Buffs, Clanranald's Regiment, Sir Samuel Gaith, historian of the Highland regiments and people, wrote of these two regiments that again and again their courage and coolness in battle were proved.[1]

Not less striking was the record of Gaels among civil populations, whether in Britain, as in the 'Forty-five, or abroad. In Germany in 1761 and 1762 much was said of the Highlanders' kindness,[2] for the boors were much better treated by those savages than by the polished English and French[3]. Similarly in the Low Countries in 1814 and 1815, they were *enfants de la famille* and "kind as well as brave". The mayor of Brussels declared that they "called forth the attachment and esteem of all"; and the inhabitants requested him "to endeavour to detain the 78th (and battalion Ross-shire) regiment of Scotchmen in the town, and to prevent their being replaced by other troops".

of the Old Testament made itself felt, as in Lewis-and-Harris in the nineteenth century, this narrower patriarchal example hardly affected thought.[1] Rooted in a wider form of family than a patriarchate, and reverencing a Holy Family and all fellowship, Gaelic society honoured age and parenthood for their inheritance, and childhood and youth for their promise.

Such ideals of human relationship led to the veneration of the Saints of the Gospels and of later history, and also of those of legend, especially Bride. Dedications to Bride or 'Bridget' are widespread from Wales to the Lews; yet her memory has been all but lost in Britain, except in the Isles. Carmichael wrote that "Bride and her service" are dear to the hearts of the people. She is called "Bride of the white feet . . . of calmness . . . of the kine; woman-comrade . . . and woman-helper . . ." "I am in the keeping of my Saint Mary: My companion beloved is Bride" (Nos. 79-71 (p. 185-184)). As joy, steadfastness and attainment are generally linked to one notable stage in the life of each 'holy companion', the example, aid and fellowship of each saint in turn was especially sought, at a corresponding stage or crisis of one's own life.

The Gael's veneration for saintly men and women was shared by Catholic peasantry throughout Christendom; but its special quality seems to have been closeness of

[1] Clanship has repeatedly been said to be 'patriarchal', as an ideal and a system. A different conclusion, that community is the root of clanship (even in its political forms), may come as a surprise. The English or Lowland reader has had scores only to the writings of strangers such as Burt. Not knowing Gaelic, these derived their information from Highland spokers of English who, deliberately or unconsciously, were biased by seeking an ideal of society, and not unnaturally explained their position as patriarchal. Thus strangers ignored the co-parcelary life of farm-groups and township, economically humble but spiritually rich, as the root of a clan-community.

fellowship. "The Irish Church", a Roman is said to have exclaimed to a Gaelic Celtic bishop, "has won no martyr's crown!" "Ireland was named the Isle of Saints not by persecuting but by cherishing God's elect", was the reply. The Celtic Church linked the lands across St. Patrick's Channel; and what was true of Patrick's missionary field seems to have been as true of Celtic Britain, the land of his birth. Kilpatrick on the Roman Wall of Clyde has been claimed as the birthplace of one who was certainly a Cymric Celt by birth and baptism, a Gael by training, and an Irishman by mission.[1]

This closeness of fellowship ranged from personal to divine relationships in waking or rest, with an intimacy of expression all its own. A prayer for rest begins, "I shall lie down with God, and God lie down with me." A simple and universal gesture of love, in which parent, child or lover slips an arm under the loved one's head, is carried into prayer at rest, "the arm of the Father", or joy, steadfastness and attainment are generally linked to one notable stage in the life of each 'holy companion', the example, aid and fellowship of each saint in turn was especially sought, at a corresponding stage or crisis of one's own life.

[1] Within in Scotland the name Bride is now rare as a Christian name, that of Patrick is still found among Gaels, Campbells, Macdonalds and others. It is even commoner than English speakers might suppose, owing to the practice—almost the necessity—of giving an English form to a Gaelic name when it is commonly used by English speakers. Cf. for Dunchad (Dunkeld), Ansuas for Anughus (August) or Ceotter Pattrick for Padhraig (Patrick). Many a Gael in the Lowlands felt obliged to relinquish his baptismal (and ancestral) name, with their link to Celtic Christian tradition.

with his spouse. The knight, the first Stewart Earl of Menteith, had died four years after his wife, in 1294. Medieval sculpture was then attaining its height, as this monument, in spite of the ravages of time, bears witness. The following year, 1295, saw the commencement of "the three hundred years war" with its repeated destruction of Scottish arts and traditions of peace. Under King Alexander III, "that Scotland led in love and law", peace within the kingdom of Scots allowed a union embracing Gaelic and Celtic traditions and Scoto-Norman arts. After his death this became all but impossible. So far as scholars can tell me, this almost unnoticed monument remains unique in Christendom, indeed in the world.[1] The arts of Scotland, historic and in touch with European achievement, were shattered by invasions, and Gaelic tradition was only to be maintained by the very poor, whose debtors, for all time, we have become.

As the approach of death God's mercy and peace were sought. Latterly Roman Catholic prayers stressed the wish for Confession to a priest, followed by Supreme Unction for the attainment of 'Happy death', *Bas sona*.[1] In early non-conformist times the people of the time than of willingly to the 'Soul-friend', followed by Benediction. When death had come, the mourners sang of sleep and home. In Lewis today funerals are conducted in silence to the graveside, where the last service is held; but

[1] *A unique mediæval tomb in Inchmahome: a cultural link.* (Geddes, 1952.)

[1] 'It would be of deep interest to compare the attitudes to death found in 'Spiritual Songs' by Protestant Gaels like Buchanan or Grant, with songs on death which, through maybe of post-Reformation date, are of Roman-Catholic origin (e.g. in Fr. Allan Macdonald's collection, poems on the Day of Judgment, and of Wrath; on age and on death; and on Purgatory; pp. 31, 85, 146; 34, 19, 21; 23). Many have much in common, both by virtue of the earlier traditions they share and still more because of parallel trends of Reformation and Counter-Reformation. Cf. *Carmina*.

magic is always efficacious—however desperate the need, however pure the motives of those who ask. These men were said to be the most successful fishers in the place; they were also Elders of the Kirk, who saw no wrong in what they did. They did not inform the minister; but the good man was not a fisherman and did not understand either the mysterious ways of fish or the incitement of a crew!

While this *neid fire* was kindled in all earnestness, a miming song-dance I have seen in Eriskay is pure fun: 'the Carline or Witch-wife of the Mill-dust' (*Cailleach an Dudain*), who falls down dead and is brought to life again! Once, perhaps, a half-remembered symbolic 'play' of the seasonal fall and resurrection of seed, it is certainly in form and spirit a thing of happy laughter now! Tales were retold by Martin and a seventeenth-century English skipper, of offerings made to a sea-god, Shony, at Eoropie, Ness, for the sake of seaweed, followed by feasting and drinking in the chapel there.[1] The story may be garbled or, if true, may record a pre-Christian survival turned to merriment and of no religious significance to the people of the time than 'the Carline of the Mill-dust'. The prayers for the seaweed necessary for agriculture and daily bread are Christian in spirit.

Often the people were at the mercy of periodic famines, diseases and sudden death, there were ample grounds for fears. Hence a word must be said of a belief widespread and ancient in the Old World, 'the evil eye' (*droch shuil*). In the absence of clinical diagnosis, a malady, or a misfortune to oneself or a valued possession, might cast suspicion on someone present when it occurred; and

[1] W. C. Mackenzie, 1919, pp. 143-208. Contrast *Carmina*, vol. iv, pp. 23-25.

stubborn and suspicious; he never believed it. He realised that the backwardness of the Island arose from lack of opportunity, and that opportunity he would do his best to provide. Wherever he went he found the same story—things half attempted, nothing done.[1] Leverhulme, one felt in 1919, wanted to do all he could for the Islanders. A greater man would have wanted to work not only for, but with, the Islanders. Then, even if the fisheries had been ruined, as they were, by forces outside his control, he would have shared a moral victory, not shared and suffered economic loss, with moral defeat.

In the Isles for centuries before, a family and well-tried friends were valued above all other things. What was more, this was still true in the lifetime both of the elder men and the women. Marriage was for a home, and of the absent men, at war. The foundation for this friendly life was a plot of land and work to do, a home and the leisure to enjoy it. Leverhulme, too, valued these things in his own way. He cared for human homes and gardens, and had proved it at Port Sunlight and elsewhere. A pioneer of industry and efficiency, he pled for 'a six-hour day' and leisure afterwards, and he had done much to realise the ideal in his own works. Moreover, he was not without respect for spiritual values, freedom, and a congregation's right to choose their pastor.[1] All these things should have helped to put him into sympathy with Island life, and up to a point they had done.

It is clear that Leverhulme had considered the possibilities of improving the local fisheries, village by village; and an engineer had reported on possible harbour improvements at Tarbert, Barvas, and elsewhere. But he came to the

[1] Leverhulme (1927), p. 211; and Leverhulme (1st Baron), *The Six-Hour Day and Other Industrial Questions*, 1919.

COMMUNITY FROM PAST TO PRESENT PT. II

Visits at Tarbert and another was erected in 'the Bays' district by Leverhulme. Leverhulme also appears to have introduced 'Automatic' hand looms into Lewis. Today as in the past, the weavers possess a little croft or a few, a cow, and a few sheep on the outrun, and perhaps a small boat.

Commercial fishing and weaving cannot, however, be satisfactorily combined, for seasonal alternation of occupation entails waste of gear and plant, and interferes with efficiency. Thus in the North Lochs fishing 'creek' (Leurbost neighbourhood, immediately south of Stornoway), weaving became important, but none of the seven large herring fishing boats (all registered in 1939) had been fitted with motors after 1918; they were idle and rotting, and by 1938 only one was still registered. In South Lochs, however, motor-boats were purchased, but there is little weaving. An obvious reason for the difference is the accessibility of the North Lochs area by road to Stornoway. Light passenger carts bring yarn to the village, besides groceries, etc., and take away rolls of tweed. South Lochs, on the other hand, considerably further from Stornoway by road, is still within reach for marketing fish. In North Lochs, merchant seamen at home and young men on their return from three months' work on East Coast fishing boats, turned increasingly to the 'Automatic' looms, manipulation being easily learnt; but such intermittent work alone gives little hope of progress. There is no more fascinating problem than the future of improved weaving.

a. Unemployment and the Island Budget

In the past, the storms of the Atlantic washed up on the Island shores the wreckage of world commerce; and

CH. X BETWEEN TWO WARS, AND AFTER

fragments of spars and other needful things lacking on croft and moor were picked up and carefully stored. So, after 1919, from the wreckage of modern industry horse on the ground-swell of 'Depressions', there came to the Islands the frail raft of unemployment relief, doled out like driftwood long ago.

Some assessment is therefore required. The total amounts of relief disbursed before 1931 were comparatively bountiful; and they certainly exceeded the sum of the crofters' contributions to the Unemployment Insurance Fund. After a couple of months of wage labour at roadmending, harbour-repair, or the like, young men were qualified for 'the dole'. Furnished with this, they returned to the croft when paid employment gave out, to cart in their peat, collect stones for a new house or another out with a rod for a little fishing from the rocks. All this was done 'on the dole', work complete legality, so long as their names were duly inscribed at Stornoway Labour Exchange as seeking fresh employment. Not a few prayed that 'employment' would not come inconveniently soon, as they would then be legally bound to accept it and to leave the croft. No doubt, even if only part of the money received was urgently needed, the surplus was not squandered, as it might have been in a town. Extra cash, if any, served to buy a bum here, feeding for the gander there, and other things of permanent use. Yet morally it constituted misappropriation of relief. As a result, through no real fault of their own, young men began to lose independence and self-respect. This general problem for youth was widespread in years of 'depression', and it was peculiarly severe both in industrial Clydeside and the fishing villages of Scotland, and also throughout the 'depressed areas' of northern and western Britain, of which the Isles form the outermost fringe.

[illegible] and of lifting and Dramatic, the past in this [illegible] been stripped to reveal a [illegible] Sky. In such places a black loamy soil has [illegible] and [illegible] and [illegible] [illegible] [illegible]

121 by help of oral tradition and of the living witness of con-
174 tinuing usage, we can reconstitute Gaelic life from the
178 view-points of both people and chief. Elsewhere, even in Scotland, only fragments of early life are recorded, in
175 parchments written by the lawyers of landlord and king, and almost always from the privileged side. History is
814 indebted to modern lawyers who have deciphered and
127 published the faded documents of their predecessors. But the very training as solicitor-factors which fitted them for this specialised task, in no way prepared them to view life as seen, experienced and felt by the men and women of the past, or even by the elders or youth of the townships today, with whom they have rarely laboured and whose mother tongue they rarely understand.

(A) THE LABOURS OF MAN AND WIFE, AND THE REWARD

621 We have seen that until the nineteenth century the
632 township in the main was self-contained. Its people grew,
175 reared or caught their food, and also found the raw materials
133 for their clothing; they built their own shelter, and cut their own firing. As a result, both men and women had
174 each to develop "a wide range of simple skills", in the
175 apt phrase of a Lewisman, Mr. Donald MacLean, M.A. Beyond the co-operative effort within a family, a farm
462 group, or a body of 'fellow-townsmen'—in which each was competent to take a share according to sex and age—aptitude and family tradition initiated some local division
463 of labour. The resident smith and the 'caird' (usually a wandering craftsman or tinker) appear in the oldest tales and in the first rent-rolls. In addition there were honorary
759 tasks. The smith might act as the village surgeon, ready

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

174 to bleed or to set bones, while some elderly woman would
175 serve as physician and midwife. Spiritual consolation
462 and renewal too could be found, even in the absence of
monk or nun, or of priest, minister or catechist. Enough
[463] here, that with agriculture and fishing, most crafts, except
[759] metal-work, were practised in every family. The 'range
of skills' was therefore wider and richer in latent art than
[793] might be supposed from those needed on a little croft today.
[593] Hence the importance of understanding the roles of husbandman and housewife, of "the man and the woman of the house".

174 Their labours through the annual rhythm of the seasons
462 might be classed as efforts for the man and endurance for
the women (Fig. 9). Man's muscular strength and free-
221 dom of limb rouse him to efforts demanded by the thrust
[181] and lift of peat-cutting, digging in stony soil, or pushing the foot-plough, step by step obliquely down a rocky slope. In the past an archer's chase of stag, wolf or boar demanded all a man's effort, and courage too, as fishing still does in the stormy north-western seas. With this facing of danger there came a gaiety that sparkled like the crest of a breaking wave. Women's work demanded by its unceasing activity a cheerful endurance, whether at labour on the croft, at corn-grinding, butter-making and peat-carrying, or carding, spinning and weaving; and with every task of day or season came the constant tending of cattle, of menfolk and children.

[538] This allotment of seasonal tasks and skills is neatly put in the proverb, "A man's cow won't yield milk, nor a woman's horse ploughing" (*Cha bhi bainn' aig bo fir, 's cha bhi treabhadh 'an each mnatha*). Yet women have always taken a share of work on the croft—too heavy a share when the men were much away—and the habit of

encouraging them to rest when the men returned was fondly indulged. Much can be learned from the first (or 'old') "Statistical Accounts of the parishes of Scotland drawn up from the communications of the Ministers of the different parishes", *circa* 1790–96. Of the parish of Stornoway, where by 1790 many men had become crofter-fishers and others were at sea, the Minister wrote, "The women labour at least as hard as the men", even pulverising the ground with heavy hand-rakes (harrows being seldom used), and digging both with crooked and straight spades. That the men's debt was repaid in acts of manly service is true. A man would carry wife or sweetheart on his shoulders across a river in spate, whose rushing waters might have swept her away. But in her turn, a woman would wade into the cold sea, her coats high, bearing on her hips husband or son out to his open boat, so that he could start his night of exposure dry-shod and warm. This act of service was noted and illustrated by Burt at Inverness (about 1726), and it was common in the Lews before the building of stout piers, that is within living memory. Strong common sense, sheer necessity in fact, enforced such mutual service; but the sacrifice entailed was nerved by anxiety for those in danger, by personal pride and love. It was also true that it bore hardly on women, with their readiness for self-sacrifice and their ordeal of childbirth.

What return for their labours did the people get in the past, it will be asked, and what approach to sufficiency in a normal year? For the Island, the most thorough of the five Parish Accounts is that of Harris, with its fascinating retrospective notes (vol. x, p. 368). There the yield of a typical family share, a 'fourth' or 'farthing' land, was computed at "from four to five bolls" (which in Scotland

175 single tack, for which the tacksman, who was a relative
423 of Seaforth's Chamberlain, paid £247/10/8, 10 sheep,
247 9 stones butter, and 3 bolls of meal. The Bragar rental
mentions scallags who were not listed because they
were not smallholders; rather, they worked for the
tacksman for a certain number of days per week, in
return for which they received ground to cultivate and
on which they might build a house. There were probably
scallags in Shawbost as well; a section of common land
near the sea, which bears the marks of old cultivation,
is today called Blar na Scallag (field of the scallags).

The evidence is that, rather than being the
egalitarian society portrayed by many idealistic
proponents of crofting society today, the society living
in the area we now know as the crofting counties was
composed of fairly differentiated tenants and subtenants.
Allotments of land were called penny, half-penny, and
farthing lands (Walker 1812; 56; Gray 1952: 48); place
names such as "Five-penny Borve" indicate this history
of land tenure in Lewis. The 43 tenants in Shawbost in
1726 paid rents varying from £3/10/4 to £6/7/4 (Scots
money, which was 1/12 of the English). The differences
in rent gave them different shares in the arable ground
and different shares in grazing rights on the common ground.

●175 Thus some tenants were relatively more prosperous than
423 others. A large class of subtenants (scallags) did
429 corvée labor in return for a small amount of arable
land and the right to graze a few livestock. Their
land was intermixed with that of their masters in the
prevailing system of run-rig. "Crofters" had economic
standing similar to that of scallags, but had permanent,
compact allotments (Gray 1952: 49).

G. Joint Farm vs. "Crofting Township"

The 1726 rental indicates that the "town" of
632 Shawbost was a corporate unit and thus that "crofting
townships" have a long history. However, Geddes (1948)
argues that the form of the 1726 rental was due to the
method by which it was collected. In 1726, officials
toured the island and made a list in large public
hearings of the rents of those assembled, thereby attempting
to make certain that no tenants were excluded from the
rent roll. The major cooperative work unit seems to
168 have been not the township but the joint farm, which
176 contained enough men to make up a crew for ploughing
and fishing.

In the Lothians and eastern Lowlands, the land could
be worked in larger units than in the Highlands, and a

●175 typical homestead or "farmtoun" consisted of a
423 "ploughgate" occupied by eight tenants, each of whom
247 contributed one animal to the common plough and thus
had an eighth of a share of land or one "oxgate"
(Gray 1930: 97).

In the Highlands and particularly in Lewis, about
175 four six men and their families worked together and
254 shared land which was held in run-rig. The Old
460 Statistical Account (1796) lists 90 ploughs in the
parish of Barvas or about one plough per five families
(Geddes 1948: 57). Geddes maintains that joint tenants
175 paid an equal share of the rent and had equal "ecumings"
423 (the number of stock allowed on the common grazing land).
233 In contrast, Walker (1812: 56) says that joint tenants
paid different rents according to the share which they
had in the arable land, and that the number of cattle
which a tenant had on the common grazing land was soumed
or proportioned to his rent; all the tenants worked the
arable land together, and received a percentage of the
produce which was appropriate to their share. Geddes'
description (1948) emphasizes equality within the joint
farm; Walker (1812) and Gray (1952) point to differences
between tenants and subtenants.

●175 In any case, the "town" or township was not the
423 effective work unit, but rather was the larger
247 neighborhood in which several joint farms existed.
233 The tenants of several joint farms grazed their stock
on the surrounding moorland (i.e., on common grazing
land).

H. From Run-rig to Crofting

175 Run-rig was an agricultural system suited to a
423 pastoral people, who required the use of open, common
241 pasture for grazing their livestock; the arable land
311 was limited, and of varying fertility (According to Day
(1918: 12), 54% of the land in crofting counties was
mountain and heath used for grazing, and only 56 was
arable land). Residents worked several strips of
different quality, and the strips (in drained beds of
423 earth a few feet wide and many feet long called lazy-
424 beds or flannagan) were usually re-allocated every few
422 years. A "constable" acting for the landlord ensured
825 that proper husbandry was maintained.

The joint farm, and the stratification of tenants
175 and subtenants within the farm, disappeared as
241 "progressive" landlords began, in the second half of
423 the 18th century, to substitute compact holdings for
the "mingle-mangle of dispersed strips (Gray 1952: 46)"
000 which characterized run-rig. Hamlets or clachans

●175 Hamlets or clachans
241 (small clustered settlements) were broken up, and
306 houses were isolated on strips of land in linear,
176 single-street villages.

Gray (1952, 1957) argues that the main factor
175 behind the reorganization of land use in the Highlands
was the progressive, individualistic, laissez-faire
ideology of the 18th century. Grant (1930: 97)
attributes the reorganization to the high demand for
cattle which existed during the Napoleonic wars.
177 Highland landlords, who were very much in contact
241 with the society of the Scottish Lowlands, were
influenced by agricultural practices there. The
trend to change run-rig, which had once dominated the
whole of Scotland, to fixed, compact holdings began
in the Lowlands.

According to the "progressive" ideology of the
423 time, the giving of land to individual farmers in much
424 larger pieces than they had previously held would
422 serve to stimulate agricultural development and give
rise to a class of capitalist farmers. To give land
to a relatively few people, however, meant the removal
of a large number of tenants who had hitherto been
able to survive under the system of run-rig.

●175 Around this time, various factors had encouraged
(164) an increase in population. After Scotland's union
with England in 1707, the prohibition on the import of
cattle into England was lifted, and trade in cattle
became economically more important (Day 1918: 26).
The numerous wars of this period caused the price of
cattle to double between 1735 and 1766 (Day 1918: 180).
Clan warfare diminished; the potato was introduced;
and vaccine for smallpox became available.

175 The increase in population led to an extreme
164 crowding of land in some areas, which made agricultural
reform difficult. Many landlords tried to encourage
168 tenants of their estates to emigrate. The appearance of
a market for kelp, which lasted from the middle of the
18th century to about 1815, discouraged landlords from
implementing policies of depopulation that would
175 eliminate their labor force. An alkaline extract of
824 kelp was used in a variety of manufactured goods, such
423 as soap and glass. The seaweed was gathered by men,
424 women and children living along the coasts, and burned
388 in rough open kilns. Tenants who worked at this
(465) occupation received 1½-4, and the landlords £16-20,
per ton (Mackinlay 1878: vii); the landlord received
as high an income as £10,000 to £20,000 a year from the
burning of kelp (Gray 1957: 42).

●175 Factors which led to further crowding were the
423 development of industry and an increased demand for
241 wool in the south, which occurred when traditional
(167) sites between laird and tenant had been loosened. The
clans had been disbanded after the Jacobite rebellions
of 1715 and 1745; those landlords who had not
forfeited their estates received huge sums of money
as compensation for the abolition of hereditary
jurisdiction. They had experienced travel and the
luxuries of other countries, and were not eager to
remain on their estates. They accepted the huge rents
offered to them by sheep farmers to the south, and
turned vast amounts of land into sheep tracts. Tenants
were crowded together along the seashore, or lived on
361 tiny holdings dispersed among the larger farms or on
moorland, earning their living by doing wage labor.

Despite the factors which encouraged a high level
175 of population to remain on the land, proprietors
423 attempted to destroy the joint farm with its small,
176 dispersed holdings and collective rights. Run-rig
(166) agriculture was abolished in Argyll in 1775 (Day 1918:
180; Gray 1957: 49), and over the next 80 years it
disappeared from the Highlands (cf. Gray 1952: 49-50),
to be replaced by townships of compact holdings
surrounded by undivided hill grazing lands.

●175 Geddes (1948: 56) gives evidence that joint farms
423 were abolished in Lewis early in the 19th century.
241 Gray (1952: 50) says that by 1819 there was little
423 run-rig left in Lewis. The factor's notebook for
Breasclete, on the west side of the island, shows the
destruction of clachans around 1850, and their replacement
by linear townships.

In the Napier Commission's "Evidence" (1884) for
175 the parish of Barvas, it was mentioned that the rent
423 had been increased because of improvements made by the
632 landlord, Sir James Matheson, between 1849 and 1852.
176 Land had been drained and new townships created; and
both old and new townships were lotted and rented in
1850 and 1851 (Napier 1884: 999). The Ordinance Survey
175 map drawn up in 1852-53 reveals several interesting
423 features of Shawbost: "New Shawbost" has recently been
422 laid out; and in an area now incorporated by only a
few separate crofts on "Carnan," a cluster of houses
appears, perhaps the clachan in which joint tenants
lived, and from which they went out to farm their various
strips of land, before Matheson reorganized the land
in linear strips with dispersed housing. The peat banks
(314) in the Carnan area are almost exhausted, indicating a
(174) long period of settlement in this area.

●175 It is ironic that the attempts by landlords to
423 initiate agricultural reform and develop capitalist
424 farmers led to a destruction of the differentiated
422 tenantry on the joint farms (cf. Gray 1952: 51-56),
and a proliferation of very small units, none of which
was adequate to provide a reasonable subsistence.
These small units became fixed as individual holdings
by the 1886 Crofters Act, and the only important
distinction thereafter was between smallholders with
security of tenure (crofters), and non-crofters who
built homes on the common grazing land but had no
specified rights. Although various agencies were
established after 1886 to enable holdings to be
enlarged, only in the last fifteen years have such
possibilities been officially developed in the form
of official subletting and individual apportionment.

17 By the second half of the 19th century, a trend
423 against laissez-faire was manifest in the writings of
European scholars. As feudalism broke down, small-
holders throughout Europe were being dispossessed of
their land, which was then consolidated and enclosed.
171 In Denmark, legislation was passed as early as 1682
to prevent landlords from taking steps to increase the
efficiency of their farm production by replacing the

three-field system with improved rotation methods involving consolidation of land. The Danish government feared that consolidation of land would have meant a reduction in taxes and fighting men.

The British government was faced with the same threat as the migration from the Highlands, as the Highlands had long been a source of good fighting men.

A reaction against the materialism of the industrial revolution developed in England as small-holders sold their land to large landholders to become labourers. The Taylor Report (1954: 9) reflects the value which is still placed on country life by maintaining that crofting communities "embody a free and independent way of life which in a civilisation predominantly urban and industrial in character is worth preserving for its own intrinsic quality."

The various acts protecting smallholdings were also attempts to keep labor dispersed; to diversify and improve the use of land, and thus to increase Britain's self-sufficiency in food production. Various marketing agencies and subsidies were introduced around World War II to achieve such aims. Among the many agricultural-ists affected by these encouragements emanating from the central government were crofters.

In 19th-century Scotland, the cause of the Highland tenants and crofters was taken up, as part of the trend of the times and because a series of famines occurring in the Highlands caught the attention of Britain. After the kelp industry was destroyed at the beginning of the 19th century, landlords maintained high rents on the assumption that the depression was only temporary, which caused tenants to borrow their capital by selling their cattle (Gray 1957: 38). A number of reports were published on the plight of Highland smallholders: Fullarton and Baird (1845), MacNeil (1851), Macaulay (1878), and finally the Napier Commission's report of 1884 which was followed by the Crofters Holdings (Scotland) Act of 1886.

The 1884 Napier Commission Report tried to resolve the conflict between the rights of the individual smallholder and the maintenance of agricultural efficiency in a situation which still had communal elements of social organization, by recommending an organization much along the lines of the old joint farm. The township was defined as a farm, or part of a farm, which was occupied in common or in division by several tenants. The township, seen as an agricultural unit, was to be given various immunities and powers by which to achieve

stability and improvement; e.g., an executive officer, the Constable, was to be elected annually by the community, and he would oversee various improvements in the township (Napier 1884: Dep 1884: 187-9).

However, the Crofters Act of 1886 did not make the township a unit of local government. It was more concerned with protecting the individual crofter's rights than with the creation of a self-sustaining, self-correcting economic unit. The Napier Commission had recommended the consolidation of crofts which were rented at less than 16 a year, and a policy of permission by which the excess population would be encouraged to emigrate or specialize as laborers, fishermen, and so on.

Instead, the 1886 Act provided security of tenure for a large number of crofters, as well as a fixed fair rent and compensation for improvements if the crofter chooses to leave the croft. These assurances, and the creation of a variety of agencies (such as the Congested Districts Board, the Crofters Commission, and the Board of Agriculture) whose purpose was to encourage agricultural improvement by providing funds, equipment, breeding animals, seeds, advice and so on, constituted a set of incentives. These incentives combined with a number of other factors including improved transportation and the spread of

information via the technology of mass society to affect the choices made by succeeding generations. For example, young people are able to leave the island and work in British cities or abroad, sending money home to sustain their aged parents who by law cannot be removed from the croft.

E. Changing Land Use

Darling (1955) described the previous Highland way of life as a well-adapted, ecologically balanced system, in which proper use of land was attempted by limiting the number of livestock, preserving a proper ratio between cattle and sheep, and regulating the flow of stock on the land throughout the year. Ditches (farmers of turf or stone) and drains were communally repaired and cleaned. Although continuity with the previous way of life is evident today, the overall picture is one of partial use, and misuse, of natural resources. Various pressures from government, organizations and colleges have been brought in to encourage effective husbandry and land use.

a. Specialization and Individualism: The change from an ecologically adapted, intensively regulated community in which land was used intensively for subsistence

of the normal capitalist farmer in the West; but in crofting areas, these pressures reveal a strain between communal and individual tendencies.

a. Pasturage:

Although run-rig was replaced by fixed, compact holdings, the method of animal husbandry was not affected until the land began to be fenced. A single dry-stone dike enclosed the township, keeping livestock on the moor and away from the arable land. In different parts of the Hebrides, various types of herdsmen were hired to protect both the livestock and the growing crops (cf. Owen 1956-59 for a discussion of cattle, calf and sheep herdsmen in North Uist).

The township Constable had a great deal of power, which included the right to evict people from their crofts, to enforce rules of good husbandry. The last Constable of Shawbost, who died at the turn of the century, has been credited with many of legendary stature. Such as forcing an old woman with a sore leg to take her cow to the moor along with all the others. Old widows who had no one going to the fishing and hence no means of paying their rent might be evicted in favor of other permanent, land-hungry members of the village.

In the last half of the 19th century, many families were "cleared" from the district of Uig and resettled in Shawbost. According to a local version of village history, the Constable evicted persons from North Shawbost and resettled them in New Shawbost. "The people from Uig were fishermen, so they needed to be by the sea. They wouldn't take a croft in New Shawbost at all." According to another version, the crofts once extended all the way across from Carnan to the loch; when the Uig people came, the crofts were chopped in half, and the street called Sulie Bhigh was created.

Whatever effect the Constables had on land use and animal husbandry, they are now referred to as "tyrants," who went mad or committed suicide after the Crofters Act of 1886.

Cattle and horses were tethered or herded within easy walking distance from the township; sheep could be left on the moor without much surveillance. At a much earlier time another dike existed out beyond the township dike. The dikes were used according to principles found in grazing schemes today: the sheep were kept far out on the moor, beyond the second dike, until midsummer when they were moved in closer to the village. At this time they were still out of the arable land of the

township, but on land which had been rested and which thus provided better grazing. During the winter the sheep were allowed past the township dike, to graze along with the other livestock on the stubble of corn and barley, and mineral-rich seaweed by the shore.

After World War II, the individual crofts began to be fenced, and the township dike was no longer required. The fact that sheep were still grazed communally on the moor meant that everyone had to go out together on a particular day rather than individually, but fencing allowed more individual variability in land use. Less use was made of crofts for raising crops, and they could be used for grazing sheep all year round.

b. Grazing schemes and apportionment:

Another illustration of the individualism of land use is provided by comparing the number of apportionments granted by the Crofters Commission for Lewis in the last 10 years with the number of township grazing schemes carried out during the same time (see Table 37). A crofter may apply to the Commission for an area of land (apportionment) to be sliced out of the township's common grazing land and given to him for his own use; theoretically, his share in the township's common grazing land is reduced if his application is granted. [See pyk-ciuj/st]

Chapter 3

CHANGING ECONOMIC STRATEGIES:

LAND, SEA AND LOOM

In Lewis, the change from a relatively self-sufficient community in which land and sea provided the economic base occurred in the context of the phenomenal rise of the Harris Tweed industry. In the following pages, the history of Harris Tweed is discussed in relation to changing strategies involving exploitation of land, sea and loom. Associated features of social life are discussed. Social boundary systems are defined and discussed in Chapter 4.

a. The Sea

Around World War I, mine boats, as long as 27 to 30 feet, driven by sails, used to go out regularly from the Shawbost harbor. From five to seven men, usually neighbors, had "shares" in a boat. They would go out fishing during the night and return the next day. "We baited our lines with eel, for ling. We would catch maybe two or three hundred. I remember once we caught 1300."

On one of the crofts along the strand are the ruins of two curing houses, where the fish were salted and dried. Ling, cod, skate and halibut were cured and sold to local merchants for exports. "The name as Lewis" in Ireland was very dry. Then was the main industry. Then the English came with their steam trawlers; they ruined the fishing here, and then went west to Ireland and the Faroes. In Ireland they got fined for poaching, but here the trawlers often ignore the three-mile limit. But the fishing was the mainstay here, before the Harris Tweed came along."

One man returned from sailing in 1934 and bought a boat for £2. He had 30 lobster pots and made 17 one pots by selling the lobsters at a shilling apiece. Another man, who returned from the United States in 1934 because of the depression, bought a share in a 14-foot boat. It was made in Ness, at the northern tip of Lewis, and cost about £14. He and his partners went out every night possible; the fish provided an important part of their income. The boat was sold in the 30's. "It wasn't being kept up enough." Around World War II there were as many as twenty boats; six fished at night, after a day's work. Today there are four 12-foot boats in Shawbost, each shared by four or five men. The boats are used intensively for fishing during certain times of the year,

but not as often as in the past. In the past boats were in danger of being smashed by the strong east winds that gained easy access to the Shawbost harbor; but today, because so many cars are available, the boats can be sheltered in the more protected bays of Carloway, five miles up the coast to the southwest of Shawbost. Despite this protection and the increase in income since World War II which would enable more people to buy boats, the number of boats remains small.

In the past certain people were esteemed for "knowing the wind and the sea." The sound of the surf coming from different directions presaged different kinds of weather; a line of white across the bay meant bad weather in a few days. A fifty-year-old man says, "My father and grandfather could tell when a storm was coming. They needed to know, and they didn't have radio and television to tell them. I would know the signs, too, if I had listened to them."

Not only was there local fishing, but the men used to hire themselves as crew on other fishing boats. Many surnames reflect this history. One family is known by the nickname "Urachan," the surname of a man who lived on the east coast of Scotland and on whose boat the head of the Shawbost family had once worked as

a crew member. Another family is called "cook," the first job which a novice had to assume when he joined the crew of a fishing boat. One of the last men to go to the east-coast fishing is about 60 now. The man came back from the fishing in time to bring in the oats, barley and potatoes, and the money was used for rent and the purchase of various foodstuffs and other goods. They usually brought enough rolls of wallpaper to cover the stone-walled or wood-lined high dubh (black house) for another year. Twenty pounds were good wages for a season. While the men were away at the fishing, the remaining members of the family lived on credit from the local shops, and depended on the good will of their neighbors.

Many men joined the armed services, and were especially sought after by the Navy and the Merchant Service. In 1900, there were 2,500 Lewismen in the Naval Reserve.

Around the turn of the century, until the first world war and the growth of the weaving industry, the girls used to "follow the fishing." "Everyone came to the boats to see you off. You could go all the way to Aberdeen for 12/6 on a special fish-worker ticket."

The girls went from the south of England to Shetland in the far north.

In the far north. "There were two fishing seasons. For one season you went to Fraserburgh, Stornoway, Berwick and Peterhead; and then the winter fishing was in England, at Yarmouth, Scarborough and Lowestoft. I remember in Yarmouth we didn't kiss the English girls. They smelled, it was such a dull color. We liked the pure white Scotch breed."

They lived in small huts, and the work was hard but full of fun. Neighborhood girls used to get together, bringing bedding and different items in large chests to share in the housekeeping. Three girls worked together in a crew, and there were as many as six sharing a room, in double bunks. Some of the huts were so small that there was barely enough room for the beds and the cupboards. At night the boys would come in off the boats. "You were so tired from being up since early morning; but you were always able to dance. You were treated with respect; the youngsters today aren't so good." The women who married non-islanders that they met at the fishing were not likely to return.

When the weaving started on a large scale, the girls were glad enough to have work at home, even though the pay was hard." But many continued their temporary absences from the island, working in hotels or as

domestic servants among the well-to-do families in Glasgow and other cities on the mainland (see Appendix Island).

When the weaving started, some men settled at home permanently, but many continued to come and go between the sea and the loom. In 1931, the ratio of men to women in Lewis and Harris was 100:111. The men came home for temporary jobs, such as the construction of roads or houses. Jobs are told of the common practice of sending for an extension of leave. The man found it easy to join the Royal Reserve because of their fishing experience; and it brought them a crofter's fee and expenses-paid trips to places off the island for several weeks of training during the year. But when the wars came, the loss of men to the Navy and to the Merchant Service was heavy.

B. The Land

The number of arrears in rent in the Barvas rent ledger at the turn of the century indicates the small amount of money in circulation at the time. Between 1899 and 1914, several crofters paid part of their rent "by work," and six had some of their stock "uplifted by decree." For example, a Widow Catherine lost "one red

For example,
a Widow Catherine lost "one red
mare and foal (£10), one dun one (1/3/10), and one dun
heifer (11/10)." One family is said to have paid rent
by being fiddlers for "the castle" (the home of Sir
James Matheson), thus earning the patronage. "Fiddler."
Their income stopped abruptly when the fiddler at the
time, a great-grandfather of descendants now living,
converted to the Free Church and smashed his instrument.

In 1899 and in 1901 it was noted in the rent ledger
that two crofters wanted "first chance of a vacant croft
in the township." In the first quarter of the century,
a conflict ensued between Shawbost and a neighboring
township over the extension of a cemetery; land was too
precious to take out of cultivation and give to the dead
of another village.

A 65-year-old man recalls, "Men got their living
from the land and sea. They kept more cattle when I was
young. They used to bring of the cattle to fertilize the
soil. The entire croft was used. My father's croft was
only 2½ acres, but he worked it well and harvested eight
stacks of barley to see us through the year." There were
a number of kilns to dry grain, and mills along the stream
to grind the barley. The "old Horse mill" which was
recently rebuilt by the school children as a school project
was in operation from 1920-1934. "Then the tweeds got

People kept several cattle, some of which were dry most
of the time. But because everyone was keeping cattle,
milk would be gotten from a neighbor. One man was
planting eight or nine hundredweights of potatoes before
the war, some of which would be used to feed the livestock.
"You couldn't buy milk then, so you had to keep a cow.
and even though people were weaving, they weren't getting
so much money as they are now. It was the barter system
here for a long time. So they didn't have the money to
buy feeding stuff. It was better to spend the time
planting potatoes. Now of course there's more money in
the weaving."

After the war, an act was passed which provided free
milk for school children. Milk for the Shawbost school
was supplied by a farm near Carloway. The school first
started buying the milk from the school milk van. A strike
held by weavers during the war had increased the payments
for weaving, and the barter system had stopped. More
money was available. As the loom was more profitable,
more people stopped keeping cows, and relied on their
neighbors for milk, or got their milk from the van bringing
milk to the school. And as the cattle got fewer, the
market for bottled milk expanded. A dairy was started on
the west side of the island in the mid-1950's which carries
milk from Uig to Ness.

The number of cattle diminished as milk became
available by other means; and when the township receding
crofts came into extensions, the need to go to the
shellings for an "early bite" was removed. The shellings
that remain in use today are huts of tin, wood and
concrete within easy walking distance from the highway,
used on weekends and during summer holidays. Most of
these modern shellings are close to Stornoway, and serve
as summer retreats for the relatively harried urban
dwellers such as publicans. On the west side, the
shellings are no longer used, but remain as a theme of
songs and in nostalgic memories.

C. The Loom

Gle Mor, the big cloth, was woven in the Highlands
and Islands for hundreds of years. Martin Martin,
who travelled through the Outer Hebrides in the late 17th
century, describes the export of "plaiding," and the
practice of washing or shrinking the woven length of
cloth (Martin 1716). Weaving was done on wooden looms,
and produced only for local markets until the middle of
the 19th century.

By the middle of the 19th century, the failure of
the kelp industry, decline of fishing, and destruction

of potato crops by blight had contributed to widespread
poverty. The production of cloth for non-local markets
was promoted initially by philanthropic proprietors in
an effort to ameliorate such conditions. Lady Dunmore,
wife of the Dunmore family that owned Harris during most of
the 19th century, was largely responsible for developing
a market in London and elsewhere for cloth woven in Harris.
The cloth was popular first among the aristocracy, who
wore it for hunting and other sporting occasions. The
romantic image of a cottage industry promoted for charitable
purposes contributed to the market value of the tweed.

The market expanded in the second half of the 19th
century, aided by ladies of leisure who followed the example
set by Lady Dunmore (cf. Hunter 1964: 24-26). The
production of cloth for a commercial market spread from
Harris to the southern Isles, but was slow in coming to
Lewis, where the proprietary, Sir James Matheson, provided
the people with construction jobs. After Matheson died in
1876, weaving for outside markets began in Lewis in the
parish bordering Harris, and the name "Harris Tweed" was
used because a market for cloth of this name had already
been established. By World War I, weaving for outside
markets was being done in all four parishes in Lewis. In
1899 there were 55 looms in Lewis and over 200 in Harris.

By 1911, the number of looms in Lewis had increased to
300-500 (Hunter 1964: 32).
By the late 19th century small mills had replaced
domestic spinning and weaving in the Highlands on the
mainland. Weaving continued to be a home industry in
the Hebrides where it was encouraged by the support of
non-profit-making organizations such as the Highland
Home Industries and Arts Association, the Scottish Home
Industries Association, and the Crofters Agency--all
established at the end of the 19th century--and also
encouraged by the patronage of the aristocracy, who
wore it for hunting and other sporting occasions. The
romantic image of a cottage industry promoted for charitable
purposes contributed to the market value of the tweed.

The market expanded in the second half of the 19th
century, aided by ladies of leisure who followed the example
set by Lady Dunmore (cf. Hunter 1964: 24-26). The
production of cloth for a commercial market spread from
Harris to the southern Isles, but was slow in coming to
Lewis, where the proprietary, Sir James Matheson, provided
the people with construction jobs. After Matheson died in
1876, weaving for outside markets began in Lewis in the
parish bordering Harris, and the name "Harris Tweed" was
used because a market for cloth of this name had already
been established. By World War I, weaving for outside
markets was being done in all four parishes in Lewis. In
1899 there were 55 looms in Lewis and over 200 in Harris.

1. The Harris Tweed Industry in Shawbost: Coinneach

Ban, a man who started a tweed business on the west side
of the island eventually developed into a large mill
with equipment for spinning yarn and finishing tweeds.
was said to have been a rink-taker, a man who lost the
first £50 he borrowed, but borrowed another £50 and never
looked back, a man who throughout his life gave fellow

238 175 157 472 businessmen nervous breakdowns because of the risks he continued to take. "He was planning to start some business. At one point it was going to be either distilling or the tweed, and he just happened to go for the tweed."

Some say Coinneach Rod had physical disabilities, developed or aggravated by military service, which made him unable to work like other men, and hence he was forced to find other ways of earning a living. He was a merchant, like other islands who became entrepreneurs in the tweed business.

According to one version of Coinneach Rod's life, he began to handle tweed on a large scale as the result of an accident, when an agent selling tweed for a merchant on the east side of the island arrived on Lewis for the first time, asked for a "Kenneth Macleod, merchant," and was directed to Coinneach Rod of Shawbost.

"He was also an earthy, natural, easy man to get on with. He never changed, even after the money came. He would sit the buyers down with a plateful of cuddies and say 'Dig in,' 'Eat up.' He always ate them whole, and never spat out the bones. The buyers liked that. They liked his easy manner."

175 441 452 Between the first and second world wars, the merchant was an extremely powerful figure. When men and women

175 441 462 went away to the fishing, their families bought groceries on credit. "If the merchant thought the fishing season would be good, he let them have as much as they wanted; otherwise he restricted them in their buying."

288 175 157 444 437 472 The barter system continued in Shawbost long after it stopped in Stornoway. A weaver was given credit in Coinneach Rod's store, until it closed in 1948, for the exact amount of the tweed. He never gave money. "You had to get just the right amount of goods, even down to tuppence in matches." People were forced to buy huge jars of jam which they did not really want or need. Some "cunning" fellows would slip a two-pound pair of shoes into a shoebox marked 15 shillings. "Coinneach Rod would ask if you wanted a wireless, or would a tweed jacket fit your son. You couldn't refuse, or you wouldn't do any weaving for him for a long time."

Coinneach Rod bought looms for many weavers, and they 288 175 157 444 472 452 would weave only for him to pay off the debt. "People living on the dole with a large family would go to his store and ask him to buy them a loom. He would get the man a loom, and then get him a lot of tweeds to weave so the man could pay him off. It was two tweeds for yourself and one for the loom."

288 175 441 2. Centralisation and Specialisation: Centralization and specialization in handling the production of the tweed

288 175 441 462 developed from the concentration of power in the hands of the merchants. In the early days of the industry, all the processes involved in the production of a finished length of tweed were carried out by individual families. A man used wool from his own flock, and with the aid of other family members, dyed it with vegetable dyes, carded and spun it by hand, wove it, washed and shrunk it, and found his own buyer. Dyeing wool, spinning yarn, and washing ("waulking") the finished length of tweed 286 232 175 462 was usually done by women. In Harris, the entire process of producing a tweed was carried out by women, but in Lewis the weaving was done largely by men.

175 286 A woman in her 80's recalls the process of weaving when she was young. Hand-spinning had died out by this time, although the question of whether tweeds woven with such yarn could legitimately be called Harris Tweed was not resolved until 1934.

"About 1916 or so it took about two weeks to a month 175 283 to do a tweed. You bought the wool from the Agricultural 175 Board. Sixteen bags of wool, costing about 120, would 433 do four tweeds. You needed four one-stone bags per 433 tweed. Then you would spend a day gathering a bag of 288 286 324 crotal (lichen scraped from rocks and used for dye). One bag per one bag of wool was required for the dye. After

175 283 175 283 175 283 432 dyeing the wool it was spread out, dried and sent to Stornoway to be made into yarn. The yarn was then sent back, and the weaver wove and washed it. About six women were required to do the waulking (the process by which the cloth was washed and shrunk).

175 284 432 "In those days the weavers designed their own patterns, and sold their own finished tweeds. I remember going into town with my brother, we had two tweeds in the cart. We went into a shop to sell the tweed, and the man said it was poor weaving. He didn't want to pay the full price for it. I told my brother to roll it back up, we would take it somewhere else. As we left the shop, he told me I had 'good cheek.' In the next shop the merchant didn't say anything, and gave my brother the regular price. We went home with £60."

286 288 175 176 176 433 433 433 433 386 The great demand for tweed encouraged the development of more efficient methods of production. One by one the various processes of production were taken over by specialists, and gradually these specialists were brought together under one roof. Large boilers for dyeing wool were supplied as a result of actions taken by the Congested Districts Board, which was formed in 1897. The Scottish Home Industries provided chemical dyes. The most 286 288 324 difficult and time-consuming processes were carding and 243 spinning, which small mills on the mainland began to do

286 288 175 176 176 178 433 433 433 433 386 on commission for weavers around the turn of the century. By the early 1920's, four mills on the island were carding and spinning wool on commission; and one mill brought looms into its premises. Lord Leverhulme, who bought Lewis in 1918, saw the value of concentrating weavers in one place and of improving the technology. He encouraged the introduction of Hatteraley domestic 463 looms, which eventually replaced the wooden looms. The individual weaver also did his own warping, but after World War II the mills began to hire warpers to work full time on mill premises. Transporting the tweeds, which used to be the responsibility of the weavers, is now the responsibility of the mills. Today all processes except the actual weaving are handled by mills, most of which are located in Stornoway.

Such steps in specialization and centralization made sense to the weaver. One of the older weavers recalls, 175 175 "In the late 20's or 30's you could buy a yard of Harris 286 288 433 Tweed for about two shillings. It wasn't economical for 433 any crofter to dye and spin the yarn, weave it and sell it 435 for only two shillings a yard. As the mills enlarged, they could make it with the machinery because they could make it an economic proposition."

However, the tendency toward specialization and 175 centralization was in direct conflict with the reasons 286 288 322

175 175 288 288 288 433 433 433 433

288 paucity of passengers, which provided rides to and
175 from town many times a day; but with the "development,"
178 that is, the centralization, of industry, public trans-
472 portation deteriorated. Visitors to the island unfamiliar
494 with this history are struck by practices which they interpret as coming out of a clockless past, such as the present custom of stopping the bus midway in its journey to Stornoway so that the driver can eat dinner in his mother's house while all passengers wait on board. Such a custom is fairly recent, and indicates the deterioration of public services to populations which are marginal to the centralized source of these services.

288 During World War II, when the demand for tweed was
175 high and the number of weavers small, the weavers staged
[468] an effective strike by which they received an increase in pay and the burden of cartage was shifted from them
[178] to the mills. This did not affect the system of trans-
[494] portation until the mills realized it would be cheaper to run their own transport rather than to pay the independ-
[493] ent drivers a "cartage fee." The mills then began to use their own vans to deliver yarn and collect tweeds directly
175 to and from the weavers. Once the mills took over trans-
288 portation, they tended to deliver tweeds to weavers
178 closest to the mills rather than to uphold the principle
[494] of equal distribution. This practice (made possible by
[466]
[361]

175 the 1934 decision to change th
178 "islander") led to the weavers

288 441 458 in Shawbost: a very small business, which until recently did not even have its own transport but hired facilities when they were needed and simply went into hibernation when orders stopped coming; a medium-sized business, which went into liquidation in 1971; and a large business, which continues to survive despite a depression which has continued since the late 1960's.

288 441 464 [439] Harris Tweed is sent to markets all over the world; but because of the difficulty of maintaining a large labor force, the filling of orders is sometime slow. If large orders cannot be met, weaving as an island-wide occupation cannot be maintained. The number of weavers on the island fluctuates, as slack periods come and men adopt the time-tested strategy of temporary migration in search of other jobs. One of the factors which aided the weavers during their strike of 1943 was the fact that so many other jobs were available during the war that the future of the industry was jeopardized.

[468] [175]

288 464 [178] In the last five years the number of mill employe has decreased from 800 to 500. The decrease is due in part to the introduction of more efficient techniques and new equipment, but there is little room for improv ment in the production of tweeds because the human element, the weaver, is essential to its product

sheep were let out of the pens, and a fight broke out between the two groups of people.

3. Crofters vs. Non-crofters: Another division within the township has developed largely because of the attention paid by outside agencies to "crofting." The Crofters Act of 1886 defined crofters and gave them a protected, privileged status. In fact, very little distinction existed between non-crofters (sometimes called squatters and/or cottars) and crofters, and in some places, such as the Isle of Scalpay, non-crofters even out-numbered crofters. Both categories were linked to each other by bonds of kinship and mutual dependence. Non-crofters were in fact favored economically. They did not have to pay rent, but had the same opportunities to graze stock and plough land as did crofters. Many crofters themselves had bualls, units of land not recognized as part of the croft and not included in the land for which rent was paid but recognized as property by the villagers themselves to the extent that these bits of moorland passed down through families or could be given by one person to another. Even today, a young girl thinking of getting married says her future husband might build their house on her father's bualls, and a man may build a house on moorland "given" to him by his wife's aunt. Officially, a non-crofter had no "rights" to a house which he built on the common

241 grazing land and he could not transfer such property in
175 a will. Similarly a crofter had no right to his bualls,
423 and could not formally protest if another crofter sought to appoint this land for his own use (see Chapter 2 for a discussion of appurtenancies). But in both
[229] situations, informal understandings superseded legal rights.

Various legislative acts which followed the 1886 act focussed attention on the crofter. Various matters associated with crofting are handled by a Crofters Commission. Crofters have access to grants and loans to improve land and build fences and homes. They may buy goods at low prices in a nearby cooperative store. As crofts were fenced, land around the townships became scarce and non-crofters found it difficult to keep large numbers of cattle and horses.

Within recent years it has become possible for non-crofters to gain title to the small plots of land on which their houses are built. Some loans are available to them for building houses. Non-crofters have access
[654] to the various subsidies available to all agriculturalists, such as the subsidies for raising hill sheep and beef cattle. There is still the feeling, however, that
[329] crofters have rights which non-crofters do not have and that in conflicts over scarce goods crofters have

175 F. The Decline in Self-Sufficiency
432
435

Until the second world war, when weavers began to
175 earn larger sums of money for their weaving, the
175 township was relatively self-sufficient. The land was
[241] more thoroughly cultivated, and the village boasted a
175 number of local specialists. These specializations
463 were linked with particular family lines. Certain
592 families were blacksmiths; others were undertakers, joiners, cobblers, or midwives. As generations succeeded one another, occupations were not thrown open in the competitive, individualistic way of the mobile city. Certain occupations were seen to be "naturally" linked with particular families. Sometimes it was said that people of a particular family (which might include quite a number of collateral lines) had hereditary characteristics which suited them for particular occupations.

"Tagey" was an expert bone-setter. He wasn't a doctor
[969] at all, but he could set bones better than any doctor. And he used to let blood, when people were dizzy with threatening strokes, or had pneumonia. It was in the people. He was a direct descendent, through his mother, [827] of the Murrays of South Shawbost, the people who had the still and were the blacksmiths for generations. He got that ability from them."

105 Whatever the rationalization, cobbler Fathers begot
463 cobbler sons. The present postmaster's grandfather was
[205] the first postmaster in Shawbost, and when help is needed in delivering the mail it is the postmaster's first
[164] cousins who are likely to help out. As late as the 1950's, the township still had its own undertaker, a man who had learned from his father the art of laying out and dressing the body but who didn't like the job very much and was happy enough to turn it over to an undertaker who travelled from Stornoway.

The island has had a veterinarian, based in Stornoway,
463 for the past 30 years or so. Earlier, certain blacksmiths
[232] and farmers treated ailing livestock when the crofters
[230] needed them. For human ailments, there were many cures
[298] by plant and spell.
[463] The man who was the last village blacksmith died
[324] that long ago. His smithy was in the center of the village. His home and smithy were mortared stone buildings with
[142] corrugated iron roofs that were once estate houses for the men who worked the experimental farm established by Sir James Matheson in what is now New Shawbost. The blacksmith was also a shopkeeper and butcher. As a
462 blacksmith, his work was principally shoeing horses and
324 making harrows and peat-cutters, which he did with the
874 aid of one and sometimes two apprentices. One of his

Chapter 5

GEOGRAPHICAL AND SOCIAL MARGINALITY

182 Despite the growth of the Harris Tweed industry and the gradual disappearance of some of the techniques and expectations associated with heavy reliance on the land and the sea, an important factor which helps to sustain some of these patterns is the social and geographical marginality of the islanders.

When the young men who survived the second world
105 war returned to the island, most households still had
[128] horses to cultivate the croft, but a few years later
[230] the tractors replaced the horses. The labor government,
[298] which came into power after the war, passed legislation
[463] which extended the processes of centralization that had
[324] proceeded since the breakdown of the clan system. The National Health Service was established. Free milk became available in schools. More scholarships (called "bursaries") became available for further schooling.
[207] Television came in the 1950's. In short, the islander was exposed to a number of new alternatives.

132 To the extent that persons became involved in these possibilities, the island became peripheral or marginal. The island has become more dependent upon central

45 which official records are kept by the mills. If you
437 may jokingly to a fisherman who has brought in a large catch that he should put some money aside for the income tax man, he is likely to reply, "We'll have to
463 catch me first." A tradesman may be earning large sums
[232] of money doing local work as a skilled specialist at the same time that he is collecting social security. A man may move in and out of a number of different jobs, and never report his income. "Occupational pluralism" (cf. Brox 1966) rather than economic specialization has developed as a strategy in various countries along the North Atlantic fringe, such as Iceland, the Faroes, northern Norway and Newfoundland, as well as the west coast and islands of Scotland. In these marginal areas, incomes from specialized occupations is, in the long run, unpredictable and inconsistent.

In times of national economic depression, strikes,
[178] shifts between socialist and conservative governments,
[298] and other crises, crofting provides an alternative
105 strategy. During the last war, many islanders who had
[772] left the island (including some who had been quite
[142] prosperous in the cities) returned to spend the duration of the war in the village, glad of the relative security provided by the relative abundance of food and less strict
000 rationing. During a huge snow-fall that occurred on

175 During a huge snow-fall that occurred on
241 roads in the 1950's, the mobile grocery vans and other
[229] supply vehicles could not come out to the west side,
[449] and a group of men had to make an expedition into town for provisions, after which many families made certain that they always had a good supply of meal, salted mackerel and herring. Many villagers have gotten deep freezers to store beef and mutton; others say they do
[464] not trust the freezers, that a failure in electricity—which occasionally happens in this region of gales and far-away repairmen—would bring disaster if they depended fully on them for keeping their meat. When the tweed industry is going through one of its periodic depressions, more men go out more often to fish. "I've been going out every night for the last week or so. I don't have a tweed, and I won't have one for the next six weeks. I don't know what I'm going to do; maybe I'll go back to sea. Three of us caught one hundred mackerel last night. I salted my share, and didn't give any of them away. These are the hard times. We're going to need them during the next six weeks.

A few people raise beef cattle, depending largely on subsidies for encouragement to do so. A few are beginning to keep cows again for milk, giving as their reasons that freight charges make the bottled milk too

522 In nation-wide comic strips and jokes, the Highlander
181 plays the role of the clown, the rustic country cousin. The comic strip "Angus Og" portrays a kilted Highlander, sly and canny behind his apparent simplicity, tricking the landlord and searching for the Loch Ness monster. Stories of the lazy, dour crofter abound.[1]

164 When young men go away to the Army or Navy or to
181 work on the mainland, they say that they feel like
"Foreigners." "Thirty years ago the island was very
175 isolated. It was difficult to get away. There were
182 so few education grants available. I got my teaching
871 certificate and wanted to get a post back on the island, but was told there wouldn't be a vacancy for another fifteen years. So I went down to England, and found I had to be at least as good as an Englishman if not better in my school work."

"When I went into the RAF, I had never seen light
172 switches because we used paraffin lamps. An English
364 chap told me to turn the light on, and I didn't know which way meant on or off. That memory still sticks in me."

[1]Even a high official in the Highlands and Islands Development Board tells a joke; that he "presently going round Westminster, of all the places, with a group of Highlanders." He goes on to explain that "Gaelic is brusque." Gaelic, if there was a corresponding word in Gaelic, "Tir Gaelic," replied the Highlander, "we have no word that conveys such a sense of urgency."

172 "I was in the Navy during the last war. We were
156 in Norway, and got an invitation to visit the palace. I didn't go. I was afraid I'd make a mess of things."

"This place has an inferiority complex. It's mainland-oriented; so you feel outlandish."

The new director of an association which promotes
595 the speaking of Gaelic is a Lowland Scot who learned
197 Gaelic when he was in England. He was working in England
186 and, as a Scotsman, felt so much like a foreigner that
181 he decided "to be a real foreigner"—so he studied Gaelic. Motives which prompted legislation protecting crofting also lie behind the development of organizations which attempt to protect and preserve the Gaelic language.

An Common Cuidhealach, the Highland Association
105 which promotes the speaking of Gaelic, was founded in
1892 in a town on the mainland, and has always been urban-based. Eighty years passed before the association established its headquarters in Stornoway; but the headquarters were relegated to bindquarters when the director found that he needed to be on the mainland to exert pressure on influential organizations for aid and support. The organization is condemned by ministers on the island, who see it as an organization that sponsors light-hearted
[993] singing. The magazines and books which it publishes or
[214] sponsors are seldom read by the rural islanders. The

197 behavior characteristic of the dominant group; but for
[illegible] those that remain in the village, the language serves a
[illegible] unifying function, although its form is limited in
576 diversity of elements.

Jokes are most humorous when told in Gaelic; and
197 conversation is punctuated with Gaelic proverbs and old
528 stories. There is a vast oral lore, expressed in Gaelic,
[illegible] of the village and generations of its members and their
[illegible] characteristics and escapades, a dense map of human events.

All of these tales, proverbs and jokes have been told a
829 thousand times, but retain their unifying function. When
speaking of today's children who do not go to the shelling,
a man says sadly, "They won't have our memories; this
place will mean less to them than it does to us." The
moor is not an empty wasteland, but a map of memories.
103 Thousands of place names are known, and behind every place
175 name is a story. The major landmarks such as mountains,
lochs and headlands tend to have Norse names, from the
days when the Norsemen raided and settled along the island
coasts; but the smaller hillocks and fields and bends in
the stream have Gaelic names, for example, Shelling of
the One Night, Field of the Slaves, Slope of the Stone
[129] Boys, Hillock of William's Shelling. To know these place
names and their histories is to participate in a distinct
community, which has been made even more distinct by contrast
with the dominant society.

Chapter 6

THE REELS AND THE BOTTLE

571 Two of the most important networks in the village are
[illegible] the converted members of the Free Church, and the drinking
[illegible] fraternity of the males, especially the unmarried males
who lack the obligations of married men, and who can
therefore drink with greater freedom.

A. The Bottle

293 The word "whiskey" (or "whisky," as it is spelled in
175 Scotland) is almost synonymous with "Scotland," despite
the fact that the earliest reference to whiskey in that
country appears only in the late 15th century. The word
is derived from the Gaelic uisge beatha, "water of life,"
a translation from the Latin aqua vita.

Martin Martin (1716: 3) describes the types of liquor
made from "corn" in the Outer Hebrides as Common Usquebaugh,
Treatarig (three times distilled), and Usquebaugh-baugh
(four times distilled). He states, "...two spoonfuls of
this last liquor is a sufficient Dose; and if any Man
drinks more, it would presently stop his Breath and
endanger his life."

Excise taxes were first levied on whiskey in 1644,
and stills of less than 500-gallon capacity were prohibited.
Local, illegal distillation continued for a long time
after 1644, and throughout the Highlands and Islands
tales are told of "the excise man" and how he was outwitted.
The Island of Fabbay in the Sound of Harris was evacuated
in 1843, supposedly because of illegal distillation that
was being carried on there. The ruins of old distilling
houses are found throughout Shawbost. Villagers say
that these were used in the time of their grandfather
or great-grandfather to distill whiskey for occasions
such as weddings.

In Shawbost, until recent times whiskey was associated
mainly with special ceremonial occasions: the birth of
[527] a child, weddings, and wakes. When a baby was born, the
father went into town for whiskey to be given to visitors
[illegible] coming to see the baby. Having whiskey at a funeral was
[illegible] so important that many a widow sold her cow to provide
it, so that people would not say it was a bad funeral.
A course of stitch up all night in the house of the
deceased has stopped, probably in part because a prayer
meeting lasting from midnight until 2 a.m. was introduced
with the intention, according to one minister, of preventing
the wake from becoming too joyful an occasion. Whiskey
was abundant at New Year's, and at weddings. "The dance

293 (at a wedding) would be held in the barn, with sheets
175 lining the walls so that if a man staggered against the
[illegible] wall he wouldn't dirty himself. There were four and
one-half gallons jugs of beer and a few bottles of
whiskey. Sometimes someone would spew on the floor.
People got drunk on very little, because they didn't
have it so often."

Occasionally the word went out that someone had
[illegible] brought a jug of beer from town, and the men gathered in
someone's barn or weaving shed, usually on a Saturday
night.

"The war changed that. When you were at sea, you
293 had to think of day to day. There was no tomorrow." When
175 her brother was away at sea, most of the money he earned
[illegible] was saved for him, and when he got back up gave it to his
to do whatever he liked with it. The men would go into
town drinking. They had money, and they had nothing else
to do; and they had learned to drink during the war.
Maybe if the TV had been around then they wouldn't have
started that kind of drinking."

A. Bothans: Because most parishes in Lewis were
[illegible] "dry," that is, no licensed purveyors were allowed, a
[illegible] journey of many miles had to be made to purchase beer and
[illegible] whiskey in Stornoway. Around 1930, Hessnen (many of whom
were sailors) began to bring back from town several kegs

[illegible] of beer at one time to avoid having to make the 50-mile
[illegible] round trip very often. Men met to drink in barns or in
[illegible] high relief, the houses in which people gathered for
evening visiting, but for this purpose eventually built
huts of stone or concrete, or used shelters already
available such as the shells of old buses or Nissen huts
built by the armed forces but no longer used by them.
[341] These shelters, separate from the rest of the village,
were called bothans. One or a few men brought the drink
205 from town, and the drinks were sold at cost. In 1963
[illegible] a bothan was raided by the police and the men fined.
[illegible] But in 1967, a court case found six men not guilty of
[illegible] trafficking in excisable liquor because there was no
evidence that money had changed hands. The lawyer for
the accused man argued that the drink was not "for sale."
It was simply made available, and drinkers made "voluntary"
contributions to a common kitty.
175 The first bothan in Shawbost was started after the
205 second world war, by a sailor home on leave. Liquor was
[illegible] brought to an old Nissen hut, which eventually was replaced
by a small concrete hut with gas lighting. ("It was
built overnight, because if anyone knew it was being built,
they would protest." "It was built inside the Nissen hut
so no one would know. On the day they were tearing down
the Nissen hut, a minister was passing by and he praised

[illegible] the Lord that his prayers had been answered.") Another
[illegible] bothan was started in an old bus.
[illegible] Today only one bothan exists in Shawbost. It is a
[591] concrete structure, lit by gas and heated with coal,
which is burned in an expensive fireplace. Like most
bothans, the one entrance faces away from the main road.
Unlike most bothans, it has a small window which is
curtained but nevertheless reveals whether or not the light
is on inside. Most bothans present blank, windowless and
doorless faces that give no indication whether or not the
building is occupied.

[208] Every three years a poll may be taken within a parish
to determine whether the parish should be wet or dry.
[166] After the parish of Uig voted itself "wet," the Doune Braes
Hotel was opened in Carloway, only five miles from Shawbost.
[329] One of the arguments for making the parish "wet" was that
if drinking in the bothans would cease, and men would drink
under more controlled circumstances. "The married men
usually went home from the bothan at a reasonable hour,
but the single men just stayed there talking all night.
At the hotel, they have to go home at 10:00."

Despite the opening of the hotel so close to Shawbost,
the bothan remained open. The drink was cheaper and the
atmosphere less formal. Unlike the bothans in Reas, however,
[591] the Shawbost bothan was usually open only on Saturday, the

B. The Bible

791 1. The Free Church: "A man in my great-grandfather's
[illegible] time," said a 65-year-old man, "talked about the great
178 change within his generation, from the days when fanks
were held on Sundays to such strict observance on the
Sabbath that not even a cow could be tethered."

The first evangelical minister on Lewis came to the
105 parish of Uig in 1824. The Rev. Alexander Macleod belonged
[illegible] to the Church of Scotland, but Lesmaster Macleod belonged
[illegible] it broke away from the Church of Scotland in the "Disruption"
of 1843. When he came in 1824, he found "superstition,"
"spiritual darkness," and "polluted remains of Popery,
[illegible] since it was the religion in this place...the only notion
they had of Christianity (Dalton 1925: 7-8)." The southern
[illegible] isles of the Outer Hebrides are still Catholic, but in the
[illegible] Protestant isles of the north, holidays associated with
[illegible] Catholicism are avoided, and stories are still told of the
burning of Protestant martyrs by Catholics. Catholics are
disliked "because they believe that they can buy their
way out of sin," or that the bread and wine of Communion
is really the blood and body of Christ. "A Catholic is
anointed with oil and left to die without food or water.
We are privileged that we are not like them."

In the Disruption of 1843, about one-third of the
[illegible] people and 39% of the ministers left the established church

[illegible] to join the Free Church (Donaldson 1960: 100). The Free
[illegible] Presbyterians left the Free Church in 1893 because they
found it too "liberal." Several dissenting groups,
including most of the members of the Free Church, formed
the United Free Church at the turn of the century. After
[658] a long court case, the church property was left with the
Free Church, which continues to support itself without aid
[illegible] from the state. Collections and funds solicited by
[illegible] villagers who visit the homeless periodically are sent
[illegible] to a central office in Edinburgh, which pays all ministers
an equal salary, despite variations in the size of their
congregations. About one-fourth of the church's income
comes from Lewis. A minister's salary is between 1900-
1,000, and the upkeep and fuelling of his manse is included.
The present minister in Shawbost uses oil and coal, but at
an earlier time received loads of peat from the villagers.
The villagers bring extra food to the manse when visitors
are held, although the church donates about L20 to be used
to provide for visiting ministers.

[illegible] The Free Church contains a number of presbyteries,
[illegible] of which Lewis and Harris are one. An Assembly is held
each year which parallels the Assembly held by the Church
of Scotland. (According to one minister of the Free Church,
"A strait wall divides the two.") The Free Church publishes
a monthly report of church activities and amount of money

[illegible] sailed on an awful lot to give prayers in church, and
[illegible] hard for some of them to get up and speak." The Reverend
[illegible] Scotland notes in his diary that private meetings were
[illegible] instituted on the Island in 1824.

A quarterly meeting (quinne raish) is held in Stornoway
[illegible] to which many of the converted from the villages go. The
[illegible] Communions are held twice a year. "Special services," or
"small communions," held soon after the Communions, are
intended as evangelical services for young people, that
[illegible] services explaining people to convert. These services,
which last from Monday through Friday, were started in
Reas after the first world war.

[illegible] A. The Communions (Cuisinhean): Communions are gi
[illegible] twice a year, during autumn and late winter. They are
scheduled for different weeks in different parts of the
island, and neighboring congregations close their churc
when Communions are being held nearby, so that during th
Communion season some persons may attend a number of
services at different churches.

In the days when transportation was limited, visitors
[illegible] coming from a distance away stayed for an entire weekend
[illegible] All households prepared food and made ready for any over
[illegible] night visitors who might arrive without prior warning.
[illegible] Guests often slept on mattresses laid on the floor.
[illegible] Facilities of transportation improved

or Seven Hunters, some twenty miles

175 342 361 the eighteenth century these 'black houses' would be replaced by houses of stone and lime, and a few of those survive.

172 174 712 Of the fort built by Cromwell on the Point, no signs remain. For tactical reasons, the best site would seem to be the neck of the Point, from which the guns of the fort could defend the houses, stores and quays. The irregular building line near the point marked T, a Town House at a later period, may correspond to the northern angle of the fort. The fort appears to have been standing when the original drawing was made for the engraving in the Old (or First) Statistical Account of Stornoway, *c.* 1793.

175 361 By the time Wood drew his plan in 1820, houses on the Point no longer looked exclusively on to the axial street. The main alinement of interest came to be the shore, marked by a properly built quay. Today, the Point Street houses have fallen into decay but many older houses still stand in fair repair along the 'Beach' or Quay.

175 361 34 Thirdly, from the nineteenth century, until 1914, two-storey, flatted tenements, hotels and houses of middle-class people were built upon a grid that followed upon the old field plans. In an alternative plan, proposed about 1820 but not adopted, a diagonal vista opened out to the Established Church, built in 1794 on rising ground. The modest Seaforth Lodge which had stood across the harbour was replaced in 1850 by Stornoway (or Lews) Castle, its pseudo-Tudor style designed to please the new improving landlord, Sir James Matheson, who had purchased Lewis in 1844. Presented to the people on the break-up of the Leverhulme Estates in 1925, a new technical school has taken it over. A few villas also grew up on outlying roads. Thus, a mere village in 1801, and among the smaller burghs

175 361 162 226

175 361 162 226 of Ross and Cromarty, with populations of from 1000 to 2300 in 1841, Stornoway leapt ahead by 1851, growing with the rise of the fishing trade. Including the literally floating population of fishers, its numbers exceeded 4000 in the summer of 1921, though falling below this in 1931 when the census was held in the spring.

175 778 361 Still another stage, a fourth, seemed in sight when, in 1918, the first Lord Leverhulme made his bid to centralise the scattered, failing fishing industry of the Island at Stornoway. A canning factory was started (south of the area shown on the plan), only to be dismantled before its completion, then recommenced and again dismantled at "Leverburgh", South Harris. New housing commenced. When this great venture closed and population stagnated, the grandiose proposal to reopen the diagonal vista on Wood's plan and centre it on some great new building, remained a dream. The failure of Leverhulme's great enterprise and its hopes led to discouragement for some years. Yet it is possible that the vision of change given to the Island may have contributed to a renewed capacity for enterprise, individual and communal.

175 361 [288] Later extension had to await the growth of the Harris tweed industry, and the erection of spinning-mills to provide yarn for the rural hand-weavers. The town has extended beyond the plan in two main directions: to north-east with villas and housing schemes and to ESE. with the great new mills where kippering sheds were numerous from the mid-nineteenth century until after 1919.

361 366 [162] Although Tarbert is a shopping centre for Harris and has its spinning-mill, Stornoway has no rival on the Island. The adequate depth of its harbour, combined with its position and access from sea and land, have given

361 369 632 [656] [654] by co-operation of three authorities: the
the Piers and Harbour Commission, and
Trust as owner of property, including Le
its grounds. The social situation is of qu
interest, and an attempt to describe some o

[731] century. Following the evictions after 1831
famine of 1846–48, emigration caused a fall i
islands (*e.g.* in South Uist, Fig. 12). Forty
1871, the Outer Hebridean total reached
of which Lewis alone, with 21,000, now g
half the total, and Harris—in spite of an int
owing to evictions—4800. By 1901, in spi
the southern isles, the total for the Outer He
a peak of 46,200. Of this, Lewis already cont

29,000 and Harris 5270. From 1901 to 1911 rural growth slowed down and ceased thereafter; but even by 1921 there had been little change (rural Lewis, 28,380; Harris, 5280).

FIG. 12.—Graph showing changes of population in Lewis-and-Harris from *c.* 1701 to 1951. (Because of boundary changes the curves for the parishes of Barvas, Lochs and Uig have been averaged and are shown as B.-L.-U.)

The great exodus from the Island came three years after, in 1924–25, when Leverhulme's expenditure on labouring wages was over, the war bounties had been spent —partly upon the refitting of boats—and when fishing was hard hit by the destruction of the Russian market. Simultaneously, a wet summer spoiled the crops and prevented even the drying of the peats.

little sign of Norse blood, can hold their own as fishers with the men of Ness.

Third, it is still commonly stated not only that the "great majority" under the clan system were "without any legal status", but that their tenure "depended on the good will of the chief or tacksman".[1]

As the last lawbooks of the Gael were taken from Lewis by its first mainland lord in 1611—never to be heard of again—it may well be that, as recognised in the Northern Isles, so in the Western Isles, peasant tenure was permanent according to regional law. In practice, mere 'goodwill' is so uncertain a quantity that if this statement had been true, it is hardly credible that communities could have remained so stably rooted as their race-types show them to be. Evictions of groups or individuals at the whim of chief or tacksman would have broken down their homogeneity of race. In the Lowlands, where eviction had become so frequent by 1500 and insecurity for the mass of the country people has prevailed ever since, such localisations of race would be unthinkable and do not exist except in certain fishing communities who possess a pride, almost a caste-code, of their own: the Newhaven fishers within Edinburgh remain apart, with a dialect and a dress of their own. Great stability of tenure—in fact as in customary claim—is shown by the racial homogeneity of Gaelic communities.

Lastly, it is common to state that the nobility and gentry of a countryside constitute its 'old' or 'original' families. It is true that some land-owning families seem 'old' compared to recent purchasers—successively the merchants and lawyers, venturers and planters of the

[1] From a representative report on the Highlands and Islands, that of the Scottish Economic Committee, 1938 (Historical Preface, p. 9).

137 by reclamation, notably at the Macaulay Demonstration
311 Farm on the 'peat moss' of Arnish Moor (south of
185 Stornoway), then too small to be shown, and in South-west Harris where new crofts were laid out in the thirties.

137 The six main types of vegetation in the Island may be grouped as three. First are the Hill Pastures and Moors: (1) 'Rocky' among the bare hill-tops of Harris and Uig, and (2) 'Fair' on favourable slopes, which merge into (3) 'Marshy Grass Moors' of coarse grass and sedges, heath and rushes. Secondly come (4) the vast brown 'Peat Mosses and Moors', either smooth and wet, with sedge and cotton grass, or channelled and cut up into hags; near the broken edges of the island cliffs this expanse is often fringed by (5) the 'Heather Moor'. Thirdly, by the sandy bays, are (6) the 'Machar lands', *i.e.* the 'Sandy Pastures', rich with clover; though narrow, this coastal plain is all important to stock-rearing and potato-growing, and so to settlement. In traditional terms, these three groups form hill moor, peat moss and sandy shores: *monadh*, *mòine* and *machair*.

(c) CROFTING AND THE CROFTERS' YEAR

1. *Place of Settlement and Choice of Work—Past and Present*

175 Lewis and 'Harrey', as they were called four centuries
114 ago, were well described by Dean Monro,[1] and his descrip-
311 tion is fundamental to the present scene. "Harrey is very fertile and fruitful for corne, store and fishing, twice mair of delving is in or of teilling", which appears to mean

[113] [1] Dean Monro, *The Western Islands of Scotland . . . in 1549*, reprinted by A. Mackay, Stirling, 1934.

175 that the spade and foot-plough (*cas chrom*) were used for
114 double the area ploughed. From Monro and from the
311 precise Statistical Accounts of the eighteenth century, it is clear that pony-drawn ploughs were usual in the smoother
[241] parts of Lewis. In North Harris are 'abundance of
[127] Deir'. We must not forget here that 'faire' and fertile
[136] are comparative terms for the West. "Lewis is faire and weill inhabit at the coste, ane fertile and fruitful countrey, for the maist part beire [barley], with 4 Paroche Kirkes."
[226] There is "ane castell callit Stornoway . . . with 3 salt loches, very fine for take of herrings . . . [and] infinite fresh water loches. In the Lewis there are 8 waters with take of salmont. . . ." There were also "Whales . . ." In "a cove 2 fadoms deep at the ebb sea, uses Whytuns (whitings) to be slain with huiks", there were "very many haddocks and Men with their wandes sitting [as today] upon the Craiges of that cove, and Lades [boys] and Women
[136] also. . . . In this Ile there are many Sheip for it is very guid for the same. For they lay furth ever one mures and glens and never enters in a house and their wool is bot anes in the zeire pluckit off them in some fauldes."
[236] In Zetland wool is still plucked, not sheared.

The description of reclamation is specially worthy of note: "In this countrey all is peit mossland at the Sea cost, and the plaice where he wins his peitts this zeire [year] . . . there he sawes his corne the nixt zeire, after that he guidds it weill with Sea ware" [*i.e.*, improves or
[245] manures it with seaweed]. On "Ellan Colm Cill [an islet apparently on the east coast south of Stornoway at the mouth of Loch Erisort] Macloyd of the Lewis has ane faire Orchard, and he that is Gardener has that Ile [rent] free. . . ."

175 Around the coast of Lewis no absolute limit is set to
185
311

175 reclamation, which Dean Monro has described as he saw it
311 Technique and economic return must be balanced agains
185 the factors of nature. Although natural conditions ar
[182] difficult, they may not form a complete explanation of th relative arrest of reclamation in the nineteenth century for here separation from the agricultural advances of th Lowlands by barriers of mountain and sea caused the re tention of unprogressive methods until the wave of agri cultural improvement had spent itself by the middle o
[178] last century. To this cause must be added other influence
[171] contrasted to those leading to peasant advance in the rest o Western Europe: the political history of the Gaeldon after 1745, the revolution in land tenure and in the socia life of the upper classes, the commercial, industrial an imperial development of Great Britain. All these factor help to explain the contrast offered to the Lews by wester Denmark and western Norway, lands in which the so and climate are comparable to those of the Island. Ye reclamation is proceeding, as on skinned land at Nes where plots of ground have been steadily broken in b pick and by spade or plough.

226 Settlement and agricultural land are placed aroun
[361] the coasts with their fishing grounds. In spite of wha was often said—that the Lewisman is and has always bee
[311] primarily a fisherman—fishing alone is not enough t account for this distribution, for the agricultural conditio
[241] on the whole are also best along the coasts, or were so fo early settlers. As Stevens remarked, the light sand 'machar' lands are there, and the fringe of partially im proved soil close by; drainage is, on the whole, bette while shell-sand and sea-ware are to be had for manur
241 The sea-ware also serves still as fodder, while one or tw
824 sorts are sometimes cooked for human food; carraghee

(Chondrus), for example, is used as a thickener of milk to make a cheese-like mould. Dulse is also plucked.[1]

The type of coastal form and vegetation alters the relative importance of crofting and fishing—and the balance chosen is significant. (1) Where the coastline is smooth, and leads inland from sandy machar with its clover to sand-ameliorated 'black land' of smooth topography lending itself to ploughing, and the whole is backed by extensive pastures, the tract is relatively well-off for crofting but may be ill-placed for fishing. (2) Where the coast is either indented or salient with rocky loch-sides or steep promontory cliffs, a rolling or rocky topography, little shell sand, and (on the promontories) a shortage of pasture, it is ill-placed for crofting; but it is favourable to fishing either by virtue of sheltered sea lochs or of salient promontories, one or other side of which tends to give relative shelter to the fishing ground (chosen according to the direction of the wind, to avoid being blown on to a dangerous, lee shore). Hence the site of a settlement has had much to do with the choice and opportunities for a communal vocation, from prehistory to the present time, as we shall see.

Significant local characteristics emerge in the names of the ancient districts (inset with the Map of Vegetation, Fig. 8). In the north is Ness (Norse, 'nose' or cape); along the west is Cladach (Gaelic, a stony beach); while in South Harris the western 'Machar' contrasts with the eastern 'Bays'. 'Park', a sheep-run in the early nineteenth century, was the Norse 'East-fell'. In contrast, the parishes of Lewis centre on four churches, linked to the road-system. This radiates from Stornoway in five directions: east, NE., NW., SW., and south to Tarbert,

[1] Pulling dulse (*Rhodymenia*) is one of the 'delights' of Iona as told in a poem long attributed to Saint Columba!

Harris; South Harris is ringed by a road, extended recently to take in the more isolated 'Bays' townships.

2. *The Crofts and Crofting Ways*

The prevailing modern unit of cultivation and tenure in the Islands is the croft, the land held individually by each small landholder or 'crofter'. The Anglo-Scottish term croft (Gaelicised as *croit*) meant steadily cropped, infield land, manured and never left fallow, and distinguished from the unmanured outfield with its long fallows and poor out-turn. This term came into common use in the Highlands and Isles in the eighteenth and nineteenth centuries with the splitting up of the older unit of cultivation and tenure, the small joint farm, with its little team of fellow-workers or 'small tenants'. By 1830 group tenure had been replaced by individual holding of crofts, but with the pasture still held in common, as it is to the present day, and an allotted strip of the machar.

The Lewis croft consists of a nominal five acres of crops, of oats, barley (or bere) and potatoes, sometimes with recent additions of turnips, and more often a small hay crop. The word 'nominal' is used because during the nineteenth century the croft had often been subdivided between two or more sons, without addition by reclamation to bring each subdivision up to the acreage of the original croft. Moreover, in the hilly southern part of the Island, cultivation is in little patches instead of in continuous fields. There, narrow ditches have been dug and the soil heaped up to form little ridges about ten feet by four, banked up by turf. These are known as *feannagan* in Gaelic, or in English, 'lazy-beds'—a term in use as early as the time of Burt, two hundred years ago. Thus only about two-

461 part-time or (to use a convenient phrase) 'overtime',
462 meaning by this a special effort such as cannot be maintained for long. Women's work, on the other hand, has a continuous element of 'part-time' occupations, which can be simplified to 'light' work, when a woman's services are also needed at harvest or to carry in peats, and the like.

462 One vital point in the life of peasant women is too often uncontrolled: maternity, with its crisis of childbirth.
000 Among wild creatures the young are normally born in spring, when food is abundant and daylight long; but among mankind there is no clear season for parenthood.
462 This has its compensations, for neighbour-wives can, and do, help one another, turn about. It also has its drawbacks where women have a large share in the seasonal round; and a heavy period of work, such as creeling peat, may strain a woman for life if it comes when she should have light occupation. It may well be that old Gaelic customs, from courtship through marriage, provided protection.

462 The seasons being still the same, the earlier sequence of
221 traditional tasks is maintained through the year with certain differences. The upper graph shows the men ploughing
• 175 or delving, as the land permitted, from February to a full-time peak in March–April. From then, women helped increasingly. By March, nets had to be got ready and the boats put in order for the fishing season, closing in September. In townships well situated for cod-fisheries, fishing for sale must have been almost full-time work for many crews, in the season; elsewhere it seems to have been no more than light work for food alone. Ashore, women baited the lines and dried the cod. In April–May the women would see that their few ewes bore their lambs and suckled them in safety; and in spring the cows would

[see p. 91-analyst]

462 calve. For peat-cutting, the men took advantage of the
221 driest months, with a peak in May–June; and after the peat stacked on the moor had dried through the midsummer
• 175 months, the women set out to creel it in, before the autumn rain should have made the bogs too soft, and stacked it near their doors. The fishing season usually closed with some herring fishing in August–September. The clipping, or rather pulling off, of the wool as it began to be shed, was done chiefly by men, in July–August. Then, too, the absence of fences made herding doubly necessary to protect the growing crops.

Some relief was given by the departure of many of the cattle to the shielings, where a few girls and women would stay through July and August, once men and women together had driven the cattle there. Cows kept at home were, and still are, tethered, or herded close at hand.
[178] Even now the hay harvest is insignificant, and until this century it hardly existed, except for a little put by in a
221 tiny barn. Towards the end of the summer, roofs were stripped of their thin thatch, and fresh turf was laid on
175 the light rafters and covered with barley straw. Then as now, harvest came in September–October, all helping in reaping the oats with the scythe or the sickle, and pulling up the barley by the root. With the onset of winter winds, rain and cold, the chief outdoor tasks of the year were over.

Throughout the year there were small jobs to be done, and in the past, owing to the imperfection of implements,
[462] constant small repairs were necessary. Indoors in winter
[286] the women prepared the wool together and wove it. Baskets were also made then, the coarser types by men. By all these means the essentials of subsistence were largely met, so long as the seasons were reasonably good. Except for salt for the housewife and iron for the smith, the food

221 and clothing, firing and shelter produced met local needs.
• 175 Further questions of early economy belong to Part Two, as do those of the festivals by which the seasons were initiated and closed, along with the phases of human life.

221 A century later (as indicated in the lower graph), agri-
[178] cultural tasks were much the same, but the character of fishing had altered greatly. Herring fishing was at its
[433] height in the Island for some fifteen years, or half a generation, before 1914; but it never recovered from the difficulties of the war and after-war periods. The curves of the summer, autumn and winter fishing indicate the 'full-time' activity of summer, and the 'part-time' work of
[462] early winter. Not only the men, but the women participated, the women being employed in gutting and kippering. Boats and men fished further afield. Women were employed in gutting in early summer in the Scots East Coast fishing, which preceded that of the West Coast and was followed by the East Anglian autumn fishing. Some line-fishing continued locally in summer, but it has now almost ceased. The building and repair of roads increased after the middle of the century. The carting of peats, stacked by the roadsides, lessened 'creeling'; but it is particularly haulage by lorry which has replaced carrying by the creel, so lightening women's labour.

[178] Indoors, primitive crafts tended to be superseded as
[571] machine-made articles replaced those of native material and manufacture; but the *ceilidh* ('*cailey*'), the meeting 'together', continued, though the arts of song and poetic
462 improvisation declined. In Harris the women had woven
283 and spun for centuries and have continued to do so for home use and sale; in Lewis the women gave up weaving in the last
286 century, few spinning since then and none weaving. Thirty
178 years ago only an occasional weaver, always a man, could be

2. *From Black House to White House*

342 Discontent with the old black house grew with the
177 knowledge and experience of better housing in Stornoway
178 and on the mainland. The congestion which developed
during the nineteenth century meant that often one house
• 175 was fouled by another above it, leading to typhoid epi-
342 demics. While the smoky atmosphere of the 'black
161 houses' inflamed the eyes and irritated the respiratory
164 system, the roof was high and the fire kept the air in
motion by day, ventilating it to the chimney hole, while
[354] the lack of glass often made it necessary to work with the
door open. The ravages of tuberculosis came towards the
end of the nineteenth century, when Islanders went to our
crowded towns and, not being immunised, were danger-
ously infected. Returning home, too often to linger and
die in a house now provided with tiny, fixed panes which
permitted a closed door and made it stuffier than before,
178 patients spread infection. Flight to a tiny, air-tight
342 wooden cabin or to a small white house of stone and lime
often followed. The availability for the first time of planks
[313] and timber, a certain practice in boat-repairing, and pos-
[177] sibly acquaintance at first- or second-hand with Canadian
wooden houses, may have influenced the choice of wood.
The early 'white' houses, with an attic lit by skylight,
were airtight, for the windows were too often fixed or only
[354] opened at the bottom. The door was left open in warm
weather, but it was not high enough to allow the escape
of the stale, upper layer of air which the women breathed
as they did their cooking and baking.

342 In the inter-war period, particularly in its last decade,
746 the 'black house' was being abandoned, not for something
178 worse, but far better. The Government-aided houses have
656

361 luck in land, but a disadvantage where control of a single
[423] area is desired by one man. Regularisation of roads,
[182] houses and holdings is relatively modern, for crofts and
dwellings were once grouped in hamlets usually close to
[172] the seashore. The early hamlets can still be made out
from their ruins among the rocks, sometimes sketched in
the 'six inch to mile' Ordnance Survey plans. They were
without formal order or arrangement, each homestead
within its boundary wall. Where ploughing was and is too
difficult, the soil is heaped up in ridges, 'lazy-beds', and dug.

361 Shawbost, on a rocky part of the west coast (six miles
491 south of Barvas) consists of three main sections: a scatter
of houses and ruins by the enclosed loch, two main streets
linking the loch to the main coastal road, and inland another
short street. The three can be made out on a 'quarter-
• [175] inch' map. The two main streets were laid out by the
[311] Estate Officers following removals in the mid-nineteenth
century from another part of the island, Uig, and the third
running inland was laid out still later, when population was
growing and land was needed. When the third street was
laid out, the landlord, Matheson, lent good plough-horses
for preliminary reclamation. The irregularly placed black
houses near the sea are tending to be rebuilt close to the
main road.

361 In addition to this type of movement, farms 'broken
178 up' once more into crofts have been laid out on a regular
311 grid plan, each house placed on a corner of its five, ten,
or twenty-acre plot (*e.g.* Galson, Dalebeg, etc.). 'Skinned'
[654] land may also be reclaimed for crofts by squatters tolerated
by the community, or on a regular grid by agreement of the
assembled crofters, guided by the Department of Agri-
[491] culture. Thus two distinct tendencies are seen: the grid
plan in new settlements, road alinement in existing ones.

361 in solid black, and the third in hatching (Fig. 11). First,
174 upon the little peninsula or 'Point' which protects the
inner fishing harbour of the river there grew the nucleus
361 of the town, with its Castle upon the rocky islet now con-
226 cealed by the steamer pier. Sheltered from the waves by
the peninsula and from enemies by the Castle, MacLeod's
504 galleys and the early fishing fleet must have congregated
in the inner harbour. Protection from storm was specially
needed until, in the nineteenth century, a quay was built,
with space for marketing and handling the herring.

174 Inland from the Castle was the little church of the burgh,
361 dedicated to Saint Lennan (L). The little town can be
imagined stretching inland from the church, its dwellings
[346] built along the 'Point Street' axis, until it met the track,
road or street crossing the neck of the Point. The largest
church of Lewis proper, now in ruins, stood apart from
the burgh, at the south-west extremity of Eye Peninsula.
Until trade developed, the backs of the houses would have
been turned to the shore. To north, on the landward
side from which cattle would come, the market developed.

• 175 Secondly, in the seventeenth century, thatched houses
361 were strung out along Point Street and the shore for the
Gaelic settlers, the fisher- and craftsman-crofters brought
342 here to found a burgh and commercialise fishing. During

184 Comparisons at the present day are most illuminating.
[791] In the Hebrides one may pass from Calvinist Lewis-and-Harris to Catholic Barra, through South Uist, where Presbyterian and Roman Catholic dwell, side by side, in mutual respect. Although their home life, economy and language are the same, the influence of a comparatively
[121] recent divergence in religion is marked. Such Island evidence, present and past, forces one to re-examine conclusions upon life in the Lowlands accepted until recently, and to seek for the truth upon earlier forms of life in common and for their meaning today throughout 'the North and West'.

175 Ancient elements of unity, and later ways in which
423 these were broken, adapted or remade, region by region,
427 are being unravelled. The Old Estate Plans, made at the outset of the agricultural revolution, show these immedi-
621 ately before the re-planning of fields and farms (*circa* 1750–90). These plans also reveal the existence of still
178 earlier types, not otherwise recognisable even on the spot.
[184] With their rentals (when available) they reveal the ways in which old joint farms were placed under a single tenant, as in Lothian, or were split up among several tenants, as in Ayrshire.[1] From such geographical data, both the economic and the deeper social aspects of rural life emerge with new clarity. Such data may be linked to Planning Surveys of land and rural life for tomorrow.

621 Now, although so fundamentally equalitarian within
427 themselves, these hamlet communities of the Gael were subjected to the overlordship of a chief or laird, either directly or through an intermediate gentleman-tenant, a
174] 'tacksman'. History, with archaeology read in history's

184 verses would ring false to them! Before 1939, two-fifths
241 of the rural pupils of most non-crofting counties came or
361 went in the school year—most of them the children of
166 farm servants. Their schooling suffered, and their
teachers might be reduced to despair; indeed it is to
[182] educationists, rather than to agriculturists, that we owe a
[871] survey of these facts. When they leave home to be 'hired',
[155] the young folk learn to fend for themselves but may suffer
in the learning: stability of character and endurance in
attachment are hard to form.

It would be difficult to overstress the tragedy of the long-continued break-up of rural communities in the Low-
175 lands. From the later years of the English invasions, as
178 when Major wrote with his knowledge of Scotland in 1500,
241 this break-up continued through the early, largely unre-
361 corded phases of the agricultural revolution, down to the
later phases from 1750 or 1800 to the present day. No
166 one who has worked with fellow-servants on Scots farms
155 will under-estimate their sterling qualities. But the break-
up, the tragedy, happened. It was boldly sketched by the
[114] Rt. Hon. Thomas Johnston (to 1929) and verified by
Miss I. F. Grant (1924 onward). Beginning from intimate study of well recorded and surviving ways in the Highlands and the Hebrides, Miss Grant realised the significance of earlier Lowland life in the farm-hamlet or ferm-toun, as Lowlanders themselves could hardly have done. Comprehension of this break-up of community brings out the value of the enduring elements of communal life still recorded, remembered and surviving in the 'Outermost' Hebrides, at the core of 'the North and West'.[1]

[1] Ideas outlined in this section are developed in A. Geddes (1938–54). Detailed references will be found in the Bibliography.

182 meaning that the men of that village, and its immediate
226 neighbourhood, were the last to put to sea and the first to
241 return. The Barvas folk could retort that they would
have been fools to do anything else on a straight exposed
329] coast; and that anyway their pony-drawn ploughs were
461] of more use than the foot ploughs of the rocky south.
A form of provender taken indirectly from the sea was the
sea-birds and eggs from the sea-cliffs and islets like Rona,
north-west of the Butt. This helped to support a few
families in St. Kilda and on the rocky Shiant Islands south-
east of Harris.

175 Fishing remained backward and primitive, however,
226 until the nineteenth century. After developing in a
178] promising way, it was checked before the First World
War, and fell into decay during and after it. Decay has,
504 of course, been widespread. In 1935 the chief ports of
501 the East Coast, from Leith with Granton northward by
Fraserburgh to Wick—a round dozen—had still an average
of 250 to 300 vessels, 3000 in all. These were chiefly of
steam or motor auxiliary power and valued (with fishing
gear) at £2,750,000. Orkney and Zetland, too, had each
their 300 boats. The whole West Coast, however, from
Stornoway to Ballantrae, had only 2000 boats, valued at less
than one-tenth of the fleet of the East, and worth only a
fraction of this, to judge from prices in the open market.
Nearly 400 boats were still on the register for Lewis and
Harris (Stornoway district) and another 300 for the rest of
the Outer Isles. But fewer put to sea each year, even from
Stornoway itself.

182 A major drawback to herring fishing in the Stornoway
226 district is the uncertainty in the movements of the herring
shoals. On the Clyde, moreover, herring can be sent fresh
to the city but further north they must be cured. Whereas

(c) FARM-TEAM AND BOAT'S CREW

The strictly equal division of rent on each joint farm shows the equality of sharing among its workers by 'run-rig'. By this system, periodic pooling and redivision kept the land in convenient blocks, a wet part here and a dry one there, all shared out to give each man an equal chance whatever the weather might bring. Such sharing was not mere static division of goods: it was the means for co-operative work, in ploughing and harvesting, or cutting peats, on land, and in manning a boat for the fishing.

For ploughing, two or three men were needed—one leading the horses (walking backward and singing his encouragement), a second to hold the plough and perhaps a third to turn the sods; but four ponies abreast were needed to haul the plough, and each tenant possessed only one or two. In addition, the plough might be preceded by an instrument to clear the ground, a 'reestle', requiring two horses and one man. A Gaelic proverb notes the selection needed in the horse team, and one disabled by age could be replaced as leader by another. Ploughing was necessarily co-operative.

The rockiness and hilly ground of Uig and Lochs diminished the usefulness and, no doubt, the number of ploughs, but the importance of their fishing was some compensation for poor agriculture. In 1790 there were ninety ploughs in Barvas parish, where they were no doubt of ancient usage: a ratio of one plough to five families, or one per joint farm. To judge from the smoothness of Stornoway parish, ploughs were probably used there in a similar ratio.

While some jobs were done by no more than two people, —as when a ridge or 'lazy-bed' was put in order, the

couple advancing one on either side of it—many other tasks were definitely team-work. Such was peat-cutting. "When they are making peats, five people are employed. One cuts the peat, another places it on the brink of the ditch where it is dug; a third spreads it on the field, a fourth pares and cleans the moss; and a fifth man is resting, ready to relieve the man that cuts. The women are seldom at this work, but the men help one another alternately; sometimes they must rest satisfied with fewer hands; but the above is the full complement of men required to perform the work, according to their tastes." Buchanan's description was written 160 years ago (1793); it remained true till recently and generally it is so still. There was thus a normal team practice for work—even a man to rest was not forgotten! As the Gaelic proverb puts it: "They won't make power (add strength) without a threesome and they'll limp without a foursome!" (*Cha deanar treine gun triuir, 's bidh iad crubach gun cheathrar*). In Gaelic, as in Scots, one speaks of a team according to its number, as "a pair, a threesome, foursome" and so on, up to a tensome (*deichnear*). In Lewis the farm-team was usually a foursome or fivesome.

Only in exceptional cases was land worked and held singly—as when a smith was kept busy at his anvil in ploughing-time and harvest. Thus in 1715 one or two rural smiths had single holdings of average value or more (£1), and one artificer or tin-smith (caird) a holding of minimum value (5s.); and in the burgh all the small plots were held singly. As the women wove, at home mostly, no male rural weaver held a single plot; his weaving could be done at slack times, so long as there was light; at busy times he worked on the land with the rest of his team.

On the mainland, both Lowland and Highland, an

On the mainland, both Lowland and Highland, an outlying reclaimable patch of arable, lying near distant, little-used pasture, frequently gave a single family the chance of a living. Such a site meant solitary toil for the man and his family; but there might be advantages such as an occasional deer from the forest, or a post as hunting 'forester' such as was held by many a Gaelic hunter-bard. In the Eastern Highlands such a high-lying croft was known as *Ruigh* (anglicised to Ry-). Traditions of poverty with individuality in isolation were handed down, for example, from one of my forebears who held such a *ruigh*, Rycorrach, one of several strung out along the 1250-feet contour in a small, high valley off Strath Spey; the last of them was abandoned only recently. Such a *ruigh* may have originally been a summer shieling, only occupied when shortage of corn-land below, coupled with new possibilities of a little profit from sheep-shearing, led to settlement there.

At the fringe of the Island's deer 'forests' of North Harris and Park, stalkers are still found in lonely lodges and dwellings, individuals often of character and worth, as they need to be; and a few isolated shepherds, such as one finds on mainland sheep farms, dwell on small islets. But in the Isles, isolated, high-lying spots for single crofts are rare. And the clearest distinction must be drawn between the true solitude of a single, isolated cottage or croft and the sociability of a group of four or five, or even two or three, crofts, such as those of lobster fishers; for even a few families form the germ of a community, in work and in leisure.

The potentialities of co-operative practice were overlooked by agricultural reformers, excusably enough. For when new methods were required, run-rig kept back the pace to that of the slowest, virtually arresting reform. Soon

after 1800, John Walker wrote that run-rig, "formerly very general in Scotland, was abolished with improvements but still subsists in many parts of the North. A number of tenants of the same farm have a common pasture for their cattle, and the arable is divided among them, by ridge and ridge alternately, which each cultivates for his own behoof. This gives them all a common interest in the crop and, when there was no inclosure by dyke or hedge, might be of some advantage" in giving each person some protection "against the encroachments of his neighbour's cattle". Speaking of joint possession this time, though without reference to survivals, Walker wrote that in the Lowlands "in old times a large farm might be occupied by a number of conjoint tenants who cultivated the farm in common and divided the produce. In this way the interest of each became the interest of the whole. They were ready, and were frequently called upon, to defend the common crop and cattle against depredations. There was then a necessity for such an allotment of land, especially in the Border country and in the Highlands." The team, in other words, was a unit of defence. But "nothing like improvement can be expected from farmers placed in this situation . . . [and] no community can ever equal the carefulness and industry of an individual in the management of his affairs".[1]

So far as it goes, such an analysis is incontrovertible; for Walker was one of many contemporary observers who could contrast both the "improvement, industry and carefulness" of the best individuals under a vigorous landlord, with the sluggishness of old-fashioned ways on backward estates. The fundamental reason for sluggishness was that

[1] John Walker, *Oeconomical History* [descriptive account] *of the Hebrides*, 1808.

the cultivable land and pasture having been shared out to minimal fractions, they called for a minimum of labour by the men—though housewives and mothers had always plenty to do. The morrow's tryst for work might prove a tryst with no work done. The men might foregather on the moor to cut peats, for instance, but if one of their number was late, become so absorbed by telling stories of the Fenians that, ere work had begun, it was time to go home—resolved to meet for work some other day! As a result, reformers advocated breaking-up the joint-holdings; and this was done in Lewis by 1830, as noted in the Brand Report. But mere division of the land did not increase its total amount.

Yet while noting the progress made by the liberation of individual initiative, we can see the drawbacks of individualism: the evictions made with no provision for new homes, and later the monotony and the loneliness of modern farm life, the mutual distrust of employer and employee, and the general inability of farmers, as yet, to co-operate. At the present, when planning, purchase and sale are required on a large scale, particularly among smallholders, the interest of each is still "the interest of the whole". The team-spirit must be recovered from the work (not simply the play) of school onwards to further education and communal effort.

To sum up, every farm-hamlet was held jointly and on equal terms, each joint holder being responsible for an equal share of the rent, and the movable run-rig system ensuring equal quality, as well as equal quantity, of land. Common interest was assured, and there was mutual support in distress or sickness, as when one member, named in a deposition of 1718, was 'valetudinary'. Lastly, work was done in common not only when it led to efficiency

through division of labour or united effort, but simply for the sake of mutual stimulus and pleasure!

(c) THE SHARING OF MACHAR, MOOR AND SEA

Embracing several joint-farms, each with its team or crew, came the township. The township had not only its common pasture, it had a special extensive system of run-rig on sandy, coastal machars, as in parts of the Island and in Uist—a system continued to this day.

On the machar of Barvas, cultivation strips are still re-allotted periodically, as they were annually on all the Island machars. The machars behind the 'storm-beach' dunes of the Outer Hebrides closely resemble one another, from the Butt of Lewis to Barra Head. The immemorial system was noted by Walker and more fully by Carmichael, who called it 'intermediate run-rig' to distinguish it from the run-rig of older joint farms on boulder clay, and it persists at the present day.[1] In North Uist the machar land is laid off in large scatts or fields. Each scatt is divided into as many rigs as there are crofts in the township. There may be a dozen scatts in all, and usually half the number are lying out in natural pasture, but they are put under crop in rotation, so that each year one or two scatts will be brought into cultivation, and the others left out after a course of cropping. When a scatt is to be brought into cultivation the township 'constable' (who holds sway under the district ground officer) appoints a day for allocating the rigs.

[1] Walker (1808); Alexander Carmichael, appendix xlviii and xcix, pp. 213 ff. and 451 ff., Report of the Crofters' Commission, 1884. Socially these form the most significant evidence in this great Report. See also "Grasing and Agrestic Customs", *Celtic Review*, 1905. Cf. C. Macdonald, *Scot. J. Agric.*, 1919. See also his lively accounts of machar and pasture: *Highland Journey: Suil air ais*, 1943.

rigs. The rigs are numbered and then balloted for by a double ballot. First the men approach the hat in any order and pick out a number: this is to decide the order in which they will approach the hat in the second draw. The second draw then decides the number of the rig. The crofter retains the rig while this particular scatt remains in cultivation, usually for a period of two or three years. The machar is shared by the whole township. The crops grown include a light type of oats, barley, a little rye, and potatoes; and clover may be cut.

In the division of the machar for potatoes at Barvas, there are now no such hard-and-fast rules. The Common Grazings Committee select a certain area for cultivation and each crofter is allowed to take as much land as he requires within this area. This land is only cultivated for one year in six to ten years, and then reverts to grass. If cultivated for two or more years in succession there is a danger of the sand being blown away, and grass would be difficult to establish again. Potatoes are now the only crop grown on the Barvas machar.

Beyond the machar of the Isles lies the moor with its fringe of reclaimed croft land. By Carmichael's day this was held in individual portions, though, as he said, most of it was once held in 'farms' in run-rig practised by small units, not by the whole township. Why this difference between the arable of the machar and of the moorland? Carmichael did not explain it.

Three explanatory points are, first, that the whole cultivated land of the scatt or the machar is continuous, whereas the moorland is hummocky and boggy by turns, and cultivation is therefore patchy; secondly, that, unlike the stony clays, the light shell sand is easily forked or ploughed and needs no 'team' to plough it; and thirdly,

that no initial reclamation had been needed on the scatt. In each year of cultivation, it is true, manures of a sort, principally seaweed and sooty sods from the roof, are applied; but they form a temporary improvement only for the crop to be taken, and do not constitute reclamation. After manuring, the grasses and clovers are simply turned over and the land, 'rested' and manured by cattle, straightway gives its best crop.

It is otherwise with what is won from the moorland. As Dean Monro wrote of the reclaiming Lewisman in 1549: "In this country all is peat moss-land at the sea coast" (the long machars of the west of Uist give place to rocky coasts round much of Lewis), "and the place where he wins his peats this year, there he sows his corn the next year; after that he guids it weill with sea-ware". Even where the slopes are fairly smooth, the peat land has not the uniformity of the machar and the continuity of its arable strips. In addition to sea-ware, sand may be brought by creel or by pony pannier to reclaim peat, forming a heavy burden. Moreover, the first crop is always a poor one, and may be almost lost. Although in his brief notes Monro used the singular 'he', we know that the peat was usually cut co-operatively by teams. Hence most of the hard labour of reclamation may, indeed must, have been done co-operatively too, but by small teams, not by the members of a whole township together.

The sharing of common pastures is the last, but important, feature of land holding in common. The two kinds of pasture required were, firstly, those close at hand, animals being tethered or herded in the crop-growing season, and secondly, the more distant summer pastures. The people of certain townships, which were without a large outrun close at hand, had to go some distance to

reach their shielings. From Point district (Eye Peninsula) the cattle are still brought inland to the moors south-west of Stornoway. And from Bernera on the west the cattle are swum to the hills of the main island, just as they once were swum from Bute to the hill-pastures of Cowal in Argyllshire across the Kyle at the 'Strait of the Swimming', Colintraive (Caol-an-t-snaimh). Nothing could be more natural, indeed inevitable, than pasture in common where large, open moors were to be found. The number of animals allowed to each holding was duly apportioned and then, as now, was known as the summing or 'souming', still checked at the annual gathering (*coigoradh*).

Thus a cluster of conjoint farms shared "the grass on the Ben and the tillage on the machar" (*Fiar air beinn agus peighinn air machair*). Along the shore, sea-ware, drift-wood and the like were allotted, too. And, as Carmichael put it, there was even "run-rig at sea", for the fishing banks were allotted among the available crews. Most of these rights are still shared by the members of a township. But any crew can now fish freely where they choose, and no township can legally keep away strange boats, nor even steamers beyond the three-mile limit. This loss of communal rights stands in the way of remunerative fish-farming and its promise.

Profound social implications distinguished these three concentric circles of community: the family; the farm-team and boat's crew; and the larger, township group. These implications concerned labour, duty and right. The labour of reclamation gave a 'right' to the land thus won from the moor; and the duty of labour together, for fruits equally shared, gave the farm-team and fishing crew cohesion on land or sea—team and crew working for a common purpose. On the other hand, as individual sharers in the common

embracing several hamlets. Yet the strength of community life sprang from co-operation in the farm-team and in the boat's crew.

With the passing of the joint farm the greatest disciplinary factor for work in common passed away from agriculture. The fact that fishing still remained as a social discipline, and actually developed in importance as the farm-team declined and was abolished, was to prove all the more significant to the vitality of social life until 1914 and even to the present.

(e) THE COMMUNITY ORGANISED: STEERSMAN AND CONSTABLE

As small groups of two to half a dozen men could manage their agricultural affairs informally, by common consent, no official was formally chosen to manage the affairs of the fellow-workers on a farm. Where prompt decisions are needed, however, even a small group should be led: a boat's crew therefore choose their helmsman-skipper and obey him at sea. And where several farm-groups made up a township, more formal deliberations were required and to carry out their decisions they chose a responsible man, the constable.

Of the crofters' manner of deciding communal affairs in Uist, Carmichael wrote, in 1884, that these meetings "were highly interesting, as showing the ability of the people, their logical and legal acumen, their readiness of resources and, I can happily add, their invariable courtesy towards one another. There was one regular official known as the constable on whom there lay the chief executive responsibility. When a crofter is elected constable of his town-land, he takes off his shoes and stockings and, taking

Lewis and Harris

121 by help of oral tradition and of the living witness of con-
174 tinuing usage, we can reconstitute Gaelic life from the
178 view-points of both people and chief. Elsewhere, even in Scotland, only fragments of early life are recorded, in
• 175 parchments written by the lawyers of landlord and king,
814 and almost always from the privileged side. History is indebted to modern lawyers who have deciphered and
127 published the faded documents of their predecessors. But the very training as solicitor-factors which fitted them for this specialised task, in no way prepared them to view life as seen, experienced and felt by the men and women of the past, or even by the elders or youth of the townships today, with whom they have rarely laboured and whose mother tongue they rarely understand.

(A) THE LABOURS OF MAN AND WIFE, AND THE REWARD

621 We have seen that until the nineteenth century the
632 township in the main was self-contained. Its people grew,
175 reared or caught their food, and also found the raw materials
[433] for their clothing; they built their own shelter, and cut their own firing. As a result, both men and women had
174 each to develop "a wide range of simple skills", in the
175 apt phrase of a Lewisman, Mr. Donald MacLean, M.A. Beyond the co-operative effort within a family, a farm
462 group, or a body of 'fellow-townsmen'—in which each was competent to take a share according to sex and age—aptitude and family tradition initiated some local division
[463] of labour. The resident smith and the 'caird' (usually a wandering craftsman or tinker) appear in the oldest tales and in the first rent-rolls. In addition there were honorary
[759] tasks. The smith might act as the village surgeon, ready

3: Geddes K-4,5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

174 to bleed or to set bones, while some elderly woman would
175 serve as physician and midwife. Spiritual consolation
462 and renewal too could be found, even in the absence of
[463] monk or nun, or of priest, minister or catechist. Enough
[759] here, that with agriculture and fishing, most crafts, except
[793] metal-work, were practised in every family. The 'range
[593] of skills' was therefore wider and richer in latent art than might be supposed from those needed on a little croft today. Hence the importance of understanding the roles of husbandman and housewife, of "the man and the woman of the house".

174 Their labours through the annual rhythm of the seasons
462 might be classed as efforts for the man and endurance for
221 the women (Fig. 9). Man's muscular strength and free-
[181] dom of limb rouse him to efforts demanded by the thrust and lift of peat-cutting, digging in stony soil, or pushing the foot-plough, step by step obliquely down a rocky slope. In the past an archer's chase of stag, wolf or boar demanded all a man's effort, and courage too, as fishing still does in the stormy north-western seas. With this facing of danger there came a gaiety that sparkled like the crest of a breaking wave. Women's work demanded by its unceasing activity a cheerful endurance, whether at labour on the croft, at corn-grinding, butter-making and peat-carrying, or carding, spinning and weaving; and with every task of day or season came the constant tending of cattle, of menfolk and children.

[538] This allotment of seasonal tasks and skills is neatly put in the proverb, "A man's cow won't yield milk, nor a woman's horse ploughing" (*Cha bhi bainn' aig bo fir, 's cha bhi treabhadh 'an each mnatha*). Yet women have always taken a share of work on the croft—too heavy a share when the men were much away—and the habit of

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

194 462 221 encouraging them to rest when the men returned was fondly indulged. Much can be learned from the first (or 'old') "Statistical Accounts of the parishes of Scotland 175 drawn up from the communications of the Ministers of the different parishes", *circa* 1790–96. Of the parish of 462 Stornoway, where by 1790 many men had become crofter-127 fishers and others were at sea, the Minister wrote, "The women labour at least as hard as the men", even pulverising the ground with heavy hand-rakes (harrows being seldom used), and digging both with crooked and straight spades. That the men's debt was repaid in acts of manly service is true. A man would carry wife or sweetheart on his shoulders across a river in spate, whose rushing waters might have swept her away. But in her turn, a woman would wade into the cold sea, her coats high, bearing on her hips husband or son out to his open boat, so that he could start his night of exposure dry-shod and warm. This act of service was noted and illustrated by Burt at Inverness (about 1726), and it was common in the Lews before the building of stout piers, that is within living memory. Strong common sense, sheer necessity in fact, enforced such mutual service; but the sacrifice entailed was nerved by anxiety for those in danger, by personal pride and love. It was also true that it bore hardly on women, with their readiness for self-sacrifice and their ordeal of childbirth.

175 What return for their labours did the people get in the 431 past, it will be asked, and what approach to sufficiency in a normal year? For the Island, the most thorough of the [129] five Parish Accounts is that of Harris, with its fascinating retrospective notes (vol. x, p. 368). There the yield of a typical family share, a 'fourth' or 'farthing' land, was computed at "from four to five bolls" (which in Scotland

Lewis and Harris

175 usually corresponded to six imperial bushels). The stock 434 was "four milch cows, three to perhaps four horses, and as many sheep on the common as the tenant has luck to rear". Although such estimates, especially of crop yields, are apt to err on the favourable side, a comparison with the same writer's statistics of stock (and rental) shows that this estimate gives only a little over the modern average per family in Harris, and allows an average sheep flock of one score ewes.

175 The briefer Statistical Accounts of Lewis indicate the 431 average stock per family, suggesting comparisons both with the present, and with an earlier time (Chapter II). In 1790 422 the cattle and horses, though small, were greater in number per family than now. In Lewis there were eight head of cattle per rural family, compared to 2·5 today; there were one or two ponies per family (according to the topography and ploughland of the parish) instead of an average of only one horse to five or six families today; the small family sheep-stock was similar; and there were also some goats, 175 say, one to every second family. In addition to these 226 resources, there was fishing; and the number of boats in Stornoway parish, giving one boat to four families, is a guide for the rest. Fishing, with net-making, was a predominant occupation in all parishes by that time, and boat-building was significant too.

175 As to changes, fishing had grown in importance since 433 about 1720, and kelp-making added an important new 434 resource. But one may doubt if the Island supported an appreciably larger live-stock in 1790 than seventy years before; one must rather assume smaller shares per family, [182] for population had increased. A basis for agricultural security was an adequate balance of sandy machar to 'black', peaty, clay land; and the area of machar, a limited

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

175 natural zone, could not be extended. In any case, the re-433 clamation of clay land tended to slacken as efforts turned 434 to fishing and kelp-making. The introduction or increased growing of potatoes added to the human, but hardly to the [182] animal, food supply. Finally, while the beginnings of [311] medical knowledge and vaccination had aided the growth of population after 1750, veterinary science had made no [232] progress, nor did it advance in the Island for many years to come. We may conclude that an average stock per Island [422] family about 1720 was rather more than that of 1790, and the acreage relatively larger, while both were greater than the average of today, particularly in the Lews.

175 What, then, could a family have to eat, from such crops 262 and stock? While in winter even now there is almost no 244 milk to be had on a croft, and there would be little then, there was salt meat, dried or salted cod (or herring) and fish oil; oat and barley meal and some rye meal; cabbages; and, increasingly in the eighteenth century, potatoes. Martin included potatoes among the crops grown even on far St. Kilda in 1697. A century later it was written that the people of Uig, for instance, had, though 'unwilling', been induced to grow and eat them 'forty years before'; and the years tend to be under-estimated where changes are slow and memories long! But it was written of Harris that by June the meal and potatoes had mostly been consumed, "and such as cannot afford to purchase imported meal subsist chiefly on the milk of their cows and sheep, with what fish they may chance to catch, till their wants are relieved by the first fruits of their potato crops early in Harvest".

175 We conclude that with even less money but a little 511 more grain the population in the Island had fluctuated 162 about a mean for some centuries before, as it had in so 171

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

175 much of Britain and Europe until about 1700. A modern 511 parallel may be found in Asiatic lands with the frequency 162 of famines alternating with periods of recovery or, in others, the long-drawn misery of chronic under-nutrition and 171 endemic disease. In modern Europe, only international [731] or civil war can now bring such extreme widespread misery. And as peace brings partial healing, so in the Island past, when good seasons returned after famines, the life of the family renewed itself.[1]

175 The narrow margin of survival even in good seasons, 593 the risks of the bread-winner's death and of his family's destitution, and the need of co-operation in so many tasks made the family too small, weak and precarious a unit to stand alone. Even with relatively little division (or specialisation) of labour, and in spite of its apparent self-sufficiency, the family had perforce to link itself with wider circles of community life.

(B) JOINT LABOUR BY SMALL TEAMS: THE EVIDENCE OF TENURE IN 1715–26

175 Romance is hidden among the rent-rolls of the Seaforth 241 estates, all of which were forfeited when the Earl rose for 'King James VIII' in 1715. For of the rents withheld 427 from the government until 1720, on the mainland at least [642] the loyal clansmen paid a considerable portion to their [613] exiled chief, styled 'Marquis' by 'King James'. But the

[1] The 'ups and downs' of a peasantry living on the margin of subsistence and subject to severe disease can be studied in India, 1871–1941, where the 'net' or mean change has to be correlated with the 'variability'. This wide problem was reviewed in a series of papers to 1948; "The Social [113] and Psychological Significance of Variability in Regional Changes of Population", with examples taken from Indian villages. (A. Geddes, *Human Relations*, Vol. 1, 2, 1947–48; cf. *Geog. Rev.* 1942 and 1948; and *Geog. Journal*, 3, vol. 98, 1941).

175 241 427 [476] rent-rolls record something of more vital and enduring concern, the unit of community life in the Lews. This was the 'conjoint' or 'group' farm of the labouring peasantry —though it was overlaid in parts of the Island by the formation of tacks held by gentleman rent-farmers.

175 241 427 656 Both rolls are Judicial Rentals, that is to say, the tenants, great and small, were convened by the Government Commissioners and examined on oath as to the rents they formerly paid; the accounts were then entered and totalled. Because of the Jacobite resistance, the small amounts of rent and the maladministration of the Forfeited Estates, doubt was cast upon the first rental, of 1718. A second rental was therefore compiled in 1726, upon a different system, which confirms the correctness of the first.[1] All were named, including those absent or 'valetudinary'.

175 361 [182] [184] [433] [476] Owing to the Island's comparatively smooth land surface and access to the sea, the people could group themselves as they chose. Whereas in the Highland mainland many a pocket of land is too small to keep more than two or three families alive and no fishing grounds are available, in Lewis the people could join together in teams of four, five or six, to work a hamlet-farm or penny-land, definable as a joint-farm of unit size, and to man a boat with "four to row and one to steer".

175 241 427 [436] [113] The first point of interest is the equality of the shares, each man paying exactly the same as his fellow-tenants for his 'farthing',—a fourth, or other equal share of the farm. An average share of rent was a little over 10 shillings sterling with additional payments in farm produce, though not (as

[1] A. Geddes, "Conjoint Tenants", etc., *Econ. Hist. Rev.*, Second Series, vol. i, no. 1, 1948, pp. 54-60. This reconciles the evidence of 1718, reproduced in the Brand Report (1902), Appx. O, and that of 1726, edited by J. R. N. Macphail (1916).

175 241 427 436 might be thought) in cured fish. Here is a sample Deposition from Borve (W. Lewis), a township then composed of five hamlet-farms, or 'pennylands', with their share of outrun, peats and fishing grounds over the whole and known as Five-Penny Borve.

Donald McGillimichaell, William McHomas, Gillichallum McCoilog, and John McConnell in five penny land of Borrow and Parish of Cladach afor^d MAKE OATH severally that neither of them has any Tack of their possessions, But that each of them pay yearly to ye above Mr. Zachary McAuly for behoof of ye Countes (of Seaforth) for^d Nyne Pounds Scots (*i.e.* 15/- sterling), Two Bolls one Lipie meall, Fifteen pound weight of Butter, and three-fourths of a mutton. Depone they and each of them are someqt in arrear but know not the Particullars, and this is ye truth as they and each of them shall answer to God, and depone they can't write.

(Signed) DAVID BETHUNE
(Sheriff Substitute of Ross).

175 241 427 451 [642] [613] The only point on which these good fellows must have had to face qualms in 'answering to God' was their lapse of memory as to 'Particullars of arrears'! None of the 222 small tenants could remember this! Although the Chamberlain or Factor, Zachary MacAulay, denied it, he may have exhorted or compelled payment of rent in order to forward it to the exiled 'Marquis'. Mainland rents were actually despatched to France from Leith in broad daylight under an armed guard of clansmen! At the same time, neither MacAulay nor the joint tenants were of Clan Kenneth, the MacKenzies. MacAulay himself was a man of high character—and a poet too—and not one to collect rents in order to embezzle them. His affirmation has the ring of truth, with little alloy. To the Government Commissioners he wrote that what made it impossible for Lewis peasant-fishers to have paid rent in full during civil war,

175 241 427 451 and still more to pay arrears, was "the rugged Hag, Poverty, that would resist both King and Government". We may guess that MacAulay passed a hint to the tenantry that (in a good Gaelic idiom) they had better 'disremember' details of arrears: and this they did.

175 551 613 [178] Of the four names on the deposition quoted, one or two may have been surnames, others the patronymics of kinsmen. As is still the custom, clansmen knew one another by names of many kinds. Stature or colour was used to distinguish a big John from a little one, a fair from a dark, or a pale from a swarthy; occupations such as smith or caird (artificer, not necessarily travelling tinker as now) were used, and also mere nicknames. Of the eighty-one crofters or fisher-burghers in Stornoway, fourteen were MacKenzies; and other mainland surnames, such as Fraser and Gunn, Matheson and MacLennan, also showed their descent from the immigrants brought in when MacKenzie of Kintail founded the burgh to encourage fisheries after 1611. Each held a single holding, usually rented at two shillings sterling.

[241] [226]

175 241 427 631 To conclude, rentals about 1715 show (1) the characteristic equalitarian grouping of small peasants as fellow-workers in the hamlet-farms still held directly from the superior, Seaforth; (2) the eighty-one small burghers of Stornoway; and (3) tacksmen, responsible for the larger part of the Island rent, but under whom we know that the labouring peasantry, though without the local independence of the others, also continued to dwell and to work together. The tacksmen were to pass away, as many of them had originally come, at the desire of a mainland lord, and the lord, in his turn, was to leave; but the small peasantry of immemorial stock still hold and work their land.

aborigines in India—lovable people when unspoiled by tyranny, caste or industrial exploitation, as I can testify.[1] Yet Gomme, like many since, leaves the reader with an impression which must be re-examined: that the Islesfolk are the representatives of a backward race who have clung to predominantly superstitious, pre-Christian customs and beliefs. As a people, the Gael received and welcomed Christianity in one of its earliest historic forms, and maintained its spirit through poverty and famine. To this inheritance we shall turn in Chapter VII, when the rhythm of life and its changes have been followed out in the following chapters.

To begin with, the briefest outline of historic sequence is all that can be recapitulated, the Island annals having been recorded in the excellent Brand Report (1902), and by W. C. Mackenzie (1903 to 1937). Politically and strategically, the age of clanship may be thought of as a period of struggle between the Islands and the Mainland to the south or east. The long-drawn conflict of Clan Campbell of Argyll with Clan Donald—whose Chief was the Lord of the Isles of which Islay and Skye were the two dominant, western keys, and Lewis and Harris the northern outposts—offers a parallel to the conflict of MacKenzie of Kintail with the last MacLeods of Lewis. Obscurity veils the early origins of the Island clans, with their mingled Norse and Gaelic lineage, but chronicles are more reliable by the time of forfeiture of the lordship of the Isles to the Crown in 1493. The MacLeods of Dunvegan, chiefs in north-west Skye, continued to hold Harris until late in the eighteenth century, and they maintained an indirect connection until the nineteenth.

[1] A. Geddes, *Au pays de Tagore: la civilisation rurale du Bengale Occidental*, Paris, 1927.

174 613 But the last MacLeods of Lewis, torn by family dissensions, fell fighting before the power of King James VI (and I), who backed the 'capitalist' fishery enterprise of 'the [175] Fife Adventurers'. Although these were routed by the Islanders, a Highland lord and chief, MacKenzie of Kintail, received Lewis from the Crown in 1611, taking his title from Loch Seaforth, near which he had built his Lewis hunting-lodge. Except for a period of forfeiture after 1715, the Seaforth family held the Island until its purchase by a wealthy and beneficent tea merchant, Matheson, in 1844. From Seaforth's tenure and the Papers of the Forfeited Estates are left records of ancient life and of the introduction of changes, temporal and [178] spiritual. These are reviewed in the next five chapters. Chapter X brings the Island story to the year 1953, and its prospects.

175 621 622 427 184 565

rents, and its end is in sight when these cease to provide for the lord's desires.

(E) STORM AND GALLEY; BATTLEFIELD AND REGIMENT

174 614 577 [501] [726]

The peaceful round of daily life formed the most enduring test of the mutual loyalty uniting the commoners of the clan, and linking chief to people. Yet the tensest ordeals came in hours of danger faced together, whether at sea in a small fishing boat or a many-oared galley, or in war in a clan company. The Gaels' own records must speak for them. Many a song of the Isles conveys the team-spirit of the crew though without describing its men.

174 614 501 538

And although Mary MacLeod's song of MacLeod's Galley be irretrievably lost, there survives one epic poem portraying the ship, the storm and, man by man, the crew who warred against the waves and won. Alexander Macdonald's *Birlinn of Clanranald* is unmatched in Gaelic, and probably in English, verse for its portraits of the crew in action, from steersman to 'look-out'. The flowing metrical translation by Pattison with Hugh MacDiarmid's vivid prose helps to give the English reader some vision of a crew of Gaelic freemen at their best.[1]

174 614 501 539 577 [113]

The poem opens in slow traditional rhythm with "the Blessing of the Ship", the arms and the crew. Then the bard, speaking for the stately skipper, "incites the sixteen oarsmen to row" out of the bay, and they row to a rousing shanty, a *Iorram*. Next, in readiness for the voyage and

[1] Thomas Pattison, *The Gaelic Bards* (2nd ed.), 1890 (pp. 1-28); and Hugh MacDiarmid (Ed.), *The Golden Treasury of Scottish Poetry* (pp. 65-85), 1940. Cf. A. Macleod (Ed.), *Sar Orain: Three Gaelic Poems*, Glasgow, 1933. The different themes of its sections, each in its own metre, have been published separately, in *The Songs of the Hebrides*, and elsewhere.

174 614 501 539 577

ready to leap fore or aft: "Quick to move as the mountain hare . . . or the hounds after him; quick to climb as a squirrel in the spring-time". Then comes the stirring evocation of the storm, testing each man's mettle and the discipline of all, until at last, their ship battered and themselves bruised and weary but undaunted, the crew reach Islay and round the sheltering point of Carrickfergus. There, with thanks to the High King, they drop anchor, the *birlinn* rides in peace, and all find meat and drink and rest.

175 614 721 703

As at sea, so in war, loyalty could rise to heroism in individuals and corps. Young men were attached to their chiefs by chivalrous leadership in warfare, both before 1745 and later. The Highlanders' high character contrasted with that of most Regiments of the Line, too often disciplined with the lash while demoralised by debauchery. From Lewis the Islesmen went out to the Seaforth or the Ross-shire Highlanders. General David Stewart of Garth, historian of the Highland regiments and people, wrote of these two regiments that again and again their courage and coolness in battle were proved.[1]

175 618

Not less striking was the record of Gaels among civil populations, whether in Britain, as in the 'Forty-five, or abroad. In Germany in 1761 and 1762 much was said of the Highlanders' kindness, "for the boors were much better treated by those savages than by the polished English and French". Similarly in the Low Countries in 1814 and 1815, they were *enfants de la famille* and "kind as well as brave". The mayor of Brussels declared that they "called forth the attachment and esteem of all", and the inhabitants requested him "to endeavour to detain the 78th (2nd battalion Ross-shire) regiment of Scotchmen in the town, and to prevent their being replaced by other troops".

175 703 [551] private naturally addressed him in Gaelic by his Christian name, and writes of him with the warmth and respect due to an elderly relation. Something of this mutual regard remains; and young Englishmen of education have told me of their surprised admiration for the character of the best traditional type of 'Regular' Scottish, and particularly Highland, non-commissioned officer, before and during the two world wars.

175 829 Such bravery and character abroad led Stewart to the conviction that their foundation must be the character of the peasantry at home. He held that the Highlanders' home life demanded support, and having served with the Sutherland Highlanders, he felt the deepest grief and anger at the clearances of the Sutherland estates by an English [727] proprietor. When Stewart remarked that a few deaths mattered little when compared to the nation's renown, for this 'endures for ever', he referred to deaths in battle, which he analysed as typically of 1 to 2 per cent of the men. Whereas upon long voyages or in unhealthy stations, 25 per cent of soldiers or civilians might die of disease.

175 703 614 Yet, to the Gael, discipline did not mean blind submission to injustice. "Accustomed to obey their immediate chiefs, who durst not break a compact with them, and to have promises punctually fulfilled, implicit submission was not yielded when they had rights to preserve." For the bond by which, of old, the Highlanders "were held to their superiors and one another" was "the bond [648] of fidelity and affection. . . . In later times, when they entered the King's service, they considered themselves as contracting parties", and resented breaches of faith. Of eight mutinies in as many regiments, that of the Seaforth in 1778 should be instanced here. The regiment included many Lewismen, with Mackenzies and Macraes, and also

175 703 614 648 some 200 men enlisted at Perth. When, shortly after the had been embodied, the men were quartered in Leith prio to embarkation, complaints arose about infringement o engagements. "The regiment refused to embark, an marching out of Leith, with pipes playing and two plaid fixed on poles instead of colours, took a position on Arthur' Seat at Dunsappie, of which they kept possession fo several days." The inhabitants of Edinburgh, who ha encouraged them, supplied them with provisions and am munition. "After much negotiation, a proper under standing was brought about . . . and they marched dow the hill . . . with pipes playing and with the Earls o Seaforth and Dunmore, and General Skene, at their head They entered Leith, and went on board the transport [721] with the greatest readiness. . . ." None of the men wer tried or confined. Seaforth, as their colonel, set out wit them to India—although his fortune and title would hav allowed him ease at home, or the purchase of highe military rank. His death on the long voyage contribute to the men's "prostration of mind which made ther succumb more easily to the effects of disease", scurvy, o which 230 out of 1100 fit men died before reaching Madra and others soon after. As we have told, the survivor fought with disciplined courage.

175 702 614 To a chief, recruitment was financially important, fo he, and not only the recruits, received a handsome bounty Simultaneously it provided him with a commission with out the cost of purchase—previous training and promotio being considered unnecessary. The clansmen knew thes facts of bounty and command, and generally responded t an appeal. When Stewart of Garth was recruiting for th Ross-shire Regiment, a band of young Lewismen joined for half the bounty offered by a Lowland regiment!

CHAPTER VI

CLANSHIP: PEOPLE, CHIEF AND TACKSMEN

(a) COMMUNAL EQUALITY AND LORDLY PRIVILEGE

175 632 612 631 THE equalitarian customs of hamlet and township astonish many to whom the crofting villages are unknown and whose picture of the Gaelic past is derived from tales of the 'Forty-five. The widespread historic fact of lordship over a subject peasantry has obscured that of peasant-neighbourhood, more ancient, it would seem, and, in the Isles, still more enduring. The very existence of rural democracies' such as those just described has been doubted by certain scholars on the theoretic ground that they would be humanly unworkable! Yet it is none the less true that the peasants as clansfolk gave loyalty to their chief. The fervent loyalty given to the exiled kinsmen-kings, the Stewarts, was a scarlet thread interwoven—or entangled—in the homespun web of community, of clanship. Wherever the Gaelic is spoken, the Jacobite songs are sung with passion, and their echo has gone round the world.

(641) (533)

(171) So in the life of the Gael, without doubt—and in varying degree throughout Britain and the rest of Europe—we have to envisage a composite, perhaps a contradictory, state of things, in which communal equality is overlaid by

175 631 632 647 820 171 621 lordly rank: a working, equalitarian democracy dominated by an aristocracy proudly refusing to work. The fascination of Gaelic community is, first, that its elements stand out so clearly, and, secondly, that links were forged in clanship which made its living chain, though heavy, a thing that shone with pride, and beauty too.

(b) CLANSHIP, COMMON DESCENT AND CLAN-HELP ('CUIDEACHT')

621 To what extent is it now possible to disentangle the two contested elements of the lord or chief and the farm-teams and townships? Prehistory is hard to unravel; but the successive waves of conquest flung upon the Island shores have left their jetsam, unmistakably. The circle of huts found near a broch or commanding *dùn* recalls the tenants' village grouped close to the castle of a chief, from early history down to the 'Forty-five, and suggests a primitive form of feudalism or of clanship. Traditions add their part. In Uist one may still hear the ancient heroic lays traditionally ascribed to Ossian, Oisean, son of Fionn or Fingal—lays of which Macpherson's sonorous prose gave free rendering. The Fingalian tales differ from the lays, being frankly fantastic. Lewis had its own cycle of Fingalian tales; examples are given by W. C. Mackenzie (1919). Both lays and legends tell of an aristocracy or warrior class, the Fenians, of their enjoyment of the chase, and of their relative comfort, with wealth in gold and silver, in banners and flowing mantles. The chase combined with riches implies the existence of a community to feed and clothe the huntsmen. The traditions of the Cuchulainn cycle, with closer approximation to historical and

173 621 614 622 820 171 621 archaeological truth, tell the same tale. Historically, in-

173 621 614 622 820 171 621 his near kin. Again, much as in the medieval *gentes* of France, fosterage of an heir by a clanswoman formed the closest possible tie to at least one family of the people from ancient to recent times. For it linked the heir by sympathy—though not by equal obligation—to elders and playmates in childhood and his contemporaries in later life.

565 To re-state this 'contradiction' of equality and privilege, we have thus a hierarchy of 'class' imposed upon a 'classless' society. For the joint farms and the township were essentially classless. The two classes, the lord and the people, were primarily opposed, war having placed the conqueror above those who fed him. This state of things was not active 'class-war', for the armistice could endure indefinitely by means of the bargain made between the classes for some exchange of services; none the less, it was built upon class conquest.

175 565 614 622 (570) (577) That all should ultimately claim the lineage of their chief was a remarkable solution to the hereditary opposition of class. A man who knew the Islanders well, John Lane Buchanan (1793), noted how in conditions of the utmost poverty the poorest addressed each other as 'lady and gentleman', *bean-uasal* and *duine-uasal*, a courtesy not lost today. And every clansman had a right to shake the hand of his chief, as Edmund Burt observed in his vivid *Letters from the North* (written after 1721). Indeed the sense of mutual obligation implicit in Gaelic society is well illustrated by the homely word *coir*, usually translated 'right'; it is equally used for right's correlative, duty—as when a Scots or Irish crofter may say "You've a right (a duty) to help your mother"—and for a 'right' (privilege) to shake the chief's hand. An English equivalent would be duty-privilege, or duty-right. Similarly, the same

175 565 614 622 175 582 words are used for neighbourly help among crofters and for services to the chief.[1]

Full freedom of choice in marriage prevailed among the people, who honoured marriage and enjoined continence; but the position of the chief placed him apart from the rest of the community. Now, the more equalitarian the community, the more free are a couple to choose one another on grounds of mutual affection, passion and respect; the parents, too, are more likely to encourage or support a suitor for their child because of character and virility, rather than means.

175 565 582 The lads of the clan, chief and people, grew up together in an isle or glen. But in manhood, while a labouring lad sought a wife from the girl playmates of his childhood and his fellow-workers at the peats, at the harvest, or in the shielings, a chief's choice was confined to his own class. In pre-feudal clanship, tanistry, *i.e.* the choice of a chief among the higher kin, gave a wider choice for marriage near home than feudal primogeniture, irrespective of the wishes of the chief's kin except in extreme cases of unfitness. In Scotland, tanistry prevailed even in the royal line until the eleventh century. But with the dominance of primogeniture, the young chief chose a bride outside his own community for reasons other than those of human feeling, honoured by Gaelic lyrical and religious tradition and even by the Church.

As a result, the chieftain's son was granted a licence forbidden to the rest, a temptation to maidens and a bad

[1] *Coiḋ* (cognate with gosta) means a portion, lot or share, or what is one's own (*e.f.*, gen. *coḋaiḋ*); and the associated verb (*coiḋiḋ*) means not simply to share but actively to help. The opportunist lodging given to the chief and his 'suil' of 'lads' was the 'cuideachy'—*cuid-eiḋiḋe*; while the famous motto of the Seaforth Highlanders is Help the King!—*Cuidich an Righ!*

175 565 582 example to lads! Often of tall, fair stock, physically superior from better feeding, accustomed to have his own way, better taught, finely dressed, free and welcomed wherever he went in the glen that fed and fostered him, the young chief had favour on his side; moreover he was protected from the vengeance of jealousy. A song in praise of a young chief of Clan Leod boasts that "the girls would give their snoods for Rory"! When she lost her maiden snood to him, a girl would be excused, and her 'natural' child not diahonoured, but granted a share of paternal affection and inheritance. After marriage, a chief's lady made allowances for his past. But licence, once a habit, is hard to change, and the bitter tales of jealous wives, married for policy, and their revenge upon a rival. One gathers that where there were enough gentry to meet, choose and inter-marry freely, as among the Island tacksmen, decency was better observed; but among landlords in the Highlands, as in other lands, local licence was common down to the last century. Then, whereas a Minister of the Established Church could hardly blame his own Patron (or his son), a Free Church Minister could speak out from the pulpit!

(834) 175 837

175 585 Of the legendary *jus primae noctis*, the 'law of the first night' of Boece and other old historians by which a lord had at one time the 'right' to rape the bride of any of his serfs or tenants, there is no authentic record. Yet from the primal right or wrong of conquest, some such 'law' was forced upon the Gael, as upon other peoples. Boswell records MacQuarrie of Ulva's belief that the custom of paying him a sheep when a tenant married was followed in lieu of such a right! Obligatory hospitality also lent itself to abuse. In all relations of chief to people, there were adjustments. In more complex society, poverty makes

175 585 womanhood a prey to prostitution. The licence of a chief among young women was preferable to this; but evils were inherent in the fact of lordship.

(c) TWO ISLAND BARDS: MARY MACLEOD AND THE BLIND HARPER

175 613 621 While in Lewis the continuity of clanship was sorely shaken by the fall of the chiefs, the Torquil-MacLeods, in Harris it was maintained in the family of the Norman-MacLeods of Dunvegan in Skye. The family of Dunvegan is famed for chivalry and gentleness, not only in the songs of the past but in the speech of Skyemen to the present day. Harris did not suffer the bloodshed endured in Lewis from the death of Torquil until after the accession of MacKenzie in 1611; and Harris was not involved, like Lewis, in the troubles of 1715. MacLeod of Dunvegan retained Harris until the end of the eighteenth century, when it was purchased by a cadet of the family who had made his fortune in the East; and it only passed out of MacLeod hands half a century later. Hence it is that while in Lewis there is still talk of the 'give and take' between later laird and people, in Harris there is more. In "the hereditary Hall of MacLeod" of Dunvegan, two Island bards gave birth to immortal song. Together, the tales of Lewis and the songs of Harris and Skye give us an authentic record of clanship in fact and feeling, linked with community today.

(562) (533) (678) In spite of the break in continuity, ease and warmth of feeling could spring up between a MacKenzie of Seaforth and the Lewismen, though Seaforth was a peer of the realm, and of a mainland name, not a MacLeod by direct descent. Playful rhyming, chaffing contests between titled laird and small tenant, are recorded by A. Carmichael and W. C.

175 613 621 (824) 197 565 576 Mackenzie. For all that, in 1900 a crofter said: "We called the old proprietor Seaforth, but I believe his right name was the Prince of Welsh". To him the Earls were royal!

Freedom of intercourse is embodied in the language to this day. With 'a stranger', a little spoken Gaelic lessens 'strangeness' and quickens intimacy, because Gaelic conveys essential human relationships as English rarely can—even the English of the 'democratic' Lowlands. For instance, a well-dressed stranger, though young, is usually addressed in English as 'sir' by a senior crofter, and, just as in the South, without the expectation of 'sir' or 'ma'am' in return. In English, that is, respect is given to class. In Gaelic, age receives respect: it is the stranger, if the younger, who adopts the respectful 'you' (the second person plural, *sibh*), while the crofter, if the older, uses the friendly singular, 'thou' (*thu*). If they are of equal age, and neither is elderly, 'thou' would be used by both. Similarly, respect is given to womanhood; and an older woman who would say 'Sir' in English will say 'My dear' in Gaelic.[1]

(562) 614

It is not only by daily contacts that we may understand the relationship of people to chief, but by the height of feeling it may attain, and by the beauty of its expression. Among the finest of the later songs of praise to Gaelic clanship and its chiefs are those composed by two Island bards, a woman of Harris and a man of the Lewis. Mary MacLeod, *Mairi Nighean Alasdair Ruaidh*, was a kinswoman of the MacLeods of Dunvegan and Harris, and a beloved

(175) (533) (173)

[1] Calling on the sub-postmaster in a Highland place where I was known to be a friend of the laird, I was addressed as "Sir". But hardly had we passed to Gaelic when this woman, my elder and a person of culture, habitually used an expression then strange to me. Hesitant, and suddenly shy at being forced to translate, she said at last, "When thou wast a *bump* [just a boy]! 'twas *thu* the *gasp*!" But rightly, she would have been slightly shocked had I said 'thou' to her.

175 nurse in the family. Born about 1615 in Rodel (south-east
533 Harris), she composed her last elegy (to Sir Norman
[614] MacLeod of Island Berneray, Harris) in 1705; she may
even have composed her last great song (on the birth of
the nineteenth chief) a year later.[1] Towards the end of
the century (between 1664 and 1693), Mary's younger
contemporary, Rory Morison was bard at Dunvegan, being
known as the Blind Harper, *An Clarsair Dall*. A Lewis-
man, Rory could not have found adequate patronage as a
bard in that Island, the chiefs of Lewis having passed
away. Morison is stated to have been a descendant of
the Gaelic judges or *brieves* of Ness and the son of a
minister, and he was to have entered the Church along
with two brothers, later ministers. But smallpox blinded
him, and he turned to oral, not to written 'literature',
perhaps to our ultimate gain.[2]

Here then were two bards, man and woman, whose
fame is growing, rather than waning, in our own day.
While Mary was illiterate, however rich in lore, Rory, with
his clerical home and family tradition of Gaelic jurisprud-
ence, must have begun to read Latin and English, perhaps
Greek, and also Gaelic, though not reaching Hebrew (as
his brothers would) before he was struck blind. Mary, so
far as is known, was the first to compose what may be called
'court' song in simple words and in the 'strophic' verse-
form of rhythm and assonance enjoyed by all Gaels, Scots
and Irish, since her time. Lacking the learning of the
dying school of classical bards, Mary is more personal
[614] than they, "a lyrist not less than panegyrist"; and she is
more spontaneous. The same seems true of Rory. Yet
[622] the themes of the classical bards were renewed by these
[113]

[1] James Carmichael Watson, *Gaelic Songs of Mary MacLeod*, 1934.
[2] John Mackenzie, *Sar Obair: Beauties of Gaelic Poetry*, 1877.

175 two singers, as in the portrayal of a chief, "blue-eyed and
533 with clustering, golden locks . . . and brown, ruddy
614 cheeked"; in descriptions of "his wisdom, prowess and
622 justice" or of his traits—his "joyous, fresh, and shame-
fast cheek", and as a friend to the poor seeking justice,
and to men of learning, musicians and bards. In the halls
of chiefs where ancient joys and traditions were main-
tained, the ideal of chiefship was essentially that of man-
hood. Nor is the chief's lady forgotten either by Mary
or by older bards, though womanhood is a theme rather
for lyrics and for sacred song.

Even at Dunvegan the stream of clan life was once
interrupted in the lifetime of these two bards, as the
Clarsair told in his satire on the anglicised seventeenth
chief (1693–99), and as Mary hinted in her haunting
'Croon' or *Cronan*. Happily, the stream was renewed
[173] by this chief's successor. Tradition and song show that
such renewal was primarily due to the strength of com-
munal life among the 'people' which called out leadership
from the chiefs, in justice, in war, and in the encouragement
of the oral arts. High conduct from the chiefs was invoked
[577] by the expectations of their people. More important still,
it was the warmth of feeling among the people as a group,
and their ties to one another, which lit their personal loyalty
to a chief and called forth his loyal leadership in return.[1]

[1] Gaelic loyalty was burned away in the Jacobite Risings, but as the last Rising left the Island relatively unscathed, one may simply refer to two works: Audrey Cunningham's *The Loyal Clans*, 1932; and J. L. Campbell's *Highland Songs of the Forty-five*, 1933 (Gaelic and translation). The first work analyses the need for a personal relationship to Scottish kingship, felt so keenly by the clansmen. The second gives authentic evidence of the spirit of loyalty. (Both the sense and a hint of the rhythm, with several of the airs, are available for the English reader.)

I know of no explicit statement of the conclusion given above, for lack of the sociological approach attempted here; but it is surely implicit in the thought of many a Gael.

(b) TACKSMEN AND SUBTENANTRY, FACTOR AND LORD: 1611–1800

175 We saw that in the Rent-roll of Lewis in 1718 the first
427 sixty-four entries, signed personally, recorded comparatively large holdings (tacks), the annual rentals of which were
614 from £3:6:8 to over £10, the occupant of one (or more)
621 of which would be styled 'Tacksman or 'Man of the Farm-town' (*Fear Baile*). While one or two tacks were shared, a few tacksmen may have held more than one tack—though one cannot be sure, owing to the recurrence of the same
[551] Christian names in each clan. It is striking that half the tacks—though mostly small ones—were held by men of undoubted mainland names, of which there were twenty-two MacKenzies, four MacLennans and three Matheisons.
[1142] These were doubtless the descendants of gentlemen from the mainland who in 1611 had helped to win and hold the
[551] Island for MacKenzie of Kintail, later Lord Seaforth. Of native Lewis names the principal are MacAulay, Morison and perhaps MacIver.[1] Only three small tacks were held by MacLeods, who may have been of Island stock. Lochs and Eye on the east coast had largely been granted in tack to the new-comers; on the south-west and west coast MacAulays and MacIvers held much of Uig and a few farms in Cladach; but more of Cladach and most of Ness (in the north) were still held by joint tenants. Stornoway was held by burghers, of whom perhaps two-thirds bore mainland names. The peasantry remained as unnamed subtenants on these holdings, of which the total rents show
[114]

[1] The writers of the Brand Report (1901) assumed that MacIver is a native name. This would seem to be borne out by its frequency as a surname today, in contrast to MacKenzie, Matheson or MacLennan, though W. C. Mackenzie (1919, p. 90) thought the MacIver tacksmen arrived with Seaforth.

175 they were composed of at least one to four or five hamlet-
427 farms. The tacksmen also had cottars for service.
614 Thus in Lewis a special reason, the accession of Sea-
621 forth, had led to the granting of many tacks to his own clansmen and to natives. Elsewhere in the Highlands the
175 procedure is noteworthy during the sixteenth[1], seventeenth
427 and eighteenth centuries, for the collection of rents from
614 the peasantry by means of large tenants had financial
184 advantages for the greater landlords (I. F. Grant, 1930).
The tacksman's continuation as tenant depended on his
[661] paying regularly, for the lease was not a hereditary grant.
A tack could also provide for a long younger sons or
[565] immediate relations, such as formed the gentry of the clan. Along with smaller lairds, these furnished the cadres of officers who led the clan regiments down to the 'Forty-five, and later the Highland Regiments of the line and the Fencibles down to Waterloo. Like MacKenzie, other great chiefs such as Argyle or Breadalbane leased tacks when they acquired the status of peers and took possession of fresh lands with Royal support, after vain resistance from native chiefs and their followers. In Lewis, the fiscal status of tacksmen was applied both to MacKenzie's supporters from the mainland and to those with ancient roots in the west of the Island. The latter may have thought a mere lease a poor substitute for hereditary tenure, though a legal compromise necessary if their possession was to be
[1142] continued. The lack of permanent tenure ultimately led to the departure of their descendants.

175 From the families of these tacksmen have sprung most
621 of those of Lewis birth or descent who achieved fame
614 before the twentieth century. Of the MacAulays, we saw
554 Zacharias was Chamberlain during and after the 'Fifteen.
[468] Thomas Babington Macaulay came of the same line, as

175 did another Zacharias, closer than Thomas to the Lewis
554 tree, who worked nobly with Wilberforce for the emanci-
614 pation of the slaves.[1] Still another connection was a
621 Canadian emigrant, grandfather of the late T. B. Macaulay,
[668] LL.D. Alexander Mackenzie, the explorer of the Mac-
kenzie River, was a descendant of Lewis tacksmen.
MacIvers and Morisons also distinguished themselves.
[1108] But the sons and daughters of crofters had to await the
[870] provision of education in English before they could rise in trade, learning or war; hence few Lewismen of the greatest Lewis name, MacLeod, achieved eminence until the twentieth century.

175 As for the peasantry, the interposition of a new or
554 enlarged class of tenantry between themselves and the
565 superior must have meant that they had to labour on the
427 tacksman's home farm, and no doubt pay more in produce or cash. Hence the Gaelic saying that if the position of the small (joint) tenants was bad, that of the subtenants was worse, "the Evil One itself". Following the long fight with the Fife Adventurers, hardship may have been greatest where mainland tacksmen were placed above the joint tenants; but even under MacAulays and MacIvers rents may have been raised and some of the joint freedom lost which was still enjoyed in Ness. Whatever adjustments had been made in an earlier period had to be re-made with the beginning of Seaforth's new order.

In the following generations, contradictory accounts of lairds, factors and tacksmen are given by contemporary observers. Certain of these insisted that, given the poverty of the lands as a whole, the chiefs and landlords, factors and tacksmen, were the saviours of their people. Yet even among those who supported authority in general, there was
[113]

[1] Charles Booth, *Zachary Macaulay*, 1934.

175 seldom agreement as to which of these three types brought
554 the greater good or wrought the lesser evil. As elsewhere,
565 tacksmen declined by the end of the eighteenth century.
427 Buchanan wrote in 1793, "The greatest tacksman in Lewis is the Laird's ground officer"; but he added that the Island was for the most part inhabited by tenants holding directly from Seaforth, who "easily perceived the folly, as well as the inhumanity, of lending out the people on his island to imperious tacksmen, for the purpose of raising fortune to themselves on the ruins of the unfortunate subtenants". At a later date a former Chamberlain of the Lewis estate, John Munro Mackenzie of Calgarry, held otherwise. To the Napier Crofters' Commission in 1883, he said: "Till the beginning of this century the greater part of the Lewis was in the hands of tacksmen, or middlemen, who got in some cases from their subtenants in money, produce, and labour, what nearly paid their rents". Their names were those of the seventeenth century. Early in the century, "when Mr. Stewart-Mackenzie married the Hon. Lady Hood, daughter of Lord Seaforth, and took the management of the estate into his own hands, he did away with the middlemen, and let the land direct to the crofters.
[232] This, no doubt, was a step in the right direction, but it had its disadvantages, as the example of a good middleman, who looked after his people, and who was industrious in farming . . . and stock-breeding, was beneficial to the people, though in some cases they may have been petty tyrants." He might no doubt have added that they could, if need be, stand between a bad factor and the crofters.
[278] When they lost their tacks, some of these 'middlemen' turned to the growing fishing industry and helped to supply capital and enterprise as curers; their successors were active through the nineteenth century and I spoke with

175 the last of these in outlying villages after 1918. When
554 Matheson purchased the Island in 1844 he left the fishing
565 industry to the curers, great and small. Particularly before
427 most fishermen could speak and write English, the local
228 curers were best fitted to take action not only in marketing but in approaching the Government to aid the construction of piers and harbours. On the whole, their long ties with place and people, coupled with education, made them useful leaders of a community in which leaders were needed to adapt life to a changing economy. Here and there one or two small farmers survive, a little apart from the main townships. Aided by a long cultural tradition, they meet changing times by combining with their inheritance a sane selection of new elements.

Looking beyond the Island to the mainland, the time is
175 approaching for a fair assessment to be made of the historic
621 parts of chief and landlord, factor and tacksman. Not only
622 is there an enlarging body of documentation, but a growing
427 understanding of communal strands in tradition and of
184 changing social economy seen in relation to geographic factors of place and region. And in the Gaeldom, condi-
[178] tions varied greatly between bordering areas from Mar to
[182] Kintyre and the heartland of tradition in the Hebrides. In the Island, one must consider the fundamental opposition, yet the recurrent readjustments of chiefs and people. These, and not only individual differences in character and conduct, explain the differences of experience and opinion
[829] quoted above. The people's belief, so frequently given to me thirty years ago, that it was bad factors, not the landlord, who taxed and harried them unjustly, expressed an idealistic faith in a chief, rather than the facts of economy
[565] and history. For lordship begins with the imposition of
[113]

[1] A. McKerral, *Sept. Hist. Rev.*, 1950.

175 his bonnet in his hand and bowing low and reverently, he
622 declares on honour in presence of earth and heaven, in
[782] presence of God and men—*Am fianuis uir agus adhair, am*
fianuis Dia agus daoine—that he shall be faithful to his
[178] trust. This simple declaration of office is extremely impressive, though now, alas, becoming obsolete from the fears of the shallow thoughtless and the scoffs of the severely
[626] wise. The duties of the constables were to divide a new peat-moss into banks for which lots are cast, to see that every crofter does his share of free labour in road building and repair, to engage herds and the like." (*Napier Crofters' Commission*, 1884.)

Naturally such duties called not only for tact, firmness and authority, temporal and spiritual, on the part of the constable, but for strong backing by the crofters, as a body,
175 of the man they had freely elected. But hence too, the
622 advantage to a covetous landlord of superseding free
557 election by appointing his own nominee. Martin found
427 that this had been done in St. Kilda shortly before his visit (about 1695) and the people complained bitterly, as well they might. We shall see that the same suppression of liberty was resented in Lewis less than a century ago. As a mere estate employee, moreover, the constable's position between the landlord's factor (or ground officer) and his fellow-crofters, was always difficult; and it might be cruelly hard, as when he was forced to help in destroying a neighbour's house at an eviction. Neighbourly union in a township was damaged by this duality of function, when he who should have been their own impartial executive was in the landlord's pay. When affairs got too bad in a Lewis township the people would appoint their own constable in addition to the landlord's; even so, rivalry and dual functions weakened the community. Such weakness

175 in communal organisation, historically brought about by
622 landlord or steward over a wide period, has commonly
557 been ascribed to some inherent feebleness in Gaelic
427 communal spirit. It is all the more vital to realise the
strength of community and its self-governance by neigh-
[623] bourly 'parliament' and chosen constable, by which the people put their ideals into practice. These may be given in the three traditional terms of fellowship, fairness and freedom, summing up the Gaelic watchwords.[1] Unless the struggle for freedom was too severe, fraternity, followed by equality, came first.

[538] [1] *Companas, caidreabh* or *cairdeas*; *ceartas, coir, cead cothrom*, or *co-roinn*; and *saorsa*.

175 614 577 621 principle of duty-right or *coir*. Further, in so far as chief and people claimed unity as the children, the clan, of one ancestor, they had crystallised a fair ideal, realised by an exchange of services ('cuideachy'). Gaelic clanship was not without its Lowland counterpart in 'kindness' which linked those of one 'kind'—'kinsfolk' and neighbours—to their ferm-toun and parish, to one another, and to the laird. Tyranny and betrayal by chief and laird make one share the bitterness of grief once felt as competition for scarce land broke up 'kindness'. Yet the people's endeavour and attainment in the past give hope for the future.

175 614 621 622 All have heard of the hereditary Highland chief and many have read of the gentlemen-farmers, but too few have heard of team and crew, and township-parliament. It is time we learned not only of the aristocratic chief but of the chosen helmsman and the democratic constable. So long as the fallacy is repeated that the Highlanders "never co-operated, and could not act together except under the orders of a chief", so long will it be easy to add, "and they never will"! Historic truth may have much to teach [642] for the renewal of leadership for life together. And beyond the Highlands, the example of this aristo-democracy, at its worst and its best, may contribute to new concepts of community.

788 241 facing the sun, he cut a handful of corn. Putting the handful three times round his head, the man raised the '*Iollach Buana*', reaping salutation,—and the whole family [175] [178] then took up the strain." While these notes by Carmichael describe the custom after the abolition of the farm-team, he also tells of "all the people of the Townland going together to reap" (*Carmina*, No. 89, cf. Note to No. 90). In the days of close partnership this was no doubt a team blessing, said by the chief reaper among his neighbours in mutual aid.

782 264 [114] Grace before meals survives in Presbyterian households; and ancient graces are recorded in *Carmina*, vol. iii. The unpublished examples given here are from Miss Annie Johnston (or NicIain), Barra, to whose knowledge Gaelic lore owes so much:

1. O God, bless our portion, and our people.
2. O God, be about the beginning of our life (or food) and about the end of our life (*lit.* of our world).
3. O God, let nothing enter our bodies that may harm our souls.

A Dhia, beannaich ar cuid 'us ar cuideachd.
A Dhia, bi mu thus ar bithe (or *bidhe*)
'us mu dheireadh ar saoghail.
A Dhia, na leig dad 'n ar coluinn a ni lochd do'r n'anam.[1]

[114] [192] [1] The reader will note the meaning in translation; but he should also scan the Gaelic, and the assonance of the vowels. In the first and shortest there is a simple play upon sound and meaning: *ar cuid 'us cuideachd*—"our share (of things) and our (share of) people, friends and family". In the second, Miss Johnston thinks there may be a play upon the words 'life' and 'food' (of which the sound is almost the same), reminding one that food is the means of life and of all that life means. In the third the apposition of ideas is characteristically emphasised in the pattern of the accented vowels in the words "*dad 'n ar coluinn a ni lochd do'r n-anam*"; here again the form, by means of which it sank through the senses into the heart, marks its native origin. Contrast with these the translation into Gaelic of a common English Grace. As in the English original, its prose lacks poetic form: *Tha sinn a toirt taing dhuit, A Thigearna, airson nan tiodhlaicean a tha Do mhathas a' buileachadh oirnn, troimh Iosa Criosda ar Tighearna.* Amen.

782 233 The care of cattle was accompanied by prayer. As a Eriskay housewife said to me, she would never leave he cow tethered without a murmured, "Saint Columba b herding you" (*Buachaille a'Chaluim-cille ort*). The curin of animal sickness, as of human ailments, was accompanie by prayers. And prayer was used to avert the evil ey symbol of suspicions born of unreasoning fear which psychologists tell us, beset the modern but little less tha the ancient! The thought or act of prayer which link a man to his fellow-men links him to the dumb beasts "The man who is merciful to a soul will not be merciles to a brute" (*Am fear a bhitheas trocaireach ri anam, ch bhith e mithrocaireach ri bhruid*).

796 171 779 Throughout Christendom each task of the annua rhythm was marked, at its start and close, by a day o seasonal festival (*Lá Feill*). These Christian festivals re placed earlier celebrations and continued some of thei features, often in play. Yet concerted seasonal activitie could not be related to the supreme festival of the Christia Church, Easter, owing to its movable date. This is on reason for the great importance of other, fixed Festivals t [114] rural community life. This point, not always appreciate by latter-day individualism, is made clear by M. M. Bank in describing *British Calendar Customs*, vol. i, *Scotlan* 175 (1937). Remembering that the Old Style Calendar date 178 were ten days later than the New Style (when officiall adopted in Scotland in 1600), they may be compared wit 796 the annual rhythm of climate and labour (Fig. 9). Unti 1600, the New Year began in spring on 25th March. Afte the Reformation and the abolition of Christmas or Noel *Nollaig*, New Year's Day on 1st January took its place a the day which, in the Protestant Highlands and Lowlands still keeps alive some of the old friendly visiting an

3: Geddes K-4,5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

175 796 178 'first-footing'. In the past the lads came in bands singing carols, and once admitted—refusal of hospitality being out of the question—any misunderstandings and quarrels of the past year had to be forgiven and forgotten. With individual visits this is no longer possible, for though these maintain friendship, they cannot easily and naturally heal a quarrel.

175 796 533 [127] From Lewis three fine carols once sung by youths are recorded, of which the fidelity of Carmichael's translation goes far to render both sense and feeling (Nos. 55-57).[1] In Ness I have sought in vain for the old melodies from the descendants of Angus Gunn. Born about 1800, Gunn had lived for many years as a shepherd on the islet of North Rona, unreached by the burning zeal of the Evangelists, so that his traditional piety survived. Could they be found, these melodies would enrich the remnant of authentic Christian lore in Britain, for even the well-known English carols are mostly of modern reconstruction.

The first Christmas Hail opens, "*Ho Ri*, Hail to the King, Blessed is He. . . . Blessed be the house and all therein. . . . Lasting . . . and healthy round the hearth be ye. . . ." It goes on, "This night is the eve of the great Nativity, the great Noel [*Nochd oidhche Nollaige moire* . . .]; Born is the Son. . . ." It closes, "Shone the mountains . . . earth, and land, Heard was the wave upon the strand. . . . Blessed be the King . . . to all ages, to all time." A fragment from Tolsta, Lewis, sung by boys on New Year's Eve as they begged for a Noel bannock from house to house, latterly began and ended with playful nonsense, yet it retained its traditional climax: "[On the first day of the New Year] I saw the Threesome [The Trinity] going to the shore. The land shone, the

[113] [1] No. 59 is set to an Eriskay chant in *Songs of the Hebrides*, vol. i, p. 159.

3: Geddes K-4,5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

175 796 533 earth shone, The wave shone on the shore; The deer of the mountain steep shone. . . ."[1]

"The Christ Child's Lullaby" is a lovely carol narrating the Christmas tale. Legend tells that it was sung by 175 796 533 773 'Mary-Mother' herself to an unwanted stepchild lost on the moors, where his stepmother found him in the arms of Mary, who sang as she lulled him. The stepmother cherished this song with the lost child, henceforth loved as her own.[2] The poetry of the Gael, like the odes of Greece and the Psalms of the Hebrews, is luminous with the vision of mountains, land and sea, reflecting a light within that of sun or moon, and sonorous with the rhythm of wave, tide and season which are "of all ages and to all time, [181] *gach linn gu brath*". Its adoration is full of nature and of humanity, yet it soars above mere nature worship or anthropomorphism.

175 796 While Christmas, more than any, was a festival of leisure, others were closely linked to labour. The festival dates of Candlemas or Lent, of Saint Bride's, Saint Patrick's or Lady Day, marked the stages of spring's coming and the duties they brought. Summer came in at Beltane—held in May, though the word included other dates connected with spring fire; and on St. John's Day

113 [1] Donald Macdonald, M.A., MS. essay for the Royal Scot. Geog. Society.

[2] A short version is published in the *Songs of the Hebrides*, vol. i. A translator may choose from its 29 stanzas—though all are true to the Gospel and worth translation. Of the simple choral variant of the air (as published) Fr. Allan Macdonald told Miss Amy Murray his grief that it had superseded the melodic variety given to the Lullaby when sung by one singer at a time (*Celtic Review*, 1905–6). From three variants noted from oral singing one can arrange a melodic sequence. To pass from a major variant (set to stanzas on Jesus's mother, the shepherds and the 'kings') to minor variants (set to the tale of Herod's evil deeds) restores much of the dramatic intensity of this noble carol. Only deep feeling for the Gospels could create and maintain, without written help, so full a version of the words and variety of associated melody. (The complete words, *Taladh Chriosta*, are in Fr. Allan Macdonald's collection, p. 7.)

175 at midsummer came joyous departure to the shielings.
796 Michaelmas at the end of September was a festival of horsemanship, when the ponies, rested and well fed, could race madly along the machar. As long nights brought in the winter, Haliowe'en came on 31st October, and on the morrow the solemnity of All Hallows (*Samhain*). On 11th November came St. Martin's Day, and in December Christmas once again.

175 When the Islesmen put out to sea, prayers were chanted
782 to Father, Son and Holy Spirit and to the Disciples, "the Fishers of Men". While some of these might be individual (*Carmina*, Nos. 117-120), others were chanted by the skipper at the helm, as celebrant, the crew giving the
[178] responses (No. 121). As self-sustained community life
[779] weakened and customs were endangered, this prayer was encouraged by a few clergy, Catholic and Protestant. At
175 the start of the season's fishing in Eriskay, Fr. Allan Macdonald went out in the boats and chanted a rune taught
226 to him by elders, the men responding.[1] One of the 'Ocean
788 Blessings' or prayers recorded by Carmichael (No. 119) is found in Bishop Carswell's *Liturgy in Gaelic*, of 1569, and is quoted by Martin as "a form of prayer used by many of the islanders at sea after the sails are set".[2] Most of Carswell's *Liturgy* was translated from that of John Knox, but not this prayer, of which the earlier and later-recorded version are the same, except for one revealing difference.

[178] [1] In so doing, 'Father Allan' may have been restoring a pious service of an older school of Gaelic priests trained upon the College of Lismore, an island in Loch Linnhe. Lismore was the birthplace of Carmichael, and in the home of his Protestant parents the young priests were hospitably received.

[2] *Foirm nan Urnaighthe* (ed. M'Lauchlan), 240, and Martin, 1703 (edition of 1934, pp. 186-189). A new text of Carswell is in preparation by the Scottish Gaelic Texts Society.

175 As recorded by Carswell (and Martin), this prayer,
226 after calling upon the Trinity, tells that the Three-in-One,
788 ever living, guided Clan Israel through the Red Sea,
773 brought Jonah to land from the belly of the great ocean beast, and led Paul and his companions from the torment of the sea; after these three stanzas it closes with a general supplication. As heard by Carmichael three centuries after Carswell, the first three stanzas are identical, but they are
[539] followed by the culmination. Recalling the hour "when the storm poured on the Sea of Galilee . . .", the poem goes on, "Be Thou, King of the elements, seated at our helm, And lead us in peace to our voyage's end. . . ." It is significant that the Reformation Liturgy includes the story of Clan Israel's flight from their enemy whose drowning forms the climax of the tale, and the absurd miracle of the whale—a late interpolation in the convincing original Hebrew poem on Jonah's voyage,[1]—but that it omits the Christian climax, of the storm allayed by Christ, the Helmsman of peace.

[539] Another fishers' rune (No. 120) concludes, "To whom trembles the voice of the wind? To whom become tranquil strait and ocean? To Jesus Christ, Chief of each saint, Son of Mary, Root of Victory." These blessings, though they refer to the Old Testament, dwell lovingly on the New. Their thought is of the fishermen friends, Peter, Andrew and John, of the Baptist and of Christ's mother, of Saint Martin and later apostles to the Gael, and the Archangels, and of Christ, Rock of rocks (*Carraig Ail*), and the Trinity.
226 These bring strength in danger, peace after strife with the
778 elements, remembrance of the poor, and fellowship to the crews. Peace and strength pervade the "Dawn Prayer of

[1] R. G. Moulton, *Modern Reader's Bible* (reissue, 1925, pp. 1423-1424; cf. Note to Matt. xii. 40, p. 1696).

286 Make smooth and even the warp of my loom
788 And grant thy blessing, God, on me,
539 On all who here find shelter and room
And dwelling . . .

Thine arm be round each woman here
Who waulks this web of mine,
O aid her in her hour of need . . .

Keep the flock that we may win
Sweet and nourishing milk to drink
And wool to give, to weans and kin,
For wear!

Even now in Harris or the Lews, a brief good wish may be uttered—a "Health and strength to the wearers!" as the perspiring women end the waulking; but in the past the web was finally consecrated. Each of the family who was to wear a portion of it was named by the weaver herself, who led the consecration (*Carmina*, No. 113).

May the well-loved wearer of my web
Never be wounded . . .
May the sanctuary shield of the Lord be his. . . .

286 The significance of this gift of hard-won cloth can now
532 be seen, first for the family but next for the neighbourly
614 team. We can understand how each 'set' or pattern of tartan stood for the spirit of the family and the group of
[593] kin and homeland, the clan. We conceive what it meant
[621] to the Gael when the tartan, with "the Highland dress . . . or any part of it whatsoever", was forbidden "to
[291] any man or boy" in the Highlands. Women were still allowed to wear it, it was true, but the dress ceased to be a symbol of community when its wear was confined to
[714] one sex. As a single exception, the Highland dress was
175 retained for soldiers, but the militarisation of the tartan—though it seized upon one strand of clanship, that of

286 warfare—destroyed its intimate tie with the home, with
532 peace. The web the women had dyed, spun, woven and
614 waulked together ceased to be a sacrament when the tartan
714 was proscribed to men except when worn as a uniform with
[178] "England's cruel red".
[648] The framers of this law, which stood on the statute book for over forty years, took full cognisance of what they
175 did. Appended to the Act of 1747 was an oath which
648 reversed every benediction said by the women at their
286 work: "I . . . do swear, as I shall answer to God at the great day of judgment, I have not, nor shall have, any
291 gun, sword, pistol or arm whatever, and never use tartan,
782 plaid or any part of the Highland garb; and if I do,
641 may I be cursed in my undertaking, family and property—may I never see my wife and children, father, mother, relations—may I be killed in battle as a coward and be without Christian burial in a strange land, far from the graves of my forebears and kindred; may this come across me if I break my oath". This Act, as law and symbol, struck full at the sacramental life of family, neighbour-team and clan community, in which labour and prayer had been indissolubly bound.[1]

(c) WORSHIP, CONGREGATIONAL AND PERSONAL: THE BOOK AND THE WORD

178 Little remains of the tradition of worship in the tiny
771 oratories, chapels or 'temples' whose ruins stud the shores

346 [1] The collaboration of friends in Lewis may allow mention of the Gaelic
172 version of A. Geddes, *The Spirit of the Tartan, a Song Drama* (English
[113] Version); *Souvenir Programme and Book of Songs* (Outlook Tower, Edinburgh, 1932). In this the spirit of this labour sequence embodied in its songs and runes is dramatised in its setting of custom and history. The Gaelic version was prepared by the generous labours of James Thomson, M.A., Bayble, and the late Duncan Macdonald, M.A., Sandwick, Lewis.

172 of the Isles, and in which the people met, though far from
178 any clergy. On the southern mainland most trace of
346 shrines and chapels seems to have been lost, so small are
[771] the rings of unhewn stone that marked their sites. Little
was recorded by salaried clergy about the services conducted
• 175 there; those who approved tended to let well alone. Hence
814 written accounts have come down chiefly from those who
were out of touch with rural needs or ignorant of the
language spoken in intimacy, and whose alien training had
[219] removed them from sympathy.[1] As for those whose private
interests, stipend or subservience to patrons bound them
to prelate, lord or king, they roundly condemned free
congregations.

175 Nevertheless, fragmentary records have come down,
814 such as those of Martin, who visited St. Kilda in 1697 and
771 described the little church where the people still kept a
fine brass crucifix and worshipped together, without the
[184] presence of a clergyman. Naturally, the curiosity stimu-
lated by St. Kilda's fabulous isolation led Martin to de-
scribe its little community more fully than any other; but
he mentions similar worship elsewhere. Thus in lonely
North Rona, inhabited by only five families, Martin had

[133] [1] The difficulty of initiation to intimate usages of language is exemplified in a scholarly and patriotic work, the *Dictionary of the Gaelic Language* (Gaelic-English, and English-Gaelic) by Malcolm Maclennan, D.D., 1925. This standard work incorporates all the words of three previous dictionaries,
[192] with many additions. Yet key words of the people's religious heritage, of immemorial age, of living usage, and recorded a generation or so before in the collections cited here, are either absent, or are given the more prosaic or debased of two shades of meaning (not the *higher*). See "*caim*, a case, sheath" or *shrine*; "*tionnsgann*, a beginning" (a *dedication*); *earna*, *Hail* or *salutation*; "*ora*, *orra*, or *ortha*, a charm . . . amulet . . . or imposture of any kind . . . Irish . . . prayer in verse—from Latin, *oratio*" (why prayer in 'Irish' only?); and other vital words. According to this scholarly dictionary, the title of the supreme Scottish collection of Gaelic religious tradition, Carmichael's *Ortha nan Gaidheal* (Latin, *Carmina Gadelica*), is to be translated, not *Prayers*, but "*Charms* . . . or Impostures . . . of the Gael"!

• 175 visited the chapel of St. Rona. It was fenced, and was
814 swept every day, suggesting daily worship; and the Lord's
771 Prayer, Creed and Ten Commandments were repeated
there every Sunday morning. This led Martin to say that
[788] the people had no vices; and indeed the Gael's own
prayers insist upon the beauty of virtues rather than on
the evil of vices. In Lewis at that time (1695) there were
two ministers, at Stornoway and at Barvas; and the Barvas
minister visited Rona yearly. Isolated though they were
from their fellow-Lewismen, the Rona folk thus had annual
contact with organised religion, such as was lacking even
on the main island during periods of stress in Scotland.
[648] Invasions, repeated destruction and prolonged intrigue by
the Norsemen or the English Kings, led to, and intensified,
[798] internal strife. And in Lewis forty years of warring inter-
regnum had followed the 'Reformation'.

175 These and other notes of worship given by Martin,
771 such as those of the Lewismen's devotions when touching
at the Flannan Isles, show that the worshippers relied
798 greatly upon themselves and one another. They did so
even after their primitive Christian modes of worship had
been blamed and derided by Reformers, and the new modes
in their turn condemned by such ordained priests as secretly
made their way north from Armagh to Uist, Harris and
probably to Lewis. How much more stable must their
community's faith have been before the tragic upheavals
[797] which began at the Reformation. Some four centuries
earlier, the Roman Church supplanted the institutions
developed by the early Celtic missionaries from regional
and rural growth, by a formal organisation developed upon
an imperial and civic model. Thus they may already have
shaken faith by undermining the authority of communal
[795] sanctions and traditions. But the break caused by medieval

• 175 Roman Catholicism was far less complete than that ulti-
771 mately brought about by Protestantism—Episcopalian or
798 Calvinist.
795 At least twenty-five churches, chapels and tiny oratories
are named by Martin in Lewis and his list is incomplete
175 (1934, p. 106). Harris and its islets also had their comple-
346 ment of 'temples', in addition to the priory church of
Rodel. We may perhaps assume that before the Reforma-
[162] tion Lewis had a population of some 4000 persons,
or 1000 families, and contained some thirty chapels or
[794] oratories in inhabited areas. If so, then one church or
'temple', on an average served thirty to thirty-five families,
or six or seven farm-groups. Yet only the larger congre-
gations at Eye, Stornoway, Ness or Uig and Rodel would
normally be served by clergy; the people of smaller congre-
gations would be without, for weeks and months or even
years.

175 When the people were too distant from priests (and
79 later ministers) to hear the Lessons, they handed down
the Word orally. Their power of retaining memorable
[153] thought, even in prose, is still remarkable; and verse
175 strengthened memory. For example, 'the Ten Com-
788 mandments' paraphrased in rhyme are recorded in Fr.
779 Allan Macdonald's little collection, "as given by the God
of graces to Moses in the wilderness" (*Na Fainteau*,
p. 62). Moses, had he understood Gaelic, would have
protested at the omission of the Second Commandment,
but no sculptor of Iona, Rodel or Eye would have felt a
need for it, being unafraid that a Christian could bow
down to a golden calf. Believing, with Solomon, that a
craftsman's work is his prayer, the artist-monks held that
an 'image' should represent, though never replace, God's
creation, and may even quicken our concept of the Creator

• 175 in whose 'image' mankind was made. As for the number
779 ten, it was simply restored by subdividing the Tenth
788 Commandment into two parts! Thus the letter of the
Mosaic Law, be it frankly admitted, is modified! There
are also extensions of certain Commandments. Yet, re-
calling Jesus's insistence upon the unspoken thought which
prompts man's conduct, one may feel that the blunt Seventh
Commandment, "Thou shalt not commit adultery", is
strengthened by the form of its paraphrase: "Avoid *all
thought, or wish*, or deed immoral (*mi-bheusach*, immodest
or vicious)". The Sixth becomes, "Commit no murder
nor sin of wrath". And the paraphrase of the Fourth,
rendered as "Keep the Lord's Day *and each festival*",
completes the Commandment as it was obeyed by Jesus
and His friends at the Passover, and by Celts and Romans
at Easter. The memories of the people were impregnated
with abiding truths from the Old Testament, and still more
with the teaching and spirit of the Gospels.

175 All this was incorporated in their lives. As each
771 symbol of nature was truer to Gaelic worshippers because
it was not borrowed but experienced, so their interpreta-
tion of the story of the Son of Man was the truer because
they looked for Him among themselves. Spiritual fears
are imaged from bodily perils they knew in the 'Rough-
bounds' and at sea; and spiritual ignorance is seen as a
peat bog's 'black morass', not as a waterless desert beyond
Jordan or the Dead Sea. Comfort is rarely suggested by
the biblical 'shade from heat', but rather by the 'sun's
[776] mild healing rays'. When Christmastide, Old Style,
brought lengthening days and mantled the Bens with snow,
the glow upon their summits in earlier dawns told the
[776] Islesmen that the Light of the World was born again. In
their thought Jesus shared their communal life with His

885 in thy kertch!" and counsels her to be hospitable yet wise,
539 and courageous though calm; to be frank yet tactful, dignified though kind. The themes of this ode's melodious
885 verse recall the virtues of a wife enumerated mnemonically
538 in the acrostic which concludes the Book of Proverbs.
593 For in that, too, there is mention of "strength and dignity, wisdom and kindness", and the poor are not forgotten as the wife goes tirelessly about her work, sets her servants to their tasks and sells her merchandise at a profit. Yet the acrostic's emphasis on the wife's work and its gain reveal the writer as a shrewd citizen seeking to train a wife to ceaseless exertion and business dealing, with her husband's private profit and public honour as a most important end! The singer of 'The Kertch'—man or woman, one cannot tell—thought of conduct not for its profit first, but for its virtue, and dwelt upon motive, mind and heart.[1]

• 175 To tide over the supreme crisis of childbirth the mother
844 was strengthened in confidence, courage and calm. The need was the greater before modern midwifery. In Sutherland as late as 1908, a good professional nurse tending a difficult case of childbirth, anxious and powerless without a doctor, found herself indebted to older wisdom. The patient's mother first filled a small basin with water into
[788] which she put trinkets of gold and silver. "She then held the basin to her dying daughter's lips, and made her drink three mouthfuls of the water, each mouthful in the name of Father, and of Son, and of Spirit, 'the three Persons of the Trinity of kindness and power, *Tri Pears na Trianaid chaoimh chumhachdaich*'. Soon after, the child came . . .

[113] [1] *Am Breid*, 'The Kertch'. *Carmina*, No. 215. A short paraphrase by Mrs. Kennedy-Fraser, set to a lovely air and refrain, will be found in *From the Hebrides*. First published (imperfectly) in *Nether Lochabor* by the Rev. Alexander Stewart (1883, p. 4) with delightful notes.

• 175 and all was well. . . . 'How the trinkets in the water
844 could affect the case', continued the nurse, 'I do not know, but that some occult power was at work . . . I am
788 certain.'"[1] As to the gold, did not the Magi offer the same 'magic' at the Nativity? Is a drink of water not the
844 simplest physic to cool a fevered system? Is not each
788 Name of the Trinity, breathed by a mother to her daughter in labour in her turn, a Word of tender power and courage: while the slow rhythm of the three Names may calm the wild heart-beats which had brought on haemorrhage, and lead to safe delivery?

771 Throughout life there prevailed the concept of God as 'encompassing' man, woman or child, old or young, in their weakness. This image is ancient, and is found in the Psalms (10, 12, 32, 142). So long as faith were alive the Lord's aid might be called upon for another in need of help, or for one's own protection. To clarify the concept, unseen, by help of a thing seen, a circle was drawn with the hand round oneself or another, in fear, danger or distress.[2] By such innocent aid the people strengthened confidence in sickness and resistance in temptation, and concentrated prayer for delivery from evil.

888 As age approached, its gifts were honoured. For in age, memory, kneaded by labour, is leavened by leisure; the experience won on land and sea, or in group-farm and home, can be weighed. And gifts of feeling, sown in childhood and growing through life, ripen as grandchildren come in from their herding or play to listen and learn.
[538] When manuscripts or books were unobtainable, readings rarely heard, and the people illiterate, teaching could only

[1] *Carmina*, vol. iv, p. 283.
[2] *Carmina*, vol. ii, Notes; cf. Nos. 248-250, etc. Encircling or circuiting symbolically, was also known by a word of which only the literal meaning is now known to most: *cuartachadh*.

888 be given by ear and learning come by heart. Henc
539 were the holders of an inheritance of treasures whi be sought from them or be lost for ever. But to b mitted, the word must remain alive in the mind. both the faculty of memory and the fruit it bor elder's mind brought respect, even veneration. A in retelling is still immensely valued, but so, to thoughtful commentary and poetic enrichment. for elders, though general, was not given blin personally and by choice.

888 As handed down, the Fifth Commandmen
771 "Honour thy parents and hold them in loving (*Striochd dha do pharantan 's thoir speis dhaibh*
562 community was pervaded by the Christian conc Holy Family, rather than by that of a patriarchat concept took root from the first missions to th community, with which it harmonised and which fertile ground for this Christian seed. Hence t no general assertion of paternal, still less of pa authority at the expense of youth. Where equa is due to both parents, the mother finds equal regard with the father. And although the fathe is close at hand while the mother's may be a little away, her parents are likely to be the younger more active and helpful to their grandchildren, influence of all four grandparents fairly balanced.

[184] The patriarchs Abraham, Isaac and Jacob a

[199] adaptation (*Carmina*). But until the overwhelmi
• [175]

[1] Rev. Allan Macdonald, p. 62, *Na Faintean*. The omission o paternal precedence may be a courtesy to motherhood implyin parenthood.

888 of the Old Testament made itself felt, as in Lewis-and-
771 Harris in the nineteenth century, this narrower patriarchal
562 example hardly affected thought.[1] Rooted in a wider form
(184) of family than a patriarchate, and reverencing a Holy Family
(773) and all fellowship, Gaelic society honoured age and parent-
(177) hood for their inheritance, and childhood and youth for
(175) their promise.

Such ideals of human relationship led to the veneration of the Saints of the Gospels and of later history, and also of those of legend, especially Bride. Dedications to Bride
773 or 'Bridget' are widespread from Wales to the Lews;
776 yet her memory has been all but lost in Britain, except in the Isles. Carmichael wrote that "Bride and her services" are dear to the hearts of the people. She is called "Bride of the white feet . . . of calmness . . . of the kine; woman-comrade . . . and woman-helper . . ." "I am in the keeping of my Saint Mary: My companion beloved is Bride" (*Carmina*, Nos. 70-71; 263-264). As joy, steadfastness and attainment are generally linked to one notable stage in the life of each 'holy companion', the example, aid and fellowship of each saint in turn was especially sought, at a corresponding stage or crisis of one's own life.

776 The Gael's veneration for saintly men and women was
171 shared by Catholic peasantry throughout Christendom;
174 but its special quality seems to have been closeness of

(64) [1] Clanship has repeatedly been said to be 'patriarchal', as an ideal and a system. A different conclusion, that community is the root of clanship (even in its political forms), may come as a surprise. The English or Lowland reader has had access only to the writings of strangers such as Burt. Not knowing Gaelic, these derived their information from Highland speakers of English who, deliberately or unconsciously, were biased by ranking as chief or gentry, and not unnaturally explained their position as patriarchal. (621) Thus strangers ignored the co-parental life of farm-groups and townships, economically humble but spiritually rich, as the root of a clan-community.

779 with his spouse. The knight, the first Stewart Earl of
764 Menteith, had died four years after his wife, in 1294.
532 Medieval sculpture was then attaining its height, as this monument, in spite of the ravages of time, bears witness. The following year, 1295, saw the commencement of "the
• 175 three hundred years war" with its repeated destruction
644 of Scottish arts and traditions of peace. Under King
(829) Alexander III, "that Scotland led in luve and law", peace within the kingdom of Scots allowed a union embracing
(648) Gaelic Christian traditions and Scoto-Norman arts. After his death this became all but impossible. So far as scholars
181 can tell me, this almost unnoticed monument remains
764 unique in Christendom, indeed in the world.[1] The arts of Scotland, hitherto in touch with European achievement, were shattered by invasions, and Gaelic tradition was only to be maintained by the very poor, whose debtors, for all time, we have become.

763 At the approach of death God's mercy and peace were
782 sought. Latterly Roman Catholic prayers stressed the wish for Confession to a priest, followed by Supreme Unction for the attainment of 'Happy death', *Bas sona*.[2]
(174) In early times confession seems to have been made as willingly to the 'Soul-friend', followed by Benediction. When death had come, the mourners sang of sleep and
764 home. In Lewis today funerals are conducted in silence to the graveside, where the last service is held; but

(113) [1] *A unique medieval tomb at Inchmahome: a cultural link.* (Geddes, 1952.)
[2] It would be of deep interest to compare the attitudes to death found in 'Spiritual Songs' by Protestant Gaels like Buchanan or Grant, with songs on death which, though maybe of post-Reformation date, are of Roman Catholic origin (*e.g.* in Fr. Allan Macdonald's collection, poems on the Day of Judgment, and of Wrath; on age and on death; and on Purgatory:
(171) pp. 31, 85, 146; 34, 19, 21; 27). Some have much in common, both by virtue of the earlier traditions they shared and still more because of parallel trends of Reformation and Counter-Reformation. Cf. *Carmina*.

The families of the young men might be willing to encourage enlistment. But they pled or bargained for an assurance that after service was over their sons should be returned to their homes and have land on which to settle down. The receipt of the bounty and their savings would help the men to pay rent later.

175
702
668

Passive resistance was offered at times, however, as when the Macleod Highlanders were raised in 1757, only a decade after the 'Forty-five. An Island friend has told me of a family tradition, that, as a young man at that time, his own great-grandfather was concealed to escape conscription. And the press gang was busy in Stornoway when the *Old Statistical Account* was written. Protest had usually to be made in secrecy or silence; but a revolt was organised by Stornoway men in 1793.[1] And the voice of one unwilling conscript has come down to us in a song, well known in the Isles (though little known in English), with the refrain—*Och ho ro*, brown lad, so bonnie (*'ille dhuinn*). Although it bears no sign of Jacobitism, it begins, "My grief to be wearing King George's red clothing!" It continues, "The short-coated sailors bore us to Holland. It was a Saturday evening when we fought; and many a wife was widowed ere dawn broke on the Lord's Day, their husbands ta'en, whom gold can never restore, stretched out among the rushes, blood pouring over their shoulders. . . .

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

175 701 [614] Such are the mingled traditions of the Highland regiments which served in so many wars, for right or for wrong. Of all the desperate alternatives before the Gael —famine at home, semi-slavery in the factory towns, death-stricken sea voyages, pioneering in the forested hills of Eastern North America, or war, it was this last which offered the men not only the trappings and glamour of clanship but continuing fellowship. In the regiment a Gael was among friends. Modern civilisation offered him no other life promising social continuity and the hope of a return to croft and township, " if death should spare him ".

175 701 565 554 [703] It would be wrong to suggest that only the gentry could rise to command, for as English and literacy were acquired, the sons of small tenants received commissions. British military discipline has too often driven a breach between the men and the non-commissioned officers, spoiling the latter's fitness for higher leadership. But among Highlanders " the bond of faith and affection " led naturally to commissioned rank. For generations, historic precedent was carried on in living tradition.[1] Given education, the sons of Island crofters have risen to command on land and sea; but education came late.

[178] [871]

CONCLUSION

175 621 631 577 614 Thus in the ' little commonwealths ' of the farm-hamlets grouped within the township, personal right and equal shares were balanced by common duty, summed up in the principle of duty-right or coir.

[1] The tradition of leadership calls for review but here one can only cite examples. For instance, descendants of his neighbours in Strath Spey told me that my paternal grandfather, as a penniless lad speaking Gaelic and English (in which he was literate), enlisted in the Black Watch about 1829. He was known as a N.C.O. for his power of quiet, reasoning discipline. He thrice refused the offer of a commission, which was then given to others, of whom more than one rose to high command in the battalion.

175 widowed mother and her family, working in farm and town-
771 ship, sending merriment at Christmas, and comforting
776 sorrow at Easter or All Souls. And even as He had told the Disciples to heal by faith, so, they thought, had He bidden them. Who could have told the people, in their ignorance, that in a later age they would suffer for this faith?

175 Thus upon the Lessons read in church (or out of doors)
771 and cherished as the root and stock of faith, there were grafted three types of native shoot. These were the para-
78 phrases, the meditations or commentaries, and the parables
538 or legends. The paraphrases should need no justification here, in so far as the four Gospels are each incomplete and complementary—the Celtic clergy may have known the fragments of a fifth; these 'fulfilled' the older Law and the Prophets. Of the meditations, few would be censured by a Protestant or Catholic theologian on points on which both would agree; points of disagreement in the meditations hardly concerned them. (Cf. in the Rev. Allan Macdonald's collection, "Thoughts on Death", *Smaointean air a' Bhas*, or *Carmina*, No. 7, and many more.) As a theologian might criticise the parables, legends or marginal tales of which so many were told in medieval Christendom, a word should be said of these.

771 Legends were told of the appearance of Saints to be-
773 lievers, such as that of "The Christ-Child's Lullaby", and of the life of the Holy family. The Gaelic sense of parable was strong (*Carmina*, vol. ii, Notes, *Caim*). In these legends was expressed what the people themselves would have felt and thought in joy or suffering. Legitimately, a preacher suggests a motive or circumstance to bridge the gap in a Bible record; the people did the same. When reverently retold, some suggested circumstance would in time grow to be a legend taking a place close to the Gospel story. A

175 The advent of the Reformers to the Island may at first
798 have seemed less revolutionary to the people than has
generally been suggested by historians of either the new
181 Church or the old. Ministering to one another, the people
777 had not, like the city-dwellers of their time, enjoyed—or
suffered—a multiplicity of offices, administered by priests
whose ways of living might be a scandal. The Mass heard
in Latin was incomprehensible to those of Celtic (or
Teutonic) speech without the aid of translation into the
vernacular—an aid now universal among literate Roman
Catholics. Most of these offices, such as auricular con-
fession to a priest to obtain absolution, with masses for the
dead, indulgences and the like, were performed for pay-
ments prohibitive to the poor. The Islesfolk, for the most
part, lived far both from the orthodox practices of the Latin
Church and from the more flagrant abuses against which
a minority of the old Church had protested in vain. Hence
the transition to early Protestant liturgy would not be too
painful. In prolonged isolation, the Gaelic people, per-
force, had lived the life of the Lollard and Protestant
doctrine of "the Priesthood of all believers".

175 After the Reformation the people were bewildered by
181 the mutual condemnation of Presbyterian, Episcopalian
798 and Jesuit, and torn to the quick when all three parties in
turn denounced so much that they themselves held dear.
The more the rival clergy confused and wounded their
minds, the harder it was for younger generations to discern
ancient Gaelic wisdom and discard superstition; and
the easier to fall into credulous and secretive repetition of
rhymes and strings of holy names. The scorn of the
wealthy for simple rites and of the book-learned for the
symbols of old speech would add to confusion rather than
aid discrimination. As pious and understanding crofters

175 complained in Carmichael's own time, mockery is hard to
181 withstand. One can only guess, as yet, what were the real
798 effects of the decadence of Rome and the impact of the
Reformation upon the landward communities of the Low-
lands and Northern Isles. But the records of the Western
Isles leave no doubt as to the onset of this spiritual tragedy
among the Gael, of which Carmichael and others saw the
later acts and of which one still finds the epilogue.

175 The grim desperation of the religious and civil wars,
798 and their persecutions—crucifixions made by every side
in the name of the Cross—caused faith to be disastrously
shaken. Superstition rushed into the widening cracks in
older belief, aided by important sects of clergy. In the
Highlands, 'witch' torture was never carried to the
lengths it reached in the cities, though the last 'witch'-
burning in Scotland may have occurred in east Sutherland
(P. Hume Brown, *History*, ii, 1912, p. 451). But the frenzy
of witch-hunting by ministers in the Lowlands, during the
widespread evictions and social anarchy of the post-
Reformation period, suggests that the Adventurers' invasion
of the Lews, followed by the arrival of new masters and
Presbyterian ministers after 1600, must have aroused mor-
bid, anti-social fears. Lewis certainly suffered from fear of
the evil eye as late as the nineteenth, and even this, century.

We have to face the effects on the people of religious
strife. To ardent Reformers the Blessed Sacrament of
the Roman Church was a 'Jack-in-the-box'; and at the
climax of the Mass, the elevation of the Host—the moment
of 'transubstantiation' with its literal interpretation of the
words, "This is my flesh" (*Hoc est corpus meum*)—was so
much 'hocus-pocus'.[1] Conversely, to Roman Catholics

[113] [1] J. H. Matthews, *The Folklore of the Mass*, p. 96, 1903 (Catholic Truth Society).

175 much of Protestantism was a denial of Christianity.
798 Holders of all these forms of Trinitarian belief have united
in condemning Unitarianism as heresy, its earlier Arian
771 form having been stamped out in blood. The 'heterodox'
are held by the orthodox of many Churches to be awaiting
eternal torture. To a thoughtful humanist like Sir James
Frazer, on the other hand, the belief that one alone by
suffering can atone for the sins of others is of the deepest
significance, as being an ancient, widespread and 'pathetic
[795] fallacy'. Happily, one finds the greatest tolerance and
sympathy where Protestant and Catholic are mixed in the
[181] Isles. Elsewhere, too, sympathy and reverent enquiry are
taking the place of dogmatic assertion.[1] It is in this spirit
that we can best understand Gaelic beliefs at their highest,
and so distinguish their lowered use—or misuse for selfish
ends—from the highest use of sacrament and prayer by the
pure of mind and heart.

(e) RELIGION, MAGIC AND SUPERSTITION IN DAILY LIFE

789 Evil ends might be sought by means of the ancient
runes: the power of their poetry and associations could
tempt to perverted use. Carmichael tells how in Uist a
malefactor, in terror of the law, went to a needy woman,
and by appealing to her pity—and in exchange for a small
sum—learned from her an "Invocation for Justice".
Strengthened by its rhythm and imagery, and by his own
associated belief in its magical power as a charm, he stood
up boldly in Court, firmly asserted his innocence and got

[113] [1] Cf. the friendly theological arguments between a Bernera Presbyterian and a Roman Catholic from Berra (*Bodach Bharradh*—vii, viii), sketched in Gaelic by I. N. Macleoid, *Litricheam Alasdair Mhoir*, Stornoway, 1932.

121 to the world within. Above all, harmony of relations, at
771 every stage of life, in man and woman, was felt to pre-
181 figure relations with the Divine. The religious poetry of
which the Gael were the creators and heirs, promoted
courage and calm. True, its very power could lead to
superstitious respect for mere forms of words, debased as
'magical' charms. Such misuse was 'superstitious',
being false in itself and falling short of the clearest thought,
the highest aspiration, of the time and the community.
Worse still, use with evil intent could concentrate ill-will
and evoke mutual fears. Yet at its best, thought was
clearer, less confused, than is commonly imagined. To
the aspiration and attainment of the Gael—in congregation
or solitude, in meditation or labour, in love and faith or in
works—the fragments of their oral heritage bear witness.

(c) LITERACY AND EVANGELISM: 'THE MEN' AND THE DISRUPTION

175 From before 1680 "a school for the gentlemen's sons
178 and daughters" was open in Stornoway. Latin and
871 English were taught, and a century later even Greek had
been added, as recorded by W. J. Gibson, for many years
Rector of Stornoway's high school, the Nicolson Institute,
in his *Education in Scotland*, 1912 (chap. v). Particularly
towards the end of the eighteenth century, the Gaelic School
Society and other bodies, like the Society for the Propaga-
tion of Christian Knowledge, sent out schoolmasters to
teach the reading of the Scriptures. Industrial schools were
set up at the same time by Lady Seaforth, to teach spinning
[671] by the wheel, replacing the slow distaff. It was not till
nearly a century later that teaching of English was widely
taken advantage of—partly by the compulsion of the

175 Education Act of 1872, for the people "did not want to
178 give their children wings to leave them".[1]
871 The reading of Gaelic progressed fairly rapidly after
[671] 1800, in order that the Bible might be read. By 1833
something like one in three or four of the population, or
more than half of the younger people, could read Gaelic.
The Hon. Mrs. Stewart-Mackenzie of Seaforth, it seems,
had a 'warm sympathy' both with teaching to read the
175 Scriptures and with evangelical preaching. The coming
114 to Lewis in 1824 of the first evangelical minister, the Rev.
793 Alexander MacLeod, an Assynt man, is described in his
memoir in a striking volume, *Disruption Worthies of the Highlands*, edited by J. Greig (1877).

"At the distance of more than half a century it is not
175 easy to form a conception of the religious and moral
771 condition of Lewis previous to the year 1824. The present
793 writer has heard a still living minister of the Free Church,
who is a native of Uig, declare publicly that only two or
three copies of the Bible could be found within the wide
extent of the parish, and that he himself travelled a journey
in search of a copy of the blessed book, and all in vain. . . .
The densest intellectual and spiritual darkness held uni-
versal sway. Notwithstanding the pleasing features that
characterise Highlanders, even in their most primitive con-
dition, this state of things could not fail to be attended
with baleful fruits. Despite their constitutional warmth
of heart and loyalty of nature, unbending fidelity to what
they esteemed to be honour, and their unbounded kindness
and hospitality, many gross vices were found commingling
in the characters and lives of the Lewis people. For,
however strange it may appear, at the first prayer-meeting

[1] Quotations to this effect, dating from the *Old Statistical Account* until 1883, are given in the Brand Report of 1902.

175 which Mr. Macleod attempted to hold at Uig, one of the
771 former elders actually offered a request that a wreck should
793 be cast ashore in the neighbourhood;[1] while another
elder, referring to the death of our Lord as a misfortune,
used strong expressions of deprecation of its having at
all occurred.[2] . . . The reason is easily furnished; the Lewis
ministry was not evangelical. Moderatism held the land
in sole possession. . . . Nor did it act merely in a negative
indifferentist manner. Moderatism contained in itself
elements of positive distaste to Gospel truth, and enmity
towards gracious influences and experience. As a matter
of course, it was perfectly compatible with this system to
grant toleration to superstitious and superstitious obser-
vances, which had been handed down through the Dark
Ages of Popery from the still darker ages of Druidical
idolatry. Acts of adoration, having for their object the
heavenly bodies, were common. It is scarcely necessary
to state that family worship was unknown among the
people, and even at the manse. For although the public
ordinances were dispensed as a matter of form, they exerted
no practical influence upon the conduct. They rather
tended to lull more profoundly asleep by imparting and
maintaining a feeling of security to the poor dark benighted
souls who participated in them."

People did come to church "in tolerable numbers"
from the very outset of Mr. Macleod's ministry, but "Here
for the first time was a preacher who showed by his whole

[829] [1] Shipwreck was still thought of as an 'act of God', and a dire 'misfortune'. Not only is there no hint of deliberate wrecking ever taking place, as on some other British coasts, but abundant record of aid to the shipwrecked and respect for their property in the absence of the skipper and crew. (Martin, 1695; and later.)
[784] [2] According to Evangelical theory the punishment of guilty and innocent alike was part of the Divine plan. How different this, from the faith of the Islanders till then!

195 manner that he had in hand business of eternal moment
791 to his hearers. That business was to warn them of the
793 wrath to come, which impended over unpardoned Christless
sinners, and to proclaim the way of escape by the open
(192) door of a crucified and risen Saviour. Not more than
two months had elapsed since Mr. Macleod's admission
when the 'stupid attention' and vacant stare passed into
the wistful anxious listening, the suffused eye, the tender
subdued manner, and in some cases the heart-wringing
enquiry, 'What must I do to be saved?'

(183) "For something like two years this minister 'refused
to dispense the Lord's Supper'. . . . A very early effect
of his work was the extinction of various worldly and
pernicious customs and amusements to which the people
had been previously addicted, and the substitution of
meetings for prayer, diets of catechising, day and evening
schools, family worship, and other spiritual exercises in
their room. Many at the outset felt greatly aggrieved at
the new order of things. Meanwhile the Lord stood by
his servant, and the word mightily prevailed against all
opposition. Incredible efforts were made by earnest souls
in all parts of the island to be present at the preaching of
the Word, even on ordinary Sabbaths." By 1838 "the
whole island seemed to be moved by one powerful spiritual
impulse" and 9000 people flocked from all parts to the
Uig communion. "When the memorable 18th of May
1843 dawned"—that of the Disruption—"no part of the
country was readier to rally round the banner then displayed,
because of the truth, than the island of Lewis
almost to a man." It was "an unspeakable relief to the
ministers' spirits to escape by one decided step at once
from the bondage of State control and the chilling atmosphere
of Moderatism. . . . Even where evangelical preach-

195 ing was lacking, and the minister of the parish remained
791 in the Establishment, the popular movement inclined
793 unanimously towards the cause of the suffering and pro-
testing Church of Scotland, with the exception of a small
handful of people in Stornoway."

794 The part of elder folk in religious life continued to be
796 important, but in new ways. Masculine influence now domi-
198 nated the family and the congregation. The 'Men' in
the Highlands were Elders of the Church who often spoke
as lay preachers and who rose to speak on 'Question Day'
—that is on the Friday of the Communion Services, which
extended, and still do, from Thursday, the Fast Day, to
Monday, the Thanksgiving Day. The presiding minister,
after opening devotions, invited any Elder of the Parish to
rise and propose the Question; the Elder having read a
text from Scripture, would say he wished to hear the
'marks' of the true Believer, drawn from the text. After
the minister had himself "opened out the text", he would
name visiting Elders, calling upon them in turn to speak.
One by one, each would rise and give his picture of the
real Christian in terms of the qualities suggested by the
text. "And so the hour sped under the pleasing and
helpful variety of a dozen speakers or more. The 'Men'
spoke out of rich experience. . . .' Question Day' was a
self-searching season, when every hearer examined his
heart by the 'marks' adduced . . . and as this went on
there was a sweet glow on the face of the Congregation as
the presiding Minister summed up and closed the holy
Convocation." [1]

175 The 'Men' had long been a recognised Order in the
178 Highlands, and their foundation is traced to Thomas Hog,
794 the famous minister of Killearn, "born in Tain in the

[1] Rev. N. C. Macfarlane, *The 'Men' in the Lews* (1924).

175 year in which John Bunyan was born". Archbishop Sharp
178 "banished him to the dungeons of the Bass Rock for
twenty-eight years, and it was during his imprisonment
794 that the meetings of communicants were kept going by a
parishioner,—a reformed tinker and a gifted and consecrated
lieutenant". This tradition of the 'Men' renewed
itself and spread with each wave of 'Revival'. It sprang
up in the Islands more than a century ago, as it had on
the north-western mainland during the later eighteenth
century, and in 'Easter' Ross two hundred years before.

(198) The spiritual crises of the Reformation and of the
Cromwellian and Covenanting age are still profoundly
influential; yet they seem hard for those from the Low-
lands and England to understand because they occurred so
long ago. But in Lewis, Macfarlane writes of the 'Men'
whom he knew and admired, in order to keep their memory
green. Once more, life in the Isles throws fresh light on
the past, revealing its significance.

(b) EVANGELISM AND ERASTIANISM, WRATH AND WOE

175 The Disruption [1] gave a powerful urge to the move-
668 ment for freedom, in matters spiritual. Throughout Scotland
(195) the people were made to feel that both landlordism and the

[1] 'The issues of Disruption, for the sake of freedom from the choice of a minister by the landlord's patronage and from State control, were reviewed by the Rev. Prof. G. D. Henderson, in *Heritage of the Disruption*, 1943 (published at the centenary, and nearly half a generation after the Union of 1929). While the Free Church still maintains a strong hold in the Island—and among a small minority elsewhere who feel that even the terms of the Union could not secure full moral freedom—it is claimed by the Church of Scotland that its constitution now goes far to solve "the age-long antinomy of establishment and freedom", a view widely held abroad, both in Germany and in the smaller lands of North-west Europe occupied by the invader, at the time of the centenary.

175 State were in the wrong: the people were with God and,
668 most of all when they suffered, God was with them! The
sense of liberation brought to the Highlanders and Isles-
men encouraged them to press their claim to the land they
worked, strengthening the agrarian movement of 1880–86.
The moral victory of 1843 contributed to legal victory in
1886.

175 The influence of Evangelism continued for some time
178 at fever heat. "Even down to the present time (1877)
there are tokens of the gracious working of the Spirit on
791 men's minds, although it is a day of small things com-
795 pared with the past and, in the case of some, a day of
stumbling and instability. How humbling to behold the
first reaction in favour of worldly and Erastian [1] principles,
manifesting itself on the spot where the gospel banner was
first unfurled in Lewis! But there is a God that judgeth
in the earth, and his time to vindicate his cause shall come.
'Offences must come, but woe unto that man by whom
they shall come!'" [2]

181 What comment can be made on this? One shudders
at first, to hear of 'gross vices' among the people, only to
find that by these 'vices' was meant fidelity to the religious
past. It may seem strange that Highlanders such as these
writers on the Disruption Worthies', who were almost
as proud of Columba as of the Covenanters, were blinded
to the enduring values in Columban tradition. They
were certainly unable to foresee the effects of their
preaching.

[1] 'Erastianism' is the doctrine of the supremacy of the State in ecclesiastical causes, a term which came into use in Britain in the seventeenth century. Actually the problem is one which Erastus, 1524–83, nowhere entered upon; none the less, the name is established, and it denotes a major issue of principles.

[2] J. Grieig (ed.), *Disruption Worthies of the Highlands* (1877).

795 but still more to their repeated justification in the name
771 of the Lord 'God'. 'God' the universal (*Elohim*) came
(796) to be identified with the tribal god Jahveh or Yahweh,
altered, late in Jewish history, to "the LORD God",
000 term still used in Bibles. The war cry of the Jewish tribes,
as they swept in from the desert or tightened their hold
upon citizens and cultivators, was that of many wild
wanderers, before and since, who have cried upon their
God of Battles, upon Jahveh, or Allah. Magnificent in its
affirmations of righteousness, the Old Testament can be
terrible in its denials of pity.

795 The Bible (literally *Biblia*, the Books) reflects the search
791 of a people through centuries towards the idea of God;
but the tragedy of the Bible, or rather of its historic misuse,
536 came with the acceptance of all 'Scripture' as equal in
inspiration and truth. The early and the late were accepted
together, the mixed or false with the true. The custom of
seeking Divine guidance by simply opening a page of 'the
blessed Book'—that is, any text on any page of any one
of its books—was an example of such acceptance; and it
(195) was only possible for the literate. In Lewis, Macfarlane
records the custom, practised by 'The Men', late in the
nineteenth century.

Reading came late to the Islanders, but its effects were
195 as direct as among the Puritans or Covenanters at an earlier
178 period. The people, whose hearts had long since been
791 wrung with pity at the Crucifixion and who were steeped
(538) in reverence for the Gospels, became 'changed' indeed.
(212) Once their minds had been crushed by the Old Testa-
ment's massive weight, the 'change' was reinforced by the
vision of a world to come, limned by fevered imagination
(195) in the New Testament's finale, the Apocalypse. The
'change' was brought by Evangelicals who had themselves

175 undergone the same crushing experience, at a time when
178 communal life was being overthrown by the Industrial
791 Revolution. "Terrible old men!" exclaimed a wise Lewis
schoolmaster, of these 'Disruption Worthies'. It was not
795 that they were inhuman—that is clear from the warmth
felt for them by so many of the people, who would never
have taken kindly to the unkind.

195 Nor were the first Evangelicals invariably severe. Of
198 the Rev. Mr. Macrae, long in Lewis, it is told that, when
791 young he had rebuked an older fellow-minister for levity
at a ministers' supper on Communion Monday. Leaping
795 up, the minister seized Macrae by the shoulders and danced
behind him, till Macrae was forced to join in the laugh!
181 Macrae never forgot the sane and kindly words spoken
to him after: and he saw he had been wrong to identify
cheerfulness with irreligion. Yet much joy was extinguished or found illicit vent. To such ruthless zeal, there
came inevitably reaction, noted even by 1877, and still
more notable during the war of 1914–18 and after. Con-
flict or compromise was inevitable where Churchmen em-
phasised terror and inveighed against the calm heritage of
their forebears and the happiness for which human nature
198 asks. The days of emotional 'Revival' are by no means
791 over and from them the pendulum may swing from excess
back to relieved but wearied unconcern. Moreover, with
the emigration of so many of the men, the balance of family
life was upset. Some thoughtful men and women feel that
the 'Revival' which swept their Island (with the rest of the
Presbyterian Hebrides) before, 1939 and during the war
was partly due to the excessive influence of spinsters, to
whom strict Presbyterianism offered little outlet for
motherly emotion or sisterly service.

(c) SOCIAL CUSTOMS IN CHANGE

178 In spite of 'the wrath to come', life had to go on, work
181 be done, and natural affection find an outlet in youth.
183 How could the women waulk the cloth without a chorus
to keep their beating hands in time? Songs had to be
allowed by the sternest for this work in common. In a
land where marriage was not an affair of dowries, but
chiefly of love choice among the young folk, the old courting customs could not wholly be denied. Curiously enough,
drinking was not severely looked upon by Scots rural
Evangelists; in one story in the Old Testament, it is
not the drunkard, but his mocker whom the Lord punished! In a city, a drunk man is a prey to thieves and
harpies; but in a township none will do him harm. But
today there are Evangelical ministers who think that drink
should be frowned on at weddings and *ceilidhs*, while song
and dance might be tolerated.

(175) Not all the people gave in willingly to the severity of
the new creed. In Uig there is a cave, the 'Pipe's Cave',
791 to which a crofter was wont to resort on dark nights, his
795 pipes in his oxter, when the wind blew *from* the manse and
183 out to sea! Ultimately the least willing were forced to
give in, first, by the appalling threat of the refusal of communion, and secondly, by denunciation from the pulpit
(198) and the ostracism of the Elders. Much was destroyed
that can never be recovered now, and many a fine heart
saddened or broken. It was the most intimate expression
of their lives, their religious lore, which suffered most.[1]
178 Yet something remains, preserved by the good sense,
181

[1] Carmichael gives an infinitely pathetic account of a conversation in a home in Ness about 1880–85. *Carmina*, pp. xxvii–xxxii.

114

testant' and perhaps 'Catholic' too, or sacked by the King's Adventurers, there seems to have been little effort to build or rebuild the four 'paroche kirkis', one of the terms of the Royal grant or infeftment of the Lews to Kintail (Seaforth). But the evidence in the previous chapter makes one doubt that the maintenance of Celtic Christianity by the people in their thatched 'temples', in their homes and fields, or at sea, was "a lapse into heathenism". The term had been better applied to the acts of certain chiefs, and of the King and his Adventurers.

175
771
[829]

Although imbued with their traditional faith, the people were intensely aware of their isolation from the great world, and humble as to their own oral learning and religious culture. Moreover, since the arrival of Christianity they believed that they belonged to the Church Catholic. But by the sixteenth century their lords had misappropriated funds, clerical absenteeism was common, and they cannot have been unaware of faults in the Church of Rome. They were the more eager to welcome any cleric who read the revered Scriptures, whether he came as a Calvinist or Episcopalian from Edinburgh or by perilous journeys from Armagh, Spain or Rome itself.[1] Living far from the worst theological controversies and persecutions inflicted for a century after 1560, the Islesfolk revered a good cleric for his own sake, as they did Macrae and, later, the minister of Barvas (and Martin himself) in lonely North Rona in 1695.

[1] Catholic missions to the Isles in the penal times are described in Compton Mackenzie's *The Book of Barra*, 1936. Martin (1695) refers to some Harris fishermen recently reconverted by priests, and to the mockery of their 'Protestant' neighbours because in spite of Roman prayers, their fishing had been less successful! Some of the MacKenzie tacksmen and no doubt their tenantry remained Roman Catholics until after the 'Forty-five, notably MacKenzie of Kildun near Stornoway, who gave shelter to Prince Charles in 1746. (W. C. Mackenzie, 1919, pp. 126-130.)

(v) A CHANGING CHURCH: 1820–1943

175 Underneath the doctrinal severity of the Presbyterian
795 Gael, there has continued some of the cheerful faith in
living, the belief in mutual aid, the tolerance and calm,
[178] breathed in our native religious lore. The sternest Presbyterianism, which swept the North-west after 1820, still makes the Gaelic North its fortress in Scotland. Yet the maintenance in the Scottish Church of a doctrine of universal love was due, no less, to Gaelic ministers, and seems to have owed its rebirth to Gaelic tradition through these men. The question of continuity is important: for this doctrine, embracing all mankind, not only the predestined few, has profoundly influenced the attitude to life in all Protestant lands, throughout a century crucial to human development.

195 The most notable of the Scots ministers concerned
with the doctrine of the Atonement were John McLeod
795 Campbell and his younger friend, Norman Macleod. Born
793 in Argyllshire in 1800, McLeod Campbell was ordained in 1825, and preached the assurance that God loved, and Christ died, for all men. For this he was charged with heresy by the Church of Scotland, and deposed in 1831, a trial he bore "with saintly charity and patience", refusing to found a new sect. In 1832 he went through the Highlands and Skye, preaching everywhere in Gaelic. A Moderate minister, John Maciver, who attended his services, said to him: "I never understood so much of your views before; now in the strength of God I will enquire more into them". It was very different when he met his own cousin, Roderick McLeod, who eight years later swept the island of Skye into the Free Church and led the Evangelicals in the Hebrides. To his sister

175 Campbell wrote, "My reception by those who are called
795 'professors'", the lay leaders who 'professed' the
Evangelical doctrines, "was trying to the last. Holding
793 that Christ died for all seemed to them so fundamental an error as to poison all my teaching." Thereafter,
175 Campbell retired, in Glasgow, to read, preach to a few,
793 and write, keeping in touch with Norman Macleod and
814 Erskine in Scotland, and in England with J. F. D. Maurice (1805–72). After *Christ, the Bread of Life*, Campbell wrote *The Nature of the Atonement* (1856). Readers felt not only that he was one of the most lovable of men, but a profound theologian, a view reinforced today. "Of all books that have ever been written on the Atonement", wrote Dr. Denney, "McLeod Campbell's is probably that which is most completely inspired by the spirit of the truth with which it deals. Its originality is spiritual as well as intellectual. In speculative power he cannot be compared to Schleiermacher, nor in historical learning to Ritschl; but he walks in the light all the time, and everything he touches lives."

175 Here then was a man who seemed to have been born
793 "in advance of his time", yet who came of a community
159 of deeply traditional cast. His life's thought was attuned to that of his forebears, and expressed itself most intimately perhaps in their own tongue. Campbell was born and reared in Lorne, Argyllshire, which had first received Protestantism through Carswell, who, in translating Knox's "Liturgy" into Gaelic, incorporated the old Gaelic labour prayer of the fishermen (Chapter VII (a)). The gentler form of Protestantism brought in by Carswell may have allowed the spirit of Celtic Christianity to survive among the people of 'Mid-Argyll' and Lorne, down to Campbell's boyhood. It may thus have contributed to the making of "a Scottish

175 saint, a character so eminently Christ-like",
793 intimate beliefs, doctrine and wide influence.
159 Highland roots and deep charity characterised

CONCLUSION

(CHAPTERS V TO VIII)

175 178 105 Manifestly, prevailing views of the relationships of chief and people, and above all, of the people to one another, must be revised, even reversed. So must widespread views of the relation of clerical to 'lay' members in the living, though unseen, Church. The enduring character of the people's primitive faith, from its early arrival to our time, may be almost unique in Western Christendom; distance and sheer physical poverty proved to be its protection. Had they been better preserved, the temporal and spiritual traditions of the Eastern Gael, and also of Scots Lowlanders, might well justify a revision of views. In the Isles again and again the people were placed under 'Authority'—under laird and soldier, legislator and official, priest and pastor, orthodox cleric and unorthodox 'intellectual'. Should not each of these ask with humility whether they and their predecessors have not often misled those who might have led them, mistaught those from whom they might have learned?

ECONOMIC CHANGES: 1750–1919

(A) TRANSITION: MIGRATION, FISHING AND KELP-MAKING

175 433 [621] [427] [794] [437] UNTIL the 'Forty-five the township had lived a almost self-contained life. Its traditional econom was self-sufficient except for two indispensabl commodities—salt for the housewife and iron for the smith Beyond this, the chief demand for payment was the ren to the lord, with tithes for the kirk. For these needs an demands a step towards production for exchange was re quired, the more so that what was exported might includ the very necessities of life in 'bad years'. The rent wa paid largely by the sale of a surplus steer or two, an 175 317 436 [435] [251] 175 433 [326] [443] drovers called for the cattle. By 1790, if not before, tw or three open boats set out annually from Uig, for instanc for Glasgow, laden with salt beef and dried salt fish Although salt seems of little account today, it once bulke large in the Budget, its price being heightened by duty especially after 1707: "as dear as salt", was a saying, *ch daor ris an t-salluinn*. Salt was needed to preserve th carcase of a 'cattle-beast' or sheep killed in autumn, an for cod and herring curing. Wrecks were valuable, as o all infertile undeveloped coastlands, both for their timbe and their iron. Cairds or tinkers occasionally brough metal goods; or a packman called, as strange a figure the

CHAPTER VIII

CHANGE IN RELIGION AND SOCIAL CUSTOMS

(A) COMMUNAL CHRISTIANITY, THE ROMAN CHURCH AND THE REFORMATION

75
98
29
93]

WHEN the Reformation broke upon Scotland and the Church of Rome was driven out, the new Church was slow to replace the priests and conventual clergy by its ministers. More than two hundred years later the minister of Harris wrote, with reason, that in contemplating "the decayed monuments of the piety of our Christian ancestors . . . the pious mind is affected with a mixture of awe and sorrow, while it can hardly admit that the overturning of the ancient church establishment ought to be considered as reformation here". These words were honestly spoken. The minister continued: "In Harris, where, till within a few years back (from 1790), there has not been since the *aera* of our reformation from popery, so much as . . . one decent house for public worship; there were of old no less than twelve churches and chapels of which . . . the walls are yet standing, besides others . . . while tradition has preserved their names and dedications".[1] These are those of monastic *cella* or *cill*, of parochial or collegiate *ecclesia* or *eagleis*,

[1] *Old Statistical Account*, x, 376. No doubt many churches had lacked a priest for a considerable time before the Reformation; but taking a long view, the minister's conclusion was sound.

and of a township's tiny chapel, oratory or *teampull*.

In Lewis, as in the Northern Isles, the early years of the Reformation period had been years of invasion by the King's Adventurers, of resistance, bloodshed and ruin. Hence when Mackenzie brought a Protestant clergyman to minister to the people they flocked to hear him. Naturally the new lord chose one of his important tenants from Kintail, the Rev. Farquhar Macrae. "For forty years prior to the visit (about 1611) no one in Lewis appears to have been baptized or married,"—or rather, no ceremonies had been performed by professional clergy, an important distinction. "'The population', we are told, 'had lapsed into heathenism', but 'Mr. Farquhar's' mission proved thoroughly successful. 'Large numbers of the people were baptized, some of them being fifty years of age, and many men and women were married who had already lived together for years.' The author also stated that the success of this mission went far to reconcile the inhabitants of Lewis to Lord Kintail's rule. According to a Kintail tradition, 'the number of people that came to be baptized by Mr. Farquhar was so great that, being unable to take them individually, he was obliged to sprinkle the water at random on the crowd with a heather besom'"[1] —much as it still is on certain festivals in the Roman Church.

The tale of the Rev. Farquhar Macrae shows both the spiritual prestige of one who could read the Scriptures and must understand them, and the people's belief that a lord who brought a Gaelic clergyman must indeed be a Christian and was to be welcomed, or at least accepted. After the larger churches had been rifled by lairds, 'Pro-

COMMUNITY FROM PAST TO PRESENT PT. II

as some Indian pedlar one meets on the road may seem now. An older packman's tale of his long tramps, of the people's poverty and hospitality, must have resembled the mingled plaints and praise one hears from an Indian pedlar today! But in the past only a speaker of Gaelic could find his way among the people. Almost until 1900, if not still later, Gaelic speech was to provide a social bond, but ignorance of English speech an economic barrier.

The transition to increased exchange, with migration, and seasonal work, was temporary, tended to make for pauperisation. About 1795, *Statistical Accounts* enumerated, for every hundred families, two or three smiths, wrights (or spoke-makers), a shipwright or some boat-makers, a few weavers, tailors, and perhaps a miller. Each of these held some corn land, individually or in shares, with rights on the common. The line between plain crofters (to use a later term) and crofter-craftsmen was not easily drawn, and different writers wrote as they judged best. In Lochs, 80 per cent were fishers and net-makers. On the isles shores of the west, in Barvas parish (in which three-fourths of the men were also 'fishers'), kelp-making was a seasonal occupation. In Stornoway parish, where sub-tenants paid 30s. to 60s. in rent, with twelve days' service, they sold ling to their tackesmen at 5d. each, earned £3 a month on herring boats, made kelp at 30s. per ton, and roads at 8d. a day.

In Harris in 1795 the eight 'bred' (or trained male) weavers worked only for 'the gentry': the laird, the tackesmen and their families. The rest of the weaving was done by the women, giving a ratio of only one male weaver to fifty-five families. But in Lewis male weavers were commoner—one to every twenty to thirty families was the ratio—as if the practice of home weaving by the women was less universal there, even at that date.

CH. II ECONOMIC CHANGES: 1750–1919

About the seventeenth century there was introduced the making of *aqua vitae*, *uisge-beatha* or 'whisky', an addition to the ancient drink of home-brewed beer or ale, a pleasant brew still tolerated by the Excise. In order to pay the rent, the making of whisky from home-grown barley must have consumed a precious fuel—peat. Illicit whisky-making facilitated export by tackesman or Factor, and it also served to tickle the palate, cure the ills and cheer the spirits of the crofters themselves. Sir Walter Scott, after the Clearances, was in the land, though there were undoubtedly whisky stills that escaped his eye. In some of the old houses a hollow space was left at a selected spot between a chimney-flue and the outer walls, to conceal what was not meant to be seen. A pleasant picture survives of the eighteenth century. It is told of a man of exceptional prosperity, that when he laid his hand on a pillow he could hear on the one side the clacking of his corn mill and on the other the babble of his still.[1] What more could he pray for in the dawn of life? Nevertheless, the increase of distillation as a legitimate home industry by which to pay the rent (in kind or by sale), followed by legislation prohibiting all stills, encouraged the landlords in a trade for strong drink, then tempted them to smuggling and breaking the law.[2] Seaforth started two distilleries at Stornoway, importing barley for the purpose. By 1824 there had ousted the illicit stills, but they were closed about 1830.[3]

From a perilously narrow margin of subsistence, periodically overstepped in famines, the Islanders passed to a larger measure of production for sale, and in the second half of the eighteenth century population increased. Its

CH. II ECONOMIC CHANGES: 1750–1919

growth followed the increases in potato-growing and fishing, in income and food production, and the introduction of vaccination against smallpox, which had formerly taken a heavy toll of child life.[1] This increase found an outlet in emigration to the Colonies, of an led by departing tacksmen though discouraged at first by the Island lairds. For example, in July 1773, 840 people sailed from Lewis. "Alarmed by this, their master . . . came down from London to treat with the remainder of his tenants. What were the grounds, they asked, think you? 'The land at the old rents, the augmentation paid for three years back to be refunded, and his Factor to be immediately dismissed!'" Although the *Edinburgh Evening Courant*, from which this quotation is taken, went on to say that it was expected that the demands would be acceded to, or the Island would become a desert, the Factor was retained.

The pressure of population can be imagined when the appalling conditions of transport overseas are remembered. Even as late as 1841 Gaelic emigrants sailed from Greenock to the Clyde across the Atlantic in a vessel for which the maximum human cargo of negro slaves permissible was 400. The regulations governing the transport of slaves did not apply to the transport of 'freemen'. In quoting this case, D. F. Macdonald suggests that while it was in the interest of slave-owners that their slaves should arrive in the Plantations alive, it was rather in the interest of manufacturers to discourage emigration so as to keep a supply of labour at home with which to meet their growing demands and fill the gaps due to a high mortality, particularly among workers newly arrived from the country.[2] It would also seem as if it had not been in the interests of landlords to impose passenger regulations at that time.

CH. II ECONOMIC CHANGES: 1750–1919

landlords to improve passenger regulations at that time. This brought enlistment in the Highland regiments, the Navy and Merchant Marine. Owing to migrations of all kinds, males came to be outnumbered by females, then to have a heavy toll of child life.[1] This increase found an outlet in emigration to the Colonies, of an led by departing tacksmen though discouraged at first by the Island lairds. For example, in July 1773, 840 people sailed from Lewis. "Alarmed by this, their master . . . came down from London to treat with the remainder of his tenants. COMMUNITY FROM PAST TO PRESENT PT. II

small savings, if any, have been put to the purchase of fishing gear and boats, for fishing, too, was summer work. By 1833 the poverty of the Outer Islands and the bankruptcy of the landlords were such that Parliament intervened, then was called to the aid of the Hebrides. Poverty continued to be extreme, but need turned the people to fishing. The loss of revenue to the lairds led to their making sheep farms—somewhat unwillingly—with local evictions: in Lewis chiefly from Park and from north of Stornoway, and in Harris notably from the western Machars to the eastern Bays. In spite of this, it also brought about the sale of Harris by Macleod, and finally of Lewis by Seaforth in 1844.[1]

(6) NEW OWNERSHIP AND CAPITAL IN LEWIS: 1844–76

Lewis was bought by Mr. James Matheson, a gentleman who had formerly made a fortune in the East India trade in China. Sir James (as he became) put much capital, effort and goodwill into the management and improvement of the island. Of the amounts expended we may distinguish, so far as possible, what he spent as a rich man for his private pleasure from what he spent for the people. No sooner had Matheson bought the Island than the 'great famine' of 1845–46 broke out. The terrible loss of life in Ireland, and the depopulation of that country which followed, would have been equalled in the Isles but for the action of landowners like Matheson—who were the descendants of 'kinsmen', not of alien conquerors—and also of subscribers

[1] In 1841 the ratio in Lewis was 100 males to 114 females, and in Harris, 100 to 116.

CH. II ECONOMIC CHANGES: 1750–1919

COMMUNITY FROM PAST TO PRESENT PT. II

in Scottish cities, who came forward again in 1888 and in 1891 built and laid out for himself at the time, houses sent was not reclamation. This contrasts with his provision for those whose homeland he had bought—the sum spent upon his own mansions and grounds being nearly half that spent directly for the good of some 20,000 fellow-Gaels.

Matheson was not technically equipped for his chosen task of 'reconstruction'. Nor was he fitted by trade in the East for the leadership of a people accustomed, in spite of dire poverty, to considerable freedom. Ignorant, not gathers, of the language of the people, his choice of a later Factor was hardly a happy one. Tradition in Lewis speaks of this Donald Munro as an 'autocrat', and evidence in 1872 confirms it. In addition to being the Factor for an ageing man and so holding economic sway over the people, he held seventeen public and semi-public offices (e.g. Clerk of Peace, Clerk from Justice of the Peace to Captain of the Volunteers, still other offices being held by his clerk! The extent of his sway is also shown by his having served successively as Factor upon fifty-six farms, under his own authority. As a result of the treatment of the officer sent to serve the summonses, three crofters were tried on a charge of "assault committed on an officer of the law in revenge for having executed his duty". When asked in court if Sir James would not have disapproved of this step in defence of the executors, Munro replied that it was his practice "never to trouble Sir James with small matters". "Then you consider the eviction of fifty-six families a small matter?" was the retort. These "Bernera rioters" were found not guilty, they and their neighbours were left in possession, and soon after the Factor demitted office.[1] Lewismen felt the result to be a moral victory.

[1] Brand Report, 1901, p. 160.

which heartened them for resistance in common against landlord and State, both in the agitation for reform of the Land Laws during the next ten years and in their demands for 'the return' of sheep farms to crofting, which continued until all these were divided soon after 1919 and the ex-Servicemen's return.

Expenditure of capital in Lewis during more than a generation, from the purchase of the estate in 1844 down to the death of Sir James in 1878, helped to maintain the people and provide relief in bad seasons. It left Lewis greatly improved in roads and paths, in new dwelling-houses and in buildings of various sorts. Two real efforts had been made to utilise Lewis peat, industrially for parafin oil, and agriculturally by reclamation for tillage, manure and knowledge of a century ago, these attempts did their initiator credit. Yet failure left the Islanders to continue crofting without either an additional occupation or the extension of croft land, even at the high population density (per acre of arable) which Matheson had found on his purchase in 1844.

Subdivision of crofts was the first result. A father would simply divide his croft between himself and a son, and might not even be entered on the rent-roll of the estate, and the two would inevitably need more stock than before upon the common. The second result was simply 'squatting': the building of a house, perhaps with a tiny kailyard, on a piece of the 'skinned' land. As building went on overcrowding old sites, fifth accumulated and springs were contaminated, crofting was hindered and cows became fewer per family, in spite of overstocking. By 1886 about two-thirds the number of the cottars and squatters found in 1914 were already in occupation. In 1914 there were over 3000 statutory crofts in Lewis, their

COMMUNITY FROM PAST TO PRESENT PT. II

not averaging 32s. in addition to which there were over 1000 houses of the cottar class and 300 houses of the squatter class.[1]

Lastly, Sir James trained no successor to follow up or improve upon his experience. At his death in 1878 Sir James was succeeded by his widow, and, nearly twenty years after, she was followed by a nephew and his son. But the expenses of Stornoway Castle and its burdens, accompanied by lower rents, weighed down the new proprietors. In 1918 the estate was sold to Lord Leverhulme, who shortly afterwards purchased Harris too, with a view to his great schemes of fishery development.

(c) FISHERIES: 1750–1914

For the greatest expanding industry of the northern coastlands, Matheson had done comparatively little even at Stornoway. In 1883, a former Factor (Mr. Mackenzie of Calgary) stated that he had constantly asked for aid to the fisheries, especially by the building of harbours, pointing out that the landlord would reap benefit in rent.[1] But Matheson had replied that the fishermen and landowners, the people engaged in the trade, should do this work for themselves. By the end of the century, harbours were being planned and built with Brand aid in the north, west and south-east of the Island (at Ness, Carloway and Uig, and Turbert, Harris). In 1900 the Islanders possessed 150 herring boats, and in that year five boats from the Stornoway District sailed for the first time to Yarmouth, and two to Lerwick. For the next dozen years there were

[1] Brand Report (1901).

[175] ed hopes that prosperity could be maintained. In 1914
[220] war came, followed by sweeping changes in international
[221] trade. These changes left the Island fishermen workless,
[222] and with wrecked and rotting boats. In twenty years the
[639] number of Scotland's fishermen was halved, and the remainder all but ruined. For guidance, past progress and past losses should be reviewed, in order to see what measures can be taken to restore prosperity.

For the slow growth of a native fishing industry, two
[121] factors were to blame: the Island's poverty of investment, together with the unsettled state of the Isles, and also, it
[224] seems, the jealousy of urban interests. "The mere report
[225] sented, to 1893 and even after, by the Royal Burghs, and
[226] from 1907 by the British Parliament. The Royal Burghs certainly developed Scottish trade and industry through their own ports, but they feared competition, and opposed any direct contact of other ports, such as Stornoway, with foreign fishers and traders. From the days of the Maclean
[418] this difficulty had hampered regional development. It was in spite of royal prohibition that Seaforth encouraged Dutch curers to settle, an arrangement interrupted by war with Holland in 1653 and 1665.[1] Curers from Caithness and the East Coast were encouraged to replace the Dutch; men, and from time to time through the succeeding century efforts were made from the south to form fishing companies, and in the Island to encourage local fishers to profit from example in the catching of herring and of ling, hake and cod.[2] The people fished for food, with fishing-rods from the shore, and in frail boats in the lochs, and if they
[418] landed, they also sold a surplus. Fish were not only taken direct to Glasgow, but sold at home, first to Scots and foreign and later to British boats, of which ninety visited Lochs in

COMMUNITY FROM PAST TO PRESENT PT. II

[121] 1794, for instance, their crews not only fishing but also
[228] buying from local merchants. Islanders occasionally earned a pittance as pilots, for until the charting of these rocky coasts navigation was most dangerous.

The herring industry was in the hands of 'adventurers'
[175] who 'ventured' their capital, and the Islanders benefited
[478] little. The British export was aided by a bounty which
[470] helped to capture the Continental market; but, as Adam
[471] Smith pointed out, the bounty was given to the small, open
[175] boats suitable for the north-west lochs. These favourites
[175] of the Salt Duty after 1797 and of the bounty system from
[139] 1808 were, in the Island, a minority. The new steam-
[175] lights upon "Public Administration" in the Isles. As they
[175] wrote, these interests have had to suffer "either deliber-
[175] ately, for the benefit of other Islands, or other Islands in the kingdom, or inadvertently from ignorance".[1] Although the bounty system was widened to include small boats after 1786, the Salt Tax remained until 1817.

To overcome difficulties, the British Fisheries Society
[175] was founded with Government support in 1786. Although
[175] Stornoway then seemed too far afield, the Society's concentration upon larger boats nevertheless shadowed Lord Leverhulme's principles after 1918. At Ullapool, Tobermory
[311] and Lochboy (Skye), and at Wick, quays and stores were constructed and awaited the boats, with good land and grass for a cow, to be reclaimed. Although concentration at Wick led to the sale of the station's crofter women's produce in 1842, the Society had done some good work in the West. The chief difficulty of the West Coast north of the Clyde area and among of Stornoway District remained: the lack of a well-marked seasonal migration of herring.

[175] From the Napoleonic Wars to 1914 the amount of
[228] herring cured on the West Coast of Scotland rose and fell.
[175] In 1820–24 the East Coast cure was half the West Coast
[471] cure, but the place of 1842 brought the capture of the
[455] Continental markets and the East Coast herring export leapt up. It averaged 500,000 barrels from 1850 to 1870, a million from 1880 to 1900, and one to two million barrels
[139] until 1914. With the decline in the export to the Plantations, the West Coast cure fell, to rise by 1890 and reach a peak from 1900 to 1914. Thus, although no more than
[175] from a tenth to a fifth of the East Coast yield, that of the West Coast had risen greatly.[1] Of this, the Stornoway cure formed the major part.

The chief single type of catch, of white fish (cod, ling
[175] and hake), was developed too, and settled to a peak by
[175] 1900, then dwindled and fell. The average Stornoway
[175] District catch of white fish for a dozen years to 1900 was valued at over £100,000, much of it caught by local boats, and some of it cured at small 'creeks' (e.g. on the west of the Island, on Loch Roag, near Carloway). The
[175] cure, a strong coarse food, was shipped to Ireland and the Clyde; but after 1900 fresh fish and fresh sheep and
[175] lambs could graze in their thousands. In many estates the introduction of additional sheep, with the crofters' cattle, was tried and worked; but in others the people were
[175] ruthlessly evicted. Although offset by many acts of wise economy and generous aid, evictions were too frequent during the next half-century, and they engendered frequent bitterness.

Whereas in other Isles, and on the machar of Harris, the small joint tenantry and subtenantry were evicted in

[1] Figures 1898–9 quoted from J. F. Dow, *Public Administration*, 1918; other figures from Statistical R. Report, 1901; 1912–14 from *Fishery Board for Scotland* Tables E-II, 1914–6, and Table 13 and A.L. 1918.

COMMUNITY FROM PAST TO PRESENT PT. II

[175] though also by State loans. The efforts of the Island
[175] fishermen in the sixty years from 1880 to 1939 can be
[471] summed up by the story of the sheep-farming boom.
[470] one of the Seaforths had been offered 'double rents', and
[175] believed that they would turn the people away. Later
[175] on, when the wars were over, and when the Seaforth fortunes were failing, subtenants and their cattle had been
[175] replaced by sheep stock in three tacks around Ardvourlie (at Coll and Gress and at Aignish at the base of Eye Peninsula) in defiance of help-burning and the potato
[175] famine brought acute want in rocky parts of the Isle, but led to the destruction of their homes by certain communities.
[175] In 1891–2 there were a total of forty crofters in a township of Barvas parish, more than half emigrated by help of Sir James Matheson. Local resettlement was aided by Sir James, who provided loans and supplies for Uig people, who moved to Shawbost (6 miles north of Loch Roag). Abandoned farms became farms; and although agricultural prices fell and Sir James made little profit from the
[175] erection of buildings and the draining, dyking and fencing of the newly reclaimed land, the fresh sheep and lambs could graze in their thousands. In many estates the introduction of additional sheep, with the crofters' cattle, was tried and worked; but in others the people were
[175] ruthlessly evicted. Although offset by many acts of wise economy and generous aid, evictions were too frequent during the next half-century, and they engendered frequent bitterness.

[175] the legal recognition, improvement and enlargement of the
[175] 'crofting township', defined as a farm, or part of a farm, occupied
[175] in common or divided by tacks between tenants, and
[620] number. The executive officer of the township, the Con-
[621] stable, was to be elected annually by the community.

The Crofters' Holdings (Scotland) Act of 1886 did
[175] embody three of the chief recommendations made, but the first, the recognition of the township, was omitted. The
[175] Crofters Act gave security of tenure, compensation for
[175] improvements, and some facilities for enlargement of holdings. Security was perpetual and rent was fixed by the crofter within his family, though renouncable by him
[175] upon one year's notice, upon fair statutory conditions. The chief conditions were payment of rent, fair maintenance of the holding, and respect of land and community, the township, with an executive officer, the Constable, working for the improvement of the township, by fencing, draining and other works, with the assistance of the proprietor; "the whole scheme enforceable by " legal compulsion on either side." As early as 1886, the Aignish crofters were found guilty and sentenced to terms of from nine to fifteen months' imprisonment, for the crime of "deforcement" actually passed away. Yet the seeds of trouble only lay dormant; they were to spring up a generation later, and again after the end of 1914–18.

In defending the Napier Commission's plan to recog-
[175] nize the township, one may accept their definition of it as
[175] a farm held by tenants, singly or in common. Yet it must be remembered that the word 'farm' had come to have a
[175] very elastic meaning. The joint farm group was more the active group for labour in common; but if the 'township' included several joint farms, as is generally had in the Island, its people formed a relatively 'passive' community. Members of the township enjoyed rights in common, and shared in duties of observance; but they had seldom to

[1] A useful summary of the legislation is given by the Rect. Elim. Commission's Report, 1918, pp. 12–21, and a more full one in J. F. Dow's *Public Administration in the Highlands and Islands of Scotland*, 1918, a work of real social insight.

[2] Act of 1919 is still the main enactment under which local authorities exercise their statutory functions in Scotland; but the Agriculture (Scotland) Act 1948 included new provisions to allow the Secretary of State for Scotland to intervene in extent and form of the Scottish Agricultural Wages Board. The Act of 1919 contained provisions with regard to settlement of ex-Service men. Some progress has been made in carrying out these provisions, and there are many applications in the Hebrides and elsewhere where the demand for crofts exceeds the supply.

COMMUNITY FROM PAST TO PRESENT PT. II

[175] Death of Sir James had left his widow in possession of the
[473] estate, but she married a lady with little training for administration. In south-east Lewis, in November 1887, a body of landless men attempted to settle on the peninsula of Park, Loch
[472] Seaforth, after which some of the illegal settlers or raiders were tried and acquitted, and fourteen small crofts with
[474] outrun were provided. In January 1888, 50 men marched from Barvas to petition Lady Matheson that the steep farm of Galson should be allotted to some of them at a fair
[475] valuation, so that they could be made into crofts. Lady Matheson refused to consider the petition until the arrears of rent due by the petitioners were paid. Less than a week after, sheep were driven off Aignish (1500 sheep) and were
[476] recovered by marines and soldiers, arrested eleven men. Two days later, more sheep runs were invaded. Some demolished, and sheep driven off. On January 20, 500 men marched to Lewis (of whom 200 actually sailed). On February 1, the Aignish raiders were found guilty and sentenced to terms of from nine to fifteen months' imprisonment. Other 'raids' on sheep runs actually passed away. Yet the seeds of trouble only lay dormant; they were to spring up a generation later, and again after end of 1914–18.

[175] In defending the Napier Commission's plan to recog-
[175] nize the township, one may accept their definition of it as
[175] a farm held by tenants, singly or in common. Yet it must be remembered that the word 'farm' had come to have a
[175] very elastic meaning. The joint farm group was more the active group for labour in common; but if the 'township' included several joint farms, as is generally had in the Island, its people formed a relatively 'passive' community. Members of the township enjoyed rights in common, and shared in duties of observance; but they had seldom to

[175] co-operate in active endeavour. It was all the more
[477] important to have an elected 'official'; the Constable,
[478] one of themselves but placed in authority. There could
[479] be no restitution of the old joint farms where they had
[480] existed in the past; but the Crofters Act should have been
[481] still possible to extend the old spirit to the larger townships
[482] as the Commissioners held.

Again, the constitution of the township is bound up
[175] with the rights of common pasture upon the moor all the
[175] year, and on the 'infield' or enclosed arable; but the
[175] Crofters' Act failed to regulate the rights of the exercise
[671] of Common Grazings. It slackened the authority of the state without giving the power to the local community upon its members. After five years the Government began to recognize the mistake, and passed the first Crofters' Common Grazings Regulation Act, providing for crofters to elect a Common Grazings Committee. But it was illconsidered—it was not compulsory, it was permissive, and crofters and squatters without legal tenure, were not bound by the Regulations. On one hand they could not get permission to graze the common grazings without the Board, in order to reclaim it as a croft, without first obtaining the unanimous consent of the township's crofters; and in large
[233] townships there might always be an objector. Yet each
[427] crofter could, and did, put on stock, a cow or two and a
[428] few sheep, on the common land, without permission.

In 1908 a second Act was passed; but twenty years
[429] had allowed tradition to lapse and difficulties to accumulate. In Isle Scalpay (Tarbert) for instance, by 1909 there
[430] were only forty legitimate crofts, but eighty tenants; and
[431] the large crofters would not make part in depriving any
[432] crofter of such grazing liberties as he exercised. All were
[433] neighbours and most were relations, and their principle

CONTINUED ON NEXT FICHE

192 The circular, corbelled stone "beehive" huts, some still in good repair, are of uncertain date. The best preserved are on the Moregail Deer Forest, in remote situations which make it almost certain that they were only occupied seasonally; those on the Garynahine common pasture are associated with assymmetrically ridged, curving, lazybeds. This, however, need not imply permanent occupation of the site, nor does it solve the problem of age; such lazy-beds are certainly old, possibly pre-potato (c. 1790 here) - but the huts do not decay with age and may be very much older.

195 Early in the eighteenth century the present area of the parish of Uig was held from the
42 Seaforth clan chief by 26 tacksmen, whose names are recorded in the judicial-rental of
64 1718, (Fig.4). They, presumably, had sub-tenants but of these there is no record. Elsewhere in Lewis the same rental records many small tenants holding direct off the chief but in Uig, apparently, the tacksman and sub-tenant system remained intact. Although we cannot be certain of their precise extent, the distribution of the tacks
[241] coincides fairly well with that of the better agricultural ground (Fig.2).[1] Five of them cluster round Uig bay, four were in the Valtos-Reef area, and three around the strait of Little Berneray. All these districts have machair; together they accounted for three quarters of the meal and more than half the sheep and money rents. What is more, these rents represented 27% of the total rental of Lewis, whereas by 1887 Uig yielded only 17%
[178] of the rental and by 1901 the proportion was reduced to 14%. The relative decline of
369 Uig is largely due to the growth of Stornoway; this shift in the centre of gravity of Lewis has tended to exaggerate the remoteness and isolation of Uig in the present century.

161 By the end of the eighteenth century the tacksmen seem to have disappeared; at any
175 rate they are not mentioned in the remarkably detailed account of the parish given
in the Old Statistical Account, 1792. Meanwhile the small tenants had multiplied:
[632] whereas in 1755 the old parish * had supported 1,312 persons, in 1792 the
407 minister recorded 1,898 . At this time there was neither plough nor cart
494 in the parish. The minister was cultivating potatoes and his family were eating them

175 for a firmer hold upon the land and for a return to aban-
178 doned sites. The communal possession of joint farms, held
433 directly or under tacksmen, gave place to individual pos-
(731) session of crofts. Yet the legal recognition of perpetual
[166] tenure in 1886 gave not only the crofter's home but the
crofting neighbourhood a security unequalled in Britain.
The use of moor and machar in common was retained;
[167] but its control for improvement or reclamation by the
175 estate or the township was weakened, rather than strength-
178 ened, by the Crofters' Acts. Confusion grew—both upon
the arable land, subdivided, unenlarged and unimproved,
423 and also upon the common grazing, sorely overstocked in
427 spite of ever diminishing 'soumings' (or family shares) of
cattle. Rating difficulties and anomalies appeared. Com-
munal discipline, maintained at sea by fishing, was weak-
ened on land after the abolition of the joint farm-group,
and almost nullified in the townships by subdivision and
squatting.

175 A year before the potato famine of 1845, a new landlord
178 had brought good-will, capital and pioneering effort to
433 Lewis. These had been directed to experiments in the
427 reclamation and the industrial utilisation of deep peat.
(311) Helped by employment on these and other works, the
[161] population of Lewis continued to increase, when increase
in Harris was arrested for a generation. Yet while neither
experiment with peat met with success, little aid had been
given to develop fisheries. In both parts of the Island a
growing population was supported from the 'seventies
onwards by help of earnings derived from the seasonal
herring fishing on the East Coast and from inshore line
fishing at home. Women added to the Island income by
seasonal 'gutting' and, in Harris, by their spinning and
167 weaving. Money was earned by work on the mainland,

178 and savings were sent by emigrants who remained faithful
433 to parents and home.

167 If it be asked why most of the people kept to their
Island home in spite of its poverty and earned so little
175 away from it, one answer must be that their native tongue
178 formed a barrier encircling them as a community at home
and cutting them off from the rest of the nation. Seventy-
197 five years ago the new Education Acts were not yet in
full operation. Comparing the relative well-being in the
(671) Shetlands with the extreme poverty in the Hebrides at that
[871] time, a northern agriculturist wrote that in Scotland, only
in the Hebrides "is the food obtained by the peasant
[511] occasionally so scanty" as to be unable "to maintain a
[184] labouring man in vigorous health". Inquiring why there
175 should be so great a difference between the Shetlanders
178 and the Hebrideans, living in similar, distant isles, he
wrote, "We think the answer may be given in one word—
197 *language*. . . . The population of the Hebrides cling to
their ancient Gaelic with consequences most disastrous to
182 themselves. . . . It handicaps them in the race for life . . .
is a hindrance in the cities and a check to the emigration
of both sexes to those world-wide regions where all who
speak the English tongue find themselves at home."[1] He
concurred with the Census Report of 1871, which stated:
"The Gaelic language may be what it likes, both as to
antiquity and beauty, but it decidedly stands in the way
of the civilisation of the natives making use of it, and shuts
them out from the paths open to their fellow-countrymen
who speak the English tongue". The Report concludes:
"It ought therefore to cease being taught in all our national
schools. We are one people and we ought to have but one

[1] James Mollison, in the Highland and Agricultural Society's *Report on the Present State of the Agriculture of Scotland* (Edinburgh, 1878), pp. 136-38.

175 language." Many Islanders would agree with the state-
178 ment that Gaelic was a barrier to economic progress.
It was not only Lowland schoolmasters, ignorant of Gaelic
197 but an educated, sensible class of men in their day, who
182 used the strap on the palms of the little children "for
their good" because they could not understand English.
(511) An active Lewis country schoolmaster, who had considerable
175 rural knowledge and experience, said to me: "I know what
197 I have suffered through life from being brought up on
Gaelic. If I had my way, I would *punish* [with the strap]
871 every child I heard speaking Gaelic in the playground!"
Had the Island School Boards wished Gaelic to be con-
sistently taught with English, they could have prevailed.

114 One may not only disagree strongly with the means—
197 the strap—but hold that enlightened bilingual teaching is
both worth while culturally and also of assistance to
871 intelligence without interfering with use in English of the
three Rs, and of secondary and higher education. Yet in
153 Lewis recent non-verbal tests in English and Gaelic show
a mean intelligence quotient depressed by about 15 points.[1]
153 The conclusion seems to be that under the present system
197 the Gaelic school child is still at a disadvantage compared
182 to other school children. But even more important to the
121 child's development would seem to be the expression of
his response to his rural environment in his own tongue.
For this the school tests and the educational code do not
fully provide; nor do the tests of life when the adolescent
Islander suddenly finds himself at work in a Glasgow
175 factory or abroad in city streets. What concerns us here
197 is the economic drawback of a lack of ready English among
182

182 rural Islanders throughout the nineteenth century and even
197 today.

From 1887 the State made efforts to improve the
175 crofters' lot. Crofters' claims to stake shares upon the only
available reclaimed land in the Island, that of a few farms,
654 had been refused in the 'eighties, but came to be granted,
241 in principle and in fact, after 1900. During the war of
427 1914–18 the Government reaffirmed its promise to divide
sheep farms into crofts for men returning from the Services,
and the Land Settlement Act became law in 1919. Yet in
spite of tentative experiments and schemes, a determined
effort to see the Island possibilities and face its problems,
as a whole, still remained to be made in the twentieth
century.

175 When war broke out in 1914 over 5000 men left Lewis
161 to join the Services, and corresponding numbers left from
Harris. Others, too, served in the Merchant Marine, ex-
72 posed to U-boat warfare. From the first months of the
701 war, Lewismen in the Seaforth Highlanders, and men from
Harris in the Camerons, fought in the Highland Division
as shock troops in the attacks which cost the Division
the highest casualties of any in the British Army. The
Lovat Scouts, the Mountain Battery, the Garrison Artillery
and other units, also enrolled their men, and suffered loss.
175 The last blow to the Island came after anxiety had ceased.
161 Early in 1919 the transport *Iolaire* struck a rock and sank
at the entrance to Stornoway harbour; and 200 men who
731 had withstood dangers and hardships during four years
of war went down in the dark of a winter's night, almost
within call of their waiting relatives massed on the pier to
welcome them.

423 —or by a compromise between. But as it is, if one crofter,
431 or a small group of crofters like those of a township or
427 parish of Lewis, were to become owner-occupiers (even by
632 gift), they would be penalised as compared to others.
829 Hence the Lewismen preferred to go on paying rent as statutory crofting tenants. Leverhulme sold the land and received the price; the new owners paid for it and received an investment; and the only 'loser' on this curious transaction was the Local Authority, the County, which failed to make more in rates!

(623) Further reasons why the great majority of crofters declined Leverhulme's offer have been given by the Lewis Association's Economic Committee (1944):

(a) As individual proprietors, they would lose the advantages of the jurisdiction of the Scottish Land Court in dealing with their disputes, and any litigation would take a more costly form.

(b) They would be debarred from obtaining loans from the Department of Agriculture for Scotland for the improvement of their holdings or houses; as the Department would no longer have the "Corner Stone" of a landlord to fall back upon in the event of renunciation.

(c) The crofters were afraid that as individual proprietors they would forfeit their share of the Common Grazing rights.

(d) Should they wish to quit their holdings they would be compelled to find a buyer in the open market, instead of renouncing to their landlords and getting valuation.

(e) There is a feeling among Lewis crofters that they prefer to have a landlord before whom they can lay their difficulties and disputes, and who will attend to their wants; an authority that relieves them of responsibility.

(181) As the historical evidence has shown, a lack of responsi-
(624) bility has been greatly due to the undermining and then the
(175) abolition of the authority of the township's own elected Constable.

311 illustrates the narrow margin of habitability on these frag-
241 mented holdings.

423 Now, in Lewis periodic pooling and exchange, or the practice of *movable* run-rig on the small joint-tenants' farms, was abolished early in the nineteenth century, except
241
423 upon the machar, where it still continues. Apparently the
476 strips were simply fixed where they had last been appor-
178 tioned by lot. Subdivision of the little crofts among sons and grandsons followed, owing to inheritance without re-
(175) clamation. Fairness gave 'the patchwork quilt' described; but it was fairness pushed to the point of folly, for differences in soil from one adjacent strip to another were slight! It is otherwise with the long, narrow plough-strips which run from the houses on the pure boulder clay down to the sandy shore: run-rig, movable or fixed, is understandable and necessary there. The case just cited shows how a sensible communal tradition, such as that of '*movable* run-rig' with periodic pooling, may degenerate into absurdity by fixation. Happily the machar still shows the sane maintenance of a tradition, the pooling of resources:[1]

182 In 1924–25, widespread distress in the Isles, the failure
161 of the Leverhulme endeavour, the crofters' refusal to own their own crofts, and the emigration which followed, caused many outsiders to forecast rapid depopulation. It was all
182 the more interesting to note the confidence in the Island's
161 future shown by buyers of the great estate, all of whom
471 knew what they were about, for they were men with experience of the Island, of its rates and rentals and of its people. To a wealthy man who repurchased a sporting

(113) [1] Apportionment of lands held in run-rig in the Carloway estate is described, and the principle discussed, in *Scottish Land Court Reports*. (See *Scottish Law Rev.* vol. 28, 7; July 1940, pp. 51-54.) At the same time 'mechanisation', or the co-operative utilisation of tractors had led to pleas for 'collective farming'. (*Stornoway Gazette*, February 1944.)

APPENDIX III

(A) THE STORNOWAY TRUST: A COMMUNAL OPPORTUNITY

632 THE people of Stornoway town and rural parish are in a
175 position to control their own future to a degree unusual in
178 Britain since the general loss of common lands in the eighteenth century. Three or four bodies or groups are important in local governance, and in addition to these an effort to arouse
632 citizenship has taken shape in the Lewis Association. As else-
623 where, the Town Council acts for the burgh and, it should be added, the Grazing Committees for the townships, the District
423 Council and County Council acting for wider spheres. The
361 Harbour Trust has its special charge. In addition, the fact of corporate ownership is important, as vested in the Stornoway Trust. Besides property in the burgh and its suburbs, including the Castle and its park or policies, the Trust owns virtually the whole landward area of the parish, from Arnish Moor north to Tolsta. It should not be forgotten that the resources of the sea are public property and that the inshore fishings, owing to a considerable measure of protection, are virtually in the possession of the coastal communities. Freshwater fishing is also in the hands of the Trust. Thus, not only building property but essential sources of production on land and sea are in communal possession. The Trust was formed in 1924.

623 During the first five years of its existence the Trust was
433 burdened with a growing deficit, but since 1929 it accumulated a credit balance, due partly to agricultural derating and partly to the registration of the Trust as a charity and the resulting relief from income tax. Possession without prevision can do little, however; and hence the need for the citizens of town and country to regroup themselves as thinkers for the common

The minister was cultivating potatoes and his family were eating them as an example to the crofters who were still reluctant to adopt the new crop. Some 70 boats were fishing; this was mainly in Loch Roag for they were small open boats greatly outnumbered in good herring seasons by boats from other parts of the kingdom. To encourage curing, particularly of white fish, the proprietor had set up two storehouses to supply salt; he, or his agents, were probably the only buyers - indeed John Knox, who visited Lewis about 1786, tells us that the estate factor held a monopoly for trading in cattle, dried fish and other products. The absolute power of the clan chieftain seems to have survived in Lewis until impending bankruptcy forced the sale of the estate in 1844. But it was kelp, more than fishing, that helped to support the people of Uig in the late eighteenth and early nineteenth centuries. Lewis made little kelp compared with the Uists, but the Loch Roag kelp was of particularly good quality and commanded more than the average price. Further, many people from Uig migrated seasonally to make kelp in Harris and Uist. Thus even at this time, the intrinsic resources of the parish appear to have been inadequate to support the population. In this connection it is worth noting the change in the average stock held by each family since 1792 as shown in table 3.

175 244 226 251 441 614 175 221 233 162 178

Clearance and Congestion.

Even after the end of the tremendous boom in kelp, brought about throughout the Hebrides by the Napoleonic wars, some production continued in Uig. In 1825, when the land rent of the old parish was £1,862, the proceeds of kelp, after deducting expenses, yielded £1,010 to the proprietor. Thereafter it failed. Meanwhile Seaforth was attempting industrial developments and agricultural improvements. The former included short lived distilleries in Stornoway, the latter involved the removal of some small tenants in order to introduce mainland farmers. For these Uig was particularly attractive, the extensive mountain pasture offering good prospects for sheep graziers. The exact date of the formation of the earliest farms are not remembered nor are they precisely recorded but at least as early as 1826 Alexander Macrae of Kintail had the tack of Scaliscro, with the extensive grazings (now partly occupied by Bernera summer pastures) east of Little Loch Roag. About 1823 the small tenants of Mealasta and Breanish were deprived of Mealasta Island, which suggests that a sheep farmer was already installed in that district. About 1838 all the small tenants were cleared out of Mealasta, six families being put into Breanish; the remainder are said to have been sent to America.

175 228 175 233 166 427 274

In Bernera island, Kirkibost was cleared about 1822, having been lotted in individual crofts some years earlier. Thereafter Kirkibost formed part of the large farm of Linshader. Little Bernera, too, formed part of this farm. On the mainland, opposite Bernera, small tenants were cleared from the shores of Loch Roag (e.g. Strome and Drovernish) in the early nineteenth century, and a tacksman was installed at west Earshader. Further east the small tenantry were cleared from Ceanhulavaig and Linshader.

175 427

By 1844 the kelp shores were almost valueless to the proprietor (though seaweed as fertiliser remained a vital necessity to the small cultivators, often working the same land year after year). In 1841 the Chamberlain of the Lews suggested to the Select Committee on Emigration that some 6,000 persons should emigrate because the land was inadequate to support them. In 1844, of necessity, Seaforth sold the island. The population of Lewis was then 17,000 (Uig 3,316); little did the Chamberlain imagine that in the following ten years it would increase by 16%, and that by the turn of the century would reach almost 30,000, (Uig 4,462 Figure 8).[1]

A further recommendation of the Napi
was to aid emigration. Now Sir James Ma
1863 proved successful, but his later effort
response. There were then, and still may b

some whose feelings and interests opposed emigration. Free Church ministers foresaw that the beliefs they had introduced would be shaken by travel; and their income, like that of the merchants, would have disappeared as a result of depopulation. The Congested Districts Board, however, sponsored two schemes of colonisation in 1888–89. In the first scheme thirty families, and in the second, fifty families were taken to Canada, mostly from the Island.[1] The first and smaller group repaid their loans and received their lands; but the second failed to do so, and the State was only reimbursed by sale of the land.

The story of the schemes suggests the lack of four elements needed for success: promptitude in organisation; sympathy with strictness, and a sufficiency of funds; a year's experience of new conditions or technical guidance, rather than segregation of the inexperienced without leadership; and choice of vocation as farmer or as farm servant. Many a crofter-emigrant has succeeded as a shepherd and farm hand or as an independent farmer; but not every Islesman, particularly a cottar or landless squatter, is fit to conduct a farm. Technically, an all-round experience of part-time crofting and fishing by rule of thumb does not train a man for farming in a new environment without even a year's apprenticeship. Success is possible in schemes which overcome initial difficulties by providing training, companionship and community life, in a suitable physical environment.

One further principle of communal life was the spiritual, which Parliament and administration failed to grasp. The most significant evidence in the Napier Commission was that of A. Carmichael; and from this the Commissioners

[1] J. P. Day, 1918, pp. 123-125, from Reports of Congested Districts Board, and Crofters and Colonisation Commissioners (Fifteenth Report).

to one another, to the landlord and to the State would have been profoundly different.

(B) STATE AID, THE LAND, AND THE CROFTERS' RESPONSE

Until 1914 the congestion in each Island township dotted between the wide, lonely moors, had increased, and it was still increasing. To every two legal crofters, either a cottar or a landless squatter was to be found, on the 'skinned land' outside the crofts. Parliament, in 1886, had discarded the Napier Commission's recommendations to give powers to extend the crofts from portions of the common, or to supply a house site and garden space for men of independent occupations such as fishermen. This congestion embarrassed Government and local services.

The associated rating system was also at fault; indeed it has still to be put right. For instance, a crofter's son—able to make a living, say, as a fisherman, and about to marry but having no croft—was penalised by high rates, should he take up his proper status of a legal cottar at a small rent. Throughout the crofting counties, the legal crofter, as an agricultural landholder, was (and is) de-rated, and had only to pay one-eighth the rates for a non-agricultural holding of the same rental. Only since 1938 has the value of the house been assessed. A recognised cottar paying rent to an estate was rated as owner and occupier, being treated in fact as a feuar;[1] and as such he had to bear a heavy burden of rates, possibly of over 30s. in the £. Whereas if he 'lay low' and shared his father's or brother's

[1] *Feuar*, in Scotland one who holds real estate in consideration of a stipulated annual payment; lit. on *feudal* tenure. Cf. J. P. Day (1918), pp. 383-384.

croft by subdivision, he would pay little, indirectly and by arrangement; while if he simply built a hut or house on a vacant spot he paid neither rates nor rent. Either course was illegal; yet it was too expensive for the landlord, however 'hard-hearted', to take legal proceedings to turn off a squatter. As for wholesale expropriation the suffering caused and the odium incurred would have involved—and would still involve—both landlord and State in insurmountable difficulties by starting fresh agitation, perhaps with outbreaks of law-breaking, repression and bad blood. Yet these anomalies still discourage, and the normal illegalities demoralise, all concerned.

Because of the provision by State and local authorities of a growing range of services in other regions, and also because of the special reasons of Insular poverty, State action was increasingly taken in the Isles. To what extent have the Islanders responded, it may be asked; or how far may they have failed, in return for aid offered and benefits received? Let us begin with mutual aid practised among the people up to 1900, and then consider the repayment of loans and grants under different conditions. Observations by those in touch with the Island for many years, officially or privately, allow one to read between the lines and attempt an impartial judgment.

As to the strength of independent mutual aid there could be no doubt. Up to the beginning of this century, the amounts expended on parish relief were 'almost nothing', and had shown no increase in preceding years. General poverty, anomalies in the rating system, and the mistakes such as the erection of poorhouses by the central administration, diminished resources; but the people generously gave help to their poorer neighbours in work and gifts. Except for a year of overwhelming crisis,

perhaps once in a generation, the neighbours were best administrators for poor relief. On the whe remained true to 1914.

As to financial assistance from the Governme evidence seems at first bewildering in its contrad suggesting utter inconsistency on the part of the Thus, the record of the Lewis-and-Harris fisher repaying loans for the purchase of boats, was th honourable in the North-west. In 1900, of th capital on barely 100 loans made to them, 83 per c been repaid, whereas on 150 loans elsewhere le 60 per cent had been repaid.

Yet as to the record of Lewismen with regard to ance for road-making, the Brand Report was signi reticent. In 1891 a road was planned direct to Sto from Loch Roag on the west coast at Carloway short-cut of sixteen miles was to shorten the dista seven miles and so facilitate the transit of fish la Carloway. Crofter labour was employed as a m 'self-help'. The road was, mistakenly, printed a plete on 'base maps' and other recent 'quarte maps. By 1901, £15,500 had been spent, a sum exceeded the estimated cost, but only eight miles had been completed and five miles partially made three miles were quite incomplete. The estimate been exceeded and "financial difficulties having ari the contractor had gone bankrupt and the engine dismissed—the work came to a standstill, £10,00 having been estimated as necessary to complete th Of that sum £8000 was granted.[1] But the road unfinished. These figures alone might not co

[1] J. P. Day (1918), p. 328. Day added that "the work should n than twenty years after its start, be approaching completion"!

the work done—or rather not done—by the local labourers; for deep peat has misled road engineers elsewhere. But impartial observers have left no doubt that the work was shirked—partly from the labourers' lack of will, in other words from laziness, and partly from the not unnatural desire that further grants might continue, offering easy money. Inspection revealed deliberate and combined concealment of bad work, road metal being thrown on to give a surface which had no foundation. The Carloway road, which was to help the Loch Roag fishermen by rapid transport of fresh catches, was never completed. The bad work of many contributed to the undoing of all.

How are these two apparently contradictory responses to help to be explained? The answer lies in the completely different methods of expending the grants. A loan to fishermen for a boat was put into their own responsible hands. The hope of profit in which each could share stimulated their enterprise; and where both the private honour of each member and the corporate honour of each crew was at stake, mutual obligation and team-spirit spurred them to work. But road-making—a work many had done for contractors elsewhere as navvies under degrading conditions—was different. A Gael responds when his imagination is fired, whether for selfish or unselfish ends; but he can also enjoy leisure as to the manner born! Not only was personal skill or effort in road-making of no advantage to an individual; there was little to call out either personal prowess or team-spirit in the work. Moreover, little effort appears to have been made by the administration to arouse ardour. The ultimate advantage of a good road to the people on the west of the Island, as a whole, was clear. Yet since bad work and delay led (at first) to further

grants, then, in the absence of an immediate goal, the combination of the corporate interest in bad work with natural inclination to an easy time proved overwhelming! The problem of assuring good work and prompt repayment is real: it calls for the right appeal to team-spirit coupled with personal responsibility. Many short roads to small new settlements have been economically built.

With regard to loans for settlement and housing, similar contrasts are found. Near Stornoway the farm of Aignish (Eye) was divided in 1905 into thirty-two fishermen's holdings (rented at £3). The Congested Districts Board lent £3600 for housing and spent £1600 on fencing and £450 on administrative expenses, a total of about £180 per holding; but in seven years the holders had paid only one-seventh of the annuities due, and were in arrears with the rent.[1] Yet on the housing loans made on a wide scale since 1919, there was mutual aid among neighbours and the repayment has been satisfactory.

SUMMARY: 1750—1914—1919

The transition from the old economy of mutual aid in self-support, little changed down to the 'Forty-five, to the development of production for sale had proceeded far by 1914. Yet change had not continued steadily. There had been fluctuations, from the land and back again, or towards individualism with returns to common action. Kelp-making, migration, and commercial fishing alternated in importance as means to earn a living without losing the anchorage of home. After the potato famine, a century ago, the people tended to move away from the outlying townships and emigrate; but the next generation agitated

The new proprietor was no better placed than Seaforth to change the fundamental causes of rural poverty and distress. But at least he had funds to ameliorate his tenants' lot and to allow experiments in land reclamation and industrial development. Existing sheep farms were extended and others formed. Land reclamation went forward hand in hand with industrial experiments such as distillation of paraffin from peat and brick and tile-making. A programme of road building was begun (the first roads beyond Stornoway were begun in 1791, but there were only 45 miles of road by 1834). In Uig the results were very obvious. Further clearances took place particularly from Timsgarry, Carnish (21 tenants), Reef (22 tenants), Garynahine, Dun Carloway. The small tenants of Valtos and Kneep were only saved from eviction by the intervention of the Fisheries Board. Nor they were important places for white fishing. By the 1850's, although the population of Uig was more than double that in 1755, and 60% greater than in 1800, it was crowded into little more than half the area. Emigration enforced by clearances reduced the population of Bernera and South Uig by nearly 500 between 1851 and 1861.

No other part of Lewis saw so many farms; nowhere else did the small tenants suffer so much from eviction. That was not all. Those who remained undisturbed were deprived of some of their traditional grazings and access to the rest was sometimes restricted. Moreover they had to make room for many of the evicted families in their own townships, thereby further increasing the problem of congestion caused by the rapid natural increase of population. Thus, for example, about 1825 there had been 22 families in Valtos and Kneep. By about 1880 there were almost 100. But, during the same period these townships were deprived of their island grazings - Pabay, Vacsay, Floday and Wiay - formerly used for wintering cattle - and of part of their hill grazings (the traditional shielings). Use of the hill-grazings was restricted, too. Thus, for example, only one day was allowed to pull heather for ropes; if men were away fishing or for other reasons, could not attend on that day, they risked punishment by going on any other. Such stories could be multiplied many times.

In the Bernera district, by the 1850's only Tobson, Bosta and Breaclete (on the island) and Earshader and Cruiivig (on the mainland) were left for the crofter families. Moreover their traditional summer grazings, which lay south east of the Deer Forest which was formed out of the Scalliscro sheep farm about 1850. Apparently their use of the old shielings was tolerated until 1878, after which date they were directed to the area now of the present road and which they have continued to use until the present day. Thus the shieling huts shown in fig.5 all post-date 1878; the area in which they lie may have been part of the West Earshader tacksman's holding. The date of discontinuance of that tack is not known but the houses, now empty, was for long occupied by squatters and the old issy beds around it still form part of a large squatter holding.

It is noteworthy that almost all the clearances were in the Bernera and South Uig districts and this is reflected in population changes between 1841 and 1851, shown in table 4.

The cleared areas included extensive hill and mountain grazings and some of the best wintering ground, including all the machairs except Valtos and Kneep. The East Loch Roag and Carloway districts were less attractive to the new farmers; as is so commonly the case in Lewis, their rough grazings lay on gently sloping low plateaux and were consequently ill-drained and of poor quality. About 1852 Dun Carloway was let as a tack but was never successfully farmed and was soon returned to crofter-occupation; it may never have been wholly cleared of crofters. Garynahine, at the southern end of East Loch Roag, next to Linshader, was also turned into a farm about 1852. Here the hill grazing was more extensive and, though seriously reduced by a crofter settlement scheme c. 1936, it remains

175 a well cultivated small farm, a striking example of what can be done with this unpromising
427 terrain. It is probably true that one of the objects of forming farms was to introduce
311 improved methods and so set an example to the small tenants. The contrast, today, between Garynahine Farm and the nearby crofts, suggests that more than example is required.

South	384	348	-36	(-9)

Notes: (1) Vuasmore - 46 (-100%). Kirkibost, Linshader, etc. had already been cleared.
(2) Reef -180 (-96%).
(3) Carnish - 60 (-36%) - but completely cleared before 1861.
(Township figures are not available before 1841).

The birth of the crofting landscape.

175 A further mid-nineteenth century attempt to improve the productivity of the small-
427 tenants' holdings was the lotting of runrig lands to form individual crofts. In a report to
311 Seaforth c.1800, the Rev. Headwick had recommended the abolition of runrig* and some
634 lotting of crofts took place about 1811 ** about which time runrig was being abolished in North and South Uist - but many townships in Uig, as elsewhere in Lewis, escaped this lotting. In Bernera, Kirkibost was probably lotted at this time and the crofts fenced; in 1852 despite clearance, the first Ordnance surveyors were able to record the old fences (which were used as the croft divisions when Kirkibost was re-settled in 1878). The now much divided crofts of Kneep (see also fig.22) are probably of the same date. Reef
[62] appears, also, to have been lotted early, for the remnants of fence recorded by the Ordnance Surveyors in 1850-1852, (Reef was cleared in 1850), show crofts of the same general form as those of Kirkibost, and quite unlike those of the 1850 lotting. Consequently, in many townships until this date, the houses remained huddled together in tight little groups, often inter-communicating one with another. The groups, or clachans, were usually set in the midst of the arable land. The runrig system had certain disadvantages, but, as a basic agricultural structure for small holders, it had two considerable advantages which may be relevant to modern conditions. Firstly, it was flexible: within it the individual's holdings varied in size and rent and it was possible, at the periodic re-allocation, to adjust the size according to family needs. An elderly person did not need to be burdened with a holding larger than he required, or was able, to cultivate; a young man with a

[113]** Report.... on the Condition of the Cottar Population of the Lews. (C.5265), 1888, p.37

* The essence of runrig was that any individual's arable land was in many pieces, scattered promiscuously amongst those of his neighbours. Periodic re-allocation of pieces was usual, but the period varied and in some cases was infrequent.

Figures 6 and 7

THE LOTTING OF BREACLETE

Figure 6 shows the irregular clusters of old houses and patches of arable land (hatched) within the infield ring. On the right the first of the new houses, standing in a row each on its own 'lot' (or 'croft'), are shown.

Figure 7, from the contemporary Factor's notebook, shows the new crofts as lotted in 1850. Note that these were not fenced.

175 growing family could increase the size of his holding. Secondly, in the absence of fences
427 a certain discipline of agricultural management had to be maintained; moreover the
311 proprietor, through the factor, grounds officers and township constables, saw to it that
632 it was. This "good husbandry", albeit at a rather low level, was maintained in the interests of tenants and land-owner alike. After the arable land was lotted permanently to individuals, there was less flexibility and less need for communal management. But the absence of fences between the new lots, or crofts, meant that they were still common land during the winter months. In some cases the proprietors paid the tenants to erect fences round the newly lotted inbye land of the whole township but, even when a ring fence existed, stock was allowed to graze indiscriminately within it from November until April.

It is fortunate that the first Ordnance surveyors were at work in Lewis just as the lotting was coming into effect. The new lots were not divided by fences, therefore they were not marked by the surveyors, but in several townships they arrived in time to plot the clachans and in some - Breaclete, for example (fig. 6) - the first edition six-inch map shows some of the new houses, neatly spaced out on the new lots. The arrangement of the latter is recorded in the Factor's sketch books, of which fig. 7 is an example.

175 Thus whilst we have little evidence of the appearance of the former rural landscape,
632 we have an excellent record of the birth of the new. The characteristic units of the new
178 lotting were townships divided into long narrow strips, arranged parallel and fan-wise more or less in the direction of steepest slope. Such an arrangement was simple to lay out; it tended to give everyone a fair share of the land of each kind - ill-drained and well-drained, high and low. And, if a road or track passed through the township it was usually possible to give each lot or croft direct access to it without the necessity for side-roads.
[367] Consequently the houses, when re-built, were usually put on the crofts. Despite the pattern of settlement replaced the little huddles of the clachans. The extent to which it was dispersed depended on the width of the lots; the greater the number of tenants to be accommodated in a given area, the narrower were the lots. In extreme cases they might be as little as 20-30 yards in width and then the houses, aligned along the road or access track might form a virtually continuous terrace or street.

CHAPTER THREE

THE CROFTING STRUCTURE

424 In the parish of Uig about 90% of the families are crofters. That is to say, they owe
[428] their presence in Uig to their hereditary tenancy of a small-holding of croft status. To these holdings they have a deep attachment; many of them have been inherited through several generations. Others were obtained more recently during the process of re-settlement of farm land which followed the Napier Commission report and 1886 Act. Many older crofters regard the resettled townships as the fruits of a hard-won victory. Nevertheless, we have seen, very few of the holdings are in fact more than 110 years
[167] old. And, whilst some families can certainly trace their ancestors in the district for several centuries, there has always been a good deal of movement between townships. Thus the claim that they occupy holdings which were carved out of the barren moor by the toil and sweat of their ancestors is, in most cases, metaphor rather than strict truth.

427 Nevertheless, the attachment to the holdings is very real and must be given careful con-
511 sideration when assessing their present utilisation and potential value. It is particularly significant because it leads to large numbers of tenants retaining holdings which are far
[440] too small to yield a living. Inevitably they seek other sources of income either at home (as by weaving or casual road labour) or away (as in the Merchant Navy, armed forces, police or other skilled or unskilled work). As a consequence the croft is neglected and
[29] the potential resources, small as they are, are not realised. The decline in cattle numbers since the late nineteenth century gives some indication of the scale of this lost productivity over the parish as a whole. This is the crofter's own loss. Individually one can appreciate the problem - "four cows will not give me a living - better to get work on the hydro-scheme and sell the cows". And when one hydro-scheme finishes
[248] another will take its place, or there will be casual road work or other labour and, between times, the unemployment benefit which the self-employed crofter does not get.

Certainly the land is of poor quality, the climate in some respects severe, and the cost of transport, from Uig even to Stornoway let alone to the mainland, a perpetual prob-
[421] lem. But the root of the problem is the small size of most of the crofter-holdings, on
[281] the one hand, and, on the other, the importance which most crofters attach to the possession of a holding, no matter how small and how neglected it may be. How has this come to be?

TABLE 5

The multiplication of crofter-tenants, and their increasing rents, 1850-1890.

Congestion and Sub-division.

195 The crofting population of Uig started the second half of the nineteenth century with
311 far less land than had been occupied by their forebears fifty years before, and, although
161 famine, clearance and emigration had slightly reduced the population between 1841 and
162 1861, (from 3,828 to 3,630) thereafter it again increased, reaching about 4,600 in 1891.
427 Rising agricultural prices after 1850 favoured farmers and crofters alike but, whilst the
farmers prospered the crofters merely multiplied, thus in effect reducing the land
available to each family. In 14 townships recorded in the 1850 sketch book the 273 hold-
ings at that date had become 402 by about 1890, to which should be added a considerable
number of cottars and squattars, many of them keeping stock and some sharing the rent
427 of the crofts on which they had built their cottages. Detailed comparison of the rentals
195 for the two dates shows that the increase had come about in two ways: firstly, it appears
161 that, from time to time, where a new rent ledger was being made up, the factor would
record separately cottars who actually shared the rent of the croft and, secondly, he
162 would recognise and enter some of the squatters who had obtained rent-free (and illegal)
holdings by enclosing and reclaiming from the common. The latter were added to the
souning of the townships according to the rent put upon them. Table 5 (page 16),
illustrates the process. The recognition of squatters, usually at £1-£2 per annum, led
to the small increases in total rental. For the rest, the increasing numbers were
caused by subdivision. Only in a few cases does the proprietor seem to have actively
encouraged land reclamation by crofters. On April 17, 1850, four of the families which
had been cleared out of Resf were allowed to settle on the Callanish common near the
Breasclete boundary (hence the settlement became known as 'Breasclete Park'. Their
rent was fixed at 15/- per acre for five years, thereafter increasing 1/- per annum until
it reached 29/- per acre; they shared, according to their rent, in the Callanish common
pasture. But forty years later one of these crofts had been divided into three, another
into two, and two new ones had been carved out of the common; the total rental had risen
to £13:19/-. Again, when Breanish was lotted in the spring of 1850, ten new lots were
marked out and the rental is annotated "there are ten young men starting ... these lots
as soon as the season commences". This appears to have been too optimistic; few, if
any, of the new lots were ever broken in.

The farms, by contrast, prospered and the proprietor was able to share that prosperity by increasing rents as shown in the table:

TABLE 6

195
427

Farm:	Rental in the period: 1840's	1850's	1860's	1870's
Mealasta	£90	£105	£105	£130
Ardroil	£100	£105	£187	£255
Garnish	(£75: crofters)	£55		
Timsgarry	£78	£84	£88	£108
Linnshader	£250	£297	£400	£425

161
162
175

/p. 18/

Figure 8.

175 It is worth noting that the rental charged for the newly cleared farm of Carnish was
427 £55 - being £20 less than had been paid by the crofters. Thus it cannot be said that the latter were evicted purely in order to obtain more rent. The proprietor must have been taking a long term view, looking for land improvement rather than immediate gain. By the 1870's the farm rentals had increased by 55%, those of the crofting townships by only 15%. And the latter often remained unpaid.

175 Thus, whilst the farmers prospered, the tenants became crowded in their townships
427 which were correspondingly less and less able to support their increasing numbers.
511 The crofts became so reduced that in an average year the produce of the land might keep a crofter and his family for only six months; for the rest he had to find other means of
195 support. Fortunately, after the hungry years of the 'forties', fishing provided just this.
226 Starting in 1851, an annual migration began, first to Caithness and later to the whole east
466 coast of Scotland and England. By the 1880's not only were most of the able-bodied young
166 men following the herring as hired men on east coast boats, but many of the women-folk,
who had learned gutting, packing and kippering from English girls brought to Stornoway
222 for the purposes, were also earning. This was summer work, and fitted well between seed-time and harvest. In the winter, small local open boats worked long lines for white fish which were dried and salted for local curers as they still are today on the
517 Norwegian coast. Between the 1850's and 1880's there was a "condition of plenty" in Lewis "which would not have been credited by those who judged of the condition of the people by the external aspect or sanitary arrangement of their dwellings".* It was this "condition of plenty" which encouraged the people to stay at home, to sub-divide their crofts, and to live on the proceeds of paid labour rather than on the produce of the croft.

Re-settlement, 1878-1935.

175 The process of sub-division ceased only when economic conditions became less
427 favourable and emigration began to exceed natural increase. In the 1880's fishing and
466 farming suddenly became less profitable. Simultaneously, and given extra point by the
226 particular distress of the time, agitation for land reform, and in particular for the
241 relief of the most congested districts, became a political issue. This began in Uig in
175 1874 when an attempt was made to evict 56 crofters from Bernera; hundreds of crofters
668 resisted by force and subsequently marched on Stornoway. They were well received by the proprietors - who appear to have been unaware of the summary and inhumane behaviour of their chamberlain - and to the credit of all concerned the matter ended peacefully. But land agitation continued.

175 The position in Bernera was eased in 1878 when Linshader farm was deprived of the
427 old township of Kirkibost which was resettled by crofters from Bosta, the latter being let to the Tobson crofters as an enlargement to their pasture. In 1880 new holdings were formed in Hacklete, which had been the grounds-officer's farm (but which, judging from its population, had always contained a number of cottars or sub-tenants). The grazing of Laimshader was probably returned to the Borroston crofters about 1886, having been part of Linshader farm and, in 1891, six new holdings were formed at Lundale, also part of the same farm. At the same period, under the new Act, the crofters of Crowlista, Valtos, and Kneep applied unsuccessfully for enlargements from the farms, but during the nineties the islands of Little Bernera and Eilean Kearstay were taken off Linshader farm and added to the townships of Bernera, and Valtos obtained Pabay Mor.

[471]

After the first World War re-settlement schemes went ahead with renewed vigour. Men serving in the Forces expected land to be available for them on their return and they were impatient to get it. By this time the Lewis estate belonged to the Lewis and Harris Development Co. - in other words to Lord Leverhulme. The farms of Mealasta, Reef, Carnish and Ardroil were all without tenants; Leverhulme agreed to break them into crofts, the Board of Agriculture surveyors were speedily put to work, and the new settlers were able to commence cultivation on March 1, 1921. Timsgarry farm, with which was the Uig shooting lodge, was in the hands of a tenant; but the Board obtained possission, reserving a small area around the lodge for amenity. Croir farm, Bernera, was also broken up. More than 50 new holdings received enlargements to their common pastures; details are given in Figure 10 and table 8, (pages 22 and 23). The schemes were done in haste, the Secretary for Scotland pushed them forward in the face of some opposition from Leverhulme. Here, as elsewhere, the ex-servicemen were restive; land raids and violence, with inevitable political repercussion, were feared.

In 1924, Linshader farm was threatened by land raiders. As a result this, too, was broken up and 10 new holdings were occupied as from Whitsuntide, 1925. This was part of the Grimersta sporting estate and the proprietors required that all the ghillies be given crofts. Linshader was not particularly suited to crofter-management: it consisted of 49 acres of old arable land and more than 8.000 acres of rough pasture, the furthest part of which was five miles distant and without road access. When the Land Court fixed the souming the following remark was recorded:

"Under a club stock" (i.e. a single flock) the moor "might have been exploited to a very different extent, but in view of the fact that individual stocks are to be kept" (i.e. each crofter his own shepherd) "which is not conducive to hefting, ... 30 sheep per share will be ample. If the whole outside ground were being fully made use of by the sheep stock the grazing of ten cows should do no harm .... but the wintering afforded on the holdings does not justify a larger souming" (than one cow). It had, in fact, been the practise at Linshader farm to buy in young cattle for summer grazing, and to send away the lambs to the Dingwall area for their first winter.

Finally, in the thirties, two long established cottar families at Aird Bheag an isolated spot on the Uig shootings, applied for and obtained recognition as crofters. Their holdings have since been abandoned and now form part of the sheep farm operated by a syndicate of four Breanish and Islivig crofters. Finally, in 1935 a further 12 new holdings were formed by a partial break-up of Garynahine farm. Thus in all, 140 new crofts and 45,000 acres have been added to the crofter holdings of Uig since 1878. During that period the population of the parish has declined from 4,500 to 2,700. Neither the formation of new crofts, nor the enlargement the old, has prevented depopulation. Little, if any, more land is available and depopulation continues. The only hope, now, is to make the existing land - individual holdings and commons alike - more productive.

[161]
[162]

Table 8 and the map, figure 10, illustrate the progress of resettlement.

Crofts and Crofters.

491
427
311

The parish of Uig is now mainly owned by five small limited companies: Uig Crofters, Bernera Crofters, Grimersta Estate, Carloway Estate, and Lewis Island Crofters. In addition, when Lord Leverhulme sold the Lewis estate a few crofters accepted their holdings as free gifts; consequently they lost legal crofter status (which is confined to tenants) although they continue to share in their respective townships. More recently four crofters in the south purchased some 2,000 acres of rough sheep grazings, including the now defuncf settlement of Ard Bheag. There is no official record of the extent of crofters' land, but we accounted for some 95,000 acres (table 9). The remainder con-

e in area, then the amount of stock allowed, per pound sterling of rent, ought to be
ed, too.

his does not appear to have been done in Uig although in Stornoway parish the soum
ound was increased after rents were reduced in the late nineteenth century. More
tly, the Crofters Commission, in re-stating soumings for some townships, has
ally (but not invariably) applied the soum to the 1886 rent, regardless of the wording
1912 regulations. This may appear to have the merit of consistency and, insofar as
ers pay any attention to the Regulations, it satisfies them because the greater (1886)
gives them a larger soum and less likelihood of being criticised or penalised for
stocking. However, it perpetuates inconsistencies which originated during the nine-
h century when the stock allowed per pound sterling rent was not reduced although
rentals were increasing as squatters' and cottars' holdings were added (see page
e). Moreover, the old souming referred to the old type of highland cattle which were
h smaller beasts than those kept today, and it assumed that the shieling pastures would
n full use. A further complication arises because about 1920 some townships acquired
stantial enlargements but the soumings do not appear to have been adjusted. Altogether
little wonder that the Grazing Regulations are seldom observed, for they seldom bear
close relationship to the grazing capacity of township lands. Proper observance of
efully revised Regulations, in which unlimited substitution of sheep in place of cattle
specifically forbidden, would be of considerable benefit to the crofters.

The inbye, or croft, land is invariably separated from the common pasture by a ring
ce, the gates of which are generally closed for protection of crops from May to
vember. Progressive townships are installing grids to obviate the twin nuisances of
ffic interference and straying stock. The fencing of individual crofts was rare until the
0's and is still by no means general. The inbye land is, in many townships, the best
nter grazing and its division into innumerable tiny fenced patches, whilst advantageous
r cultivation, would restrict the movement of stock in search of water and shelter; in a
edominantly pastoral economy complete enclosure of individual holdings is not
cessarily an advantage. This problem will be discussed in Part III but, in the present
ntext, it is relevant to point out that the small crofts of Lewis contrast strongly with
e larger ones of, for example, the Uists and Tiree. Therefore, what may be
dvantageous in the latter may be retrograde in much of Lewis.

The lay-out of the crofts aggravates this problem. The long narrow strips of the 1850
otting, well-suited to spade cultivation and common winter grazing, may require four or
ve times the length of fencing required by an equi-dimensional croft of similar area. If
enced the stock may be deprived of both water and shelter; since arable cultivation has
ecome relatively unimportant a suitable solution to this problem might be to fence a small
otato plot near the house and to put the rest of the inbye down to sown grass in three or
our communal parks in which grazing could be properly controlled. A particular problem
s posed by crofts which have been sub-divided. These may take the form of strips as much
s half a mile long by 10 yards wide or, more commonly (and much worse), of piece-meal
haring of innumerable plots, a system known locally, but incorrectly, as 'run-rig'. This
s seen at its height in Kneep (fig 22), where every croft in the township is affected. The
problem does not arise in townships with large crofts, which are usually more nearly
equi-dimensional. These are mostly the result of re-settlement schemes and have long
been fenced, (see, for example, figure 15).

Crofter-tenants.

An analysis of crofter-tenants according to age, sex and occupation (table12) provides

CHAPTER FOUR

THE ATLANTIC COAST

(Brenish, Islivig, and Mangersta)

by

Pamela M. Gough.

131 Brenish, Islivig and Mangersta are situated in the extreme south-west of Lewis, on the Atlantic coast of the parish of Uig and forty miles from Stornoway.

133 Brenish has a south-westerly aspect whilst Islivick faces north-west; in both the elevation of the crofts decreases seawards from about 125 ft. in the east to 50 - 25 ft. in the west. Only one croft in Islivig, and the eight most southerly crofts in Brenish, run to the sea - the rest obtain some shelter from a line of low hills about 300 yards wide and rising to a little over 100 feet, which forms their western boundary. The land terminates in low cliffs from 25' - 100' in height, and a rocky foreshore. Behind these townships to the east a range of mountains from 1,500' - 1,800' in height and dominated by the highest hill in Lewis, Mealisval, (1,885'), gives protection from easterly influences.

134 Mangersta lies to the north of these mountains; here the crofts lie in a sheltered valley to the west of which the land rises to over 200 feet. The valley opens southwards to the sea where there is a sandy beach and machair. The crofts range from about 150 feet to 100 feet above sea level; those nearest the sea have soils which contain a substantial proportion of machair sand.

Soils are generally deep, and there are few rocky outcrops on the crofts which are fairly level. In Brenish and Islivig the soils are mainly peaty, becoming wetter in the west. Where visible the sub-soil is gravel or stony boulder clay. In Mangersta the transition from peaty soils on the northern crofts to sandy soils on the southern crofts, is marked by the increasingly continuous cultivation, drains being unneccessary on the latter.

137 There are no trees or shrubs, and vegetation consists of marshy grass moors in the Mealasta area with a considerable amount of cotton grass bog further north. West and south of Mangersta the machair area is characterised by a calceole plant community similar in content to that found in many parts of the chalk and limestone areas of England.

361 Brenish and Islivig are old settlements, never cleared. In both, the sites of the
[172] original clachans can still be seen clustered around the mouths of their respective streams. The houses are now situated at the east end of the crofts, near to the road.

175 To the south, Mealasta - cleared in the 1840's to make a sheep farm - was divided in
632 1921 to give enlargements to the common grazings of both Brenish and Mangersta. The
311 arable land was divided into twenty-nine shares as enlargements to Brenish crofts, and is held in a modified form of runrig.

Mangersta was cleared in 1837 to make a farm; subsequently fishermen-cottars settled on the farm but they moved to Dun Carloway in 1873. In 1910, however, a new township of thirteen crofts was set up by the Congested Districts Board; the new settlers were cottars, mainly from Brenish.

233 no road and access by foot is difficult. To reach the grazings the crofters travel by boat from Mealasta several times a year and stay in one of the two houses at Aird Bheag which, although vacant, is still in repair. These houses were formerly occupied by estate employees who had crofter status.

511 From the above account, it is evident that in this district as in others, a single croft is not sufficient to support a crofter and his family. On an average, each resident crofter has acquired the equivalent of two crofts, and in addition each crofter supplements the meagre income obtained from his croft by some other occupation, e.g. weaving, labouring, or driving.

CHAPTER FIVE

THE UIG BAY DISTRICT

(Carnish, Ardroil, Timegarry and Crowlista)

by

Elizabeth Blowers.

134 Uig bay, in which low tide reveals several hundred acres of pure white sand, is surrounded by crofting townships. There are no extensive machair plains but the shell-sand forms a fringe of easily cultivated, lime-rich soils on all sides except Crowlista, and, blown inland by the Atlantic winds, it modifies and improves the texture and acidity of the
361 peaty soil as much as 2,000 yards from the shore. It is not to be wondered at then, that
[175] this bay at one time formed one of the most important centres of population in Lewis. Signs of ancient cultivation, and the ruins of old clachans, are widespread, but most of the present settlements are less than forty years old: almost the whole area was cleared to make farms in the early nineteenth century. Only in Crowlista, with its thin, rocky, arable land and almost complete absence of machair, were the small tenants left undisturbed.
[121] Consequently the district provides an opportunity to compare "old" and "new" townships, both as to lay-out and operation.

133 Carnish, in the south-west, is dominated by a huge gravel ridge - probably an esker, -
361 over a mile long and sloping steeply to the estuary of Amhuinn Chaslabhat with the rocky headland of Machair Carnish to the north. The arable land and houses of Ardroil are situated to the landward side of the hummocky machair land between the esturies of Amhuinn Chaslabhat and the Forsa river which drains Lochs Suainaval and Stacsavat. To the north of the bay the old settlement of Crowlista is situated on the rocky headland to the west of the Rethall embayment; there is a good deal of level land in the centre of the township but the slope to the estuary in the north is steep and rocky outcrops occur on the headland. Timegarry, to the east of Rethall, stretches inland between the headlands of Tolanish and Borranish along the valley of the Erista river.

134 There is a mantle of gravelly drift over this area; the Carnish esker has been mentioned and exposures of up to 120' were also seen in gravel pits in Ardroil and Timegarry. Along the coast blown shell sand rests on this drift and reaches inland for up to half a mile.

175 427 Thus, towards the end of th
pressure of population within,

were vetoed by the Crofters Commission whose
unsuitable. Both have since been re-settled by crofters.

235 hundred and thirteen - but most crofters had from forty-five to one hundred and twenty. Wedders are sold at two-three years old when the mutton is said to be at its best.

231 Parts of the common pasture - usually the machair, are set aside for wintering hogge but the usual practice is to keep as many as possible on the croft. The soum as a whole
[427] is not enforced but shares in the wintering parks are adhered to. For example:- Timsgarry Glebe is leased to Crowlista and one share entitles a crofter to winter twenty-five hogge on it. In Ardroil one share allows one cow or four yearlings or eight sheep or eight hogge
[232] on the machair - in practice it is the best hogge that are sent. The minister at Timsgarry, who is much interested in sheep husbandry, has bred a heavier sheep with longer legs by crossing the Hebridean blackface with Swaledales and these seem to be doing very well; the minister is more attentive to his sheep than are many of the crofters, but some local crofters are showing interest in this crossbreed. The lambing percentage, so dependant upon the winter and spring weather, was about 80% in 1959 and this was regarded as good.*

Enquiries show that some crofts in each township far exceed their souming but because others carry no stock the four townships are understocked according to the total soum, here expressed in cow units. Sheep stocks in Timsgarry approximate to the sheep soum, Crowlista is overstocked by 130%, while the other townships are understocked.
[235] Some of the figures used for sheep stock were approximate or estimated. Nearly all crofts keep some poultry and surplus eggs may be sold to the grocery vans.

The rhythm of work on the croft during the year is shown on Figure 16, overleaf.[1]

241 Part of the hill common west of Crowlista was cultivated until the beginning of the
175 present century, at which time the township was overcrowded with two or three houses on
[361] each croft. A similar area west of Carnish was cultivated and old lazy beds, now grazed, are to be seen on slopes south of the road in Ardroil, in the valleys of Amhuinn Thoraghain and Allt a'Gharaidh and on the Borranish peninsula. The ruined shieling huts for this area, still to be seen around and beyond Loch Suainaval were in use until 1934 - '35. (Figure 5).

464 Ancillary employment is sought by all but nine of the thirty men under sixty-five in these townships and the wives of two of the 'full-time crofters' have regular employment.
228 There is no commerical fishing by local boats though the Bernera lobster boats are seen frequently off Uig Bay. The ruined curing house and piers at Crowlista, and the 'port' shown on the O.S. map near the site of the clachan in Carnish, point to the former importance of fishing.

288 At present the weaving of Harris tweed from yarn supplied by the Stornoway mills is more lucrative. There are two looms (plus one other weaver) in Carnish, two in Ardroil, three in Timsgarry and two (plus one other weaver) in Crowlista. All these looms were in use and two tweeds woven a week bring in a useful income but the supply of weaving is irregular. The future security of these weavers depends on the prosperity of the Harris tweed industry.

464 Mitchels's sand and gravel quarry at Carnish provides employment for from three to
[316] ten men. Five men from Ardroil and one from Carnish are employed there at present.
[712] The Aird R.A.F. station draws most of its civilian employees from Aird Uig but two
[377] Ardroil men work there. One Crowlista man is employed at the hydro-electric shceme
[446] site at Gisla and this work will last for another year or two. Employers recognise the particular needs of their crofter employees and 'days off' are allowed for sheep fanks and other necessary work.

* The minister's swes gave 103%.

1. [For Fig. 16, see page preceding p.38--Analyst]

511 It is obvious that crofting no longer affords a livelihood in Aird; the only two families
[46] without ancillary occupations are those where all the members are elderly. Of the others
[288] with members in the working age-groups, five have one or more members employed in a civilian capacity at the R.A.F. station and there are five regular weavers.

621 Aird used to be a self-contained community; the land was fully cultivated and a certain
178 amount of fishing was carried on in spite of the difficulty of drawing up the boats over the rocky beach. Now it is prosperous, but very much dependent on the R.A.F. station, and if this should ever close down, most of the younger people would have to leave in search of other employment.

CHAPTER SEVEN

VALTOS, KNEEP AND REEF

by

David G. Symes.

131 On the eastern side of the Aird peninsula, facing east to Loch Roag is a secondary
133 peninsula of more moderate, but none-the-less broken relief. This, together with an adjacent area of the main peninsula, the islands of Pabay, Vacsay, Vuia Mor and several smaller islands, comprises the territorial limits of the townships of Valtos, Kneep and Reef.

133 This secondary peninsula is accidented in the extreme, with outcrops of bare rock and steeply angled small hills. The relief is greater in the west (summit 450') than in the east (summit 275'). Relatively level land is to be found only on the machairs of Reef and
133 Cliff (the latter only poorly developed) and on the glebe at Uigean. The Reef machair,
134 about 180 acres, consists of a succession landwards of tidal sands, a belt of sand dunes (c. 20' O.D.) and a sandy plain sloping gently inland towards a reed filled lagoon. The machair at Cliff is approximately 40 acres in extent; here there are fixed dunes and, in addition, the sand has been blown inland to at least 100 ft. O.D. Except where the machair sand has drifted upslope to produce a "brown machair" of mixed sand and peat, the thin soils of the Valtos peninsula are predominantly peaty. Although the length of the peninsula faces north the extremes of Atlantic weather are moderated by the protection afforded by the Aird peninsula and the islands of Pabay and Vacsay.

175 In the period before the lotting of crofts the whole peninsula was occupied by some five
427 clachans - Valtos, Cliff, Kneep, Uigean and Reef - some of which shared common pasture
361 During the early part of the nineteenth century and earlier, apparently, than the 1850 lotting
[633] carried out in most of Lewis, crofts were allotted in each of the clachan areas: Valtos and Cliff shared a common pasture and so became one township; similarly Kneep and Uigean were combined.

175 In Kneep it seems that the croft boundaries were not accepted by the crofters. Certain
311 basic divisions between groups of crofts (usually three in number) are discernable today,
427 and within these basic divisions a certain regularity of distribution of strips persists, but

the crofts at Kneep are still highly fragmented: the fifteen crofts comprise over one hundred and eighty separate arable plots. The lotted crofts at Reef were cleared in 1842 to provide land for a sheep farm. Plans to clear the remainder of the Valtos peninsula were thwarted by the Fisheries Board because Valtos and Kneep were then good centres for the white fish industry. As late as 1892 Valtos and Kneep had forty boats, providing employment for one hundred and forty-five men. Valtos with thirty-two boats and one hundred and twenty fisher-men was second only to Carloway as a fishing centre in Uig. With the prosperity of the fishing industry, the population of Valtos and Kneep had risen rapidly - from 467 in 1841 to 659 in 1891. Some, at least, of the subdivisions of Kneep date from this period. Reef was scheduled by the Deer Forest Commission (1896) for resettlement by crofters and in 1908 an attempt was made to do this, but agricultural experts advised against it, on the grounds of poor water supply, scarcity of arable land (only ninety-three acres old arable) and the risk that, if cultivated, the machair would suffer wind erosion. Nevertheless, in 1921, Reef was resettled by ex-servicemen from Valtos and Kneep. At the time the sheep farm was only carrying a stock of one hundred and seventy sheep - less than half the crofters' sheep stock in 1959.

Tables 15 - 18 summarise the more significant points of the economy of the Valtos peninsula. Table 16 illustrates the fact that the economy is in decline. Only two-thirds of the total possible units are being worked. Many of the crofters have abandoned their crofts and the younger generations are unwilling to take over. Of those remaining to work the crofts 18% are over sixty-five, and a further 47% are between forty-five and sixty-four.

CHAPTER NINE

THE ISLAND OF BERNERA AND

ADJACENT DISTRICTS OF THE MAINLAND OF

LEWIS

('Bernera and Bernera Shore')

by

P. Wheeler

Of the three main sections of the parish of Uig, the Bernera district, consisting of Bernera Island (Breaclete, Croir, Hacklete, Kirkibost and Tobson) and the "Shore" (Earshader, Crulivig and Lundale together with the isolated township of Linshader), presents a number of peculiarities due not primarily to physical conditions, but to isol Bernera Island, though central to most of Uig and easily accessible over the sheltered waters of Loch Roag, yet remained relatively inaccessible overland until the recent building of the road bridge; even now it is necessary to travel over six miles to get fr the bridge to the main Uig road and a further four miles to Garynahine. Consequentl the island, even more than the adjacent mainland settlements, has a very close-knit a self-sufficing population. Whether this community retains sufficient vitality to resist the destructive effect of better communications in addition to the general forces erodin rural and especially Highland life, remains to be seen.

The district shares the unpropitious physical characteristics described in the Intro duction. Like the other districts it has virtually no valuable mineral resources (1), a the herring and white fish industries have all but disappeared and seem unlikely to resuscitated. Lobster fishing is, however, prosecuted with vigour and enterprise; i provides a good living but only for a small group of families. The rest depend on regular or casual employment to eke out the proceeds of the croft. The kinds of work available, and the problems of permanent or seasonal absence in search of employme are common to the whole parish; thus this account is mainly concerned with the probl of crofting agriculture.

Settlement: history and patterns.

The pattern of settlement in this inhospitable and discouraging environment is part very old, and partly very recent. At least four brochs are known on Bernera and var standing stones of even earlier date, while continuous settlement has survived from th early Christian era. Traces of old patterns and practices remain, in tangible form a in the graveyard on little Bernera, or in oral tradition. All this contributes towards very close network of family relationships that binds the island folk and to a lesser ex those of the adjacent mainland.

With the exceptions of Tobson, Bosta and Breaclete, all Bernera Island had been cleared by 1851. Resettlement began in 1878 when twelve families were moved from Bosta to Kirkibost, and continued at Hacklete in 1880, and subsequently elsewhere. Occasionally (as at Kirkibost) old, pre-clearance lotting patterns were re-adopted, bu usually settlement was laid out afresh. The townships of Bernera Shore, were also affected: all the small tenants except those of Earshader and Crulivig were cleared, leaving the land under the sheep farms of West Earshader and Linshader. However, Bernera Island crofters were allowed to continue their customary use of sheilings on mainland, and the transfer in 1880 of these grazings to their present position marked

(1) A small deposit of diatomite has been exploited in Kirkibost since 1959. Only a men are employed and the number is not likely to increase.

[TEXT CONTINUED ON PAGE 61]

eginning of the resettlement movement which has given the modern crofters of the istrict almost all the lands formerly occupied by small tenants. This process was ompleted in the Bernera region soon after 1918, and the problem now - one which is bviously going to become increasingly important - is not to give the crofters more land, ut to find active crofters for the existing holdings (see Chapter III for more detailed nformation on clearance and resettlement).

The ground plans of the existing settlements vary considerably, depending mainly on he terrain. Where a township is spread along a fairly straight coast the natural endency is for the croft boundaries to run at right angles to the coast and for each house o be set on its own croft. The best examples of this are Hacklete and Kirkibost, where n early nineteenth century (i.e. pre-clearance) lotting was readopted when the township vas re-settled in 1878. Linshader, Lundale, Crulivig and Earshader also follow the ame type of layout as nearly as possible, but Tobson, with the exception of Valasay, is ntermediate between a lotted and an unconsolidated township. Croir also differs: it vas laid out in 1921 but the disposition of the potential arable forbade a coastwise rganisation. The site of Breaclete is greatly broken by lochs and a sea inlet, and onsequently an essentially regular layout based along a main Loch Breaclete - Loch eg Breaclete axis, appears somewhat complicated. The accompanying diagrams ontrast the control exercised by physical conditions at Croir with the subordination of hysical conditions to a simple lotting plan at Hacklete, (Figure 28).

Within the townships, with the exception of Kirkibost, the distribution of settlement eems to have changed little since the original lottings, for in most cases the sites of the ld and present dwellings are little further apart than is dictated by constructional roblems. It would appear generally that black houses were universal in the nineteenth entury except for the farmhouse at 1 Croir (the oldest 'white' house in Bernera), Thule House, (18 Tobson), possibly the tacksman's house at 11 Hacklete, the former farmhouses t 20 Kirkibost and at West Earshader. However, with the establishment of Congested Districts Board and of Board of Agriculture grants, housing was improved, early examples eing 5 Hacklete and 10 Breaclete. The resettled townships generally had improved ccommodation from the start. Improvement has greatly accelerated since 1951. In most cases at the present time housing is of very high standard, only one blackhouse and one near blackhouse are still occupied.

Water supplies and sanitation are less satisfactory. Most crofts by now have their rivate water supply, thought it is hoped that mains schemes may be constructed within he next few years. Sanitation varies in standard and in places there are still open ditches, but all the newer houses have water closets. It is worth remarking in this connection that tuberculosis is almost eliminated. Electricity has been available since 1952 o all crofts and most are connected, though not necessarily in every room. Cooking is ometimes by electricity but more commonly by Calor gas and a peat-fired range or stove open or enclosed). Peat is cheap to those able to gather it themselves. Where, however, help is needed to carry the cut and dried peats to the nearest road, difficulties may arise. The cost of hiring labour for peat cutting may be such that it is cheaper to buy coal.

Access to Bernera by road is now comparatively easy. Where formerly Loch Roag provided the highway of communication, the road built to Earshader after the Great War, and the £87,000 bridge to Bernera Island, built in 1953, have caused a revaluation of sites. Linshader is approached by a tarred branch road and the other Bernera shore townships lie upon the narrow and twisting main road, though four of the six Lundale crofts have no connection with it, and two of the Crulivig crofts, and West Earshader, are somewhat isolated. On Bernera Island the old cart track from the pier at Barraglom across to Tobson and Croir has been somewhat re-aligned since the construction of the bridge. This is a good tarred road, as is part of the branch to crofts 3...8 Croir. The old road to Kirkibost was tarred in 1959, though three outlying crofts near Barraglom were still without a road suited to vehicles, and the branch within Breaclete remained untarred. There is a new road to Hacklete from Breaclete which provides tolerable, though circuitous, communication. Valasay is one of the most isolated settlements in Bernera, linked with Breaclete rather than with Tobson by the footbridge and causeway paid for by Congested Districts Board grant about 1903.

CHAPTER TEN

EAST LOCH ROAG DISTRICT

(Garynahine, Callanish, Breasclete, and Tolsta Chaolis)

GARYNAHINE by Anne Iredale and Jennifer Oxenbury.

131 Garynahine is a townships of twelve crofts which are situated on the eastern arm of
632 Loch Ceann Thulabhig. The crofts nowhere extend more than one-third of a mile from the coast. There is a hinterland of about 1,800 acres of common grazing, which is
133 mostly about 100 ft above sea-level, though it rises to 200 ft in a few isolated areas; the crofts are lower, and maximum elevation is 80 ft.

Most of the croft land is drained by the stream Allt Mhurchaidh which flows through
134 all but two of the crofts. But the soils are heavy, and several crofters cut peat on their crofts. Many crofters complained that their land was too peaty for cultivation.

361 The crofts form a regular pattern beside the south side of the main road from Stornoway to Breasclete, with two small feus and a 21 acre freeholding on the north side of the road. In addition there is a farm (Garynahine Lodge) of 400 acres east of the crofts, and likewise stretching along the south side of the Stornoway road. The main road to Uig passes through the farm, dividing the cultivated area in the west from the grazing section.

195 The regular lay-out of the crofts dates from the formation of the township in 1935.
361 On the same site, but long cleared, there had been an older village about the same size i.e. twelve crofts, known to be in existence in the 1850's. The crofts were in a similar position, but were a different shape, and the ruins of some of the croft houses still remain. This village was completely burnt out one gusty winter evening when, it is said, a spark from a crofter's pipe was blown onto one of the thatched roofs, and the wind quickly spread the blaze to consume the entire village. The crofters left the area, many going to the neighbouring township of Callanish; Garynahine then became one large farm until 1935 when the land was re-allocated into crofts. The new crofters came from a variety of areas, several coming from Crulivig, others from Breasclete and Callanish. The owners of the farm had also opened an hotel which prospered until 1945 when the farm was sold to its present owner Admiral Drummond, who has since used the house of a
241 private house. Nine acres of the farm land is cultivated, and the remaining 391 acres
311 are used for grazing. In contrast to the usual practice in this area the oats have been undersown with rye grass. Another beneficial innovation at the farm is the introduction of shelter belts. Trees have been successfully planted, making it possible to produce good crops of soft fruits such as raspberries, strawberries etc. Both the crops and the stock on the farm are of a high standard, showing that with capital and correct management the land can be remarkably productive.

In contrast to the large scale economy of the farm, the twelve crofts (ten operative units) are each between 4.6 and 6.2 acres, and the total reputed arable is 67.3 acres. In all there are only 9.5 acres under crop (oats 6 acres and potatoes 3.5 acres), and 2.25 acres under sown grass. The crofts are worked either by spade, horse (hire from croft 40 Callanish) or by tractor (hire from the Lodge). The seasonal rhythm of cultivation and of stock rearing is that in Callanish.

Enquiries soon reveal that crofting is not the main occupation of the croft tenants. Another indication of the declining interest in the land is the fencing of the crofts. All were fenced when they were formed in 1935; since then there has been no refencing. Now a grant is available to pay 75% of the cost of re-fencing but little has been done.

231 Stock totals (see Appendix C) have declined recently and this trend will probably continue. There are only four cows and two calves in the township (plus six at the farm).

There is no bull in Garynahine; the Department of Agriculture bull from Callanish is borrowed. Most crofters buy their milk either from the Admiral at the Lodge or from Stornoway whence a dairy delivers daily.

Eight crofters keep sheep; stocks vary between 5 and 30 per holding. Two crofters exceed their souming (there is no equivalence in Garynahine because there has always been plenty of pasture). With a total of only 166 sheep and lambs on 1800 acres common pasture there is no danger of over-grazing.

The village has a good piped water supply from Loch Mhurchaidh, and has had electricity since 1954. There are excellent communications: 4 buses a day to Stornoway and also one bus from Uig and one from Bernera passing through Garynahine. These good communications have probably contributed to the declining interest in crofting.

There are only three full-time crofters (two of whom draw war pensions). Of the remaining 12 adult men permanently resident, 10 have regular or part time work, the remaining two being to old. Employment is either in Stornoway or at the Lodge. Only two people do part time weaving. Crofting is rapidly decaying in Garynahine. The croft land is reverting to rough grazing, and there is no indication of renewed interest in the land. Instead, life is becoming increasingly orientated towards Stornoway.

CALLANISH by Anne Iredale and Jennifer Oxenbury

Callanish must be one of the original settlement sites of the Hebrides, as it boasts an impressive standing stone circle and two other groups of stones. The stone circle is on a promontory, which projects into East Loch Roag. The promontory rises to about 125 ft, and then the land drops almost to sea-level at the neck (less than half a mile wide) which joins the promontory to the mainland. The township extends inland for about six miles in a belt roughly two miles wide. This inland area forms the common grazing; it is rough hummocky moorland with the general height rising gradually inland; the highest point is 425 ft.

The early crofts were situated close to the stone circle overlooking the Loch. The area was given to crofters who had been cleared from Linshader in the eighteenth century, and it is said that until the Crofter's Act the Callanish crofters had to return to Linshader to work for one day a year in return for this grant of land. But later the crofts on the more exposed westward facing side of the promontory were cleared and replaced by the 90 acre Callanish Farm. Some ruins of the croft houses still remain. The crofts then spread across the low lying neck to the main road from Stornoway to Breasclete, which now forms the boundary between the croftland and the common pasture. The croftland varies in quality, but it is mainly quite good potential arable. Fertilizer and manure are extensively used. Seaweed was widely used in the past but in more recent years the labour of gathering the seaweed has been out-balanced by the lower price of the artificial fertilizer. The main problem of the crofters is one of drainage, and in some parts the drainage channels have to be as wide as the strips of cultivation. Croft 29, situated on a small peninsula from the neck of low lying land, is almost cut off from the mainland at high tide.

The croft houses were then in two nuclei; one on each side of the narrow neck. Much later a third nuclei developed, known as Callanish New Park, further north along the Stornoway road, formed by evicted crofters from Bernera; they had put to sea in small boats with their belongings, and they happened to land at this point. They first became squatters on the common grazing but later gained crofter status.

There are 47 crofts in Callanish which vary in size from 2 acres to 9.7 acres. Some of the larger crofts are a result of private enterprise; the crofters have, without any

[TEXT CONTINUED ON PAGE 89]

authority, simply moved their fences and enclosed part of the common grazing. For example the crofter at 37, instead of having only the 6.7 acres of the croft has now almost 10 acres of land, of which the remaining 3 acres have been 'acquired' by enclosing part of the adjacent common pasture. Some of the crofts are in two or three pieces, and in some cases this came about in the late nineteenth century when the proprietor's wife, Lady Matheson objected to the position of some of the croft houses because they were too close to the standing stones. Croft houses 25 and 26, then near the stones, were moved to the other side of the village and given parts of crofts 1 and 2 for their houses. Crofts 1 and 2 were given parts of crofts 25 and 26 as compensation for the parts of their crofts they had lost. Croft 27 also lost part of its croftland close to the stones so that an enclosure could be made around the stones. About the same period, before the passing of the Crofter's Act (1886), when the village was still 'ruled' by the township constable, and several other changes took place. Croft 27 and 28 used to be where the croft houses are at present and the surrounding adjacent area only; but it is said that the tenants of these two houses, being influential with the constable, obtained part of Callanish Farm. Similarly the tenants of crofts 30, 31 and 35 divided part of croft 19; these changes have become permanent. The most recently formed croft was taken from the common pasture in 1890. Since then three feus have been created, but two of these are holiday houses and the third has only 0.5 acres of land.

There are 36 working croft units with a total of 134.4 acres reputed arable. All but 4 croft units grow oats, and there are 20 acres under oats (appendix C). Of the remaining cultivated land 9 acres are potatoes and 5 acres sown hay. Most of the land is cultivated by tractor; there are 6 tractors in the township. In the past there were several horses but now there is only one. Five crofters still cultivate by spade. The crops are sown in April, and the hay is usually harvested in August and the oats a month later according to the weather.

Thirty-one cows, six heifers and 25 calves are kept in the township and tethered most of the year on the crofts. It is usual for the crofters without a cow to graze one of their neighbour's cows for part of the year in exchange for milk. There is a beef-type shorthorn bull belonging to the Department of Agriculture, which is kept on Callanish Farm.

The 5,302 acres of common pasture support an individually owned stock of 904 sheep and 561 lambs. Several crofters exceed their souming, but there is no shortage of grazing. Some of the sheep graze on Garynahine township pasture. Callanish also has the use of the pasture on Orasay island; each year some of the sheep (one sheep or ram per croft) are taken across by boat for a period. The breeding ewes are brought in for tupping on November 14th, after the harvest is complete, and lambing takes place in April. The crofters open their gates for winter grazing from November 1st to May 10th; in addition Callanish Farm (which has no sheep) is open for winter grazing. The sheep are sheared in July, and the lambs are taken from the ewes a month later. The lambs are dipped in November and the other sheep in December. Shielings at Flodavat are known to have been in use until 1921.

Communications are quite good; the village is close to a main road to Stornoway, and there are four buses a day. But within the village itself many of the so-called roads are merely rough tracks, and one croft, number 29, is inaccessible by motor vehicle; it is over a mile from the nearest track, separated from it by rough peat land. This year a grant from the council was made towards the cost of construction of a road to this croft; but several of the Callanish crofters who cut peat on the intervening land refused to allow a road to be built; and so croft 29 is still almost cut off from the rest of the village. There are two shops in Callanish (one with a petrol pump); grocery, butchers' and fish vans deliver frequently. Callanish also has a stone jetty which in the past was important. There was a ferry for mail and passengers from here across to Uig and Bernera calling at Linshader, which gradually declined in importance until the 1920s when it ceased to call at Linshader. The ferry to Bernera finally ceased in 1940 when the ferryman (who lived at Callanish Farm) left for war service. After this the jetty was still used by small private boats (e.g. Callanish church serves Linshader, and many people came to church by boat until recently), but gradually it has fallen into disuse.

There is no piped water supply and after even a short period of dry wea water shortage. One prosperous crofter (where the crofter does weaving of the family is periodically away with a Norwegian whaling fleet) bought a Bendix electric wa r only to find that there was not sufficient water to us rare occasions. The croft houses have had electricity since 1954, and eve remaining inhabited thatched houses now have electricity.

Although there are only 4 full-time crofters, most of the crofts are car worked. Only a few crofts are decaying, and there is a tendency for these to the more agriculturally inclined crofters instead of allowing the land to addition to the full-time crofters, 31 other men do part-time crofting. El weave and this provides their main income, but this figure fluctuates accor prosperity of the Harris Tweed industry; at present the figure is probably average. Although 32 people have emigrated from the township since 1939 young people who have married on the mainland), there are still several yo young families making their homes here. The dominant age-group of perm dent adults is 15 to 44. Total population is steadily declining, but Callanis been a prosperous area and seems likely to remain among the more prospe communities.

BREASCLETE PARK by Margaret Grice and Doreen J. Phillips

Breasclete Park, also known as New Park, Callanish, was settled by p from Reef in the mid 19th century. Two of the six original crofts have bee making nine. However, there are only five working units and on one there vation. There is also a feu house built in 1958.

The crofts, which are fenced, form broad strips perpendicular to the B Callanish road. Cultivation is mainly by tractor, oats, potatoes and some c grown. One progressive crofter has successfully experimented with re-se acre of grazing land on his own croft. Common pasture for the 148 sheep is shared with Callanish, and for most purposes the Park can be considere that township.

The total population is 26 of which 4 are permanently away. There are 65, and 8 children under 15.

BREASCLETE by Margaret Grice and Doreen J. Phillips.

Breasclete is situated on the east side of East Loch Roag on land which from the seashore to the moorland and is interrupted by rocky outcrops of northern part. It is separated from the township of Callanish to the south, westerly flowing stream, at the mouth of which is the site of a mill.

The road on which most of the houses are situated, follows a curve thro middle of the crofts, but newer houses and some feus have been built along Callanish-Cartoway road, nearer to the shore. Stornoway is 18 miles awa road which is turned throughout. Breasclete could be served by the still u Pentland Road, were it to be properly surfaced and this would make the jou by 4 miles. Two buses in each direction per day connect the township to S high fares make visits to the town infrequent.

The township hopes to receive the mains water supply within the next fe at the moment, relies on wells within easy access of most of the houses. have piped water from private wells, some of which go dry after two or thr weather although the wells on the lower ground never fail.

CHAPTER ELEVEN

THE CARLOWAY DISTRICT

by

Brian Loughbrough

131 The seven crofting townships of Upper Carloway, (including Carloway Park), Borrowston,
133 Garenin, Knock Carloway, Dun Carloway and Kirivick form a compact area of land in the
north of the Parish of Uig bordering the coast and Loch Carloway. Here the Lewisian
[103] gneiss has a thin discontinuous covering of glacial drift which is most extensively
developed immediately above the head of Loch Carloway. Three valleys help to deter-
361 mine the layout of the townships and settlements (figure 37). The townships to the north-
west of the Carloway river are found on more gentle slopes than those to the south east
133 where the slopes are less uniform and are less uniform and are often broken by short
steep rocky faces. The north western area therefore offers an environment where almost
continuous cultivation is possible whereas in the south east the frequent rock outcrops
have led to fragmented cultivation on minute plots which are inaccessible to the tractor
or other mechanised implements.

131 The soils are heavy and acid even on the skinned land of the boulder clay slopes nor
is there any machair to mitigate the acidity of the peaty areas which descend almost to
the shores. Only in one place is there any trace of the influence of the sand and this is
to be found where the crofts numbered 1 to 3 Garenin border the small bay in the north of
that township. Here the fierce gales have blown some of the finer beach deposits on to
the croft land.

Much of the peat has been cut from the inner common pastures except in the case of
Upper Garloway where active cutting is still taking place in the valley whose flanks are
131 occupied by squatter settlements, to the east of the football pitch. On the common
311 pasture the vegetation varies from peat moss and heather with bracken to fescue and
close turf on the skinned land by the road to Dalemore. On the upper common pasture
heather and bracken have increased since the abandonment of the shielings and the
reduction of the cattle stock; many inhabitants remember that the hills once had a much
greener aspect. Nor is this a feature confined to the common pastures; on one croft in
Upper Carloway 1.9 acres are completely covered by heather whilst a neighbouring croft
has a good crop of oats on similar land. At the loch in both Knock and Upper Carloway
areas of former arable land have reverted to moss, the old lazy beds being picked out by
lines of reeds.

361 Settlement. The settlement pattern is one of great interest for it shows in a clear way
the effects of the distrinct phases in the historical geography of the area. The evidence
of success and failure stands side by side. Before attempting to justify this assertion it
is necessary to give a brief account of the physical evolution and distribution of settle-
ment.

361 The origin of permanent settlement is believed * to have been the permanent occu-
pation of shielings used by people from Bernera until the eighteenth century. Until about
175 1850 arable land was held run-rig and the houses were huddled together in tight little
clusters. When individual crofts were lotted, about 1850, the houses werescattered,
each on its croft and generally up to fifty yards from the present road (which was then
361 no more than a rough track). Sea access was then most important but since the advent
441 of modern road transport new houses have been built nearer to the roads, producing the
178 modern markedly linear plan. The roads extend at different heights across the slopes

* based on information supplied by Mr Macleod of 27 Garenin.

17 or summer pastures for the tenants of Laxay and Earnish respectively, townships on the north
175 shores of the loch. In 1775, there were four tenants in Kershader, but their place of origin
162 is unknown. In 1805, five tenants are recorded, two of them from Uig; by 1824 there were 10
341 tenants. Thus the growth of population in Lewis during the second half of the eighteenth century
311 may well have been the major reason for the colonisation of one of the least agriculturally
161 attractive districts of the island.

From Figure 1, which shows most of the thirty-four occupied places south of Loch Shell about 1828, it is evident that colonisation had extended south into the mountainous area. The evictions, which commenced in Harris in 1814, may have increased the population already there as early as 1660, for many of these families came from Harris. The numerous Mitchells in South Park speak of a vigorous community; it is possible that South Park was more densely populated than the northern area up till 1800.

162 During the period 1818 to 1842, when the grazier, Donald Stewart, and his brothers had a lease
175 of South Park, most of these settlements were cleared (Fig 2); in addition, between 1838 and
341 1843, 68 tenants and sub-tenants in Shiladernish, Cleiter, Seafprthead, Lemreway, Oronsay,
311 Stiomrabagh and Isginn were removed, in all about 436 people.[1] Some 27 families were sent to
161 Crossbost in North Lochs; others went to Tolsta and Tong in Stornoway parish, and some emigrated. The main body of those evicted settled in the townships in North Park: Marivig in 1838 had 6 tenants; by 1850, 22 are recorded. Thus the present distribution of population crystallised about 1840 and by then the townships along the shore of Loch Erisort from Habost to Garyvard were well established. The Minch coast townships from Cromore to Gravir, first settled about 1800, were greatly expanded, and Park south of Gravir became a sheep grazing devoid of small tenantry.

175 In 1844, the Seaforth family, which had held Lewis for over two centuries, sold the island to
423 Sir James Matheson. The estate management soon wrought great changes in the landscape. Until
311 1850-52, the run-rig system prevailed, a system whereby a group of joint tenants, or a tacksman
341 and subtenants, cultivated in small patches what arable land had been reclaimed, each share
241 being periodically re-allocated. The crofts, or individually held land, date from 1850-52, when the land was lotted and most of the present crofts were formed at this period. The settlement pattern associated with run-rig was one of closely nucleated groups of houses but when run-rig was abolished, houses were built on the individual crofts.

In 1858, Lemreway was once again made available to crofters, most of whom came from the
175 fishing townships where population pressure was building up. After the disastrous potato famine
162 of 1846-7, and the final failure of the kelp industry from 1840 to 1844, the population of the Outer
423 Isles experienced great hardship. By the early 1850's, the lotting of the crofts and the rapid
731 development of the fishing industry brought a period of prosperity and the population grew rapidly
241 especially in the fishing townships of the Minch coast. The prosperity was such that numerous
161 cottars built houses on the lotted crofts, and their stock-keeping on the common was tolerated because of the demand for fishing crews. About 1884, the system whereby each boat was tied to individual fish merchants, who advanced meal and provisions against the catch, was discontinued. When this system was replaced by the auctioning of catches, such was the privation in Lewis that the Royal Commission investigating the poverty of the population in 1888 found conditions almost as severe as those prevailing during the potato famine forty years earlier. It was during this period that the Park Deer Raid occurred: Park became a Deer Forest in 1883 at the end of the grazier's
[685] lease. In 1888, as a demonstration of their grievances, a large number of crofters from the Park townships went into the Deer Forest and killed about 200 deer, cooking the meat in the open for all to see. Some were arrested but after trial acquitted.[2] A few good fishing seasons remedied this unhappy situation and the population of the fishing townships rose to a peak in 1911.

[115] 1 Evidence given to Royal Commission of Inquiry into Crofters and Cottars 1883. (Also known as the Napier Commission).

[113] 2 Report on the Conditions of the Cottar Population in the Lewis, 1888.

[113] 3 Stornoway Gazette, 27.1.59.

175 While the Royal Commission of 1883-6 was investigating Crofting conditions in Scotland, the
423 farm of Seafortlhead and Shiaidervish was restored to six crofters. Six years later, the Royal
311 Commission of Enquiry into the Highlands and Islands scheduled the following land as suitable for new crofting townships: Stiemreway, Eilean Calum Cille, Crobeg, and the islands of Oronsaich and Rossaidh, a total area of 153 acres arable and 3,502 acres grazing. A further 163 acres of arable and 46,135 acres of grazing in the Park Deer Forest were scheduled as land suitable for the extension of existing holdings. The Report of the Commission considered "that in the case of Lewis, it cannot be left out of view that the congestion is very great, and the demand by crofters for access to lands now scheduled is of a very urgent nature ..... The Deer Forest Commissioners do not believe that the lands now scheduled are suitable for new holdings but were these lands occupied as common pasture by crofters, under a properly adjusted system of management, their occupation would be of much advantage to the occupants and more than outweigh the disadvantages."[4] As a result of this recommendation, the islands of Rossaidh, Oronsaidh and Iubhairt, in all 90 of the 43,728 acres scheduled, were given to Marivig, Calbost, and Lemreway, respectively, as additions to the common pasture; the sheep farm comprising Crobeg, Oronsay and Stiemreway, and the Deer Forest were left undisturbed.

175 In 1924, after raiding, Oronsay was reconstituted as a crofting township, all but one of the new
423 tenants coming from the overcrowded crofts of Lemreway. An unsuccessful attempt was made by
432 squatters who had built houses at Stiemreway, to have their unofficial lots recognised, but some
311 families remained there till 1949. In 1934, fifteen small lots were cut out of the Gravir common
241 pasture to relieve pressure on the Gravir crofts: this Department of Agriculture scheme marked
[162] the end of a century of population redistribution.

Thus the full recommendations of the Deer Forest Commission have never been implemented, but one can only conclude, after a study of the crofting economy, that greater participation by the crofters in the Deer Forest grazing would bring increased viability to the crofting community.

175 The landscape of Park has thus experienced four formative periods. Of the prehistoric era and
423 the early historical period, when the Norsemen held sway, a few archaeological sites and a large
341 number of place-names remain. From 1660 until the early nineteenth century settlement was
432 slowly established and spread over all the coastal fringe: this period saw the maximum areal distribution of the small tenantry. From 1828 to 1843, eviction stripped the entire area south of Gravir and west of Habost of population, and large scale sheep farming was extended at the expense of the small tenants. The fishing townships from Cromore to Gravir were greatly expanded at
[161] this time. From 1884-1924, three of the cleared townships were reconstituted: the population in the majority of the fishing townships continued to grow till 1911. Since 1924, fifteen new lots have been formed in Park but the population has progressively declined.

The absence of large scale resettlement since 1884 differentiates Park from most other crofting districts, but the exodus of population since 1918 and the existence of a population constantly struggling for viability in an area deficient in resources are features common to the entire crofting area.

[119] 4 Report of the Royal Commission Highlands and Islands, 1892. (often known as the "Deer Forest Commission").

THE PATTERN OF CROFTING

423 Crofting, a distinctive system of land tenure, is confined to Argyllshire, Inverness-shire,
241 Ross and Cromarty, Sutherland, Caithness, Orkney and Shetland, the seven Crofting Counties of
[178] Scotland. Small agricultural units sharing rights in common land, usually pasture but in some
423 districts arable land also, survive in 151 out of the 163 parishes, and these holdings form the
477 nearest equivalent to peasant communities in Britain, although only a small minority of crofters own their holdings, and the true subsistence element, implicit in any definition of peasantry, has all but disappeared.

175 Before 1886, the crofter was a tenant-at-will, with no security of tenure, and no right to
427 compensation for improvements. The Crofter's Act of 1886, defined a croft as an agricultural
341 holding in a parish where there existed, or had existed, rights of common grazing, and where the
423 annual rent paid was less than £30. Security of tenure, and compensation for improvements were the main provisions of the 1886 Act; the rent qualification was later raised to £50. In all, there are about 20,000 crofts in Scotland today[1] and Collier[2] estimated the crofting population at
[161] about 100,000. The number of crofts in Park is 215, with population of 908. Thus Park forms
[162] a 1 per cent sample of the crofts, and a 0.9 per cent sample of the estimated crofting population.

Crofting Organisation, Layout, and Settlement.

423 The characteristic settlement unit is the crofting township: Figure 3 illustrates the areal
427 distribution of the 12 townships in Park. Each township comprises two main elements, the
341 individually held croft land, and the common grazings. The number of crofts per township
311 ranges from 6 in Cawarsta to 43 in Gravir.

432 The individually held croft land (1,839 acres) is partly 'outrun' or permanent pasture and the
233 holdings are usually but not always consolidated - in Gravir (Fig. 4) and Cromore some of the crofts comprise as many as five non-adjacent pieces of land. Each croft is normally separated from neighbouring units by a drystone dyke or fence but in Park, such demarcation is the exception rather than the rule.

The croft land is separated from the common pasture by the township dyke, a stone or turf wa
The Park common pastures consist of 22,023 acres of moor grazing - generally very poor, ill-
drained land with a large percentage of bare rock, areas of peat, and numerous lochs. In Park, only Oronsay common pasture is fenced, the limits of the remainder being faintly marked by crumbled turf dykes. Each croft has a defined right of grazing or 'soum' on the common pasture the 'soum' is the number of beasts which may be pastured, a term comparable to the obsolescent 'gaies' of northern England. In Gravir, the soum is 1 cow and follower or young bea up to 6 quarters old (i.e. 18 months), and 8 sheep, per £1 rent. There is also a system of state equivalences (Gaelic 'coilpeachadh') in most townships whereby substitution of cattle for sheep an sheep for cattle is permissible: in Gravir, the exchange rate is one cow for five sheep. Souming and equivalences vary throughout Park. In former times, when a subsistence economy prevailed souminga were enforced but nowadays the majority of the crofters do not even know the souming of their croft.

[115] 1 Crofters' Commission, Annual Report 1958.

[115] 2 Adam Collier, "The Crofting Problem", 1953.

Although the croftland is individually held, individual control of the crofts only applies for six months of the year. After the harvest, the croft land reverts to common grazing and the whole township stock graze indiscriminately over the crofts. Thus basically the whole area of the township, the individually held crofts and the common pasture, is common land, and it is clear that the agricultural revolution with its system of enclosure has not yet fully refashioned the Crofting Area.

Before 1900, there was a third element in the crofting landscape, the shieling (Gaelic - 'airigh'). The sites of the shielings are usually on slopes commanding a view of the surrounding area near a spring or stream and usually two to nine huts belonging to the same township are grouped together as a sub-isolated shielings are rather rare. In order to conserve the pasture within the township dyke for wintering and to protect the unfenced crops, the cattle were removed to the hill early in June, and the younger members of the household went out to live in small stone or turf-walled huts to tend the cattle. The milk was either carried back to the township daily or made into butter or cheese at the shieling. The distance of shielings from the crofts varied from one to five miles in Park.

The affairs of the townships are managed by the Grazing Committee, elected triennially by the township and presided over by the Clerk of the Committee. The duties of the Committee in the past related mainly to the enforcement of soumings, but are now reduced to the disbursement of subsidies, although responsibility for the maintenance of the township dyke and the care of the township bull (usually lent by the Department of Agriculture but sometimes communally owned) are also the province of the Committee.

The layout of the townships varies with the topography but the majority of the crofts are aligned in strips from the moor to the sea (figures 4 and 5). Most croft houses are built on the crofts; in former times, the majority of the houses were sited on the poorest part of the croft as all the cultivable land was required for crops, but nowadays the houses tend to be sited near the road.

The official pattern of crofting is thus one of tenants, each living on his or her croft and sharing in the rights and duties of the township. Table I gives an analysis of the tenants of the 215 Park crofts. It will be noted that only one-fifth of the crofts are tenanted by those in the 15-44 age group: a similar proportion are tenanted by those over 65 years of age. Absentee tenants account for 14 per cent of the total. Women form under 10 per cent of the total, but only one in seven of the women tenants is the sole labour force on the croft. The intrinsic worth of the holdings can be inferred from the fact that two-thirds of the male tenants in the insurable age group take supplementary work, two-fifths of them farth of Lewis. With such a large proportion of the tenants either fully employed in ancillary occupations in Park or elsewhere it is hardly surprising that the theoretical township organisation exists mainly in name alone.

Each croft, however, is not necessarily an agricultural unit; some are sublet by absentee tenants or by tenants who are too old or too infirm to work their crofts. Of the 215 crofts, one-fifth are wholly or partly sublet. In addition to the legal crofts, there are unofficial holdings which fall into three categories, cottars, squatters and feusrs, all legally without grazing rights. A cottar[1] is a person, usually a close relative of the tenant, who builds another house on

1 These are the de facto definitions. Section 34 of the Crofters' Act of 1886 defines a cottar as follows:- "Cottar" means the occupier of a dwelling-house situate in a crofting parish with or without land who pays no rent to the landlord, as also the tenant from year to year of a dwelling house situated in a crofting parish who resides therein, and who pays to the landlord therefor an annual rent not exceeding six pounds in money, whether with or without garden ground, but without arable or pasture land". For fuller treatment, see Scott, J., "The Law of Smallholdings in Scotland," 1933, pages 152-155.

There is no legal definition of a squatter, and the above definition does not include any distinction between houses built on a croft and houses built on the Common Grazings.

TABLE VI

TOWNSHIP STOCKING: 1883[1] AND 1958

	1883		1958	
	Cattle	Sheep	Cattle	Sheep
Habost	65	215	34	1,044
Kershader	67	205	34	822

2. As Park is part of Lochs Parish, these are the only statistics available.
3. Roots (negligible acreage), fallow.
4. Figures in brackets are breeding ewes.

/p. 8-b/

Table III reveals that there are 177 agricultural units with a souming; ten units are crofts in Glengravir without a souming and the remainder of the 219 units have no grazing rights. From this Table, it is clear that full stocking and over-stocking increase with the size of the croft, the units of 20 acres and over, on the basis of stock carry, would appear to be the most intensively worked. In all, just over half of the units take in their full souming. Table IV gives an analysis of employment ancillary to croft work. Of the 219 units and it would appear that neither ancillary employment nor age is significant, related to the intensity of croft working. Table V points to the fact that more full-time crofters are to be found on the larger units but that less than one in four of the younger and more active men are full-time crofters. Tables III, IV and V underline the fact that the larger units are also the more successful and it is significant that the larger units are almost all on the better land in the agricultural townships. The average size of holding in the agricultural townships is nine acres; compared with less than eight acres in the fishing townships, where the land is much poorer and the cultivable area much more restricted.

The trends in agriculture are illustrated by Tables VI and VII. The Crofters' Commission made a survey of the crofts through the medium of Estate Factors in 1883; from Table VI it is evident that the number of cattle was much higher at that time and that the cattle-sheep ratio in the selected townships was 1:3 as compared with 1:25 in 1958. Table VII gives agricultural statistics for the parish of Lochs as a whole; separate figures for Park are not available. Since 1913, radical changes in the crop and stock patterns have taken place; here (Hordeum vulgare) has disappeared as a crop, and sown grass and permanent grass for hay have since 1947 become the leading crops. Horses have all but disappeared, and the cattle-sheep ratio has risen from less than 1:4 to 1:39 for the whole parish. Since 1938, cultivation in Lochs Parish has declined by 36 per cent. Large areas of hay-beds, no longer cultivated, are visible landscape signs of these changes; seaweed, the sole quasi-manure for lazybed cultivation, is no longer carried to the upper parts of the crofts. In fact, many of the crofts no longer use seaweed as a fertiliser.

From the foregoing account, it is clear that there are two major agricultural problems in Park, the lack of sufficiently large crofts with good arable land and an insufficiency of common grazing; these deficiences bring in their train the problem of overstocking, and the existence of uneconomic holdings.

The more progressive crofters, significantly, resident on the better crofts of the agricultural townships, have shown how croft land can be improved by re-seeding and sowing down to grass, practices which could be fruitfully extended throughout Park. In addition, several townships by co-operative effort, have reseeded small areas of the commons grazings with spiketail.

However it is clear that it is not possible for 219 viable agricultural units to be maintained on the present crofting area. The optimum size of croft which maintains a family is a moot point, for the location and situation of a croft and the quality of the land and common pasture would all have to be taken into account in making an assessment.

This problem was referred to a practical agriculturalist who was asked to state what size of croft and number of stock would be required to provide an annual income of £300, excluding croft benefit (milk, eggs and potatoes consumed on the croft) and any costing for labour. To fulfil these conditions, one of the fishing townships was carefully analysed, and the expert came to the following approximations, assuming that the rules of good husbandry were in force after the croft had been brought up to a good standard of cultivation and re-seeding had been carried out where possible on the outrun and Common Pasture, and provided there was no overstocking, and that present favourable subsidies and prices continue:-

[Habost]

Drift is found near the shore and laps round the three hills nearly up to the road, predominantly heavy clay with small boulders; this is replaced above the road by peaty loam on rock. At one time, barley was grown on the heavy drift. There is peat accumulation on the flat land near the road to a depth of about six feet and there are one or two peat banks. Vegetation is poor; there is no bracken or cover and within the crofts, moorland grasses and sedges predominate on rough land, though there are many lazy-beds sown down to clover and cocks foot. On the hills heather predominates.

Habost is the oldest township in Park. In 1843 Maclennan came from Shieldersnish and took what are now Nos. 9, 10, 11, 12 and 13 and Alisan Tailear came from Toraisay, Harris, to No. 7. By 1886 there were thirteen crofts; in 1907 four cottars were recorded, three being there before 1886; in 1957, No. 11 which had been shared between two brothers since 1904, became legally 11A and 11B making fourteen crofts. There are also fourteen operative units although two are worked from Kershader, both as 'hay and grazing' units, and two are worked as one unit within the township, for there are three non-crofting units.

Only sixteen lazy-beds are dug by spade, the rest have been drained with stone drains and ploughed by tractor owned by one crofter who lease it out to Habost and Kershader. There are three 'Croftmasters' (hand-tractors) in the township but these are only heavy enough for bringing in peats, hay and similar light work. The progressive Habost community has fenced off part of the common grazing, to keep the weaned lambs off the croft from August till November and so save fodder for winter when the croft land is open to grazing.

Oats and potatoes alternate in the rotation, with a little sown grass for hay, sown in enclosed parks of about one acre. The tendency now is to increase the number of parks, cut the hay in June and build up the lambs on the new grass. Shell-sand is used to fertilise the parks but elsewhere artificials, such as superphosphates, 'potato manure', potash, nitro-chalk and lime are used in addition to dung and, near the shore, seaweed. Most of the hay is taken from old lazy-beds.

The land is heavily overstocked: the soum is equivalent to 79 cow units, and actual stock is 144, whilst the figures for sheep are 191 and 618 respectively, including the sheep stocked in Park Deer Forest by arrers of the Habost tenants. Sales of cattle are held at Garyvard in November and May and sheep and lambs are sold in Stornoway. Lambing was poor in 1958, 50-75 per cent being general, but many breeding ewes and other sheep have died.

The only cultivation on the common land belongs to the unofficial holdings. Behind Creigeal, however, there are some old lazy-beds, a well and ruins of a hut, which has not been used since before 1852. There used to be shielings on the far side of the common on Beinn Bhuidhe and below Loch na Ciste but these have not been used since 1888. Habost is one of the agricultural townships and fishing is only for domestic use; lobsters are to be found on only four crofts and trade is slack. One crofter has a lorry for contracting, carrying peats, fertilisers and stock to market and two have butcher's rounds in Lochs. There are two small stores.

Settlement is scattered, always on elevated ground, and in many cases the new houses have been built in close proximity to the old houses site. All have piped water either from the well or from a rain tank, drinking water being carried in the latter case. Grants from the Crofting Commission are enabling new building and improvements to be carried out.

[Kershader]

233 (b) From New Year to mid-April most sheep are kept on the common grazing. Practices,
911 however, are irregular; some flocks are usually hand fed, others only rarely. In the former
221 case they heft near the upper limit of their home croft and remain fairly close at hand.
231 Most crofters hand-feed their lambs, probably housing them at night, allowing them hay in the morning and turning them on to the common grazing in the evening. All this naturally depends on weather conditions.

(c) From mid-April to May, lambing takes place on home parks.

Most crofters let their ewes-with-lamb out at one date.

(d) At the end of June, gimmers and wedders are clipped.

(e) In mid-July the ewes are clipped.

(f) The lambs are weaned in the first and second weeks of August.

(g) The dipping takes place in October and the rams are brought on the crofts.

[432] There is no general sale time, sheep being sold or slaughtered at all seasons. There is no club stock, but all but one of the Kershader crofters, along with crofters from neighbouring townships, take full advantage of the arrangement, first established in 1941, to graze sheep at 2/- per sheep and 1/- per lamb in Park Deer Forest. Hence irregularities of rhythm are introduced or exaggerated.

231 Sheep are not particularly profitable: in general, wedder fleeces give 3½ to 4 lb, ewe fleeces
[236] about 3 lb, and the wool is sold to the Stornoway mills and to the Wool Marketing Board. Average
[435] sheep carcase weight is reckoned to be 41 lb. and the price rarely rises above £3 and almost never above £4. Braxy and fluke are kept under by medicaments but remain potential dangers; 'Black leg' is still a serious problem. Many sheep are drowned in the bogs in Spring and late snows (1955, 1958) are disastrous for lambing.

241 Under-employment is a serious problem in Kershader. There are nine males classified as
161 full-time crofters, but probably only four of these (two on one croft) are in fact in this category,
162 and of the total of thirty males with their homes in Kershader, only fifteen of the insurable
167 population are permanently resident. There are twenty-eight females with their homes in this
166 township, but on only six crofts do any of twenty permanently resident females help with croft work. Local ancillary employment consists of weaving, fishing (for domestic consumption
464 only) and work on the roads. Boats, one with outboard motor, are owned by three crofts. The
[463] only resident professional worker is a nurse. Ancillary employment must be, and is, sought
[501] away from the township. As a result, of the 73 persons recorded as having migrated since 1939 or as being resident, periodically away and permanently away in 1958, 19 have left the area for good, 4 are permanently away, 8 periodically away, and only 43 are resident. Only one person has entered the township since 1939. The age structure of the population, too, is far from the
[175] optimum. The school in Kershader, which had 80 pupils in 1873, reached a peak of 110 in 1907
[178] and declined to 28 pupils in 1953, now has but 17, although it serves Caversta, Garyvard,
[871] Kershader and Habost. Maximum population was attained in 1881, but the total remained fairly constant till 1911, after which decline was marked. Since 1950 this decline has markedly increased.

182 It will thus be seen that the most serious problem facing Kershader is that of stabilizing the
241 population and giving it a stronger economic basis. Apart from the potential development of tourism, fishing, weaving and other home industries, the only possible occupation is in
[313] agriculture with perhaps a little forestry. Forestry, though important as shelter provision, cannot be a practical proposition in large blocks or on a large scale, as it would dislocate the

[Kershader] [Garyvard]

182 common grazings - at present approximately correctly stocked - and cannot therefore provide
241 much employment. Hence it is the standard of agriculture that must be improved. Since the
[313] land does not permit striking extension or improvement of the cultivated area, development must be directed towards improving pasture, with more re-seeding and controlled grazing
400 similar to that already described. All this, however, is of little avail if prices for cattle, sheep and wool remain low, or at least lower than prices prevailing on the mainland. The first priority therefore, in the establishment of a prosperous agriculture is a guaranteed market-price. Given this, it might become worthwhile to take steps to increase the carrying capacity of the crofts. It may be assumed that this would involve an all-round improvement which could give a firm basis to the economic existence of the community; until this is achieved, stability and continuity are out of the question.

GARYVARD

Gwenyth R. Page, B. A.

131 The landscape of the south-east coast of Loch Erisort is a sombre and rugged one. The
133 Quaternary ice sheets left in their wake troughs now filled by the sea loch, innumerable lochs covered in water lilies, a massive area of indeterminate drainage and expanses of bare gneiss.

Garyvard is set on the fringe of this landscape on a 20 to 25° slope with the crofts aligned
551 from the moor to the sea, on a mantle of drift. Here is the home of the MacLeods, the Mackinnon
121 and the Montgomerys. Life beats out its regular pattern of existence during the winter months
231 on the croft, followed by an increasing tempo and variety of work during the rest of the year. In
241 January and February the animals must be fed on hay or lose the battle to survive. In February there are preparations for the year's tasks, making repairs and improvements to the croft. Next month will find the crofter on the land, making or clearing drains and putting fences and dykes in order. The tempo of life quickens with the year; April sees the first sheep dipping, the land turned over, potatoes and oats sown. From mid-May, the sheep leave the crofts to fend
[344] for themselves on the common grazing. The following three or four months are times of tremendous activity on the moors when the peats are cut, to be stacked later, first in fours, then in eights, so that the wind may dry them, till eventually bee-hive-shaped stacks - some four feet high - can be seen near the peat banks in August. Then begins the wearisome task of carrying the peats home, all too frequently in creels carried on the back, since the peat workings of Garyvard are on the moors up to half a mile from road. Altogether some two miles of roads are needed to prevent the villagers patronising the coal merchants of Stornoway. Two crofters, however, cut peat on their crofts, whilst others have permission to cut from Cromore or Caversta common grazings close to the road. All the while croft work continues, varying from hoeing, weeding and cutting hay to the gathering of sheep for shearing. As there are no fences between the various commons, crofters must travel from one township fank to another, seeking their own. In August the lambs are weaned. Hay making generally ends in August and is immediately followed by the oat harvest in September. By the time both oats and hay have been gathered in, the potatoes are lifted and the sheep are brought in from the common grazing about October 12th. The last sheep dipping takes place in November and is followed by tupping.

241 There are eleven crofts altogether, though one is divided, each portion having a legal tenant
423 who has a half share in the common grazing. Two crofts are 12 acres in extent, the half crofts 2.75 acres only, though the acre cultivated on the common grazing by one of the latter crofters since 1923, has recently been officially recognized. Most crofts are in strips running from the sea-shore up the slope some 500 yards to the township dyke, and are clearly demarcated by fences erected just after the last war. Three crofts have additional strips whilst one croft was
[175] an extra strip belonging to another croft. The additional strips date back about 100 years to a time when the township grew rapidly as a result of evictions in southern Park. One croft is divided and worked in three separate parts so in effect there are fourteen operative units in Garyva

[Garyvard] [Caversta]

532 At the moment Garyvard appears to be a go-ahead village, carrying out communal schemes
[62] which will benefit the township as a whole. However, the age structure of the population is abnormal
since 60 per cent of the population is over 45 years. The future in Garyvard offers young people
192 hard work, little money and no entertainment, making the attractions of the cities and industries
of the mainland quite irresistible. Unless some industry can be started the future bodes ill for the
area, since most crofters are of the opinion that a weekly wage packet would more than compensate
191 the loss of their independence. Perhaps it is symptomatic of the age of National Assistance and
subsidies that man cares more for momentary rewards and the luxuries of life. This is well
understood by parents who encourage their children to leave the islands to seek employment either
in Britain or within the Commonwealth. The Lewisman is no sentimentalist clinging to dying traditions
and a way of life. His present desires have been re-cast as a result of his increasing contact with
the world beyond the Hebrides and he is prepared to abandon his home where it defeats his aims
and purpose. Unless prosperity can be brought in by way of industry, tourism or increased croft
efficiency, possibly through co-operation in working and marketing, it is possible that we are
witnessing the end of a community.

CAVERSTA

Helen Mackenzie

131 Caversta lies along a southern inlet of Loch Erisort, five miles from the Minch and is partially
sheltered from east winds by the Cromore peninsula and Eilean Chaluim Chille.

133 The physical nature of the terrain is irregular, rising steeply from the water's edge to a level
of approximately 225 feet. To the west and to the east, the land slopes to the river estuary and it
361 is here that the settlement occurs. Particularly in the north-west, two marked breaks in slope are
visible at 75 feet and 100 feet above the loch, which is here bordered by a 25 foot rock face. The
resulting platforms are separated by faces of bare rock. The valley of the Caversta River is a
noteworthy feature. Below a small loch, the river follows an irregular course though a wide and
shallow moraine-strewn depression and a quarter-of-a-mile from its estuary, has cut through some
low hills rising about 30 feet above the depression. At this point, its course becomes steeper as
it passes through a small gorge, which is probably an overflow channel.

137 Trees are non-existent and the natural vegetation consists of Sphagnum on the peat bogs in the
hollows and grasses and sedges on the gentler slopes. The steeper, less waterlogged slopes, often
broken by rocky bluffs, have heather cover; bracken growth is kept in check by heavy grazing.
134 Forty-six acres of land have been reclaimed by clearing heather and removing peat to form the
311 crofts, but the soil, which varies in depth from a few inches to a few feet, is very acid.

The six legal crofts vary in acreage from 4.75 to 8.5 acres and a squatter has 5.5 acres of
129 enclosed land. The township is in two parts: Torista, with the two smallest crofts, lies at the east-
241 ern extremity, while the other five holdings, also bounded by a dyke, border Tob Caversta, an
632 inlet of Loch Erisort. The crofts, which run from the shore to the township dyke, were set prior
[175] to 1861; originally the township formed part of Crobeg Farm. The legal units are, in fact, operative
units except that one of the Torista crofts, now unoccupied, is used for wintering lambs by the
absentee's brother, a resident of Caversta.

542 There are no occupied black houses remaining in either Torista or Caversta, as during the
past fifty years new dwellings have been erected in dressed stone or corrugated iron, usually with
roofs of asbestos slate, tarred felt, or corrugated iron. Several old thatched houses are now used
as barns and byres.

[Marivig] [Calbost]

000 In conclusion, it may be said that the problem of Marivig's future, and that of other crofti
townships, is not only one of adverse aspect, soil and weather conditions, and of distance fro
markets, but a problem of the population finding a stable and viable level where agricultural u
are large enough to encourage the active and enterprising section of the population to remain,
a problem of finding capital to equip a modern fishing fleet.

CALBOST

Anne Cooper

131 Calbost is situated five miles to the north-east of Gravir on the Minch coast of Park. It o
133 a basin-like hollow in the centre of which is Loch Dubh, and is open to the sea on the east. T
361 croft houses are scattered over a shelf 50 feet above sea-level round the sides of the hollow a
along the valleys which enter the township to the north and south-west.

134 The cultivable soil, a mixture of peat and well-drained gravelly drift, is on the higher gro
137 although here the rock outcrops in many places. On land formerly cultivated, bracken is spr
rapidly and now covers a large proportion of the surface, although twenty to thirty years ago
was unknown. Heather dominates the common pasture and rushes are widespread in the low-
central area. There are a few willows and rowans round the old buildings, probably planted
wind-breaks.

175 Calbost was originally a single farm but the township was formed about 1820. The pattern
241 the crofts differs from the usual shore-to-dyke alignment, as six crofts were allotted extra la
311 in the valley which enters from the north, when a part of the common grazing was brought wit
361 the township dyke. There are now fourteen crofts of which four are worked by resident crofte
189 and two by squatters. The remainder are used only for hay and grazing and are sub-let to cr
in Calbost and other townships.

241 Cultivation is entirely by spade and of the 2.6 acres now in cultivation, potatoes account f
[240] 2.37 acres. The small acreage of oats reflects the greatly reduced cattle stock of only two c
[246] two calves. Approximately twelve acres of hay are cut as winter feed for the 225 sheep which
in the township.

311 The lazy-beds in natural hay and the outrun are being rapidly encroached on by bracken.
prevalence of bracken, and the amount of work needed to clear it, is likely to deter any attempt
renewed cultivation.

178 Calbost was originally a fishing township in spite of its harbour being so exposed: boats h
228 be taken up on the shore instead of being moored in the bay. The decline of the fishing indust
504 has prevailed in Lewis has contributed towards the almost complete desertion of Calbost, les
only a few boats now used only for leisure purposes. Croft income is supplemented by only t
434 the men in the township, one a weaver and the other in the Merchant Navy. Although there ar
563 productive gardens, no attempt is made to market any produce.

The township dyke is very close to the settlement and in the past shielings were not so wid
232 in Calbost as elsewhere. The cattle were instead brought near to the dyke for milking and al
361 to graze on the common unattended. There are ruins of shielings to be found on the hills aro
417 Calbost but a more interesting feature is the second dyke; enclosures were made adjoining th
dyke and in the late summer the cattle were brought to fresh pasture within these dykes befor
the opening of the township gates. Following the opening of the gates the stock are free to wa
[178] over all crofts but there seems today to be a move towards the complete enclosure of the cro

Whatever signs there were of social or cultural disorganization, or threatened disintegration, in the nineteenth century they have disappeared. Steward's theory that folk societies do not entirely disappear but are rather modified by way of a readaptation to the higher level of socio-cultural organization of which they become a part is borne out by the evidence from the Isle of Skye.[17] At the same time, on the basis of events in the culture history of the Sgiathanach, I would qualify his theory by introducing a new condition. Isolated, relatively simple, kinship oriented societies and cultures which must achieve a reintegration if they are to preserve their continuity readapt, not only to the higher socio-cultural level, but also to the older way of life.

In conclusion, I regard Skye as a community which has maintained a continuity of culture despite marked population change. The continued distinctiveness has been made possible by a reintegration of the culture and a restoration of the network of relationships which make for harmonious living together. As in any socio-cultural group which has passed through periods of threatened disintegration, the joints of repair may be weak. Conflicts are tending to appear. The crofter, who has refused to fully adapt to commercialism, is seasonally faced with a variety and succession of tasks which no agriculturalist in the wider society would tolerate. There is the desire of the youth, who are too few in numbers to form a sodality, for a share in the mundane pleasures of

241 here and there in small patches of less than a quarter acre and therefore do not appear in our summaries, appendices A (1) and C (1).

The amount of cultivation carried out depends on three factors:

(i) stock, particularly cattle, to be carried through the winter,
(ii) size of family, which influences the amount of potatoes grown,
(iii) available labour, because cultivation is mostly by hand, especially in South Uig and Bernera.

The size of the effective agricultural unit has little influence on the area cultivated although it may bear some relation to the amount of natural hay taken. This can hardly be regarded as 'cultivated' and the acreage is difficult to estimate; the custom is to cut as and when weather permits, and wherever there is a convenient stand of natural grass.

Hand labour is a necessity on most crofts in the Bernera district and on many elsewhere. The traditional 'lazy-bed' - a long narrow strip of cultivation bounded by deep ditches which may be half as wide as the bed - is a necessity on broken, rocky ground on which the only soil is peat which often has to be gathered into hollows in order to get sufficient depth. The small size and long narrow shape of most crofts do not lend themselves to tile drainage, which is almost unknown. If it could be extended it would be a great advantage but, in general, it would have to be organised by townships, or at least by groups of crofts, and the whole trend in management of croft land is towards individual occupation and use.

241 This may not always be a good thing. Fencing is a case in point. Until the last
417 ten years fenced crofts were rare altough small parts of crofts might be fenced and, in some cases, a group of crofts might be fenced off from the rest. But, in general, the crofts were common land in the winter and used individually only from May to October.
178 Fencing grants, and the encouragement of sown grass in rotation with oats, have changed this. A great rash of fencing is appearing. This may not be altogether a good
[233] thing, particularly for the sheep in winter and spring; even if gates are still left open, stock are deprived of the ability to move for shelter. There may also be watering difficulties. Co-operative draining, cultivation and grazing, of groups of crofts if not of townships, would be more efficient and more productive.

241 Finally, we may remark on the curious insistence on hand cultivation of oats and potatoes for consumption on the croft, whilst cash crops well suited to hand labour, and
[439] which would be far more rewarding, are neglected. Flowers, vegetables and potatoes are imported into Stornoway daily on the mail steamer and even by 'plane. Neither climate nor soil prevents their production in Lewis. Moreover such crops could provide a much needed source of additional income. A few croft gardens produce excellent soft fruit and as the local season differs slightly from that on the mainland
[176] there would seem to be possibilities here, too. There have been virtually no agricultural innovations since the potato.

Economic and Technical Factors.

434 The agricultural income of a croft arises from:

(i) the sale of livestock, mostly store stock at the spring and autumn sales,
(ii) the sale of the annual wool clip,
(iii) the receipt of certain annual subsidies and grants.

These are the main items; in addition some may sell small amounts of potatoes, eggs and standing hay; a very few sell a little milk although strictly this is illegal. Such an annual income comes in three or four annual instalments, uncertain as to date and amount. Moreover, a crofter may suddenly and unexpectedly find himself deprived of a large portion of his income due to casualties amongst his stock or poor demand at the seasonal sales. Unlike the mainland farmer, should an islander withdraw his store

231 Table III reveals that there are 177 agricultural units with a souming; ten units are crofts in Glengravir without a souming and the remainder of the 219 units have no grazing rights. From this Table, it is clear that full stocking and overstocking increase with the size of the croft; the units of ten acres and over, on the basis of stock carry, would appear to be the most intensiv
[469] worked. In all, just over half of the units take up their full souming. Table IV gives an
[561] analysis of employment ancillary to croft work for 141 of the 219 units and it would appear that
[887] neither ancillary employment nor age is significantly related to the intensity of croft working. Table V points to the fact that more full-time crofters are to be found on the larger units but that less than one in four of the younger and more active men are full-time crofters. Tables
[811] III, IV and V underline the fact that the larger units are also the more successful and it is significant that the larger units are almost all on the better land in the agricultural townships. The average size of holding in the agricultural townships is nine acres, compared with less than eight acres in the fishing townships, where the land is much poorer and the cultivable area much more restricted.

175 The trends in agriculture are illustrated by Tables VI and VII. The Crofters' Commission m
178 a survey of the crofts through the medium of Estate Factors in 1883; from Table VI it is evident
241 that the number of cattle was much higher at that time and that the cattle-sheep ratio in the
231 selected townships was 1:3 as compared with 1:25 in 1958. Table VII gives agricultural statistic for the parish of Lochs as a whole; separate figures for Park are not available. Since 1913, radical changes in the crop and stock patterns have taken place; bere (Hordeum vulgare) has disappeared as a crop, and sown grass and permanent grass for hay have since 1947 become the leading crops. Horses have all but disappeared, and the cattle-sheep ratio has risen from less than 1:4 to 1:39 for the whole parish. Since 1938, cultivation in Lochs Parish has declined by 36
[518] per cent. Large areas of lazy-beds, no longer cultivated, are visible landscape signs of these
[824] changes; seaweed, the sine quae non for lazybed cultivation, is no longer carried to the upper pa of the crofts. In fact, many of the crofts no longer use seaweed as a fertiliser.

233 From the foregoing account, it is clear that there are two major agricultural problems in Pa
241 the lack of sufficiently large crofts with good arable land and an insufficiency of common grazing these deficiences bring in their train the problem of overstocking, and the existence of uneconom holdings.

241 The more progressive crofters, significantly resident on the better crofts of the agricultural
242 townships, have shown how croft land can be improved by re-seeding and sowing down to grass,
176 practices which could be fruitfully extended throughout Park. In addition, several townships by c operative effort, have reseeded small areas of the commons grazings with splendid results.

241 However it is clear that it is not possible for 219 viable agricultural units to be maintained a the present crofting area. The optimum size of croft which could maintain a family is a moot point, for the location and situation of a croft and the quality of the land and common pasture would all have to be taken into account in making an assessment.

231 This problem was referred to a practical agriculturalist who was asked to state what size of
241 croft and number of stock would be required to provide an annual income of £300, excluding croft
242 benefit (milk, eggs and potatoes consumed on the croft) and any costing for labour. To fulfil the conditions, one of the fishing townships was carefully analysed, and the expert came to the following approximations, assuming that the rules of good husbandry were in force after the croft had been brought up to a good standard of cultivation and re-seeding had been carried out where possible on the outrun and Common Pasture, and provided there was no overstocking, and that present favourable subsidies and prices continue:-

175 Hamelts or clachans
241 (small clustered settlements) were broken up, and
361 houses were isolated on strips of land in linear,
178 single-street villages.

114 Gray (1952, 1957) argues that the main factor
178 behind the reorganization of land use in the Highl
was the progressive, individualistic, laissez-fair
ideology of the 18th century. Grant (1930: 97)
attributes the reorganization to the high demand f
cereals which existed during the Napoleonic wars.
• 177 Highland landlords, who were very much in contact
241 with the society of the Scottish Lowlands, were
influenced by agricultural practices there. The
trend to change run-rig, which had once dominated
whole of Scotland, to fixed, compact holdings bega
in the Lowlands.

423 According to the "progressive" ideology of th
425 time, the giving of land to individual farmers in
829 larger pieces than they had previously held would
serve to stimulate agricultural development and gi
rise to a class of capitalist farmers. To give la
to a relatively few people, however, meant the rem
of a large number of tenants who had hitherto been
able to survive under the system of run-rig.

[Calbost] [Gravir] [Glengravir]

The present situation in Calbost is best illustrated by reference to the population statistics. There are only 17 people living there at present, seven of whom are squatters and only eight houses are occupied within the dyke. Of the male population, there are three children under fourteen years, one man in the 15-44 age group, three between 45 and 64 years and two over 65. This clearly shows the lack of active men from 15-44 years, necessary for the continuing economic success of the community. However, even these figures are not so striking as the numbers of emigrants as no less than 39 men and 40 women have left Calbost since 1939.

A community of 120 persons has shrunk to less than 20 in only twenty years as the younger people have left to find employment in Stornoway and on the mainland. The present population structure seems to indicate a continuation of the downward trend.

GRAVIR AND GLENGRAVIR

Gravir, the largest Park township numerically in population and crofts, lies astride the major east-west inlet of Loch Ouirn, a glacially modified line of structural weakness. The site of the township is perhaps the most picturesque in all Park, but the steep slopes, lack of cover, the small area of good arable land, and the considerable population existing on slim resources, problems common to Park as a whole, are all epitomised in Gravir.

On the south-facing slope above the loch and the continuation of the trough in the valley to the west, the majority of the crofts have been carved from moor to sea, some before 1800, and some in the process of the abolition of run-rig which was accomplished in the years 1850 to 1852. Originally, there appears to have been thirty crofts, but four were added during the nineteenth century, two at each end of the line, and in 1934 a further fifteen were cut out of the common grazing, a mile to the west of Gravir. On the south side of the loch, the 'clachan' of Tom an Fhuadain, established about 1800, has since developed into a further nine crofts. Thus there are forty-three legal crofts in Gravir and a further fifteen in Glengravir making fifty-eight in all.

The layout of Glengravir, a line of crofts from 3.6 to five acres, typifies the small post-1918 Department of Agriculture holdings. The arrangement of the Gravir crofts is illustrated in Figure 4, and it will be seen that not all the crofts are consolidated. There are three areas of former arable commons which have been lotted in unfenced strips and they may well be reclamations which were necessary to supplement the food producing capacity of the holdings. The method of division and allocation speaks of a period when a subsistence economy under severe pressure from over-population, necessitated fair shares for all. The last of these commons was in cultivation until 1891. Although subsistence crofting has been obsolete since then, there is as yet no move towards a regularisation of the layout.

178 The congestion which necessitated the reclamation of the arable commons developed mainly
145 as a result of a successful fishing industry which prospered from 1860 to 1914 and at one time there
228 were two curing stations in Gravir. With relative prosperity from an ancillary industry, cottars
[161] were tolerated and the population rose from 197 in 1830, to 368 in 1881 reaching a peak of 468
[162] in 1911. The collapse of the industry after 1914 began the downward trend which has certainly not yet ceased. Gravir reverted from 1918 to a township of agriculturalists and a base for employment furth of Lewis, although there have been spasms of successful fishing activity since.

Stock raising is now the function of the township and the agricultural resources and conditions
241 are hardly conducive to the development of economic holdings. The Gravir and Glengravir crofts
[231] vary between 3.5 and 26.5 acres in size: no croft has more than four acres of 'old arable'. In the days of subsistence agriculture, and indeed until the 1930's, cultivation, all in narrow lazy-beds banked up with stones at the downward extremity on the steep slopes, was much more extensive. All the cultivable land was at one time under crop, heavily manured with seaweed cut as far away
[324] Cromore or the coast south of Kebock Head. About one-third of the maximum lazy-bed area is
[137] cropped and the more inaccessible areas of the crofts have reverted to pasture; some of the laz

[Gr-vir] [Glengr-vir]

241 beds are now covered by sphagnum moss and heather. Other lazy-beds are permanently in natural
[197] hay; only thirty per cent of the land classified as 'old arable' is now in oats and potatoes. If natural hay is added, one hundred and thirteen acres of crops are taken from an area greater than the so-called old arable; this suggests that the cultivated area was pushed beyond the limits of the old arable (ninety acres) after 1850-52. As in all the fishing townships the area of sown grass is infinitesimal for only four of the fifty-eight operative units actually sow grass. The wintering capacity of the crofts could be greatly increased by the general adoption of the practice of under-sowing.

241 There are forty-three legal crofts in Gravir but nine are sub-let, in every case to relatives.
423 All the crofts are taken up and there is evident pressure of population on the land. In addition to the crofts, there are a further ten cottars, and squatters and feuars, besides the fifteen legal Glengravir crofts (ten operative units) which have no share in the Gravir common. The common
[532] has been encroached on by several feus for Gravir is the functional centre of Park: the Free
[346] Church of Scotland and Manse, the doctor, one of the two district nurses and two of the missionaries
[759] (assistant ministers) are all located in Gravir.
[795]

Gravir and Glengravir thus have fifty-eight legal crofts and fifty-six operative units. Less than
233 half of the crofts with grazing rights are fully stocked and one quarter have under fifty per cent of
311 the soum, including five without any stock. The common pasture of 2,652 acres is in general of poor grazing quality, dominated by the less nutritive species of grass and poorly drained. In 1957, a ten acre plot was fenced and re-seeded: only twelve of the operative units participated in this reclamation work, and the ages of the participants ranged between 27 and 58 years; this is significant as aged tenants are unable to carry out such work. This scheme could be extended annually; if potential improvements to the crofts are limited, pasture amelioration is virtually
[435] without limits. Re-seeding on a large scale would enable better stock to be kept rather than greater numbers; at present the sheep stock is over two hundred per cent of the sheep soum, and a ewe and lamb sell for as little as £2 10s to £3 10s, an indication of the consequences of over-stocking. The cattle stock is below the souming and this paucity of cattle is one of the notable changes in the agriculture since the 1930's for at that time as many as six cattle were kept on the larger crofts. The total stock kept in Gravir and Glengravir exceeds the souming by thirty-five per cent.

231 The great majority of the crofts can certainly not be considered economic units. Judging from
241 the souming of one cow and follower and eight sheep per pound sterling of rent in a township where
434 only seven crofts pay more than £2 rent, they were never intended to be self-supporting agricultural units. The produce of two cows and sixteen sheep, with potatoes, and in former days, bere or oats, locally milled by the three Gravir water mills, could scarcely ever have maintained a family. Fishing was the complementary economic activity, and in 1901 no fewer than nineteen boats and
[228] eighty-nine fishermen were registered at Gravir. Today, only one boat fishes commercially for lobsters.

463 If agriculture is singularly unrewarding, weaving occupies six of the males of insurable age and
288 service occupations a further ten males and five females, but neither weaving nor service occupation are sufficiently available or attractive to keep the insurable population in the district. Twelve of
[166] the males between fifteen and sixty-four years take seasonal employment and forty-six are in
[167] permanent employment furth of Lewis, in all sixty per cent of the potential male resident population.

175 The economic problem of Gravir, in common with the other 'fishing' townships, became acute
228 after the fishing industry collapsed after 1914; in the hey-day of the fishing most of the men fished
434 all the year round, locally and on the west and east coast of Scotland. Earnings fluctuated but a man might make as much as £90 in a good year or as little as £5 in a poor year. Apart from the sal of young cattle, and wool surplus to home spinning requirements, the fishing earnings constituted
[233] the bulk of the croft income. Today, on the basis of the souming, the income of the largest croft including subsidies could only be approximately £150 excluding the amount to be set aside for home consumption of potatoes and milk.

[Lemreway]

vulgaris is dominant. Ling, which can tolerate considerable soil water, often occurs with Nardus, Molinia, Scirpus caespitosus and Eriophorium. A few rowans, usually near the shore, and a few willows, usually within stone enclosures, are the only trees to be seen.

Of the thirty-three legal crofts in Lemreway, nine comprise less than five acres, while seventeen are between five and ten acres. Of the remainder, only two exceed fifteen acres and one of these is 30 acres. Six unoccupied crofts are worked by persons other than their tenants, so actually the 290 acres of croft land are shared by twenty-seven holdings. The seventeen-acre 'outend' was originally divided between fifteen tenants but confused sub-letting has resulted in four separate holdings directly occupying nine acres, and working another four acres. Thus the outend today must be regarded as the monopoly of four 'unofficial' holders.

Little more than a quarter of the croft land is cultivable and even less is actually cultivated today: Figure 9 illustrates the crofting year. The broken terrain and the stony nature of the soil has permitted the cultivation of tiny 'lazybeds' and the total cultivated area is now about 48 acres. Only the strips of land on the gentler slopes, where the soils are deeper, are now cultivated, but every croft shows signs of former, more extensive, lazybed cultivation, often covering at least two acres. For example, on the east side, natural hay is cut on the well-marked lazybeds at about 225 feet.

Oats and potatoes, 29.5 and 16 acres respectively,occupy almost all of the cultivated ground. Most crofts grow about half an acre of potatoes and one acre of oats; both acreages have declined, the former with a declining population and the latter with a reduction in the numbers of cattle; hay has increased in importance. No bere is now grown, though before 1900 it was preferred to oats. Ruins of the bere mill, which ceased to function at the beginning of the century, can still be seen. Fifty-nine acres of natural grass are cut for hay but only four crofters had sown grass for hay in 1958, about three acres in all. Few vegetables other than potatoes are grown though carrots are said to grow well, and formerly turnips and cabbages were grown. The soil needs careful preparatio to be productive and almost every crofter used some seaweed and at least twenty drew subsidies for l and artificial fertilisers in 1958.

Stock totals have declined recently but the township has 36 cows and 22 calves. Only one croft s without cattle and 22 of the 33 working units have a cow and a calf. The township has an Ayrshire bull on loan from the Department of Agriculture; one of the few remaining elements of the co-operati ownship system is that this animal is fed by the crofters, in rotation, during the winter.

All but two crofters keep sheep; stocks vary between ten and 120 per holding but the majority have about 23 ewes with ten lambs. Although numbers have declined recently, the 3,025 acres of very moderate common pasture support a flock of about 1,150 sheep, including about 650 breeding ewes and about 300 lambs.

The souming is not enforced in Lemreway and it is remarkable that the total stock tallies almost exactly to the souming. An examination of the sheep soum reveals that the stock of 917 (excluding lambs) considerably exceeds the sheep soum of 626. It is interesting that it is nearly always the working units of over 10 acres that are overstocked; of twelve such units, eight keep more sheep than they are entitled to. Most of these crofts are grouped on the eastern side of the township where the crofts have a larger outrun.

Thus, while overgrazing is not so severe as in many townships, it represents a potential threat, particularly if the common pasture is not improved. However, in 1958 ten acres of the common pasture have been enclosed and re-seeded. Six acres were sown with ordinary mixed grass seed, two acres with pelletted seed and two acres with pelletted and inoculated seed. The eleven crofters taking part in the scheme put on 100 tons of sand to help drain and aerate the peaty soil, 2½ tons of ground mineral phosphate and 2 tons of concentrated compound fertiliser, grades 1 and 2 - all of it by hand. The area was sown in May 1958: by the following August, there was a striking difference between it and the untreated pasture. Next Spring, eleven cows will be grazed on this area. With the success of this scheme, it is hoped that more of the crofters will co-operate in re-seeding further areas.

[Lemreway] [Orinsay]

[Orinsay]

233 The future existence of the common pasture for grazing is being seriously endangered by overstocking. The souming is not enforced in Orinsay and the actual sheep stock exceeds the soum by 300 per cent. Peat-cutting is gradually destroying valuable grazing areas; in the last three years there has even been some peat cutting on the better grazing on the island. The dangers both of overstocking and of indiscriminate peat cutting cannot be overstressed.

[314]

311 No evidence was seen of attempts to improve the quality of the common pasture. The establish-
242 ment of shelter belts would provide not only shelter but a means of stopping the peat from 'slumping' down slopes if they were carefully sited. Much of the common pasture could be improved by a hill drainage scheme and by re-seeding, after sanding and liming, a project well within the capacity of the resident labour force.

241 Good crops on a few of the crofts suggest that the land is not inherently sterile, however, and it would seem that if the holdings were reduced to a maximum of four, an economic existence might be feasible on these crofts. The stony nature of the soil limits the possibilities of tractor cultivation but with an improvement in drainage, one might be used in the two valleys.

464 It is not so easy to be optimistic about the employment of surplus population resulting from such an enlargement of holdings, although a revival in the fishing industry could absorb most of the men. A present there are no looms in Orinsay and providing the Harris tweed industry can hold its own, there are possibilities in weaving. Seaweed is in plentiful supply, indeed Lemreway people also obtain supplies and should its quality prove adequate, the establishment of a processing plant would provide valuable employment.

[288]

[824]

000 Nevertheless it is becoming increasingly obvious that unless the holdings can be enlarged, whethe officially or by sub-letting, and some further employment created, Orinsay is liable to stagnate, and depopulation to continue. The township which was developed to relieve congestion is now itself congested.

SUMMARY AND CONCLUSIONS

121 The aim of the Glasgow University Department of Geography Crofting Survey is to record and analyse material relevant to the crofting districts, and in so doing provide a clear and impartial statement of the present situation. In inviting us to undertake a survey of Park, the Pairc Association hoped that a body of fact would be assembled and conclusions drawn which would assist the Association in their admirable aims of advancing the well-being of the area. Their two Progress Reports, of 1956 and 1957, indicate that they have already investigated many of the possibilities for development. This summary refers to Park alone, and, it must be emphasised that until the survey of crofting is completed, no final assessment of the Crofting Area as a whole can be made.

182 The district of Park is one of the more isolated and difficult crofting environments. The ruggedn of the terrain, the high proportion of land of very low agricultural value and sheer isolation make the
●175 existence of human communities precarious. In addition, many of the Park communities were first
311 established as a result of population pressure in more favourable areas of Lewis, and the original small settlements grew rapidly as a result of a change in land use which was a national trend - the conversion of poorer areas from subsistence farming to an extensive sheep-rearing economy. The impact of this change came to Park in the form of the eviction of a large body of small farmers in favour of an extension of the grazing area. Thus the present conditions are a legacy of the relatively recent past, and of legislation, particularly in the Crofters' Act of 1886, which accepted, and tacitly agreed to the maintenance of a larger population than the land could reasonable carry[1]. Two World
[141] Wars and fluctuating economic factors have had repercussions in Park and resulted in a change in
[142] economic and social values, and depopulation has resulted: the 1951 population was 60 per cent of the 1911 total.

1. The Commissioners proposed that only holdings rented at £6 and over should have security of tenure, with a view to discouraging the perpetuation of grossly uneconomic holdings; in the Act, all holdings were given security of tenure.

acceptance of the potato, a much more productive and dependable 161 175 178 241 464 subsistence item than grain on Skye, made it possible for more people to live on less land. The introduction of a new industry, kelping, provided many with employment and freed them from complete dependence on a subsistence economy. Vaccination reduced 757 165 the mortality rate, especially among infants whose chances of reaching maturity and procreating were thus enhanced. Another 514 important factor was the Skyeman's share in the general prosperity of British agriculturalists during the early years of the Industrial Revolution and during the Napoleonic Wars. An 423 592 especially important factor was the practice of subdividing the land which made early marriage possible, in particular after the installation of the crofting system. Finally, but by no 161 175 178 182 means least significant, there was the persistence of many typical features of the culture in the days of the clan. The sentimental ties of kinship and attachment to the soil had remained.

The population decrease, partially a result of the Skyeman's 161 175 178 184 involvement in the process of commercialization, was primarily a result of a failure to fully adjust to the higher, more heterogeneous socio-economic level. By the end of the second period of the modern epoch, 1845, the people had become hostages to the potato and their own fertility. When the potato failed them, they had nothing to fall back upon, except the generosity of their landlords. The cattle and kelp markets had collapsed at the end of the Wars, and the subdivided land could not produce sufficient grain. The belief of many that the population had over-run the limited local resources was confirmed.

religious groups." As a result of urbanization almost all 171
rural areas have experienced the pangs of social mobility and 182
few have escaped unscathed from a clash with the economic 771
forces which impinge from the outside. This predisposes the 786
people to the appeal of an emotional religion, revivalism. 781
Frequently, the sect becomes uncompromising and rejects the
outside world in an attempt to bolster group security. The
sequence of events on Skye enables me to add that the sect
can also reject a great deal of the former content of the
culture. Be that as it may, the authors show how emotional [571]
religious movements restore or replace meaningful patterns
of interaction among groups whose social systems have deteri-
orated. Revivalism is a counter agent for anomie.

The first period of social and cultural disequilibrium 175
which the Sgiathanach experienced may be placed in the first 178
half of the nineteenth century, with a climax around 1840. 771
To paraphrase Loomis and Beegle, it was no mere coincidence 786
that an emotional religious movement should have appeared and 182
found so many converts. The closing years of the eighteenth
century had witnessed numerous changes in the content of the
culture and the collapse of the old social heirarchy. While
these events doubtlessly had an influence on all levels of
the society, it was not until the turn of the century that
they broke forth upon the masses. Within a decade a revival
had reached effective proportions. This was a time of estate
reorganization. The tacksmen, the traditional leaders, were
quickly disappearing. The runrig farm was being abolished.
Sheep were beginning to replace men in one parish (Bracadale).

161 Table XIX summarises the population structure and trends for the four districts. It is signific
162 that the two districts without service centres, which provide a range of ancillary employment, hav
166 experienced more severe depopulation since 1939. This table also underlines the fact that earning
167 from seasonal employment are insufficient: the incidence of permanent employment furth of the
434 districts is three times as great as the incidence of seasonal employment.

APPENDIX B

SHIELINGS - A NOTE

John E. Wearmouth with illustrations by Beth Blowers

175 From Figure 1, compiled from the First Edition six-inch map of the Ordnance Survey (1850
233 to 1852) and from personal observations, it is clear that the shieling system was at one time an overall feature of Park for the whole peninsula has traces of this transhumant economy.

361 The rudimentary structures, some of turf, others of stones and roofed with bracken or
342 heather thatch, are all sited on well drained sites, the majority on mounds. Almost all the sites are close to lochs or streams. The majority are in loose groups of from two to nine buildings, although there are some in isolation; no site has as many as twenty-six buildings as found at Airidh na Gaolthe in North Uist.

342 There appears to be two distinctive shapes of building - oval and rectangular (Fig.10). All shielings measured exhibited a remarkable similarity in dimensions, from 17½ by 9 feet to 13 by 12 feet. The oval structures are generally larger than the rectangular ones. Most of the shielings had two entrances, often, but not always, opposite each other.

195 The shieling system died out in Park about 1880 but the cattle continued to graze around the
283 shielings on the better grass, and the crofters had still to go out to milk the cattle at the shieling, although they no longer lived there. The sheep still use the mounds for shelter and grazing. These features of an obsolete economy are still easily recognisable from the luxuriant grass cover in a wilderness of peat bog and bare rock.

APPENDIX C

NORSE SETTLEMENTS NAMES IN NORTHERN PARK, LEWIS

Bridget M. Gordon, B.A., B.Litt.

103 See: Magne Oftedal, The Village Names of Lewis in the Outer Hebrides; in Norsk Tidskrift for
113 Sprogvidenskap, vol. XVII, 1954, (Oslo), pp. 363 ff.

103 Professor Oftedal points out the difficulties of these Norse-Gaelic settlement names: inaccurate spellings even in modern times, and lack of any useful evidence from older sources, make almost all the derivations a matter of conjecture. Sometimes two or more ON equivalents are possible (e.g. for Calbost), sometimes no satisfactory solution can be found (e.g. for Lemreway). Since Professor Oftedal frequently bases his explanation on pronunciations not recorded in written forms, his evidence is largely followed here.
SHIELDERNISH: the second element is N nes, 'headland'. Oftedal's explanation of the first as silda, genitive plural of N sild, 'herring', is satisfactory linguistically, but seems unlikely in meaning.

6: Ducey

175

and 159-166.]

the fourth degree of relationship. Although the extended family is now rather amorphous compared to what it must have been a century or two ago, it is still very real to the Sgiathanach. Once, perhaps, the townships and their historic antecedents were patrilocal settlements. Then, of course, the question of the availibility of land and the legality of subdivision were of small importance. Now the rigid system of land use enforces neo-local post-marital residence, often at a great distance from the parents, and very often means that the younger generation must join the constant outward movement of the population. Thus, the extended family is seldom, if ever, found intact. Indeed, the only times its members come together as a group is at a funeral or a wedding. On these occasions the strong patrilineal emphasis becomes apparent, and the fact that the individual always remains a member of his or her family group is revealed. It is, then, a stem family.

In structure the extended family includes all males and females out to, and including, third cousins. The kinship terminology is descriptive. Excepting grandchildren, all relatives are distinguished by sex and generation. Members of the parental generation and lineal descendents of the parents collateral kin are distinguished by their relationship to the individual's parents. Members of the grandparental and great-grandparental generations and their lineal descendents are similarly distinguished. The same descriptive technique extends to kinsmen of the first and second descending generations.

Beginning with a population which is believed to have been relatively stable due to recurrent crises, including epidemic famines, and wars, the pendulum of population growth and decl for the Sgiathanach has been found to be highly responsive to cultural innovations and social adjustments. Between 1750 and 1841 the Skyemen increased in numbers from 10,671 to 23,0 an increase of more than 100 percent. From 1851 to 1951 the population has steadily decreased from 22,536 to 8,603, a decrease of 62 percent from maximum. Associated with the decline were changes in the age structure. In 1861 34 percen of the population was under fifteen and only seven percent was over sixty-five; today only 22 percent of the population is under fifteen while 19 percent is over sixty-five. How can we account for these changes, or, more correctly, how can we account for the changes in the birth, death, and emigration rates?

Broadly speaking, the increase was favored by the direct and indirect involvement of the Sgiathanach in the process of commercialization, with all of its associated consequences. One by one, the natural checks on population growth declined in importance. The pressure on the means of subsistence was eased. The former clan chiefs, preferring the society of Edinburgh and London, absented themselves. After converting rents from kind to money, they provoked the withdrawal of the tacksmen by resorting to rackrenting. The former clansmen, who became joint-tenants, received a larger share in the land and were freed from the obligation of feeding both their own families and those of the superiors. At the same time the

Fig. 10

/facing p. 39/

being determined by conditions of culture, such as political and economic conditions. Under conditions of gradual centralization of economic and political systems, the geographically isolated crofting areas have evolved strategies, some of which puzzle agencies concerned with development or other aspects of governmental processes.

Before the North of Scotland Hydro-Electric Board began to operate in the crofting counties, not more than one croft in every hundred had electricity; but by the end of 1955, one in every three croft holdings had been supplied (Taylor 1956: 20). "The light" came to Shawbost in 1951. Before then, the islanders used Tilley lamps, a Canadian invention, and before them double-wick paraffin lamps. Pipes water came a few years later, around 1955; it was brought from a nearby loch, and the community work gave urgency jobs to local people. The availability of these services facilitated the building of county council houses, which many welcomed as providing a relief on the congestion caused in part by rules against building more than one house on a croft. But, paradoxically, the "pattern" of consumption of all these services came a decrease in the advantages of living in a crofting township: property was assessed and people began paying rates or taxes.

In nation-wide conic strips and zones, the Highlander plays the role of the clown, the rustic country cousin. The comic strip "Gaston Gay" portrays a skilled Highlander, sly and canny behind his apparent simplicity, tricking the landlord and searching for the Loch Ness monster. Stories of the lazy, dour crofter abound.

When young men go away to the Army or Navy or to work on the mainland, they say that they feel like

"Kangaroos." "Thirty years ago the island was very isolated. It was difficult to get to Stornoway, and a few education grants available. I got my teaching certificate and wanted to get a post back on the island, but was told there was no vacancy. I waited for another fifteen years. So I went down to England, and found I had to be at least as good as an Englishman if not better in my job as I had to be here."

"When I went into the RAF, I had never seen light switches because we used paraffin lamps. An English man told me to turn the light on, and I didn't know which way meant on or off. They seemed still stuck in me."

* From a high official in the Highlands and Islands Development Board, 1970. Cf. Hunter (1974): "Highlanders are trained to be dependent, to be conditioned to accept what is given them, to be trained not to question, to be trained not to "don't do today what you can put off till tomorrow." Cf. Hunter (1974): "Highlanders live in a Gaelic, "no worries," "what's the hurry" culture. We need no word that conveys such a sense of urgency."

"I was in the Navy during the last war. We were in Norway, and got an invitation to visit the palace. I didn't go. I was afraid I'd make a mess of things."

"Stornoway is a dreary place. Crofting (Gaelic: IV'S, mainland-oriented) so you feel outsiders."

The new director of an association which promotes the speaking of Gaelic in a Lowland Scot town learned a little Gaelic when he was in England. He was working in England and, as a Scotsman, felt as much like a foreigner that he decided "to be a real foreigner"—to be another Gaelic. Motives which prompted legislation protecting crofting also lie behind the development of organizations which attempt to protect and preserve the Gaelic language.

As Comas Carmichael, the leading spokesman for Comunn Eilean Leodhais (Lewis Island Association) which promotes the speaking of Gaelic, was founded in 1971 "I came on the mainland, and has always been interested. Eighty years ago (actually before the Association was established its headquarters in Stornoway) but the headquarters were relegated to bindquarters when the director found that he needed to be on the mainland to exert pressure on influential organizations for aid and support. The organization is condemned by ministers on the island, who see it as an organization that encourages litigiousness and "rights." Its publications and books which it publishes or sponsors are seldom read by the ordinary islanders.

FLORA

Pursuing a 'scorched-earth' policy, a Norse leader, Magnus Barefoot, on a punitive expedition, came to 1098 destroying much of the island's natural surface resources. Trees were a particular target. Although the Norse settlements, the origins of which are lost in the island was accelerated by the requirements of the Scandinavian Crown. Cattle, particularly Cattle, Dutch, or Englishmen who visited Lewis in 1830 in connection with Charles II's history schemes, reported 'there are many eagles and hawks in the isle which breed in the clefts of rocks, for this place is so destitute of wood that there is not one tree growing in the island' Martin Martin almost confirmed this a generation later: 'I saw big roots of trees in the head of Loch Erisort, and there is about a hundred young birch and hazel trees on the southwest side of Loch Stornoway' and in 10 years time Dr. Johnson and Mr. Boswell Before Sir James and Lady Mackinnon came to Lewis in 1844, the Mackinnons had purchased the old Seaforth Lodge, Seaforth Lewis Castle now stands, had many floating apple trees.

The economy in 1600 of the Highlands and Islands is interesting, for it is here that today stands the greatest concentration of trees in the country. In 1600 the ground in Lewis (Pryde 1965) had some 100 acres of trees here, mostly conifers, but with some hardwoods and birch. Lewis was then a forest of 100 acres. Highlands and Islands Development Board, 1970 Lewis Island Association

4 COMMUNICATIONS

FROM the earliest times, the private or public communications between one form or another has been a matter full of incidents and of the hazards of crossing the important waters of the Minch. One of the most spectacular events in the history of the island was the 17th century, to do much to determine and stabilize shipping developments, both passenger and cargo service were to be based on the island Seaforth in Lewis; it is said that he was drowned through the workings of his own 'treasure' or farmer-crofter, who employed several famous witches to raise the tempest in which his ship foundered.

For well over a century the subject of adequate communication has occupied the attention of the island's people. The island community lies in its ability to live within itself, while accepting the need to maintain a link with the mainland, and to maintain its living or for work. A Lochmaddy once expressed uneasiment at the isolation of Scarp, in the Outer Hebrides, stating that in 1890 they would not know what was happening in London. The indispensable expiate the island, and the 'Lewis' Lewis Island Association, 1970 Lewis Island Association

SEA ROUTES

When in the early 1800s formal sea communications were being established between the island and ports on the west coast of Scotland, down as far as the Clyde, most of the islanders were of course land people, living in the interior, cultivating their inter-chaum, ministers and the like), they had little use for the sea links with the mainland. Sea communication was for the adventurous and travel was thus a luxury they could not afford. As the nature of local life began to change with the infiltration of some of the trappings of nineteenth-century civilization, however, they began to depend more and more on the mainland for supplies of essential domestic utensils and the like and to export their surplus produce in exchange. Sea communication, the change of sea port in return; then as now, any transport operator struggling with the law of the sea, and the law of the land. Freight charges must pay for the double voyage. Though the fishing industry and the Clyde, and its intermittent service of Lewis and Harris

The plough, which is used here, and in most places of the long island, is of a very peculiar construction. It is made of a piece of 7 inches, and is drawn by four horses abreast. It has but one handle, and a long beam, which is fastened to the handle by a long leather strap, and the sake and counter are bound together at the point by a strong piece of iron. There is little one takes which combine to make an islander must be found elsewhere than in the landscape. And as they are the islanders' people, their way of living, their economic patterns, their attitudes, and the moves connected with the island's development, the island and the moves connected with the island's development, the island and the moves of it and of tracks; or that a river or stream runs need not for the island's people. Harris, Harris, Harris, Harris, Harris, The island shade off the shores of Britain, and has been fortunate in its isolation, and has been fortunate in its isolation, and has been fortunate in its isolation

CH. II THE SEASONS

827 Islanders themselves sometimes talk of a lowered stamina and poorer health today than in the past. Inbreeding is widely held to account for this. Even if health 822 be really poorer, this explanation is unreasonable; since marriage outside the village has greatly increased in the last century. Everywhere there is movement along the roads; a school placed half-way between two villages 811 fosters early acquaintance; immigrants trickle in from the mainland, and emigration continually leaves the island. Moreover, the people of certain villages were transplanted in large numbers eighty years ago, as from 143 Valtos, Uig, mainland to Bernera. In any case, inbreeding itself does not produce degeneration; for though it may "fix" or bring out harmful tendencies where these 128 is already some poor or dangerous strain, it can also fix good characteristics in a healthy population.[1]

All these changes were hastened and reinforced by two 128 new, revolutionary means. First, the physical mobility 128 of the township was given a new impetus by the motor 128 car, van and light lorry-bus; then, towards the end of the 128 inter-war years, the penetration of the Gaelic-speaking 143 home by the cacophonous voices of broadcast.

ISLAND, WORK AND PEOPLE PT. I

2. From Black House to White House

197 Discontent with the old black house grew with the 198 knowledge and experience of better housing in Stornoway 198 and on the mainland. The congestion which developed 198 during the nineteenth century meant that often one house 198 was fouled by another above it, leading to typhoid epi- 198 demics. While the smoky atmosphere of the "black 198 houses" inflamed the eyes and irritated the respiratory 198 system, the roof was high and the fire kept the air in 198 motion by day, remaining in the house under the beds, and the lack of glass meant that it necessary to work with the 198 door open. The ravages of tuberculosis came towards the 198 end of the nineteenth century, when Islanders were too 198 crowded towns and, not being immunised, were dangerously infected. Returning home, too often to linger and 198 die in a house now provided with tiny, fixed panes which 198 permitted a closed door and made it stuffier than before, 198 patients spread infection. Right to a tiny, air-tight 198 wooden cabin or to a small white house of stone and lime 198 often followed. The availability for the first time of planks 198 and lumber, a certain practice in house-repairing, and 198 ably acquaintance at first- or second-hand with Canadian 198 wooden houses, may have influenced the choice of wood. 198 The early "white" houses, with an attic lit by skylight, 198 were airtight, for the windows were too often fixed or only 198 opened at the bottom. The door was left open in warm 198 weather, but it was not high enough to allow the escape 198 of the stale, upper layer of air which the women breathed 198 while cooking and baking.

198 In the inner-war period, particularly in its last decade, 198 the "black house" was being abandoned, not for something 198 worse, but for better. The Government-aided houses have

ISLAND, WORK AND PEOPLE PT. I

V. 198 manent shapes from the island, the chief being the Merchant 198 Service and hydro-electric contracts, and for the remain- 198 borel and domestic service, nursing and fish-curing. The 198 ultimate returns of many other, that links were forged in 198 tributes to the higher proportion of men of retired and 198 pensionable age (16 per cent in rural Lewis, 11 in Stornoway 198 and 10 in Scotland). What could not be shown on either 198 pyramid for Lewis is the high ratio of unmarried women, 198 owing to the loses of the war, to migration, and to the 198 need for a daughter to remain behind to keep a home on 198 the croft. The ratio of widows, with or without children, 198 is also considerable, for all three reasons, as well as a 198 fourth, the desirability for a man to bring home, rather than a 198 city, as a place in which to bring up fatherless children.

Turning now to Scotland (b) (d), the same tendencies 198 are seen as in Lewis, though in less extreme form. The 198 difference is of quantity rather than of kind: somewhat 198 in Lewis had lost her more to Scotland mainly, so Scotland 198 had lost to England and beyond. On an average, mothers 198 in Lewis have more children than mothers in Scotland, 198 and still more so than in England: Thus the face of 198 population in the Island do not suggest a voluntary extinction of its community, but rather the will to live.

COMMUNITY FROM PAST TO PRESENT PT. II

198 hostly rank: a working, equalitarian democracy dominated 198 by an aristocracy proudly refusing to work. The fascination of Gaelic community is, first, that its elements stand 198 out so sharply, and, second, that links were forged in 198 clanship which made its living chain, though heavy, a 198 thing that shone with pride, and beauty too.

CH. VI CLANSHIP

173 coming Viking chiefs, who often intermarried with women 173 of the older aristocracy, seem to have retained some elements of the aristocracy proudly refusing to work. The fascination of Gaelic community is, first, that its elements stand 173 out so sharply, and, second, that links were forged in clanship which made its living chain, though heavy, a 173 thing that shone with pride, and beauty too.

So, from history back to 'proto-history', there is 173 increasingly discerned the stages of superimposition, in 173 the Isles as elsewhere. In Central Europe archaeology has 173 recapitulated the stage by which peasant-villagers were raided, then conquered by desperate herdsmen, on horse- 173 back or bearing better arms, who had taken to the land 173 during prolonged bouts of warfare. In the Isles the later conquerors were the factor renders from the sea, sailing in from 173 the fjords of the North. An unbroken chain of tradition 173 from Viking to Gael is visibly conveyed in the stirring 173 saga of the Galley or Birlinn of Clanranald, composed 173 only a hundred years before the Clearances (optimized, Chapter VI (ii)).

173 The conqueror had won the submission of the 173 conquered and secured his livelihood, comfort and leisure 173 by their work, he came in time to bring their interests 173 nearer to his own. Yet whenever the ancient sacred lays 173 traditionally ascribed to Ossian, Oisean, son of Fionn or 173 Fingal—lays of which Macpherson's notorious prose gave 173 new rendering. The Fingalian tales differ from the lays, 173 being frankly fantastic. Lewis had its own cycle of 173 Fingalian tales; examples are given by W. C. Mackenzie 173 (1919). Both lays and legends tell of an aristocracy or 173 warrior class, the Fenians, of their enjoyment of the chase, 173 and of their relative comfort, with wealth in gold and silver, 173 in banners and flowing mantles. The chase combined with 173 tribute implies the existence of a community to feed 173 and clothe the huntsmen. The traditions of the Cuchulainn cycle, with closer approximation to historical and 173 archaeological truth, tell the same tale. Historically, in-

COMMUNITY FROM PAST TO PRESENT PT. II

173 from the old chiefs' families, as in the genealogies of 173 MacDonald of the Isles and the MacLeods. A special 173 interest centuring with English history is that claims to 173 differences of descent, instead of being manufactured in 173 between the Saxon and the conqueror of Norman blood— 173 were faned. Even when the ancestor of the chief was always 173 to the locality, the people and the chiefs ultimately claimed 173 to be of one and the same descent. Neighbourhood 173 influenced the composition of the hunting, herding upon 173 his human herd, and the feeling of kinship brought 173 sentimentalism.

173 How far, then, can the family name, which proclaims 173 every 'son,' and 'daughter' of Leod to be of the *clan*, 173 the 'children' of the first Leod, imply the blood relationship? Both the differences of race to be found in clanship 173 and the ties it formed are well brought out in a tale of 173 Highland pride, still told in the Highlands and given 173 the Mitch in Kintail. A French skipper (an importer of 173 claret) touching at Kintail brought a cargo of claret, and 173 short, dark man and asked him of whose clan he was. 173 "The Clan Rae," was the reply, "but we are of two kinds, 173 the tall, fair MacRaes and the short, dark people." 173 "Then I 173 dark MacRaes." "And which are you?" "I," said the 173 *black fellow*, drawing himself up, "am one of the 173 tall, fair MacRaes!" "Then God help the short, dark 173 MacRaes!" said the skipper. Even one link with the 173 blood of the Clanchattan, Isaac and Jacob are named 173 in a hymn of the Lews, sung when going up with the flocks 173 and herds to the shielings; even this may be a Presbyterian 173 and Hyperborean tale, but it has the unverifiable weight

[1] Rev. Allan Macdonald, p. 81, *No Fictionism*. The omission of the Manx paternal precedence may be a courtesy to motherhood implying equality in sonhood.

CH. VIII SPIRITUAL LIFE OF COMMUNITY

888 be given by ear and learning come by heart. Hence elders 888 were the holders of an inheritance of treasures which must 888 be sought from them or be lost for ever. But no tradition 888 mistaken, the ancient tradition remains alive in the mind. Thus 888 both the faculty of memory and the fruit it bore in an 888 elder's mind brought respect, even veneration. Accuracy in retelling is still immensely valued, but so, too, were 888 thoughtful commentary and poetic enrichment. Respect 888 for elders, though general, was not given blindly, but 888 personally and by choice.

888 In Scottish Island, the Fifth Commandment runs: 888 Honour thy parents and hold them in loving regard "(*Strioichd dha do pharanton 'r thoir gràs dhabh*)." The 888 Commandment was interpreted by the Christian concept of a 888 Holy Family, rather than by that of a patriarchate. This 888 concept took root from the first missions to the Celtic 888 Christians, and was disciplined and which formed 888 fertile ground for this Christian seed. Hence there was 888 general assertion of paternal, not of patriarchal, authority at the expense of youth. Where equal honour 888 is due to both parents, the mother finds equal duty and 888 regard with the father. And, although "the man is home 888 is close at hand while the mother's may be a little distance 888 away, her parents are dear to her as the younger and the 888 more active and helpful to their grandchildren, and the 888 influence of all four grandparents fairly balanced.

888 Moses of the Pentateuch, Isaac and Jacob are named 888 in a hymn of the Lews, sung when going up with the flocks 888 and herds to the shielings; even this may be a Presbyterian 888 and Hyperborean tale, but it has the unverifiable weight

[1] Clanship has repeatedly been said to be 'patriarchal', as an ideal and a system. A different conclusion, that communality is the root of clanship, seems to be indicated by the Celtic evidence, and by the Celtic evidence. The Highlands, unlike the Lowlands, have had scores only in the writings of strangers such as Boas. Not only is the Celtic family not patriarchal, but it is not even patrilineal. Descent is bilateral, and the mother's side is of equal importance with the father's. Marriage is not a contract, but a sacrament, and not automatically enforced their position as patriarchal, and the woman's name is not automatically dropped. Nor is the woman's name is not automatically dropped. Nor is the woman's name is not automatically dropped. Nor is

As we shall see in the next chapter, there is hostility between the Portree dwellers and the crofters. One reason for this is the fact that the village pays more in property tax than the rest of the island put together while they receive relatively little in return. The feeling that the crofter is "aye wantin', but never pays a cooper" (a penny in taxes) is not at all unusual.

Summary

If the economic aspect of the culture is judged in terms of the standard of living it affords, it cannot be considered as satisfactory. There are persistent environmental obstacles, among them geographical isolation and an unfavorable climate for pastoral-agriculture. We have seen that few can hope for anything which would approach a desirable income in the surrounding commercial society. The crofters have been caught between two cultural patterns. The old system of land use has persisted. A new system has been superimposed. From this new system, however, the Sgiathanach has accepted few innovations of more recent origin than the eighteenth century, except those of a material or technological nature. Still, he has ceased to be self-sufficient, and, in doing so, he has become dependent on the commercial world for the very essentials of physical existence. For many of the crofters this means seasonal migration in the quest of employment. For some it means part-time or full-time work locally. For a relatively large proportion of the population it means dependence on contributions of their children and government agencies. This dependence has not led to a full

356

at which the youth can join together as a sodality; hence, they hardly ever have a chance to question the control of the "elect." Only once in recent years has the control of the old people been criticized. After World War II, the men who returned to the neighborhood wanted to erect a village hall. This threatened both family unity and the solidarity of the neighborhood. The young people were divided between the time honored obligation to honor their parents and their own desires for a fuller life. The parents were torn between religious beliefs and their affection for their children. The minister and his elders were faced with a situation which threatened the fundamental tenets of the faith and the continued ability of the religious expression to sanction the existing order. How strong are age controls? The youth did not get their village hall. Many of them left Skye for the Lowlands where social life is less restricted.

The difficulty is that until, say, forty years ago the traditional outlets were sufficient. Middle-aged people remember how the youth used to drop in on the old widow for a visit on an evening and then make their way off in couples for a bit of courting. Two World Wars and the continuing program of National Service, not to speak of the influence of the schools, have given the youth a new perspective. They have spent one or two years in an environment where recreational activities are considered not only innocent but also wholesome. The radio and magazines have contributed to the demands of the youth for amusements. As if this were not enough, there are

several agencies who have taken the task of bringing movies 178
to the remote crofters in the belief that the Highlander is 883
more likely to stay if he has a share in the life of the 177
Lowlander and the Englishman. These agencies want to "create" 52
a more adequate social organization."

Out of boredom, some young men try to add some spirit 273
to their lives by turning to "the drink." Although the 779
religion of the Skyeman is strikingly similar to that of the rural dweller in Wales, I found the Welshman and the Sgiathanach have quite different views on the subject of temperance.[26] All churches support temperance, from the pulpit and from the kirk collections, but abstinence or prohibition has never been accepted. Perhaps, their main reason for consistently rejecting the idea is their wont to base many of their decisions on Biblical directions. There can be nothing inherently wrong in the infallible Word of God. Then, too, to the Sgiathanach, whiskey is not Scotch; 273
it is the "water of life." The importance attached to the dram can be judged from its functions at birth, marriage, and death. It is also the means of thanking a man for doing a favor which cannot be repaid. Thus, while abstinence is a major religious tenet for the Welsh, temperance is the aim of the Skyeman.

The temperance movement has had an effect, all over 275
Scotland. The "pubs" are no more than a long bar set in a 185
bare room. Young men who have spent time in England, where the local "pub" is a closely knit club for the villagers, frequently

177 most of the young men of the Islands were away. Hitherto,
[464] though people from the Isles had gone out into the world and rubbed shoulders with all sorts of men and women, from best to worst, their own homes and townships had remained inviolate. Now, however, there came men in numbers from distant homes, with little to do when off duty and with money to spend, either on tweeds, which were virtually free of controls, or on pleasures, if they could find them. The temptations offered to a community so unaccustomed to town ways were considerable.

729 Those who returned least changed in their outlook upon
178 rural life were ex-prisoners-of-war, from the 51st Highland Division. At their own wish, they had received instruction
[423] in modern small-holding; and the demand from prison camps for land when the Highlanders would come home was upheld. It is especially among these men that agencies such as *An Comunn Gaidhealach* kept Gaelic tradition alive, linking it to the Highlanders' long thoughts of home. Next to these come naval seamen, while those most subject to urban influences were those who worked in factories. But whatever their experiences, home exerted a strong attraction. If work and a fair wage can be found in the township and on the crofts, and if social life can be renewed, many who returned will stay.

726 As in the First World War, so in the Second: few communities in Britain have had so large a proportion of their men in the Forces, in the fighting line and at sea,
[177] from the outbreak of hostilities. The Island community is almost without the exemptions due to 'essential occu-
[167] pations' such as commercial agriculture in the country, or war industry and administration in the towns. The toll
[729] has been heavy, and the nation's debt to the Islanders should be remembered.

us journey over to the "Capital of Skye" which stands on 621
Portree Loch.

The village of Portree, as stated earlier, represents the only successful attempt to introduce a nucleated settlement to the island. It was created by a landlord in the [656] early nineteenth century and has been fostered by the national and county government, especially within the last twenty years. Nothing has disturbed the English and the Lowland Scots more 621 than the alien nature of town life in the cultural heritage 648 of the Sgiathanach. Ever since the sixteenth century the Hebrideans have been resisting the introduction of villages. The Scottish and, later, the British, government has been only slightly less adamant in its determination that the country people should have a town, if not a burgh, come what may.

Indicative of its calculated creation, Portree has been 621 built "on the square," like so many English villages. Around 368 the square are found the police station, courthouse, and jail; 177 two banks and one private home; two churches and the Masonic building; and a hotel and two boarding houses. Equally indicative of the alien nature of the village, the square is normally used only when the people are going to or coming from their place of worship or business, or when they are entering or leaving Portree by the road which cuts across the square. The exceptions are an occasional civil ceremony and performance put on for the benefit of the summer tourists.

In reality, the village might best be described as an 621 overgrown hamlet, even though it was planned. The main function 368 of the village as far as the whole island is concerned is that

175 632 241 In any case, the "town" or township was not the effective work unit, but rather was the larger neighborhood in which several joint farms existed. [233] The tenants of several joint farms grazed their stock on the surrounding moorland (i.e., on common grazing land).

D. From Run-rig to Crofting

175 233 241 311 Run-rig was an agricultural system suited to a pastoral people, who required the use of open, common pasture for grazing their livestock; the arable land was limited, and of varying quality (according to Day (1918: 12), 54% of the land in crofting counties was mountain and heath used for grazing, and only 5% was [423] arable land). Residents worked several strips of different quality, and the strips (in drained beds of earth a few feet wide and many feet long called lazy-beds or fiannagan) were usually re-allocated every few [625] years. A "constable" acting for the landlord ensured that proper husbandry was maintained.

175 241 178 427 The joint farm, and the stratification of tenants and subtenants within the farm, disappeared as "progressive" landlords began, in the second half of the 18th century, to substitute compact holdings for the "mingle-mangle of dispersed strips (Gray 1952: 46)" 000 which characterized run-rig. Hamlets or clachans

175 241 361 178 Hamelts or clachans (small clustered settlements) w houses were isolated on strips single-street villages.

114 178 Gray (1952, 1957) argues t behind the reorganization of la was the progressive, individual ideology of the 18th century. attributes the reorganization t cereals which existed during th 177 241 Highland landlords, who were ve with the society of the Scottis influenced by agricultural prac trend to change run-rig, which whole of Scotland, to fixed, co in the Lowlands.

l development and give
farmers. To give land
wever, meant the removal
ho had hitherto been
em of run-rig.

175 Factors which led to further crowding were the
423 development of industry and an increased demand for
427 wool in the south, which occurred when traditional
[161] ties between laird and tenant had been loosened. The clans had been disbanded after the Jacobite rebellions of 1715 and 1745; those landlords who had not forfeited their estates received huge sums of money as compensation for the abolition of hereditary jurisdiction. They had experienced travel and the luxuries of other countries, and were not eager to remain on their estates. They accepted the huge rents offered to them by sheep farmers to the south, and turned vast amounts of land into sheep tracts. Tenants
[361] were crowded together along the seashore, or lived on tiny holdings dispersed among the larger farms or on moorland, earning their living by doing wage labor.

175 Despite the factors which encouraged a high level
423 of population to remain on the land, proprietors
241 attempted to destroy the joint farm with its small,
●178 dispersed holdings and collective rights. Run-rig
[656] agriculture was abolished in Argyll in 1776 (Day 1918: 180; Gray 1957: 49), and over the next 80 years it disappeared from the Highlands (cf. Gray 1952: 49-50), to be replaced by townships of compact holdings surrounded by undivided hill grazing lands.

175 178 241 423 Geddes (1948: 56) gives evidence that joint farms were abolished in Lewis early in the 19th century. Gray (1952: 50) says that by 1819 there was little run-rig left in Lewis. The factor's notebook for Breasclete, on the west side of the island, shows the destruction of clachans around 1850, and their replacement by linear townships.

175 423 427 632 178 In the Napier Commission's "Evidence" (1884) for the parish of Barvas, it was mentioned that the rent had been increased because of improvements made by the landlord, Sir James Matheson, between 1849 and 1852. Land had been drained and new townships created; and both old and new townships were lotted and rented in 1850 and 1851 (Napier 1884: 959). The Ordinance Survey map drawn up in 1852-53 reveals several interesting features of Shawbost: "New Shawbost" has recently been laid out; and in an area now incorporated by only a few separate crofts on "Carnan," a cluster of houses appears, perhaps the clachan in which joint tenants lived, and from which they went out to farm their various strips of land, before Matheson reorganized the land in linear strips with dispersed housing. The peat banks in the Carnan area are almost exhausted, indicating a long period of settlement in this area.

175 361 423 427 178 [314] [194]

175 423 427 178 It is ironic that the attempts by landlords to initiate agricultural reform and develop capitalist farmers led to a destruction of the differentiated tenantry on the joint farms (cf. Gray 1952: 51-56), and a proliferation of very small units, none of which was adequate to provide a reasonable subsistence. These small units became fixed as individual holdings by the 1886 Crofters Act, and the only important distinction thereafter was between smallholders with security of tenure (crofters), and non-crofters who built homes on the common grazing land but had no specified rights. Although various agencies were established after 1886 to enable holdings to be enlarged, only in the last fifteen years have such possibilities between officially developed in the form of official subletting and individual apportionments.

17 423 By the second half of the 19th century, a trend against laissez-faire was manifest in the writings of European scholars. As feudalism broke down, smallholders throughout Europe were being dispossessed of their land, which was then consolidated and enclosed. 171 In Denmark, legislation was passed as early as 1682 to prevent landlords from taking steps to increase the efficiency of their farm production by replacing the

175 423 656 stability and improvement; e.g., an executive officer, the Constable, was to be elected annually by the community, and he would oversee various improvements in the township (Napier 1884; Day 1918: 187-9).

175 423 671 However, the Crofters Act of 1886 did not make the township a unit of local government. It was more concerned with protecting the individual crofter's rights than with the creation of a self-sustaining, self-correcting economic unit. The Napier Commission had recommended the consolidation of crofts which were rented at less than L6 a year, and a policy of persuasion by which the excess population would be encouraged to emigrate or specialize as laborers, fishermen, and so on. [656] [168]

175 423 671 178 [656] Instead, the 1886 Act provided security of tenure for a large number of crofters, as well as a fixed fair rent and compensation for improvements if the crofter chose to leave the croft. These assurances, and the creation of a variety of agencies (such as the Congested Districts Board, the Crofters Commission, and the Board of Agriculture) whose purpose was to encourage agricultural improvement by providing funds, equipment, breeding animals, seeds, advice and so on, constituted a set of incentives. These incentives combined with a number of other factors including improved transportation and the spread of

175 423 671 178 [464] [457] information via the technology of mass society to affect the choices made by succeeding generations. For example, young people are able to leave the island and work in British cities or abroad, sending money home to sustain their aged parents who by law cannot be removed from the croft.

E. Changing Land Use

311 175 182 Darling (1955) described the previous Highland way of life as a well-adapted, ecologically balanced system, in which proper use of land was attempted by limiting the number of livestock, preserving a proper ratio between cattle and sheep, and regulating the flow of stock on the land throughout the year. Dikes (fences of turf or stone) and drains were communally repaired and cleaned. Although continuity with the previous way of life is evident today, the overall picture is one of partial use, and misuse, of natural resources. Various advisors from government organizations and colleges have been brought in to encourage effective husbandry and land use. 178 311 [182] [654]

1. Specialization and Individuation: The change from an ecologically adapted, internally regulated community in which land was used intensively for subsiste

178 311 purposes, to a community which, as an agricultural entity, requires transfusions from the larger society, is accompanied by patterns of specialization and individuation. The following table (Table III)[1] of agricultural statistics for the parish of Barvas demonstrates the change, over the past 100 years, from intensive subsistence agriculture to specialized production. From a broad-based subsistence use of the croft (as revealed by the number of acres cultivated for barley, potatoes and oats; and by the number of cattle, especially milk cows), there emerges a tendency [231] toward specialized production. The number of sheep, [236] which require less attention than cattle, has increased [241] since the late 1920's when the weaving of Harris Tweed [246] commenced in earnest; and around this time there also occurs a differentiation in cultivation, between the production of barley and potatoes (used largely for human consumption) and the production of oats (used largely for [231] feeding livestock). After 1931 agricultural returns began to distinguish between beef and dairy cattle. During the past ten years the number of beef cattle in the parish of Barvas has increased.

241 654 An important factor which crofters on Lewis now take into account when making decisions about their

1. [See p.ix--Analyst]

241 654 continuing investment in crofting activities is the availability of various subsidies which, in the form of fencing grants, calf subsidies, and so on, are available to other agriculturalists as well as to crofters. The certainty of support which subsidy offers is important in the decision-making of crofters because of their generally fluctuating, low-level income, in contrast to the decision-making of farmers who keep sheep or cattle on a large scale. The latter are likely to be more affected by market prices. Many Lewis crofters [648] indicate that they would hesitate to support Britain's entry into the European Economic Community, despite the higher level of prices for beef, because their subsidies might be jeopardized. Subsidies can be important as incentives for specialized production, but do not themselves sustain crofting as a socioeconomic pattern. [178] And in general, despite the incentives, all agricultural production is declining in the face of more appealing alternatives available to the emerging generations.

178 241 476 A decline in township communalism, or an increase in the individuation of agricultural practices, is another index of change in economic strategy. The fencing of individual land and purchase of personal farming machinery are everyday occurrences in the life

178 241 476 of the normal capitalist farmer in the West; but in crofting areas, these practices reveal a strain between communal and individual tendencies.

a. Fencing:

233 Although run-rig was replaced by fixed, compact [178] holdings, the method of animal husbandry was not affected [417] until the land began to be fenced. A single dry-stone [333] dike enclosed the township, keeping livestock on the moor and away from the arable land. In different parts [184] of the Hebrides, various types of herdsmen were hired to protect both the livestock and the growing crops (cf. Owen 1958-59 for a discussion of cattle, calf and sheep herdsmen in North Uist).

175 625 The township Constable had a great deal of power, which included the right to evict people from their crofts, to enforce rules of good husbandry. The last Constable of Shawbost, who died at the turn of the century, has been credited with a number of ignoble actions, such as forcing an old woman with a sore leg to take her cow to the moor along with all the others. Old widows who had no one going to the fishing and hence no means of paying their rent might be evicted in favor of other persuasive, land-hungry members of the village.

175 166 In the last half of the 19th century, many famil were "cleared" from the district of Uig and resettled Shawbost. According to a local version of village 173 625 history, the Constable evicted persons from North 166 Shawbost and resettled them in New Shawbost. "The people from Uig were fishermen, so they needed to be the sea. They wouldn't take a croft in New Shawbost all." According to another version, the crofts once extended all the way across from Carnan to the loch; when the Uig people came, the crofts were chopped in half, and the street called Baile Stigh was created.

175 625 Whatever effect the Constables had on land use animal husbandry, they are now referred to as "tyran who went mad or committed suicide after the Crofters of 1886.

175 311 233 Cattle and horses were tethered or herded withi easy walking distance from the township; sheep coul be left on the moor without much surveillance. At a much earlier time another dike existed out beyond th [178] township dike. The dikes were used according to pri [221] found in grazing schemes today: the sheep were kept out on the moor, beyond the second dike, until midsu when they were moved in closer to the village. At t point they were still out of the arable land of the

entex grazing for cattle, but by that time the cattle were already on the sea.

"The original idea was to provide an early hire for the cattle, because everyone had cattle then. Otherwise they would need to buy more baled hay to see them through the winter."

"Almost everyone in New Shawbost had a share in the 1959 schemes, about 26 altogether. Then it was mostly cattle. We took turns bringing them in at night, and I remember taking 31 home, with some left behind for the night. The cattle were grazed over the summer, and the lambs were put on from August 10 to October 10. Many dropped out after the first four or five years, when they stopped keeping so many cattle. When the number dropped to 13 or 14, they started using the schemes for sheep grazing, and then some took up their shares again. When we only had the cattle and lambs, we didn't need a scoutmig; but when the mixed grazing started, we had to keep down the number of sheep. Last year we had difficulty with disease."

A forty-acre scheme in North Shawbost started with about eighteen crofters and non-crofters participating; there were 37 cattle altogether. Now only four have cattle; the rest have sheep. The sheep-keepers say,

"The cattle give too much trouble." A smaller scheme is grazed only by sheep. On the schemes where mixed grazing is practiced, a number of conflicts arise between those who have only sheep, and those who have cattle as well. To accommodate different demands, one township scheme was divided with a fence; cattle were put in for a month in one part, and then shifted to the second part. The sheep were then brought into the first half. All stock had to be removed from the scheme a month before the lambs were weaned, so that all worm eggs and other harmful elements in the dung of animals previously present would have time to die. When was once used for a single purpose by everyone now has to be divided.

"I paid one pound a head to put cattle on the reseeding," says a man named Iain. "Now I have to move them off already. Those sheep people want it for their sheep. I won't use it if they're going to be like that. Next year I'll have the use of two crofts and my apportionment. And now that I have my own tractor I can put a load of sand at the bottom of the croft to make the grazing better."

According to another person, who also keeps cattle on the reseeding, "Some people want to move their livestock on and off the schemes when it suits them, like Iain,

who wanted to keep his bullock on the reseeding for another week because he wasn't ready to sell it; but he should have known the rules. Some people want to keep both cattle and sheep on at the same time, although the agricultural advisor says cattle should go on first, because sheep go for shorter grass. Other people want to put on twice as many sheep as those who have both cattle and sheep. When they stop keeping cattle, they think they're not getting a proper share of the reseedings.

"The Crofters Commission wanted communal township schemes. But people have different demands. It's better to go for an apportionment. You can do what you want with your own land."

The number of township members participating in the communal schemes is diminishing to the point where it is less expensive, and much less subject to conflict, to arranging over differences in stock-keeping, to invest in individual holdings of land rather than try to sustain communal practices.

Chapter 3

CHANGING ECONOMIC STRATEGIES:

LAND, SEA AND LOOM

In Lewis, the change from a relatively self-sufficient community in which land and sea provided the economic base occurred in the context of the phenomenal rise of the Harris Tweed industry. In the following pages, the history of Harris Tweed is discussed in relation to changing strategies involving exploitation of land, sea and loom. Associated features of social life are discussed. Social boundary systems are defined and discussed in Chapter 4.

A. The Sea

Around World War I, nine boats, as long as 27 to 30 feet, driven by sails, used to go out regularly from the Shawbost harbor. From five to seven men, usually neighbors, had "shares" in a boat. They would go out fishing during the night and return the next day. "We baited our lines with eel, for long. We would catch maybe two or three hundred. I remember once we caught 1300."

On one of the crofts along the strand are the ruins of two curing houses, where the fish were salted and dried. Ling, cod, skate and halibut were cured and sold to local merchants for export. "The same as they do in Iceland this very day. That was the main industry. Then the English came with their steam trawlers; they ruined the fishing here, and then went west to Iceland and the Faroes. In Iceland they got fined for poaching, but here the trawlers often ignore the three-mile limit. But the fishing was the mainstay here, before the Harris Tweed came along."

One man returned from sailing in 1932 and bought a boat for £12. He had 10 lobster pots, and made 12 one pounds by selling the lobsters at a shilling apiece. Another man, who returned from the United States in 1934 because of the depression, bought a share in a 16-foot boat. It was made in Ness, at the northern tip of Lewis, and cost about £12. He and his partners went out every night possible; the fish provided an important part of their income. The boat was sold in the 50's. "It wasn't being kept up anyway." Around World War II there were as many as twenty boats; sum fished at night, after a day's work. Today there are four 12-foot boats in Shawbost, each shared by four or five men. The boats are used intensively for fishing during certain times of the year,

but not as often as in the past. In the past boats were in danger of being smashed by the strong seas and winds that gained easy access to the Shawbost harbor; but today, because so many cars are available, the boats can be sheltered in the more protected bays of Carloway, five miles up the coast to the southwest of Shawbost. Despite this protection and the increase in income since World War II which would enable more people to buy boats, the number of boats remains small.

In the past certain people were esteemed for "knowing the wind and the sea." The sound of the surf coming from different directions presaged different kinds of weather; a line of white across the bay meant bad weather in a few days. A fifty-year-old man says, "My father and grandfather could tell when a storm was coming. They needed to know, and they didn't have radio and television to tell them. I would know the signs, too, if I had listened to them."

Not only was there local fishing, but the men used to hire themselves as crew on other fishing boats. Several surnames reflect this history. One family is known by the nickname "Stornaig," the surname of a man who lived on the east coast of Scotland and on whose boat the head of the Shawbost family had once worked as

a crew member. "There were two fishing seasons. One season you went to Fraserburgh, Stornoway, Lerwick and Peterhead; and then the winter fishing was in England, at Yarmouth, Scarborough and Lowestoft.

I remember in Yarmouth we didn't like the English herring, it was such a dull color. We lived the pure white Scotch herring."

They lived in small huts, and the work was hard but full of fun. Neighborhood girls used to go together, bringing bedding and different items in large chests to share in the housekeeping. Three girls worked together in a crew, and there were as many as six sharing a room, in double bunks. Some of the huts were so small that there was barely enough room for the beds and the cupboards. At night the boys would come in off the boats. "You were so tired from being up since early morning; but you were always able to dance. You were treated with respect; the youngsters today aren't so good." The women who married non-islanders that they met at the fishing were not likely to return.

When the weaving started on a large scale, the girls "were glad enough to have work at home, even though the work was hard." But many continued their temporary absences from the island, working in hotels or as

the cattle
know their own shellings; sometimes
they came back before milking time and stuck their heads
in the door. Stay outside the shelling at night, and
that's how you can tell where a shelling once was, even
though the walls have fallen, by the rich green grass.
Calves were born during the summer. A hollow was scooped
out in the peat, and lined with turf and moss. People
had as many as four or five cows. It was like Switzerland,
only didn't have the bells on the cows. There was lots
of milk, fresh thick cream and crowdie (clotted sour
milk); the old people knew how to make cheese.

The women were very early at night, with the sound of
the birds. There were only a few hours of darkness
anyway, and I'm sure we didn't get much sleep, but somehow
we were always fresh. It was the air, the moor air is
very health-giving. This was the best milk that I
people benefited from the change. Sometimes a person
with TB would stay out there all summer. The air is heavy
by the sea.

"There was no sense of time the way there is today.
Life was not lost in the snow or fog, you followed the cows
home. You had all summer to take home the peats, to work
the croft, to harvest the corn. There wasn't a world,
there was only ourselves. That has changed since the war.

people kept several cattle, some of which were dry most
of the time. But because everyone was keeping cattle,
milk could be gotten from a neighbor. One man was
planting eight or nine hundredweights of potatoes before
the war, some of which would be used to feed the livestock.
"Now couldn't buy milk then, so you had to keep a cow.
And even though people were wanting, they weren't getting
so much money as they are now. It was the barter system
here for a long time. So they didn't have the money to
buy feeding stuff. It was better to spend the time
planting potatoes. Now of course there's more money in
the wearing."

After the war, an act was passed which provided free
milk for schoolchildren. Milk for the Shawbost school
was supplied by a farm near Stornoway, and villagers first
started buying milk from the school milk van. A little
bald by weavers during the war had increased the payments
for weaving, and the barter system had stopped. More
money was available. As the loom was more profitable,
more people stopped keeping cows, and relied on their
neighbors for milk, or got their milk from the van bringing
milk to the school. And as the cattle got fewer, the
market for bottled milk expanded. A dairy was started on
the west side of the island in the mid-1950's which carries
milk from Big to Ness.

The number of cattle diminished as milk became
available by other means; and when the township reseeding
schemes came into existence, the need to go to the
shellings for an "early hire" was removed. The shellings
that remain in use today are huts of tin, wood and
concrete within easy walking distance from the highway,
used on weekends and during summer holidays. Most of
these modern shellings are close to Stornoway, and serve
as summer retreats for the relatively harried urban
dwellers such as publicans. On the west side, the
shellings are no longer used, but remain as a theme of
songs and in nostalgic memories.

C. The Loom

Ula Mor, the big cloth, was woven in the Highlands
and Islands for hundreds of years. Martin Martin,
who travelled through the Outer Hebrides in the late 17th
century, describes the export of "plaiding," and the
practice of washing or shrinking the woven length of
cloth (Martin 1716). Weaving was done on wooden looms,
and produced only for local markets until the middle of
the 19th century.

By the middle of the 19th century, the failure of
the kelp industry, decline of fishing, and destruction

175 dyeing the wool it was spread out, dried and sent to
283 Stornoway to be made into yarn. The yarn was then sent
172 back, and the weaver wove and washed it. About six women
367 (462) were required to do the waulking (the process by which the cloth was washed and shrunk).

175 "In those days the weavers designed their own
286 patterns, and sold their own finished tweeds. I remember
432 going into town with my brother, we had two tweeds in the cart. We went into a shop to sell the tweed, and the man said it was poor weaving. He didn't want to pay the full price for it. I told my brother to roll it back up, we would take it somewhere else. As we left the shop, he told me I had 'good cheek.' In the next shop the merchant didn't say anything, and gave my brother the regular price. We went home with £60."

The great demand for tweed encouraged the development
286 of more efficient methods of production. One by one the
268 various processes of production were taken over by
178 specialists, and gradually these specialists were brought
453 together under one roof. Large boilers for dyeing wool
434 were supplied as a result of actions taken by the Congested
463 Districts Board, which was formed in 1897. The Scottish
396 Home Industries provided chemical dyes. The most
226 difficult and time-consuming processes were carding and
283 spinning, which small mills on the mainland began to do

286 on commission for weavers around the turn of the century.
283 By the early 1920's, four mills on the island were
178 carding and spinning wool on commission; and one mill
226 (283) brought looms into its premises. Lord Leverhulme, who bought Lewis in 1918, saw the value of concentrating weavers in one place and of improving the technology. He encouraged the introduction of Hattersley domestic
(463) looms, which eventually replaced the wooden looms. The individual weaver also did his own warping, but after World War II the mills began to hire warpers to work full time on mill premises. Transporting the tweeds, which used to be the responsibility of the weavers, is now the responsibility of the mills. Today all processes except the actual weaving are handled by mills, most of which are located in Stornoway.

Such steps in specialization and centralization made
175 sense to the weaver. One of the older weavers recalls,
286 "In the late 20's or 30's you could buy a yard of Harris
288 Tweed for about two shillings. It wasn't economical for
(435) any crofter to dye and spin the yarn, weave it and sell it for only two shillings a yard. As the mills enlarged, they could make it with the machinery because they could make it an economic proposition."

However, the tendency toward specialization and
175 centralization was in direct conflict with the reasons
286
288
324

175 behind the tweed's popularity. The tweed was more than
178 a cloth; it was peat smoke and windswept moorland, the
288 image of the free man who had escaped city life and
(324) machines and was the master of his own destiny. Steps had been taken all along the way to preserve the image of home-crafted goods, as when, in an effort to prevent machine-spinning, carding mills were built in Lewis and Harris at the turn of the century to prevent wool from being sent to mills on the mainland, where it was both carded and spun. As early as 1906, a man was convicted
(485) in London of selling power-loomed tweed under the name "Harris Tweed." Today power-driven looms can produce
288 double-width cloth 54 inches wide, a width much preferred
402 to the 28-inch cloth produced on the Hattersley looms because there is less waste when the cloth is cut. But because "Harris Tweed" must be hand-woven, new looms of light-weight metal are being designed on which double-
(435) width cloth can be hand-woven. The new looms will cost so much that many weavers may they would be unlikely to invest in them, especially given the uncertain future of the industry.

The Harris Tweed Association, formed in 1909, was
175 granted a certification mark by the Board of Trade which
286 was stamped on tweeds that were hand-spun and hand-woven
141 (424) in the islands. During World War I, hand-spinning died
226

175 out in Lewis, and the Harris Tweed Association was
178 ineffective in enforcing its standards. In 1934,
288 weavers were allowed to use yarn spun in island mills,
434 and production increased; but no weaving was allowed to be done in the mills. All looms were removed from those mills which had tried to centralize this stage of production. The actual process of weaving remained, by legal definition, decentralized, although the word "crofter" was changed to "islander," thus widening the category of persons who could weave "Harris Tweed," and paving the way for centralization of weavers in the town of Stornoway.

Any person can purchase his own yarn, weave his own tweeds, and sell them to tailors or summer tourists; but before a weaver can weave for the mills, he must be registered with the Weavers Union. The Weavers Union is a branch of the Transport and General Workers Union, which includes mill employees, hospital workers, lorry
288 drivers, and others. It is an anomaly of the Harris
467 Tweed industry that workers classed as self-employed should join a union of employees and is another indication of the centralization of control and power in the mills, with whom the weavers, along with the mill workers, bargain for higher wages. Weavers receive a basic sum in island mills,
288 £10 for each length of tweed, which is usually 38 weaver's
452
434
804

288 rotation to the weavers who are registered with
466 them.

Other factors also hinder equal distribution of
(402) tweeds. Personal considerations enter; for example, the managers of the Shawbost mills feel a responsibility for the weavers in their own village, who are usually kinsmen. Exclusive distribution to local weavers is rationalized by saying that the tweeds must be done urgently; hence they are distributed only to the weavers who are known to do tweeds quickly.

The major factor hindering equal distribution of
288 tweeds is the expense which derives from the decentrali-
466 zation of weavers, that is, the cost of petrol and upkeep of the vans, which is born by the mills. Before World
(195) War II, the weavers rather than the mills were responsible
(494) for transporting the tweeds, by cart and horse at first, and then by motorized transport.

288 During this period, independent entrepreneurs
195 carried tweeds in vans and buses at four shillings each,
492 a practice which stimulated the development of public
494 transportation. Although the number of passengers using much vans and buses for public transport fluctuated, the income derived from the cartage of tweeds was in itself large enough to be profitable and to maintain the
(178) enterprises. An efficient service existed, despite the

288 paucity of passengers, which provided rides to and
195 from town many times a day; but with the "development,"
• 178 that is, the centralization, of industry, public trans-
288 portation deteriorated. Visitors to the island unfamiliar
412 with this history are struck by practices which they
494 interpret as coming out of a clockless past, such as the present custom of stopping the bus midway in its journey to Stornoway so that the driver can eat dinner in his mother's house while all passengers wait on board. Such a custom is fairly recent, and indicates the deterioration of public services to populations which are marginal to the centralized source of these services.

During World War II, when the demand for tweed was
288 high and the number of weavers small, the weavers staged
(468) an effective strike by which they received an increase in pay and the burden of cartage was shifted from them
(195) to the mills. This did not affect the system of trans-
(178) portation until the mills realized it would be cheaper
(494) to run their own transport rather than to pay the independent drivers a "cartage fee." The mills then began to use
(493) their own vans to deliver yarn and collect tweeds directly
195 to and from the weavers. Once the mills took over trans-
288 portation, they tended to deliver tweeds to weavers
178 closest to the mills rather than to uphold the principle
(494) of equal distribution. This practice (made possible by
412
(341)

195 the 1934 decision to change the word "crofter" to
• 178 "islander") led to the weavers living in council
288 houses in town and working in loomsheds behind the
(341) houses. Unequal distribution has also contributed to Shawbost's relative prosperity, and to the decline of weaving in more remote parts of the island. The
(464) unequal distribution of tweeds has made it difficult to maintain a large labor force, which in turn limits the growth and development of the industry.

3. Instability of the industry: The Harris Tweed
288 industry has undergone a number of crises. Periods of
178 depression have alternated with periods of prosperity.
(494) (See Appendix B for the fluctuation in the number of yards stamped each year with the Harris Tweed trade-
mark.) The very conditions which give the tweed its
(435) market value--the decentralized, non-mechanized human
(464) element--also limit the possibilities of growth in the industry, and contribute to the industry's instability.

When a business remains small, it must collect
288 orders before it can provide work to have the orders
441 filled (except when demand for an item is strong, as occurred around the time of the previous world war; during the war and for a few years after, tweeds could be made first and then marketed, because any cloth
(491) could be sold). Only a large business can keep weavers

288 in Shawbost; a very small business, which until
441 recently did not even have its own transport but
452 hired facilities when they were needed and simply
434 went into hibernation when orders stopped coming;
a medium-sized business, which went into liquidation
in 1971; and a large business, which continues to survive despite a depression which has continued since the late 1960's.

Harris Tweed is sent to markets all over the
288 world; but because of the difficulty of maintaining
441 a large labor force, the filling of orders is sometimes
(434) slow. If large orders cannot be met, weaving as an island-wide occupation cannot be maintained. The number of weavers on the island fluctuates, as slack periods come and men adopt the time-tested strategy of temporary migration in search of other jobs. One
(452) of the factors which aided the weavers during their
(178) strike of 1941 was the fact that so many other jobs were available during the war that the future of the industry was jeopardized.

In the last five years the number of mill employees
288 has decreased from 800 to 500. The decrease is due in
• 178 part to the introduction of more efficient techniques and new equipment, but there is little room for improvement in the production of tweeds because the human element, the weaver, is essential to its production.

township, but on land which had been rested and which thus provided better grazing. During the winter the sheep were allowed past the township dike, to graze along with the other livestock on the stubble of corn and barley, and mineral-rich seaweed by the shore.

After World War II, the individual crofts began to be fenced, and the township dike was no longer repaired. The fact that sheep were still grazed communally on the moor meant that everyone had to go out together on a particular day rather than individually, but fencing of individual land facilitated variability in land use. Less use was made of crofts for raising crops, and they could be used for grazing sheep all year round.

b. Reseeding schemes and apportionments:

Another illustration of the individuation of land use is provided by comparing the number of apportionments granted by the Crofters Commission for Lewis in the last 10 years with the number of township reseeding schemes carried out during the same time (see Table IV).[1] A crofter may apply to the Commission for an area of land (apportionment) to be sliced out of the township's common grazing land and given to him for his own use; theoretically, his share in the township's common grazing land is reduced if his application is granted.

[See p.x--Analyst]

178 311 232 233 land is reduced if his application is granted. Also, a group of men in a township may apply to the Crofters Commission for permission to fence off a portion of the common grazing land and improve it as grazing for their mutual use. Grants are available for both schemes. The township reseeding schemes, adopted widely after their introduction, have been superseded by the number of individual apportionments.

The first township reseeding schemes in Lewis were tried as an experiment in Ness, Harris, Barras and Bragar. "The Department of Agriculture fellow [654] watched us every step because it was an experiment. Oh, there were times we cursed him and wanted him away." In Shawbost, a few interested crofters went around the village to see if others were interested. "We got a bad name for it; no one could see anything to it. But those people got the benefit of it." According to one man, initial reluctance to participate in the schemes was overcome when the agricultural advisor pointed out that if they overstated their costs, they would not have to pay much money themselves.

Between 1959 and 1962, seven township reseeding schemes were developed in North and New Shawbost, and four in South Shawbost. They were intended to give

288 Questions about the state of
57 "the tweed" permeate all discussions, and often
458 constitute an initial greeting. "Have you got a
521 tweed in the loom? How many do you have? Did you
576 see Stickey's tweed van going into Pairc? Did you hear that Newalls has an order for about 800 pieces.

"The mills brought me two tweeds, and I got two in town myself. I stuck those two in the attic so that anyone who came in would be none the wiser," sa one person in a whisper. Neighbors are in and out o each others' houses and loomsheds, observant and questioning, on the lookout for any indication that they have missed out on some transaction in the competition for scarce goods.

D. Weaving as Strategy

286 When weaving was done on a wooden hand loom, th
178 weaver required a longer period of apprenticeship.
402 Weaving was "more of an art," as some of the older weavers remember it today. Not only was the shuttle thrown back and forth by hand, but the lifting of different threads in the warp was done by manipulati four foot pedals in the correct order. Today, the
288 process of weaving is very much simplified: the wea
178 pushes only two foot pedals, and simply keeps an eye
402

the automatic shuttle; all other processes have been built into the design of the Hattersley loom (cf. Thomson 1969). In other words, weaving does not entail very specialized skills and is not difficult to learn. A caller can come home and learn to weave in a short period of time, or pick up the trade again with ease after having been absent from the loom for a long time. Others substitute for each other when someone is ill or a tweed is "urgent." Wives help their husbands, and young boys their fathers and uncles. Such low-level specialization and substitutability are complementary to crofting activities and the maintenance of neighborhood ties, and may be seen to favor continuance of the occupation of weaving.

The Lews Castle College in Stornoway, established in 1963 and accredited in 1971 is a building that was formerly the home of Sir James Matheson, offers training courses in weaving for adults which last for ten weeks and qualify a person for membership in the Weavers Union (cf. Stornoway Gazette, March 16, 1968). The College also sends weaving instructors to all the public schools on the island to instruct young boys in the rudiments of weaving. The Highlands and Islands Development Board have in the past offered loans and grants with which to purchase looms, and government aid has protected the mills.

241 The competition between the loom and the croft is
208 evident in the few communal township practices which
225 still exist. One of the rules of township organization is that all households must bring their sheep in from the moor on the same day. Other rules are that no one
231 should go out on the moor at any other time with a dog, and everyone who has sheep should go out on the day designated by the township grazings committee to collect them. The moor is extensive, and the sheep wander over a wide area. Only if a large number of men go out together and come in with their dogs like a wide net can the sheep be brought in with a minimum of effort over the stream-cut, uneven ground. Anyone who goes out alone disturbs the grazing animals and probably drives them farther away from the village.

These rules have strong ethical import and are
233 much more in the nature of procedural rules prescribed
185 by the Crofters Commission. "There is a code of ethics which you learn as you grow up, as you go with your
578 elders out to the moor. You can fight with a man over a woman and make it up next week; but if you fight with a man over a sheep, you won't make it up for thirty years." These rules are weakening in importance
198 is indicated by situations in which only two or three men have gone out in the early morning to bring in the

233 sheep. These can arrive back in the village hours
18 later to find the moor lined with the cars of men who
178 have come to look for their own sheep among the flock but who had not bothered to spend the time collecting them. Many have gotten rid of their sheep to "concentrate on the weaving."

2. Sheep vs. Cattle: As mentioned in the section
233 entitled "Changing Land Use" (cf. Chapter 2), a split
518 has emerged between those who keep cattle, and those who keep only sheep. Cattle now are the predominant, but the number of sheep has greatly increased. The conflict between raisers of sheep and of cattle extends beyond the use of the reseeding schemes (see Chapter 2).

Cattle are usually brought in from the reseedings or from the common grazing lands where they are tethered, and put on the unfenced, arable inner grazing land of the township. At the same time that the sheep are brought in from the moor. In one township on the west side of Lewis, the cattle were released a few days before the fank,[1] which resulted in the formation of two groups, sheep-only people and sheep-and-cattle people, which opposed each other. At the fank held a few days later,

[1] The word "fank" refers to the process of bringing the sheep in from the moor, and to the wooden pen in which the sheep are gathered and claimed by their owners.

233 sheep were let out of the pens, and a fight broke out
18 between the two groups of people.
578

241 2. Crofters vs. Non-crofters: Another division
167 within the township has developed largely because of
575 the attention paid by outside agencies to "crofting." The Crofters Act of 1886 defined crofters and gave them
195 a protected, privileged status. In fact, very little
691 distinction existed between non-crofters (sometimes called squatters and/or cottars) and crofters, and in some places, such as the Isle of Scalpay, non-crofters even out-numbered crofters. Both categories were linked to each other by bonds of kinship and mutual dependence. Non-crofters were in fact favored economically. They did not have to pay rent, but had the same opportunities to graze stock and plough land as did crofters. Many crofters themselves had huckle, units of land not recognized as part of the croft and not included in the land for which rent was paid but recognized as property by the villagers themselves to the extent that these bits of moorland passed down through families or could be given by one person to another. Even today, a young girl thinking of getting married says her future husband might build their house on her father's huckle, and a man may build a house on moorland "given" to him by his wife's aunt. Officially, a non-crofter had no "rights" to a house which he built on the common

241 grazing land and he could not transfer such property in
115 a will. Similarly a crofter had no right to his huckle,
423 and could not formally protest if another crofter sought
423 to apportion this land for his own use (see Chapter 2 for a discussion of apportionments). But in both
620 situations, informal understandings superseded legal rights.

241 Various legislative acts which followed the 1886
167 act focussed attention on the crofter. Various matters
575 associated with crofting are handled by a Crofters Commission. Crofters have access to grants and loans
654 to improve land and build fences and homes. They may
174 buy goods at low prices in a nearby cooperative store. As crofts were fenced, land around the townships became scarce and non-crofters found it difficult to keep large numbers of cattle and sheep.

241 Within recent years it has become possible for non-
178 crofters to gain title to the small plots of land on
423 which their houses are built. Some loans are available
423 to them for building houses. Non-crofters have access
654 to the various subsidies available to all agriculturalists, such as the subsidies for raising hill sheep and beef cattle. There is still the huckle, however, that crofters have rights which non-crofters do not have and that in conflicts over scarce goods crofters have

241 the edge over non-crofters. "Squatters can do what
167 they like, cut peats, put sheep and cattle on the common
423 grazing, but this is a privilege, not a right."

The clerk of a grazings committee says, "When it comes to an argument between a crofter and a squatter, the crofter always wins. A squatter has rights only with the grazing committee's permission. If one crofter disagrees, the squatter is out."

A squatter muses bitterly, "I wanted crofting status because I wanted to get a Department of Agriculture
241 grant to build a house. I work on the peat road; I go
578 to all the ceilidhs. But at a township meeting, they didn't want me to get crofting status. They were afraid I would start grabbing peat banks or opportunismesis in the common grazing or something. There's your brotherly love for you."

4. Subsidies: In the section entitled "Changing
311 Land Use" I suggested that the availability of subsidies
654 has encouraged a more specialized investment in agricultural activities.

654 The villagers are keenly aware of outside institutions
229 which give money. They speak to each other about forms
241 which they receive from the Department of Agriculture and the Crofters Commission, in much the same way as they are curious about the number of tweeds which another

654 person has. The gigantic bureaucracy of government
423 agencies is mysterious and unpredictable. One can
224 never be certain when or for what reason another economic increment may come. "I used to throw away a form from the Department of Agriculture until I found out from somebody that you could get money with it. You may you're planting so much of your land in oats, and later you fill out another form saying you didn't get a very good return, and they send you a deficiency payment."

For some crofters, the requirements of the subsidies
241 have affected the extent and techniques of agricultural
654 activity. For example, one man used to work his land
178 in the way that his ancestors learned would bring best results: lazybeds were aligned in strips that would drain well and catch the sun, and stones were left in the soil to capture the sun's warmth and thereby facilitate the growth of potatoes. Now he has merged the separate strips, cleared the stones, and divided the land into units that allow him easily to calculate how much he has used for what crops, because to be eligible for a particular grant, a certain percentage of arable land must be ploughed with grass seed and rotated with other crops.

241 The Department of Agriculture and the Crofters
654 Commission often overlap in their subsidy-giving functions.

443 One of his
326 apprentices was his sister's son, who built another
192 smithy not far away. "This was the center of gossip.
423 People gathered there while he shoed horses that came
521 from Barvas to Carloway."

444 A number of shops were established in Shawbost
178 that sold clothing, cooking ware and groceries. At one time they numbered six altogether. These shops also ran the first buses between the village and
444 Stornoway. Gradually these businesses disappeared
443 because of competition with larger companies. Mobile grocery vans and butcher shops and bakers began coming in the late 50's, and gradually took over the trade in large parts of the island, undercutting the local businesses. Income from weaving had already weakened self-sufficiency derived from the intensive use of land and
423 sea and also weakened the formerly heavy reliance on
521 local ties and mutual aid. Today an army of, town-
44 dwelling entrepreneurs and employees constitute a major
743 proportion of the traffic on the island roads. Grocers,
178 fish dealers, bakers, sellers of soft drinks, garbage
423 collectors, insurance salesmen, mobile banks, coal
521 dealers and others extend goods and services from centralized sources to a market which has money to pay for them. The island's participation in this extensive market system is affected by its marginality to the

121 of the township with the larger society, and examines
128 the effect of geographical and social marginality on the boundedness of the township network. Chapter 6 discusses two important networks of social relations within the township.

B. Township as Social Boundary System

The township constitutes a relatively firmly bounded
632 system, although its boundaries are weaker than formerly
178 when the township was relatively self-sufficient
494 economically. Township members worked together in small fishing crews, and families relied on each other for help when members of the family were away from the island "at the fishing."

621 Relatives were expected to give priority to helping
178 each other. According to one proverb, "A relative is
605 your best friend." First and second cousins were considered especially close, but knowledge of one's
605 kinsmen extended to at least the fourth generation.

602 Ties of kinship became evident in ceremonies such as
576 funerals and weddings. One Gaelic proverb says, "You
585 know who your relatives are at weddings and funerals."
164 At weddings the onus was on the members of the bridal
638 party to remember their relatives. "You have to sit and calculate who is closely related, and all those

people will be doing the same. If they think they're close enough to be invited, they'll be annoyed if you don't include them." At funerals, relatives of the deceased to about third cousins were expected to participate.

When a population has lived in a small area for generations, a dense network of kinship develops. This fact, and the importance placed on mutual aid among fellow villagers, fostered the feeling that the network of township members, who ploughed, fished and tended cattle and sheep together, was also a network of kinsmen. "We're all the same people." "It's all one family here." Occupational and kinship spheres of social activity commingled. The importance of neighbors in contrast with relatives was reflected in such proverbs as, "A neighbor close at hand is better than a relative in a distant land."

The nuclear family did not, according to Cohen's criteria, constitute a firmly bounded system. Then as now, women preferred the company of their "own kind," that is, the company of other women. The men worked and spent periods of recreation with other men. Children spent about as much time in the homes of grandparents, uncles or fellow villagers as they did in their own homes. A 60-year-old woman remembers that it was a

common practice, when she was young, for children from large families to live for as long as six weeks with other families who were relatively better off. They would help harvest the hay or the potatoes or bring in the peat in return for food, lodging and perhaps some clothing. "They usually ate better than they did at home." The children were not necessarily relatives of the families with which they lived.

Strong friendship, that is, the kind of friendship associated with mobile urban life in which persons confide in each other and share secrets and build up an individual relationship based on extensive knowledge of one another, was nonexistent. A "friend" was a relative, or someone who gave aid when it was needed.

Today it is sometimes said, "It used to be that if your relatives were your best friends; now your best friends are better than your relatives." An old man will meet another on the road and say, "I used to see more of you when you needed me." Neighbors used to share sheep that were killed; now households kill and consume their own sheep, and freeze the meat which they cannot use immediately. Groups that walked out together to the peat to finish the job in a single day are being replaced by individual family units that can gather out and do the job in stages. People prefer to give money

with the decision which they know is to be made usually do not attend the meeting. Thus, apparent consensus is always maintained.

Changes in the character of the township as social boundary systems are apparent in ceremonial occasions such as weddings and funerals, which will be discussed in the following pages.

A. Courtship and Marriage: Courtship occurred during the dark hours when the older members of a household had gone to bed. A great deal of courting was done in company. Because transportation was limited, groups of young people went together to dances; and on other nights, bands of young men would visit a house in which unmarried girls were sleeping together, climb in through a window, and perhaps lie beside the girls, fully dressed, filling the dark with whispered jokes. Such a custom, a form of bundling, was called "night visiting" (nuith na b-uaidhean): the male visitor was called gearaid na b-uaidhe, "companion of the night."

When couples began serious courting, they would meet outside at night, or the girl would let her braogar (sweetheart) into the house after the old people had gone to bed. A couple would never consider walking hand in hand along the road during the day. Boys and girls were seated separately in school, went around in separate

in exchange for car rides or other help, including peat-cutting, because "than you're independent." Friendships are still weak, relative to friendships in urban settings. Most information which is shared between individuals rapidly enters the pool of communal gossip. Although many persons emphasize the importance of mutual aid in defining a friend, some emphasize the ability to confide and keep secrets.

Today many of the younger villagers do not know their relatives to the extent that their elders did. In one family, a girl who was about to get married had to ask her brother, who was the only one of the siblings interested in kinship ceremonies, how to invite to the wedding. It is still useful to retain an inventory of one's relatives. "I have cousins in Glasgow and Australia that I've never met, but if I ever go there I'll have a place to stay." With the increase in transportation and income, more islanders are taking brief trips away from the island. During these trips, they almost always stay with relatives.

It is frequently said that children are now "cheekier," less inclined to run errands and obey orders meekly, and that they prefer to watch television or read books by themselves to playing with each other.

child may come to spend nights or longer periods of time with them.

To some extent villagers are still dependent on each other for various kinds of help. It is considered extremely bad manners to refuse labor, a tool, or food to anyone who requests them. If someone refuses to aid another, people say, "What will he do when he needs help?" This attitude has made the island a paradise for the few salesmen who, in the last few prosperous years, have started to visit its communities; villagers find it difficult to say no to anyone who comes to their door with a request, including the request that they buy something.

A woman in childbirth was formerly attended by a local midwife, and kept in bed for two or three weeks. Neighbors and relatives, both relatives and friends, came and stayed with them at night, fixing them warm tea and milk, whispering bhronne bochd (poor soul), how awful you look..." Just as today the neighbors gather at times of illness and death. It is more difficult for neighbors to come to the bedsides of young mothers of today, who are all taken to the hospital in Stornoway to have their babies; but the neighbors manage to visit the hospital, which has no choice but to ignore its rule of only two visitors per bed at a time.

groups on the shellings or within the village as they were growing up, and even during courtship maintained a joking, somewhat rude interaction. "If he says he wouldn't touch her with a barge pole, he's obviously smitten." Someone considering the dangers of marrying an outsider* commented, "A devil you know is better than a devil you don't know."

Now that facilities for transportation have increased, couples tend to pair off in cars rather than go in groups. They may even be seen together on a date in town. Activities such as dances still begin late in the night, lasting from about 12:30 a.m. until early morning. The seriousness of a relationship is kept secret for as long as possible, but weddings today require long-term planning because wedding dinners are held in hotels rather than within the village. At an earlier time, serious intentions were announced only a few weeks before the wedding, at a rainteach or dinner party which signified a betrothal. Rainteach also means "disentangling" or "reconciling," and was described by one person as a means of "pouring oil

*The term "outsider" usually connotes non-Gaelic-speaking, but may also refer to someone from outside the village.

on these occasions. At some point during the night the bride and groom were prepared for their wedding night together. The bride's female companions undressed her, prepared her for bed, and put her into the bed with a hot water bottle. The shared some sherry with them, and they went out, whereupon the groom was brought in by his male companions. After much joking the couple were left together.

On the third night, a dinner was given for the older persons who had not been able to come to the "big" wedding.

For some time after the wedding, the married couple visited relatives and neighbors who had been unable to come to the wedding, taking a bottle of whiskey with them.

House weddings declined in number during the war when food was rationed, and as more persons changed from the "black house" to the less easily cleaned and more elaborately furnished "white house." Most weddings are now held in hotels, and consist of a single wedding dinner and dance; they are often held on Thursdays, the day of the hamsie in the past. The emphasis on community participation still exists: even though the practice of holding hotel weddings has limited the number of guests, an effort is made to invite someone from each household in the neighborhood. In part to avoid disappointing the

In part to avoid disappointing the vast number of relatives who by custom must be invited but for whom there is now not enough room, many weddings are held away from the island in places such as Inverness and Glasgow. Gifts are still given in great numbers and displayed, despite the decrease in numbers attending the wedding dinner and the feeling that only those who are invited to the wedding should give presents. The custom still exists of neighborhoods or entire villages placing flags outside their homes on the day of a villager's wedding (except when the wedding is held away from the village), and of a distant lass within a village signify that the household is related to someone in a neighboring village who is getting married. And when the wedding car has picked up the bride and is leaving for the hotel in town, the road is often littered with barrels and other barriers.

Couples now often leave the wedding dinner and dance and go to undisclosed destinations for their honeymoon. But when they return to the community they must undergo a simple rite of passage that gives assistance to their new social status. On the first Sunday following their return, they are expected to come to church with the other members of the bridal party, a process called airisaidh (a slightly Gaelicized rendition of Scottish "airing").

For some weeks after returning, the couple goes visiting with a bottle. The scope of visits seems to have narrowed to close relatives unable to attend the wedding, and sometimes the custom is referred to as old-fashioned. The bride usually mails pieces of bridal cake to relatives who were unable to attend the wedding.

D. Death: At a time of illness or injury, an individual may see persons he has not seen for years. The house is filled with a constant flow of visitors, and the visitors recount every detail of a sick person's caller and movement. The room is usually occupied by visitors when a person breathes his last.

In the past, work ceased in every house in the surrounding neighborhood when a person died. This no longer occurs, but a story is told of a weaver who called a mill in Stornoway to say that he could not finish an urgent tweed because there had been a death in the village, and was told, "You keep on weaving till the weaver dies." However, dances in the village are cancelled, and the bothan (an isolated hut in which liquor is sold illegally) may close. Outdoor work, such as peat-cutting, which would be widely seen is avoided.

Word of the death spreads throughout the village and beyond within a few hours. From an immense, accumulated inventory, memories of the deceased are brought out,

CONTINUED ON NEXT FICHE

CONTINUED FROM PRECEDING FICHE

763 relived and shared. The person's exact age and the
764 identity of his closest kin are discussed. A van is
764 immediately dispatched to bring benches from the church,
764 which are set up throughout the house of the deceased,
764 and every one each few days a constant stream of visitors
764 fills the benches. The visitors bring tea, sugar,
764 biscuits and other provisions for the days and nights
764 of communal trial. The high Chairs, "house of watching,"
764 as this wake is called, continues until the day of the
764 funeral.

764 In the past, persons sat up all night with the body.
764 "It took so long to get a coffin. You didn't want to
764 go in and find half the face eaten away by rats." This
764 practice is dying out, but lights are usually left on in
764 the room in which the coffin is placed. When an all-night
764 wake occurs, the atmosphere is one of relaxed story-telling
764 and the laughter of reminiscence.

764 At least two nights of "waking" usually precede the
764 funeral. During this time, hundreds of villagers stand
764 the high Chairs. Grief is expressed throughout the vast
764 network in which the dead person was enmeshed. On rare
764 occasions when a single night precedes burial, the house
764 is filled to overflowing.

764 Throughout the day and evening, waves of newcomers
764 enter, and other sitters slip quietly away. Kinswomen of

764 funeral procession in which the coffin is carried for
764 about half a mile from the house to the waiting hearse.
764 Over 100 men usually walk in these processions. The
764 more well-known the person or unexpected the death,
764 the larger the procession is likely to be. Relatives
764 of the deceased walk at the head of the procession,
764 at the head and foot of the coffin, while other villagers
764 take turns carrying the bier. The pallbearers serve in
764 relays. Eight men carry the coffin. Four on each side,
764 and are replaced frequently by pairs of men who assume
764 the rear positions. The two who have been displaced at
764 the head of the coffin stand outside the line, facing
764 outward, until the procession has filed past them,
764 whereupon they join the end of the procession.

764 In the past, coffins were carried for miles from
764 the house to the cemetery. The procession rested period-
764 ically, and the men usually carried an earthenware jug
764 of whisky (ciaar uisge beatha) "to ward off the cold."
764 The custom of giving a glass of whisky to men as they
764 left the house to carry the coffin was still recently
764 followed in Skyes; and in some areas a funeral is still
764 evaluated by the amount of whisky available for consumption
764 ("that was a good funeral"). Taxis are sold of
764 coffins buried without bodies.

764 Today coffins are brought to the cemetery in a
764 hearse, but the procession still carries the coffin
764 for a half mile or so to the hearse. The women gather
764 outside the house in the biting wind, huddled together,
764 beginning to sob as the heavy line of dark-coated,
764 slowly-moving men bear part of themselves away. In one
764 village on the west side, the women circled the coffin
764 as it left the house, chanting, "You are leaving us, you
764 are leaving us."

764 Graveyards are maintained by members of the community.
764 A cemetery committee collects dues of five shillings a
764 year from all households for the upkeep of the cemetery.
764 Relatives and neighbors dig the graves of their fellow
764 villagers.

767 In 1911, a funeral society called the West of Lewis
767 Funeral Association was founded with the original
767 intension of bringing back the bodies of men and women
767 who had died when they were away from the island "on the
767 fishing." Persons from Borve to Barnaray pay two
767 shillings a year to the Association, which at present
767 has about 14,000 invested in bonds. A similar association
767 exists in other parts of the island. A person may join
767 between the ages of 12 and 40, after which he is not
767 eligible for membership. A member who has left the
767 island must continue to send in his dues, or members of

121 being determined by conditions of culture, such as
121 political and economic conditions. Under conditions
121 of stagnant economic and political
122 systems, the geographically marginal crofting areas
122 have evolved strategies, some of which puzzle agencies
122 concerned with development or other aspects of
122 governmental process.

178 Before the North of Scotland Hydro-Electric Board
365 began to operate in the crofting counties, not more
511 than one croft in every hundred had electricity; but
511 by the end of 1971, one in every six holdings had been
511 supplied (Taylor 1974: 20). "The lights came to
354 Shawbost in 1951. Before then, the islanders used
194 Tilley lamps, a Canadian invention; and before then,
312 double-wick paraffin lamps. Piped water came a few
344 years later, around 1955; it was brought from a nearby
344 loch, and the construction work gave temporary jobs to
344 local people. The availability of these services
344 facilitated the building of county council houses,
344 which many welcomed as providing a relief to the
344 congestion caused in part by rules against building
344 more than one house on a croft. But, paradoxically,
651 with larger, better homes and all these services came
a decrease in the advantages of living in a crofting
township: property was assessed and people began paying
rates or taxes.

651 which official records are kept by the mills. If you
439 may jokingly to a fisherman who has brought in a large
catch than he should put some money aside for the
rainy day, he is likely to reply, "Well have to
catch me first." A tradesman may be earning large sums
of money doing local work as a skilled specialist at
the same time he is collecting social security.

A man may serve in and out of a number of different jobs,
and never report his income. "Occupational pluralism"
(cf. Brox 1966) rather than economic specialization has
developed as a strategy in various countries along the
North Atlantic fringe, such as Iceland, the Faroes,
northern Norway and Scandinavia, as well as the west
coast and islands of Scotland. In these marginal areas,
income from specialized occupations is, in the long run,
unpredictable and inconsistent.

In times of national economic depression, strikes,
shifts between socialist and conservative governments,
and other crises, crofting provides an alternative
strategy. During the last war, many islanders who had
left the island (including some who had been quite
prosperous in the cities) returned to spend the duration
of the war in the village, glad of the relative security
provided by the relative abundance of food and less strict
rationing. During a huge snow-fall that occurred on

233 mostly, that the Commun Market will soon drive up milk
233 prices, and that income from the weaving has become too
248 unpredictable.

412 Many tools and techniques associated with crofting
176 have disappeared: the flail for threshing oats (two
pieces of wood joined with leather); the sheepskin
strawbed over wood with holes burned into it, to separate
chaff and grain; rope made of plaited heather and straw.
Each spring the byre was cleaned of its accumulated dung
and urine, and this was turned into the ground along
with seaweed. Such tools and techniques remain among
the older villagers as a "memory culture" which may be
mobilized under changed conditions, as when alternatives
to crofting are no longer available or are too costly.
However, the longer crofting is neglected, the less it
can provide a viable alternative strategy. The artificial
fertilizers are ruining the land; that's why the
turnips are full of maggots and the potatoes turn to
water." As the rushes grow and clog the drains and
streams—rushes that used to be eaten by the horses and
cattle and which are now left untouched by the sheep—
the land becomes unfit even for grazing. "I'd rather
work the land than the blinkin' loom, but we tried the
potatoes, turnips and cabbage last year, and lost them
all to the maggots. You lose heart after that."

241 Crofting constitutes a dormant strategy which can
176 be mobilized if deterioration of land has not proceeded
too far, and if the skills of land use are not lost by
succeeding generations who have grown up in an
environment which presented them with more appealing
strategies.

B. Social Marginality

166 1. Linguistic Distinctiveness: Social marginality
166 began when the Highlander had to leave his place of
origin and go to the cities of the south in search of
191 employment. The feature which most distinguished him
191 was his Gaelic speech.

In Glasgow the common word for Highlander is
101 "Geuchter," a slang word with derogatory implications
101 which, according to one theory, developed when Gaelic
1965) speakers coming into English-speaking cities mispronounced
the word "sagar" so that it sounded like "teuchter."
329 Glasgow Highlanders have developed their own defensive
explanation: when the civilized Highlanders came down
among the uneducated barbarians of the south, they came
as tutors, a word which their uneducated Lowland pupils
mispronounced.) According to a university student from
the islands, the word was once used by the English to
refer to the Scottish Lowlanders.

469 on the island who had spoken English in school and had
197 not given much thought to which language she was speaking.
178 "I remember the first time I met the other girls couldn't under-
197 stand me. They always used to shout at me, making sure
197 Gaelic, even though they understand it, and parents tend
to speak only English to their children, believing this
will help them "get on." In the next generation, the
language is lost. Village children attending school in
197 Stornoway often prefer talking to their Gaelic-speaking
197 counterpart in English. A young island woman, married and
167 living in Edinburgh, says she would like her baby son
to learn Gaelic but feels that if he had a mixture of the
two languages the other children would laugh at him.

English is the language of the larger society, the
197 language in school and the language required in
197 most jobs and in dealing with most officials. In Gaelic-
197 speaking areas, the speaking of English connotes high
554 status. If an English speaker mispronounces Gaelic words
676 he is quickly forgiven, praised for trying to learn such
578 a difficult language, and asked why he bothers with a
language that "isn't any use anyway." But if a Gaelic
speaker makes mistakes in English, he is treated merciless
151 Many nicknames derive from such mistakes; for example,
"Water Squash" got his name by mispronouncing the word
"picturesque." People "win points" by competing with
324 each other in speaking English. "See how good you are!"

154 sympathetic with each others' idiosyncrasies. A constant
572 joking keeps people at arm's length and discourages the
(522) development of sympathy.

Accompanying this style of indirect, inhibited
154 expressiveness and the low level of stimulation are
culturally prescribed opportunities for relatively
uninhibited expressiveness. Such opportunities include
the ceilidh ("visit"), the drinking situation (mainly
for men), the role of clown or "character," and holidays
(144) such as New Year's. Although young villagers and
(484) emigrants often describe the village as "dull" and "dead,"
(181) the emigrants are happy enough to return to the island
for short periods of time, during which they participate
in these situations in which expressiveness and limited
license are accepted.

154 1. Ceilidh, Clown, and New Year's Festivities: Only
on certain occasions is relatively spontaneous and unin-
574 hibited expressiveness condoned or encouraged within the
township, and even then the form which this expressiveness
takes is fairly narrowly circumscribed. The traditional
(170) ceilidh was such an occasion. In the past, people gathered
(170) regularly at night in the high ceilidh (the ceilidh house,
538 or home of someone in which a genial atmosphere existed;
(533) the high ceilidh was often the home of someone who lived
alone), where stories were endlessly repeated and elaborated,

154 genealogies told, and old songs were sung or new ones
154 composed. The concentration of expressiveness in these
(170) forms resulted in a well-developed, oral repertoire of
(533) literature and music.

The ceilidh still exists today in the form of less
(538) regular gatherings. Stories and genealogies are seldom
(533) recited, but songs are still sung. A few new songs are
being composed. The word ceilidh is used as both a noun
and a verb to mean "a visit" or "to visit," but implies
(144) a casual, relaxed atmosphere rather than a formal visit.
(484) A formal visit is made by relatives living in Stornoway,
(181) government officials or businessmen, and is characterized
by more constrained behavior.

154 The ceilidh of today is often accompanied by the
154 drinking of beer or whiskey, but a distinction may be
574 made between a gathering which includes both males and
females, and a drinking situation at which only males are
present. In the past, men often gathered in barns or
weaving sheds to share beer made locally from barley or
(273) brought from town in a large keg. The drinking of whiskey
(178) was reserved for special occasions, such as births, weddings,
(178) funerals, and the festivities surrounding the New Year, but
(538) increased income has resulted in the consumption of whiskey
(533) on an almost daily occasion. Heavy drinking is still an
(249) activity engaged in largely by males, and occurs in extra-
village locations such as hotels and bothans (see
Chapter 6).

74 given at Christmas; in Lewis, Christmas is identified
(48) with Catholicism, and is an insignificant event in
187 comparison with New Year. To give two examples, a New
527 Year's dance is given, but not a Christmas dance; and
74 the mills continue working on Christmas if it occurs
187 on a week day, but close for at least two days at New
Year's. In Shawbost, bannag is defined as a party
associated with Hogmanay (New Year's eve).

In the recent past, until about ten years ago,
527 the boys dressed in women's clothes or wore masks. They
• 172 took turns wearing a cow's skin as they went from house
to house. In each house, the boy wearing the skin was
(538) hit by the others as he chanted the rann na bannag (rhyme
of the bannag):

Here I come again renewing Christmas.
(In another version: This is the New Year's night.)
I'll take the bread without the butter,
I'll take the butter without the bread,
Then we won't be empty-handed.
Then we won't be empty-handed.
One thing I refuse is a mangy potato.
It gives a heavy feeling.
It's not healthy.
Everyone can't give me my bit of butter and my lump of
cheese.
Everyone can possess will be gotten by the crows
on St. Patrick's Day.

527 As the heinich na bannagan left the house in which
43 they had received gifts, they blessed it. All food and
(538) money was given to the woman who prepared the bannag.
(269)

Today children tend to receive money more often than
food, and use some of the money to buy sweets at the post
takes her with him on his all-night visiting.

527 office or general store, preferring to divide the prot
• 178 between themselves for use at a later time. A 50-year-
431 old woman observed, "They don't appreciate the bannag
like we used to. They get this kind of rich food all
the time." The practices of wearing costumes and speaking
527 the rhyme are disappearing. Children used to have the
178 bannag until they left school at age 14 or 15; now only
the younger children go. "Children grow up more quickly
today."

New Year's is celebrated perhaps most intensively
527 by the men, who after seeing the New Year in by watching
(178) a special New Year's program on television go visiting
574 neighbors and relatives with bottles of whiskey. The
custom of "first-footing" on New Year's eve is held
throughout Scotland; but in the Hebrides much visiting
and heavy drinking may last from New Year's eve until
the following Sunday. During this time, the woman of the
house, who usually refrains from drinking and to some
extent controls the drinking done by the males in her
house, relaxes her attitude, and may even participate.
The comment, "It's only once a year," is often heard.
(538) During this time, the shyest and most retiring bachelor
becomes a Romeo; this is the only time of year he may
be heard to mention the word marriage. For example, one
bachelor in his 60's chooses a "bride" each New Year, and
takes her with him on his all-night visiting.

203 while. It would be an insult not to take a drink with
571 them; you mustn't miss your round."
(504)

The usual practice when drinking with friends is
203 for one person to buy the drinks; everyone drinks
571 together, and then someone else buys the next round. To
431 drink slowly is to indicate that you intend to miss your
round. A relative who returns to the island for a holiday
usually pays for more rounds than he receives, and may
spend as much as L80 in a single week.

If a man wants more drink than his fellows, he has
203 to buy more rounds. He may step up the pace of drinking by
571 buying more rounds, which means that he is likely to pay
a larger share than the others during the evening as they
will be ready to quit before he is; or he may keep a bottle
hidden outside the room, and disappear periodically for a
private nip, after which he returns to the group.

203 Drinking occurs at night behind the grey, concrete
571 shield of the bothan or in hotels. Drinking situations
154 provide opportunities, rare in the repressive arena of the
154 village, to express emotions and ideas. These expressions
can always be retracted in the cold, sober light of day.

"I want to be an alcoholic. Now I spend most of my
weekends feeding my brother lager so he won't get the DT's.
When something good happens, I wish like hell I could get

[Page 159 is blank; text continues on p.160

203 differentiation and differentiation in personal experience,
571 but to use it in the community, as social coin. The few
154 people who refuse to get involved in drinking episodes that
154 would deplete their available funds are called "mean"
and "tight-fisted."

"If I had a wish, I'd choose to live the same life all
over again, maybe a wee bit rougher. We don't get a chance
here. The poverty keeps us down. But what does it matter
to be a schoolteacher or a minister? What good does it do
you? If I have a shilling in my pocket, I've got to spend
it. I remember ten years ago, I went into town with L60
in tweed payments to buy a new stove. I met some of my
(435) pals, so I put down on a L50 stove and spent the rest.
What a time we had."

"I went for a holiday on the mainland and came back
with nothing in my pocket because it's no use drinking in a
place where you don't know people. You want a yarn."

B. The Bible

701 1. The Free Church: "A man in my great-grandfather's
195 time," said a 65-year-old man, "talked about the great
(195) change within his generation, from the days when fanks
were held on Sundays to such strict observance on the
Sabbath that not even a cow could be tethered."

195 The first evangelical minister on Lewis came to the
783 parish of Uig in 1824. The Rev. Alexander Macleod belonged
(783) to the Church of Scotland, but joined the Free Church when
it broke away from the Church of Scotland in the "Disruption"
of 1843. When he came in 1824, he found "superstition,"
"spiritual darkness," and "polluted remains of Popery,
since it was the religion in this place...the only notion
they had of Christianity (Beaton 1925: 7-8)." The southern
195 tales of the Outer Hebrides are still Catholic, but in the
783 Protestant isles of the north, holidays associated with
(783) Catholicism are avoided, and stories are still told of the
burning of Protestant martyrs by Catholics. Catholics are
disliked "because they believe that they can buy their
way out of sin," or that the bread and wine of Communion
is really the blood and body of Christ. "A Catholic is
anointed with oil and left to die without food or water.
We are privileged that we are not like them."

195 In the Disruption of 1843, about two-third of the
783 people and 39% of the ministers left the established church

795 collected, and an annual report on morals, which usually
condemns drinking and "the decline in moral standards."
Ministers are trained in a college in Edinburgh. Many
(199) are Gaelic speakers, although the number is said to be
declining.

When a congregation loses a minister because of death
783 or other reasons, it issues a "call" to some other minister.
The congregation is familiar with the names and preaching
styles of a number of ministers, who have in the past
visited the community as guest preachers. The congregation
votes for a minister from a list made by the lay officers
of the church. The minister may or may not accept the call.

The Free Church and the Free Presbyterian Church, two
(783) fundamentalist Protestant sects which have nuptured the
tendencies toward unification evident since the turn of
the century, are strongest in the Highlands and Islands.
Shawbost contains a few people who belong to the Church of
Scotland, but most villagers belong to the Free Church.
The only church (in the sense of a building in which sermons
795 are preached) is a Free Church which was built in 1883,
346 supposedly after men from Shawbost helping to repair the
(193) fence at the minister's manse in Carloway, where they then
attended church, were refused holiday water for their oatmeal
"brose" by the minister's wife. A building in which
members of the Church of Scotland worshipped was built

786 miscarriage occurring before marriage also requires
(48) standing even when the child to be baptised was conceived
849 by the couple after marriage. A marriage was also
(337) imperfect unless a woman who is not his wife must undergo
this ordeal before he can have his own children baptised.

It is the responsibility of the entire community to
ensure that this punishment is carried out. On one occasion
the minister forgot to lecture a couple, and afterwards
(203) the community was upset that they would have to stand; but
they insisted, afraid that people would say that they
were getting special treatment.

According to one minister, the manse is a kind of
(203) "research center" to which all gossip is reported. Some
(520) ministers use this information in the pulpit, chiding
(504) people and calling attention to wrong-doings in front of
the congregation. In contrast, a different minister
(184) in parts of Stornoway, where villagers have approached
(165) doctors in the maternity ward for information regarding
miscarriages and premarital births only to be told that
this information is confidential. The ordeal of standing
in church does not exist in Stornoway. In 1971 a person
• (194) in Shawbost was accidentally scooped from this ordeal
and his exemption was seen by some as providing an
opportunity to stop what is considered by many to be an
archaic custom.

871 875 771 [465] Education in the local school has included a great deal of religious instruction; in other words, religious and educational spheres commingle. Because of the relative prestige which the teaching profession offers to persons from the island, and because the islands are considered "isolated" by most persons looking for jobs (teaching posts on the island include an added sum which is designated as "isolation payment"), most of the island's teachers are themselves islanders. Education [554] is one method by which one's position in the community is elevated. The high status derived from having advanced education also reflects favorably on the parents and position of the family. But teachers and others who return to the island are expected not to deviate from island norms in important matters, such as fundamentalist religious beliefs; hence teachers tend to perpetuate fundamentalist religious beliefs within the classroom.

871 771 773 178 Formerly the minister visited the school once each year to examine the children on their catechism, thus testing the state of religious instruction in the school. Several years ago this practice was stopped by the education authorities of the County Council, and the minister now gives a sermon in the school about once a month but is not allowed to examine the children. Many ministers are dissatisfied with the arrangement, as they are afraid that

871
791 the children might not receive proper
793 instruction.
178

"Family worship" is considered a
771 of daily life. Prayers should be sai
782 and teas, and the head of the househo

called on an awful lot to give prayers in church, and it's hard for some of them to get up and speak." The Reverend Macleod notes in his diary that private meetings were initiated on the island in 1826.

A quarterly meeting (coinne raith) is held in Stornoway, to which many of the converted from the villages go. The Communions are held twice a year. "Special services," or "small communions," held soon after the Communions, are intended as evangelical services for young people, that is, services enjoining people to convert. These services, which last from Monday through Friday, were started in Ness after the first world war.

4. The Communions (Orduighean): Communions are given twice a year, during autumn and late winter. They are scheduled for different weeks in different parts of the island, and neighboring congregations close their churches when Communions are being held nearby, so that during the Communion season some persons may attend a number of services at different churches.

In the days when transportation was limited, visitors coming from a distance away stayed for an entire weekend. All households prepared food and made ready for any overnight visitors who might arrive without prior warning. Guests often slept on mattresses laid on the floor. After facilities of transportation improved, it became common for people to drive down for the day in private cars and return to their own homes at night.

service, believers remain in the church where they receive tokens given to them by the elder of their street. These are pieces of metal on which is printed the name of the church and village, and a verse from Corinthians, "Do this in remembrance of me." Communicants planning to take Communion in other villages take with them tokens which they have received from their own minister, or ask the local minister for one.

The Communion Services begin on Sunday morning at about 11:30. Persons not taking Communion sit in the back of the church or in the balcony. Communicants give their tokens to the elders who stand in the aisles, and are allowed to sit in seats in the front section of the church, which are marked off from the other seats by white tableclothes. The service lasts for three to four hours. Many communicants also spend a half hour to an hour in informal prayer before the ministers arrive to begin the service. In the past, a prayer meeting was also held at 8:00 in the morning, a custom still practiced in some places, such as the island of Scalpay.

Sunday is the only day of Communion on which standardized selections of Biblical verses are spoken and psalms are sung. On other days the ministers are allowed wide variation in the contents of their services. On Sunday, Psalm 22 is followed by the reading of Isaiah 53, and

into tiny squares. The ministers and the elders partake first. A final hymn is full of rejoicing, and the minister then exhorts the communicants to return to the world and give witness and to live exemplary lives.

The evening service on Sunday is evangelical, intended for non-believers. After this service the communicants conduct a brief prayer meeting to give thanks.

On Monday, the minister again tells the communicants to go out into the world and declare publically their experiences of the preceding day; and to demonstrate in everything they do and say that they are believers. In the past, only a morning service was given, as most people had a long journey ahead of them to return home; but now that cars are available, a similar evening service is also conducted.

2. The Process of Conversion: The process of conversion may be slow or sudden, but conversion is most common at middle age and among women. One informant wryly observed, "Only recently women were allowed to have socks. But from the looks of the Communion table, mostly women are going to heaven." Many of the women taking Communion are dressed from head to foot in black, a color which indicates their widowed status.

The first sign that a person is "following" (leanntail) the church is that he begins to attend the weekly prayer

Chapter 7

Conclusions:

Summary and Theoretical Considerations

A. Summary

Crofting townships of the Highlands and Islands of Scotland are within a few hours' travel of the major cities of Britain. An extremely high percentage of the young people in the crofting counties attend universities and other institutions of higher education. Politically, administratively, economically and in other ways, the crofting population participates in the larger urban-industrial society of Britain.

Despite this participation, the township-qua-village-community is a relatively strongly bounded system. This thesis investigates factors contributing to the strong boundedness. From a relatively self-sufficient economic unit using agricultural practices suited to the extensive cultivation of marginal land by smallholders, the township has during recent decades changed to one dependent on goods and services provided by the larger society.

Crofting activities nevertheless persist, in part because of the incentives offered by government bodies such as the Crofters Commission and the Department of Agriculture. The

of the converted, who occasionally neglect township and neighborly duties in favor of religious activities. The increase in private transportation during the past 25 years has facilitated the maintenance of closer ties within the clique. The existence of such a strongly bounded subsystem is an example of a trend toward the weakening of the township as a social boundary system, but this trend is countered by other factors that strengthen or help preserve the township as a bounded system.

People come and go from the township, but this appears to maintain rather than weaken township boundaries because behavior different from that prescribed within the township can be performed outside it, and conformist behavior reassumed upon reentry. Those unable to conform with standards of behavior prescribed within the township are not likely to return.

Township members who have settled away from the island come back periodically for recreation and a sense of belonging. They increase the value of the township and its way of life in the eyes of the inhabitants, and provide them with subject matter for conversation until the next holiday season, when the exiles again return.

The boundedness of the township is thus a qualified boundedness that, over the past 100 years and especially since the second world war, has decreased in strength but is nevertheless strong today.

LAND USE AND CROFTING

agrarian order. Crofting townships were created which contained holdings of a uniform size, often fit to provide only a bare subsistence living. This is still so today. There were and are no means of achieving ambition through some kind of agricultural promotion. no ladder to climb to prove one's ability to win the land over to one's side to increase its yield. And as each family increased, the progeny demanded land. The family acres were divided, subdivided and fragmented to a vicious mathematical system: more people, less land.

In the nineteenth century, many estates were sold. The newcomers, with no kinship ties with the small tenantry, saw that the only way to make their estates economic was to establish large farms, which meant the eviction, by force if necessary, of the small tenants. This is what happened. For those who did not emigrate, it was a life of huddling around a weak fire, whose flame itself could hardly stand, and thinking of the prospect of starvation and the 'old days'. Thoughts nourished on these old days became the root of action; and a fierce agitation for land reform started. The Minutes of Evidence of the Napier Commission (1882-4), of the Deer Forest Commission (1894-6) and the several official reports on the conditions of the crofters and cottars, give ample evidence of bitterness and despair as the result of poverty and lack of opportunity. About 1870, unrest in the congested areas of crofting townships became a political issue. The flames of ideals were burning high and bright. Ideals were transformed into action: take the land!

By 1880, the ripples from the stone flung into the agrarian pond were reaching the general public. Sides were taken: one stood either on the economic touchline, or on that dangerous thin red line of sentiment based on high feelings and a deep sense of wrongs being perpetrated on fellow humans. The landowners naturally insisted on the right to move into an era of land use in which management was not hampered by affairs of sentiment or philanthropy. Governed by the cold principles of business, they hardened themselves in the face of their attackers. And though they pointed to arrears in rent, and their inability to improve their land agriculturally while they had tenants not of their own choosing, they faced mounting antagonism.

HISTORY

was made in the Crofters (Scotland) Bill of 1961; this had a mixed reception. In general, today, small crofts predominate in most areas. Out of some 18,000 (the number is decreasing annually) about 15 per cent exceed 20 acres (see Chapter 5). But size has little to do with the type of land; whether arable or rough grazing. In fact, the proportion indicates that some 85 per cent of all crofts in Scotland, and this applies to Harris and Lewis, cannot be considered as full-time now or as potentially full-time.

EDUCATION

In general, the Highlands and Islands of Scotland owe their introduction to letters to the early Christian missionaries. One of the main provisions in the early monastic Church in Ireland and Scotland was for the cultivation of learning and the training of its members in sacred and profane literature. Associated as they were so closely with the common folk on the one hand and the aristocracy on the other, something of this learning and desire for learning rubbed off to advantage on to willing recipients. Literacy however, has had many ups and downs since the dawning of the Christian era in the Hebrides. Though it is impossible to ascertain to what extent the common folk participated in the knowledge imparted by the early Celtic monasteries, there are many references to a class of cleric called 'scoloca', whose learning was accessible to the poorer classes of the emergent Highland society. The 'scoloc' is still retained in Gaelic as 'sgalag', a farm servant, the poor searcher after knowledge who received education in the monasteries in return for services as labourer on the church lands, and who appears in monastic records as late as the fourteenth century.

As late as the sixteenth century, however, after the influence of the Church had diminished, the inhabitants were almost wholly illiterate. When the Fife Adventurers came to Lewis in 1598, they brought a schoolmaster with them; though it can be taken that his services were intended for the improvement of the incomers rather than the islesfolk. Old Roderic MacLeod, doughty chief of the MacLeods of Lewis at the time of the Fifers' arrival, was unable to sign his name. Two of his sons, on the other hand, were

CROFTING CHANGES

The removal of crofters from good to poorer ground was a significant factor in the destitution years of the nineteenth century, with the self-sufficiency factor becoming smaller and the dependence on imports (when there was money to buy these) increasing. Today, the crofter is of course not self-supporting, his economy being based on fishing and weaving with the produce of the croft yielding an annual average of some £2000.

Acreages under certain crops show this trend to dependence on the produce of mainland farmers. In the island in 1911 some 3,673 acres were under potatoes, the present acreage being about one-third of that. The number of people per acre of potatoes for Scotland as a whole is 22:1. In the island it is about 15:1, indicating a heavy domestic consumption. Yet substantial imports of this crop are required to satisfy demand; a relevant point is that the milking cow commonly shares the potatoes. The barley crop, once much used in Lewis's former small distilleries, has been reduced to some 10 per cent during the past fifty years. On the other hand, the acreage of sheaf crops, oats, rye and mixed corn, generally fed to cattle, has about doubled. Oats in particular are in favour for cattle fodder; even before the turn of the present century oats were not widely used for human food, and oatmeal has for centuries been imported into the region. The turnip acreage has halved over the past fifty years, perhaps the result of the gradual disappearance of the horse, its steady labour and its dung being required to put good heart in to the land.

As the crofters' cropping policy has changed over the past half century, so has their animal husbandry. Animals are a main selling product, particularly cows and sheep. Horses, of course, have been drastically reduced from their total of 1,672 in 1911, as tractor, lorry and van have taken over their work. And though some cattle are raised, the numbers are now about 60 per cent below those of 1911. At that time the density of cattle per 1,000 acres was heavy (46-60) in the north-east of Lewis, less (31-45) in the north-west, and still less further south. The present average is around 18 beasts per 1,000 acres. This decline, in particular in the milk-yielding animals, has compelled Lewis to import 1,000 gallons of milk a day from the mainland.

It is sheep which today claim pride of place on the croft, valued

AGRICULTURE AND FISHING

for mutton and for wool, the right type for translation into Harris Tweed; the predominant breed is the blackface, whose fleece is hard, wiry and long-lasting. The demand for raw wool has also encouraged larger flocks among crofters in such places as Barra, where virtually no weaving is done in the immediate locality. In general there has been since 1911 a 40 per cent increase in the livestock carried on the island's crofts, about twice as big a rise as found anywhere in the seven crofting counties of Scotland.

In an attempt to reduce Lewis's milk imports, in 1962 three crofters at Garrabost on the Eye Peninsula combined to set up a small dairy farm using the lands of their three crofts. A new dairy byre and dairy premises were built and equipped with the necessary electrical equipment. Grants were given by the Department of Agriculture & Fisheries for Scotland, the Crofters Commission, and the Highland Fund Limited. The first year of operation was closely supervised by the Lands staff of the Department at Stornoway and guidance given as necessary. The milk is retailed in Stornoway and district and amounts to about 5 per cent of Lewis's daily consumption. This little scheme has shown that the island could with some organised effort become independent of milk imports, which have been estimated at upwards of £100,000 worth per annum. Over £70,000 per annum is also spent on imported butter and cheese.

In 1947 the number of crofts in Harris and Lewis was 4,020. In 1971 the figure was 4,146 (3,592 being in Lewis), representing a slight increase in a quarter of a decade. Thus, crofting as a land use activity in the island provides a fairly stable element in the economy, although it is subsidised by the crofters' participation in the fishing and tweed industries. A crofter, it should be mentioned, is often a tenant of more than one croft, working them together as a unit. These units vary in size, the greatest bulk of them (about 60 per cent) having up to 5 acres of arable land. About 2 per cent contain over 30 acres of arable land. In recent years there have been proposals for the better use of the reclaimed moorland, particularly for cattle-raising, which would offer the crofter an increased cash yield from his interests. The annual reports of the Crofters Commission indicate, indeed, that the trend to the small croft obtained from the fragmentation

CROFTING CHANGES

of larger and more economic working units of over 30 acres of arable land is also apparent in the southern Hebrides, the west mainland of Ross & Cromarty, Argyll (mainland and islands) and Caithness.

The acreage of common grazings held per holding varies from under 50 to some 200. The crofts, as already mentioned, are in townships, of which the island has 168, half being fenced and half consisting of individually fenced crofts. During the winter most of the crofts are laid open for winter grazing by sheep of general ownership. Manure resources are mainly dung, seaweed, shell sand and of course artificials where necessary.

A new aspect of crofting in Lewis is its extension into forestry. A recent survey by the Forestry Commission indicated that under 400 acres of the land not being used for crofting were suitable for afforestation, and that these acres were made up from twenty-three different plots. At Garynahine Estate can be seen the beginnings of a real afforestation unit of some 500 acres, a scheme of the utmost significance for the economic future of Lewis and for the relationship between crofter and landlord. Too often in the past this relationship has been biting, hard and inflexible; in particular the crofter was understandably unwilling to release good land for planting trees. But the crofters of Callernish agreed that the right of usage of 285 acres of the common grazings belonging to their township should revert to the landlord, this land being thrown in with 220 acres of the Garynahine Estate. Labour comes from the affected township and others in the area.

FISHING

Early beginnings

It is the humble herring that has contributed so much to the island's economy and its history. At a very early date in history, the Hebridean fishings were worked by Frenchmen and Spaniards who must have found them rich enough to repay the long journey and weeks away from home in the cold Minch waters. It was not, however, until the end of the sixteenth century that the wealth of the Minch was really discovered, this time by the fishermen on the mainland of Scotland who copied the tricks of their trade

SINCE THE SECOND WAR

furnished less than 1 per cent of Scottish landings. The war's aftermath brought too many changes for the island to cope with. Markets had disappeared; food habits had changed; capital was scarce; and many ex-servicemen saw the writing on the wall for fishing as a full-time activity. Also, many sea-going crofters of the pre-war fishing fleet were now dead, memories on fading photographs. Nor had the Western Isles fisheries ever fully caught up with those of the main fishing bases of Britain and the east coast of Scotland. Hence the decline of the herring fishing hit them hardest of all. Today, Stornoway District is handicapped geographically, by distance from the markets; historically, by its late entry into the industry; and economically, in that it failed to participate in the trend towards the centralisation of the industry in share-holding companies within easy reach of London.

In the old days of sail it was easy for men to combine the two occupations of crofting and fishing. When in the early years of this century power replaced sail (the first motor fishing boats went to work in 1907) and the steam drifter took over from the sail-boat, the whole nature of the fishing industry changed. Modern boats and gear had to be acquired if the work was to be profitable. But the islesmen, partly because of lack of capital, partly because of the lack of suitable anchorages and harbours, and partly because the combination of crofting and fishing had created a seasonal tradition incompatible with the use of expensive boats (which needed to be kept continually at sea if they were to pay at all), were unable to adjust themselves to meet the new challenges. In the inter-war years they had no option but to carry on as best they could in their old traditional role. The resultant decline meant that when opportunities did arise for fishermen generally in the form of grants and loan schemes (introduced in 1945 by the Fisheries Division of the Scottish Home Department and subsequently by the White Fish Authority and the Herring Industry Board), the bulk of the men living in the isles were unable to take advantage of them: they lacked the necessary qualifying experience in handling modern boats and equipment, as well as confidence in fishing as a full-time occupation. By 1959 there were only twenty-five boats of 40 ft or more in length based on Hebridean ports. Lewis had only six full-time crews; Harris had five.

This lack of a local fleet fishing in the Minch and associated waters on a full-time basis has inevitably brought reluctance on the part of Government bodies to invest capital in, say, harbour improvements, knowing that they would fail to yield an eventual return. Just after the first world war Lord Leverhulme formulated ambitious plans for a full-time fishing fleet based on Stornoway. More than thirty years later, in 1954, the Taylor Commission, set up to investigate the problems of crofting, summed up:

> Gone are the days when the crew of the fishing boat could haul up their craft on the beach and leave it there in safety. The modern seine-netter is much too heavy to be beached in that way and far too costly to be exposed to risk in unsafe anchorages . . . The capital outlay required for their purchase is such that it is not possible to operate them except on a full-time basis. It is still possible for smaller boats to be employed in fishing for lobster or crab, but the general trend of development is against the man who combines fishing with the work of the croft. We do not think it possible to reverse this trend; it should be accepted and an attempt made to establish a full-time fishing industry in Western waters.

The first vital step to do just this was taken in January 1959 when the MacAulay (Rhodesia) Trust announced the introduction of a scheme to 'increase the number of modern boats with efficient crews operating from or based on Lewis'. This Trust was set up under the will of the late Murdo MacAulay of Ness, who left Lewis with little English, less money, but plenty of Gaelic and enterprising spirit, to acquire a considerable fortune in Rhodesia. He bequeathed the bulk of it to be applied for the good of his island home. Anyone applying for assistance under the scheme was required to give an undertaking that he would prosecute fishing on a full-time basis; further, no one would be assisted unless, in the opinion of the trustees, he was likely to make 'an energetic and successful fisherman'. This pioneering venture directly assisted three young men in Kirkibost, Bernera, to acquire one of the best-equipped lobster boats in Scotland; and secondly it acted as a useful prototype for the Government scheme which was to augment and largely replace it a year later. In January 1960 the Government officially instituted the Outer Hebrides Fisheries Training Scheme. Free training was offered to men pre-

6 TRADE AND INDUSTRY

IN the earliest times, the folk of the island of Harris and Lewis were self-supporting; all that they needed for life as it was lived in those days was available at near hand; their existence was self-contained, the economy virtually self-sufficient. By and large, the only commodities often imported were salt, iron, and, to a certain extent, wood. Rents were paid largely in kind: the produce of agriculture, fishing and labour. Surplus produce was directed to southern markets to bring in the odd shilling or two for which there was really very little need in the island. But once money became important in the national economy, it was not long before it was required in the island economy too. By 1790, if not well before, two or three open boats set out each year from Uig to Glasgow, laden with salt beef and dried salt fish. At about this time, too, changes were making their slow appearance in the island way of life and living. Specialists were being required: smiths, tinkers, shipwrights, netmakers, boatbuilders, weavers, tailors and millers. Each of these craftsmen generally held some cornland, either individually or in shares, and also had some rights in the common ground of the township in which he lived.

CROFTER INDUSTRIES

From the pure crofter class there emerged the crofter-craftsmen. In Lochs, for instance, by the turn of the seventeenth century 80 per cent were registered as fishers and netmakers. In the west, in the parish of Barvas, some 70 per cent were also fishers, with kelp-making as a seasonal occupation. In Stornoway parish, where sub-tenants paid 30s to 60s in rent, with twelve days' service, they sold ling to their tacksmen at 5d each, earned 20s a month on herring boats, made kelp at 30s a ton, and worked on roads for 8d per day.

In Harris in 1895, the eight trained male weavers worked for the gentry only. Weaving for the populace was done by the

found in a warehouse in Leith some years ago; a few found their way back to Stornoway, where one can be seen in the Public Library.

HARRIS TWEED

Today, with kelp long forgotten and fishing of minor importance, it is the Harris Tweed industry which supports many of the island people, either directly or indirectly; an island cottage industry with exports earnings exceeding £2,500,000 a year. Harris Tweed is exported to some thirty countries, including America, Canada, Australia, New Zealand, Japan and all the European nations. The industry is in fact the basis of prosperity in the area, both dependent upon and supporting the crofter-weaver working at the handloom in his home. Seven million yards of tweed are woven annually by the independent weavers 'on the books' of the various mills. The weavers must finance themselves, buying their own looms and bobbins, equipping and maintaining their workshops. Though they receive their supplies of yarn from the mills, they are graded as self-employed persons and as such are not entitled to unemployment benefit—a subject which has caused much argument.

One of the most outstanding facts about the cloth is that its essential qualities have remained unchanged since the industry's early formative years. But it has astonishing versatility and over 5,000 patterns are available, including the crotal browns and the heather colours.

A weaver on average can produce about 2½ webs, or tweeds, each week, a web measuring about 80 yd by 28½ in, and gets a reward of some £8 per web, according to the intricacies of the design or the number of colours involved. The money is paid out by a mobile bank making the rounds of the townships throughout the island. It is reckoned that the mills, for their part, make 1d to 6d a yard profit, depending on turnover; the total annual value of the industry's output is in the region of £4,000,000.

Between them, the five mills in Stornoway and the one in Shawbost consume two-thirds of the Scottish wool clip—the native Western Islands' crop is sufficient for less than a month's production. A thousand pounds of raw wool end up as 885 yards of finished cloth.

sary. In the end, an application was made in 1909 to that body for a trade mark defining Harris Tweed as 'tweed, hand-spun, hand-woven and dyed and finished by hand in the Outer Hebrides', with 'made in Harris' or 'made in Lewis' added as appropriate. The Harris merchants had to join forces with their former rivals in the tweed-marketing business, the voluntary non-profit-making Associations. To inspect the cloth and stamp it with a trade mark—an orb surmounted by a cross—a Harris Tweed Association was formed, consisting of representatives of each of the Harris merchants, the Crofters Agency and the Scottish Home Industries Association. Cloth was first stamped in 1911. In 1912, some Stornoway merchants were granted representation in the Harris Tweed Association, which still exists for the benefit of the industry.

In 1934, the definition of 'Harris Tweed' was eased to include any cloth 'made from pure virgin wool, produced in Scotland, spun, dyed and finished in the Outer Hebrides and hand-woven by the Islanders at their own homes in the islands of Lewis, Harris, Uist, Barra and their several purtenances and all known as the Outer Hebrides'. It was further provided that 'Woven in Harris', 'Woven in Lewis', etc, could be added, and also 'Handspun' in the case of tweeds made entirely from hand-spun yarns.

Today, a few Harris families maintain the old tradition, hand-dyeing and carding, spinning on the wheel, hand-weaving and finishing, producing a high-quality article mainly for individual customers. These tweeds rightly command up to three times the price for the general run of tweed.

OTHER INDUSTRIES

It was not until the era of Sir James Matheson that anything like a truly industrial activity was attempted. Matheson, a native of Shinness in the parish of Lairg, Sutherland, was born in 1796. Aged seventeen, he decided on a commercial career and took himself to London. After two years in a mercantile house, he went to Calcutta, where he worked in the counting-house of MacKintosh

178 Most of the outward changes which have occurred in the island
262 took place in the two decades just after the first world war. Food, for instance, now tends to be better balanced and contains more nutrients. Staple diets in the past were mostly confined to a few items, and based on the potato. Fish, particularly those with essential oils (eg cod) were, of course, available; but only if the fishermen were lucky in the catch. As for vegetables and fresh fruit, it was not until after the 1920s that these became generally available all the year round.

178 Another outward change has been in dress. Until the beginning
